IN THE DISTRICT COURT OF THE UNITED STATES FOR THE NORTHERN DISTRICT OF OHIO, EASTERN DIVISION

Civil Action No. 24214

UNITED STATES OF AMERICA, Plaintiff,

v.

THE TIMKEN ROLLER BEARING COMPANY, Defendant

COMPLAINT—Filed July 31, 1946

To the Honorable, the Judges of the District Court of the United States for the Northern District of Ohio.

The United States of America, Plaintiff, by its attorneys, acting under the direction of the Attorney General of the United States, brings this action against the defendant and complains and alleges as follows:

I

Jurisdiction and Venue

1. This complaint is filed and these proceedings are instituted against the defendant under Section 4 of the Act of Congress of July 2, 1890, c. 647, 26 Stat. 209, as amended, entitled "An Act to protect trade and commerce against unlawful restraints and monopolies," commonly known as the Sherman Antitrust Act, in order to prevent and restrain continuing violations by defendant, as hereinafter alleged, of Sections 1 and 3 of the Sherman Antitrust Act.

2. Defendant The Timken Roller Bearing Company is incorporated under the laws of the State of Ohio and is an inhabitant of the Northern District of Ohio. It maintains offices and transacts business within the Eastern Division of the Northern District of Ohio.

[fol. 2] II

The Defendant

3. The Timken Roller Bearing Company, hereinafter referred to as "Timken", a corporation organized under

the laws of the State of Ohio and having its principal offices and place of business in Canton, Ohio, is named a defendant herein. It is engaged in the manufacture of tapered roller bearings at plants located in Canton, Gambrinus and Columbus, Ohio.

III

Co-Conspirators

4. British Timken, Limited, hereinafter referred to as "Limited", a joint stock company organized and existing under the laws of the United Kingdom, with its head office and principal place of business at Birmingham, England, is not named as a defendant but is named as co-conspirator herein. Limited is engaged in the manufacture and sale of ball bearings and straight and tapered roller bearings. Defendant Timken owns 29% of the capital stock of Limited.

5. Societe Anonyme Francaise Timken, hereinafter referred to as "Francaise", a corporation organized and existing under the laws of France, with its head office and principal place of business at Asnieres, France, is not named as a defendant but is named as co-conspirator herein. Francaise is engaged in the manufacture and sale of tapered roller bearings. Defendant Timken owns 50% of the capital stock of Francaise.

IV

The Nature of Trade and Commerce Involved

6. Antifriction bearings are rotating devices for reducing friction between moving mechanical parts. Their usual employment is between a shaft and rotating body, such as an automobile axle and wheel. Balls or rollers are inserted between containers called "races" which are, in turn, affixed to the moving parts. Rollers vary in shape from straight or tapered cylinders to configurations resembling spools and barrels.

[fol. 3] 7. Ball bearings are generally utilized where high speeds and light loads are required; roller bearings, where a heavy load must be supported; tapered roller bearings, where both a heavy load and side thrust are encountered, as on truck wheels and axles. Otherwise, all types may be used interchangeably.

8. The anti-friction bearing is distinguished from the plain bearing in that the plain bearing employs no rolling

objects but depends upon lubrication alone. The anti-friction bearing has much greater load-carrying ability, endurance, and freedom from friction.

9. Whenever the term "anti-friction bearings" is employed in this complaint, it will include ball bearings, and straight and tapered roller bearings, and accessories for, and parts of such bearings.

10. Anti-friction bearings are a necessity in the functioning of a modern industrial economy. Aircraft, trucks, automobiles, railroad cars and locomotives, gun mounts, machine tools, rolling mills, mining machinery, power generating and transmission equipment, household appliances and other machinery and engines of all types, require and utilize tapered roller bearings and other types of anti-friction bearings. They are currently in great demand, both in the United States and for shipment abroad in connection with the postwar reconversion and expansion of industry and the rehabilitation of war areas.

11. Defendant Timken is now and for many years has been the largest manufacturer of tapered roller bearings in the world. In 1944 Timken produced approximately eighty per cent of all the tapered roller bearings manufactured in the United States, and its gross sales of bearings amounted to approximately $75,000,000.

12. Bearings manufactured by Timken are shipped from its plants in Ohio to customers located in other States and Territories of the United States and, subject to limitations hereinafter alleged, in certain foreign countries. Timken transacts business in Canada through its wholly-owned subsidiary, Canadian Timken, Limited, and in South [fol. 4] America through its wholly-owned subsidiary, S. A. Timken Roller Bearing Company of South America.

13. Timken sells the bearings manufactured by it directly to manufacturers of automobiles, railroad equipment, machine tools, machinery, and other products containing bearings. It also sells large quantities of bearings to distributors for resale to bus and truck owners, garages, repair shops, factories, and others for replacement of worn-out or damaged bearings in vehicles and machinery. Such bearings are known as "service" or "replacement" bearings.

14. The co-conspirators Limited and Francaise have been, since 1928, the principal manufacturers of tapered roller bearings in Great Britain and France, respectively. Limited

and Francaise export their products to various countries throughout the world. Since 1933, Limited has also manufactured and sold ball bearings and straight roller bearings.

V

Background of the Conspiracy

15. On June 16, 1909, defendant Timken entered into an agreement with the Electric and Ordnance Accessories Company, Ltd. of England, granting the latter an exclusive license to manufacture and sell roller bearings in the United Kingdom under certain letters patent. Timken agreed not to manufacture or sell any roller bearings in the United Kingdom or sell to others for shipment into the United Kingdom except as parts of complete automobiles, assembled and manufactured in the United States. Electric and Ordnance Accessories Company, Ltd., agreed not to sell any roller bearings directly or to others for shipment outside the United Kingdom, except as parts of complete automobiles manufactured in the United Kingdom.

16. On July 16, 1909, Timken entered into a second agreement with Electric and Ordnance Accessories Company, Ltd., whereby the latter received an exclusive "license" to manufacture and sell roller bearings of all kinds in Europe and the British Empire (except Canada), whether patents [fol. 5] were secured in such countries or not. Timken agreed not to manufacture or sell directly or to others for shipment into the territory allocated to Electric and Ordnance Accessories Company, Ltd., and the latter agreed not to manufacture or sell directly or indirectly outside the territory allocated to it.

17. The rights of Electric and Ordnance Accessories Company, Ltd., under the aforesaid contracts were subsequently assigned to Limited. By 1927, Limited was manufacturing and selling large quantities of tapered roller bearings of the same types and sizes as those manufactured and sold by Timken.

18. In 1927 Timken and M. B. U. Dewar, Esq., a British businessman, acquired all of the capital stock of Limited, and Dewar became Limited's managing director. Thereafter, Limited together with Timken organized Francaise for the manufacture of tapered roller bearings in France. Throughout the period from 1928 to the date of the filing of this complaint, Dewar has held voting control of Limited

and Francaise, and has supervised and controlled the management and operations of these companies.

VI

Offenses Charged

19. Beginning in or about the year 1928 and continuously thereafter up to and including the date of the filing of this complaint, defendant Timken and the co-conspirators Limited and Francaise have been engaged in an unlawful combination and conspiracy in restraint of trade and commerce in anti-friction bearings among the several states of the United States and with foreign nations, and between territories of the United States and foreign nations, in violation of Sections 1 and 3 of the Act of Congress of July 2, 1890, c. 647, 26 Stat. 209, as amended, entitled "An Act to protect trade and commerce against unlawful restraints and monopolies", commonly known as the Sherman Antitrust Act. Such offenses will continue, unless the relief hereinafter prayed for in this complaint is granted.

[fol. 6] 20. Timken and the co-conspirators Limited and Francaise have entered into contracts, agreements, and understandings, and have continuously planned and acted together to eliminate competition between them in the manufacture and sale of anti-friction bearings in all markets of the world, including the United States, by:

(a) allocating to each party a designated territory for the manufacture and sale of anti-friction bearings as follows:

1. France, its colonies, mandates and dependencies except those in South America—to co-conspirator Francaise;

2. Great Britain, Ireland, and all countries other than France and Russia on the continent of Europe and all colonies, dominions, mandates, and dependencies of the United Kingdom and other European countries, except France, in any part of the world, except in North and South America—to co-conspirator Limited;

3. Russia—jointly to defendant Timken and co-conspirator Limited;

4. The rest of the world—to defendant Timken;

(b) preventing each party from selling or shipping anti-friction bearings into the territory allocated to any other party, except in completed articles of manufacture and for replacement of bearings therein;

(c) fixing and agreeing upon prices of replacement bearings sold and shipped into the territory allocated to any other party;

(d) fixing and agreeing upon prices of anti-friction bearings sold and shipped to Russia.

[fol. 7] 21. The said combination and conspiracy has been formed and effectuated by the means, methods, agreements, and understandings hereinafter set forth.

22. On January 1, 1928, Timken and Limited entered into a contract referred to by them as a "business agreement" under which the United Kingdom, North Ireland, all countries of Europe, and all colonies and dependencies of the United Kingdom and European countries (except those in North or South America) were allocated to Limited and the rest of the world was allocated to Timken, as exclusive territory for the manufacture and sale of anti-friction bearings. Limited agreed not to manufacture, sell, or deal in any bearings except under the terms of the agreement and under the trademark "Timken." Each party agreed not to sell bearings directly or to others for shipment into the other party's territory, except (a) as assembled parts of completed articles of manufacture manufactured in its own territory; and (b) for bearing replacement purposes in such completed articles of manufacture, and then only on payment to the other party of 10% of the net sale price as a penalty.

23. In or about June 1928, Limited, on its own account and on behalf of and with the approval of Timken, entered into an agreement with Francaise allocating France and its colonies, dependencies, and mandates (except those in North and South America) as the exclusive territory of Francaise for the manufacture and sale of anti-friction bearings. Limited and Timken agreed not to sell in this territory and Francaise agreed not to sell outside of this territory except under terms and conditions similar to those set out in the Limited-Timken contract of January 1, 1928, hereinbefore referred to in paragraph 22.

24. In or about February 1932, it was agreed between Limited and Timken that Limited would not quote on any

inquiry for service or replacement bearings coming from Timken's territory, but would advise the customers that the product should be obtained from Timken unless (a) the customer demanded a British product, or (b) "SKF or F.S. are in competition." It was also agreed that Hong [fol. 8] Kong, formerly allocated to Limited, was now to be the territory of Timken.

25. On December 29, 1934, a new contract was entered into between Timken and Limited, superseding the contract of January 1, 1928, hereinabove referred to in paragraph 22. The contract specifically applied to anti-friction bearings of all kinds and was to be in effect for fifteen years. It contained substantially the same terms as the 1928 contract for the division of sales and manufacturing territories, but with the following modifications: (a) service or replacement bearings, which each company was permitted to sell in the other's territory could henceforth be sold only at prices approved by the company into whose territory the bearings were to be sold and the penalty payments on such sales were reduced to 5%, and (b) Russia was to be considered open territory into which both Limited and Timken could sell at prices and terms mutually agreed upon.

26. On or about July 15, 1935, Limited, on its own account and on behalf of and with the approval of Timken, entered into a new agreement with Francaise revising the earlier agreement of June 1928, hereinabove referred to in paragraph 23, so as to permit sales of bearings for replacement or service purposes by Limited and Timken in the territory allocated to Francaise, and by Francaise into the territories of Limited and Timken, at prices satisfactory to the company into whose territory the bearings were being sold.

27. On or about November 28, 1938, Timken, Limited, and Francaise entered into a contract, hereinafter referred to as the Tripartite Contract, embodying substantially the allocations of territory and other terms and conditions contained in the agreements of December 29, 1934 and July 15, 1935 hereinabove referred to in paragraphs 25 and 26. The Tripartite Contract, which superseded the previous agreements, provided that it should continue in effect for a period of twenty-seven years from January 1, 1938. A copy of this contract, attached hereto and marked

[fol. 9] "Exhibit A", is made a part of this complaint as if herein set forth in full.

28. The Tripartite Contract was supplemented by an agreement dated November 29, 1938 between Timken, Limited, and M. B. U. Dewar, Esq., which provided that Russia would be considered joint territory in which both Timken and Limited could sell anti-friction bearings at prices agreed upon between them. This agreement was coterminous with the Tripartite Contract.

29. As a result of the outbreak of war and the requirements of the British armament program, Limited, in 1939, became increasingly unable to supply the requirements of its overseas markets. In September 1939, therefore, Limited arranged with Timken to transmit to Timken certain of its orders from the territory allocated to it. Under this arrangement, Timken shipped bearings manufactured in the United States to Limited's customers, charging prices determined by Limited, and paying the latter a commission on all such sales. Limited refused to permit Timken to accept orders directly from customers located in Limited's territory, with the exception of unsolicited orders for replacement bearings in accordance with the Tripartite Contract. In the case of replacement bearings, it was agreed that Timken, rather than make inquiry on each order as to the price agreeable to Limited, could make quotations based upon a "protective discount" off Timken's export price list on standard bearings. As a result, Timken sold replacement bearings for use in Limited's territory at prices approximately 65 per cent higher than Timken's regular export price for such bearings.

30. In 1940, the largest distributor of anti-friction bearings in Australia urged Timken to break its agreement with Limited, so that said distributor could purchase its requirements of tapered bearings from Timken rather than from Limited. Timken refused, and the distributor was required to send its orders to Limited, which filled such parts of the orders as it could and then transferred the balance to Timken. This procedure caused delays in the [fol. 10] transmission and filling of orders, and in some cases Limited wholly failed to refer to Timken Australian orders which Limited was unable to supply. Finally, Limited agreed to permit Timken to handle orders from Australia direct for the duration of the war, but only at prices established by Limited.

31. Defendant Timken, throughout the period of the conspiracy herein alleged, has not accepted orders for anti-friction bearings for shipment to the territory allocated to Limited and Francaise, except with the consent of Limited and at prices agreed upon with Limited, and has referred to Limited and Francaise all inquiries relating to agency or distribution arrangements in said territories. Limited, in turn, has not accepted orders for anti-friction bearings for shipment to the territory allocated to Timken, except with Timken's consent and at prices agreed upon with Timken.

32. The Tripartite Contract and supplemental agreement hereinbefore referred to in paragraphs 27 and 28 are in full force and effect and the defendant and its co-conspirators threaten to and will continue the aforesaid illegal practices and arrangements, unless the relief prayed for in this complaint is granted.

VII

Effects of the Conspiracy

33. As a result of the combination and conspiracy in restraint of trade hereinbefore alleged, the defendant and its co-conspirators have:

(a) unreasonably restrained the manufacture and sale of anti-friction bearings in the United States and its territories;

(b) unreasonably restrained the importation of anti-friction bearings into the United States;

(c) unreasonably restrained the importation of anti-friction bearings into the territories of the United States from foreign countries;

(d) unreasonably restrained and prevented the sale [fol. 11] and export of anti-friction bearings from the United States to purchasers in foreign countries, despite the demand for lower price American-made bearings;

(e) unreasonably restrained and prevented American manufacturers of automobiles, and their dealers in foreign countries, from purchasing American-made anti-friction bearings for shipment or sale outside the United States to territories allocated to Limited and

Francaise as hereinabove alleged, and have caused such firms to buy British and French bearings at substantially higher prices; and

(f) arbitrarily and unreasonably increased the prices of replacement bearings sold to American manufacturers and exporters and to foreign purchasers for shipment or sale outside the United States to territory allocated to Limited and Francaise as hereinabove alleged.

34. The current world shortage of anti-friction bearings and the decrease of European bearing production caused by World War II has created large potential export markets for anti-friction bearings of American manufacture. Due to the demands of the war effort, Timken has expanded its productive facilities. The continuation of the combination and conspiracy herein alleged will have the effect of restraining and preventing Timken from seeking and acquiring many foreign markets with the eventual consequence of reducing Timken's production of bearings and employment of labor.

Prayer

Wherefore, plaintiff prays:

1. That the Court adjudge and decree that the defendant Timken has combined and conspired with its co-conspirators Limited and Francaise to restrain trade and commerce among the States and with foreign nations, and between territories of the United States and foreign nations, in [fol. 12] violation of Sections 1 and 3 of the Sherman Antitrust Act; and that the contracts, understandings, arrangements, and practices alleged in this complaint are in violation of the Sherman Antitrust Act.

2. That the defendant and its officers, directors, agents, representatives, and all persons and corporations, acting or claiming to act on behalf of them, be perpetually enjoined from combining, conspiring or agreeing to restrain commerce in anti-friction bearings among the several states of the United States and with foreign nations, and between territories of the United States and foreign nations; and that they be perpetually enjoined from engaging in or participating in practices, contracts, relationships, or under-

standings, or claiming any rights thereunder, having the purpose or effect of continuing, reviving or renewing any of the violations of the Sherman Antitrust Act, in the complaint set forth and described.

3. That the contracts, understandings, and arrangements between defendant Timken and its co-conspirators Limited and Francaise, heretofore alleged, be adjudged to be illegal and ordered terminated and cancelled.

4. That the defendant, its officers, directors, agents, representatives, and all persons and corporations, acting or claiming to act on behalf of it, be perpetually enjoined from carrying out, claiming any rights under, or entering into any contract, agreement, or understanding, in any manner restricting the defendant's exports of anti-friction bearings from the United States, or dividing export markets, allocating territories, fixing prices for export sales, or in any manner restricting or affecting the importation of anti-friction bearings into the United States and its territories.

5. That the defendant Timken be enjoined from transferring, selling or assigning the trademark "Timken" to or for the use of co-conspirators Limited or Francaise, or the successors and assigns thereof, so as in any manner to exclude the defendant from using the trademark "Timken" anywhere in the world.

[fols. 13-20] 6. That defendant Timken be ordered to divest itself of its stock holdings and other financial interests, direct and indirect, in Limited and Francaise, upon such terms and conditions as shall be approved by the Court; and that until such time as said divestiture shall have been effected, the defendant Timken, its officers, directors, agents and representatives and all persons and corporations acting or claiming to act on behalf of such defendant, be enjoined from refusing to sell anti-friction bearings to the extent available in the normal course of such defendant's business to any person, partnership, or corporation ordering such commodities for export, and exporting the same from the United States, where such persons, partnerships, or corporations make appropriate payment or tender of payment at defendant's current export prices.

7. That the plaintiff have such other, further, general and different relief as the nature of the case may require and the Court shall deem proper.

8. That the plaintiff recover its taxable costs.

Dated: Cleveland, Ohio.

INTERROGATORIES PROPOUNDED TO THE DEFENDANT—Filed February 24, 1947

To Jones, Day, Cockley & Reavis, Esqs., 1759 Union Commerce Building, Cleveland 14, Ohio; Day, Cope, Ketterer, Raley & Wright, Esqs., 1110 First National Bank Building, Canton 2, Ohio, Counsel for Defendant:

The United States of America, by its attorneys, demands of defendant The Timken Roller Bearing Company written answers under oath to the interrogatories set forth below pursuant to and in accordance with Rule 33 of the Rules of Civil Procedure.

[fols. 22-23] *Definitions*

As used herein:

A. "Defendant" means The Timken Roller Bearing Company.

B. "Limited" means British Timken, Limited.

C. "Francaise" means Societe Anonyme Francaise Timken.

D. "Tripartite Agreement" means the agreement entered into on November 28, 1938 between defendant, Limited and Francaise and attached to the Complaint as Exhibit "A".

* * * * * * *

1. List all countries, dominions, colonies, dependencies and mandatory territories comprising the territory allo-

cated under the Tripartite Agreement to (a) Francaise, (b) Limited, and (c) defendant.

2. State the following concerning each inquiry and order to purchase anti-friction bearings for shipment, and inquiry for distributor representation, outside of the territory allocated to the defendant under the Tripartite Agreement, received by the defendant from July 1, 1945 to date; the date of the inquiry or order, the inquirer's or buyer's name and address, the type and quantity of anti-friction bearings inquired for or ordered, the name and location of the intended user thereof, and the disposition of such inquiry or order.

[fol. 24] 8. List all trade marks and trade names used in the sale of anti-friction bearings (a) registered by defendant from 1909 to date, (b) registered by Limited from 1928 to date and (c) registered by Francaise from 1928 to date; setting forth as to each (1) the country of registration (2) the registration number (3) the title, design and description (4) the registration date (5) the expiration date (6) the expiration date of any possible renewal thereof and (7) with respect to all rights therein granted by the defendant to Francaise, Limited or others, state: (A) the date (B) name of grantee or other user, and (C) nature of the contents of each agreement or writing relating to the granting or termination of such rights.

[fol. 25] Dated: Washington, D. C., February 20, 1947.

IN UNITED STATES DISTRICT COURT

[Title omitted]

AMENDED

COMPLAINT—Filed December 15, 1947

To the Honorable, the Judges of the District Court of the United States for the Northern District of Ohio,

The United States of America, Plaintiff, by its attorneys, acting under the direction of the Attorney General of the

United States, brings this action against the defendant and complains and alleges as follows:

I

Jurisdiction and Venue

1. This complaint is filed and these proceedings are instituted against the defendant under Section 4 of the Act of Congress of July 2, 1890, c. 647, 26 Stat 209, as amended, entitled "An Act to protect trade and commerce against unlawful restraints and monopolies," commonly known as the Sherman Antitrust Act, in order to prevent and restrain continuing violations by defendant, as hereinafter alleged, of Sections 1 and 3 of the Sherman Antitrust Act.

2. Defendant The Timken Roller Bearing Company is incorporated under the laws of the State of Ohio and is an inhabitant of the Northern District of Ohio. It maintains offices and transacts business within the Eastern Division of the Northern District of Ohio.

[fol. 27]

II

The Defendant

3. The Timken Roller Bearing Company, hereinafter referred to as "Timken", a corporation organized under the laws of the State of Ohio and having its principal offices and place of business in Canton, Ohio, is named a defendant herein. It is engaged in the manufacture of tapered roller bearings at plants located in Canton, Gambrinus and Columbus, Ohio.

III

Co-Conspirators

4. British Timken, Limited, hereinafter referred to as "Limited", a joint stock company organized and existing under the laws of the United Kingdom, with its head office and principal place of business at Birmingham, England, is not named as a defendant but is named as co-conspirator herein. Limited is engaged in the manufacture and sale of ball bearings and straight and tapered roller bearings. Defendant Timken owns 29% of the capital stock of Limited.

5. Societe Anonyme Francaise Timken, hereinafter referred to as "Francaise", a corporation organized and existing under the laws of France, with its head office and principal place of business at Asnieres, France, is not named as a defendant but is named as co-conspirator herein. Francaise is engaged in the manufacture and sale of tapered roller bearings. Defendant Timken owns 50% of the capital stock of Francaise.

IV

The Nature of Trade and Commerce Involved

6. Antifriction bearings are rotating devices for reducing friction between moving mechanical parts. Their usual employment is between a shaft and rotating body, such as an automobile axle and wheel. Balls or rollers are inserted between containers called "races" which are, in turn, affixed to the moving parts. Rollers vary in shape from straight or tapered cylinders to configurations resembling spools and barrels.

[fol. 28] 7. Ball bearings are generally utilized where high speeds and light loads are required; roller bearings, where a heavy load must be supported; tapered roller bearings, where both a heavy load and side thrust are encountered, as on truck wheels and axles. Otherwise, all types may be used interchangeably.

8. The anti-friction bearing is distinguished from the plain bearing in that the plain bearing employs no rolling objects but depends upon lubrication alone. The anti-friction bearing has much greater load-carrying ability, endurance, and freedom from friction.

9. Whenever the term "anti-friction bearings" is employed in this complaint, it will include ball bearings, and straight and tapered roller bearings, and accessories for, and parts of such bearings.

10. Anti-friction bearings are a necessity in the functioning of a modern industrial economy. Aircraft, trucks, automobiles, railroad cars and locomotives, gun mounts, machine tools, rolling mills, mining machinery, power generating and transmission equipment, household appliances and other machinery and engines of all types, require and utilize tapered roller bearings and other types of anti-friction bearings. They are currently in great demand,

both in the United States and for shipment abroad in connection with the postwar reconversion and expansion of industry and the rehabilitation of war areas.

11. Defendant Timken is now and for many years has been the largest manufacturer of tapered roller bearings in the world. In 1944 Timken produced approximately eighty per cent of all the tapered roller bearings manufactured in the United States, and its gross sales of bearings amounted to approximately $75,000,000.

12. Bearings manufactured by Timken are shipped from its plants in Ohio to customers located in other States and Territories of the United States and, subject to limitations hereinafter alleged, in certain foreign countries. Timken transacts business in Canada through its wholly-owned subsidiary, Canadian Timken, Limited, and in South America [fol. 29] through its wholly-owned subsidiary, S. A. Timken Roller Bearing Company of South America.

13. Timken sells the bearings manufactured by it directly to manufacturers of automobiles, railroad equipment, machine tools, machinery, and other products containing bearings. It also sells large quantities of bearings to distributors for resale to bus and truck owners, garages, repair shops, factories, and others for replacement of worn-out or damaged bearings in vehicles and machinery. Such bearings are known as "service" or "replacement" bearings.

14. The co-conspirators Limited and Francaise have been, since 1928, the principal manufacturers of tapered roller bearings in Great Britain and France, respectively. Limited and Francaise export their products to various countries throughout the world. Since 1933, Limited has also manufactured and sold ball bearings and straight roller bearings.

V

Background of the Conspiracy

15. On June 16, 1909, defendant Timken entered into an agreement with the Electric and Ordnance Accessories Company, Ltd. of England, granting the latter an exclusive license to manufacture and sell roller bearings in the United Kingdom under certain letters patent. Timken agreed not to manufacture or sell any roller bearings in the United Kingdom or sell to others for shipment into

the United Kingdom except as parts of complete automobiles, assembled and manufactured in the United States. Electric and Ordnance Accessories Company, Ltd., agreed not to sell any roller bearings directly or to others for shipment outside the United Kingdom, except as parts of complete automobile- manufactured in the United Kingdom.

16. On July 16, 1909, Timken entered into a second agreement with Electric and Ordnance Accessories Company, Ltd., whereby the latter received an exclusive "license" to manufacture and sell roller bearings of all kinds in Europe and the British Empire (except Canada), whether patents [fol. 30] were secured in such countries or not. Timken agreed not to manufacture or sell directly or to others for shipment into the territory allocated to Electric and Ordnance Accessories Company, Ltd., and the latter agreed not to manufacture or sell directly or indirectly outside the territory allocated to it.

17. The rights of Electric and Ordnance Accessories Company, Ltd., under the aforesaid contracts were subsequently assigned to Limited. By 1927, Limited was manufacturing and selling large quantities of tapered roller bearings of the same types and sizes as those manufactured and sold by Timken.

18. In 1927 Timken and M. B. U. Dewar, Esq., a British businessman, acquired all of the capital stock of Limited, and Dewar became Limited's managing director. Thereafter, Limited together with Timken organized Francaise for the manufacture of tapered roller bearings in France. Throughout the period from 1928 to the date of the filing of this complaint, Dewar has held voting control of Limited and Francaise, and has supervised and controlled the management and operations of these companies.

VI

Offenses Charged

19. Beginning in or about the year 1928 and continuously thereafter up to and including the date of the filing of this complaint, defendant Timken and the co-conspirators Limited and Francaise have been engaged in an unlawful combination and conspiracy in restraint of trade and commerce in anti-friction bearings among the several states of the

United States and with foreign nations, and between territories of the United States and foreign nations, in violation of Sections 1 and 3 of the Act of Congress of July 2, 1890, c. 647, 26 Stat. 209, as amended, entitled "An Act to protect trade and commerce against unlawful restraints and monopolies", commonly known as the Sherman Antitrust Act. Such offenses will continue, unless the relief hereinafter prayed for in this complaint is granted.

[fol. 31] 20. Timken and the co-conspirators Limited and Francaise have entered into contracts, agreements, and understandings, and have continuously planned and acted together to eliminate competition between them and with others in the manufacture and the sale of anti-friction bearings in all markets of the world, including the United States, by:

(a) allocating to each party a designated territory for the manufacture and sale of anti-friction bearings as follows:

1. France, its colonies, mandates and dependencies except those in South America—to co-conspirator Francaise;

2. Great Britain, Ireland, and all countries other than France and Russia on the continent of Europe and all colonies, dominions, mandates, and dependencies of the United Kingdom and other European countries, except France, in any part of the world, except in North and South America—to co-conspirator Limited;

3. Russia—jointly to defendant Timken and co-conspirator Limited;

4. The rest of the world—to defendant Timken;

(b) preventing each party from selling or shipping anti-friction bearings into the territory allocated to any other party, except in completed articles of manufacture and for replacement of bearings therein;

(c) fixing and agreeing upon prices of replacement bearings and shipped into the territory allocated to any other party;

(d) fixing and agreeing upon prices of anti-friction bearings sold and shipped to Russia.

[fol. 32] (e) allocating the use of the trade-mark "Timken" to each of the parties in its designated

territory, requiring that the co-conspirators not manufacture, sell or otherwise deal in bearings except under the trade-mark "Timken" and requiring said co-conspirators to agree to surrender to defendant rights in the name "Timken" upon termination of such contracts, agreements and understandings;

(f) in certain of the designated territories, entering into agreements and understandings with other manufacturers, regulating and allocating the sale of anti-friction bearings;

(g) furnishing aid and assistance to each other in restricting and eliminating in their respective territories competition from others in the manufacture and sale of anti-friction bearings.

21. The said combination and conspiracy has been formed and effectuated by the means, methods, agreements, and understandings hereinafter set forth.

22. On January 1, 1928, Timken and Limited entered into a contract referred to by them as a "business agreement," under which the United Kingdom, North Ireland, all countries of Europe, and all colonies and dependencies of the United Kingdom and European countries (except those in North or South America) were allocated to Limited and the rest of the world was allocated to Timken, as exclusive territory for the manufacture and sale of anti-friction bearings. Limited agreed not to manufacture, sell, or deal in any bearings except under the terms of the agreement and under the trademark "Timken." Each party agreed not to sell bearings directly or to others for shipment into the other party's territory, except (a) as assembled parts of completed articles of manufacture manufactured in its own territory; and (b) for bearing replacement purposes in [fol. 33] such completed articles of manufacture, and then only on payment to the other party of 10% of the net sale price as a penalty.

23. In or about June 1928, Limited, on its own account and on behalf of and with the approval of Timken, entered into an agreement with Francaise allocating France and its colonies, dependencies, and mandates (except those in North and South America) as the exclusive territory of Francaise for the manufacture and sale of anti-friction bearings. Limited and Timken agreed not to sell in this territory and Francaise agreed not to sell outside of this

territory except under terms and conditions similar to those set out in the Limited-Timken contract of January 1, 1928, hereinbefore referred to in paragraph 22.

24. In or about February 1932, it was agreed between Limited and Timken that Limited would not quote on any inquiry for service or replacement bearings coming from Timken's territory, but would advise the customers that the product should be obtained from Timken unless (a) the customer demanded a British product, or (b) "SKF or F. S. are in competition." It was also agreed that Hong Kong, formerly allocated to Limited, was now to be the territory of Timken.

25. On December 29, 1934, a new contract was entered into between Timken and Limited, superseding the contract of January 1, 1928, hereinabove referred to in paragraph 22. The contract specifically applied to anti-friction bearings of all kinds and was to be in effect for fifteen years. It contained substantially the same terms as the 1928 contract for the division of sales and manufacturing territories, but with the following modifications: (a) service or replacement bearings, which each company was permitted to sell in the other's territory could henceforth be sold only at prices approved by the company into whose territory the bearings were to be sold and the penalty payments on such sales were reduced to 5%, and (b) Russia was to be considered open territory into which both Limited and Timken could sell at prices and terms mutually agreed upon.

[fol. 34] 26. On or about July 15, 1935, Limited, on its own account and on behalf of and with the approval of Timken, entered into a new agreement with Francaise revising the earlier agreement of June 1928, hereinabove referred to in paragraph 23, so as to permit sales of bearings for replacement or service purposes by Limited and Timken in the territory allocated to Francaise, and by Francaise into the territories of Limited and Timken, at prices satisfactory to the company into whose territory the bearings were being sold.

27. On or about November 28, 1938, Timken, Limited and Francaise entered into a contract, hereinafter referred to as the Tripartite Contract, embodying substantially the allocations of territory and other terms and conditions contained in the agreements of December 29, 1934 and

July 15, 1935 hereinabove referred to in paragraphs 25 and 26. The Tripartite Contract, which superseded the previous agreements, provided that it should continue in effect for a period of twenty-seven years from January 1, 1938. A copy of this contract, attached hereto and marked "Exhibit A", is made a part of this complaint as if herein set forth in full.

28. The Tripartite Contract was supplemented by an agreement dated November 29, 1938 between Timken, Limited, and M. B. U. Dewar, Esq., which provided that Russia would be considered joint territory in which both Timken and Limited could sell anti-friction bearings at prices agreed upon between them. This agreement was coterminous with the Tripartite Contract. A copy of this contract, attached hereto and marked "Exhibit B", is made a part of this complaint as if herein set forth in full.

29. As a result of the outbreak of war and the requirements of the British armament program, Limited, in 1939, became increasingly unable to supply the requirements of its overseas markets. In September 1939, therefore, Limited arranged with Timken to transmit to Timken certain of its orders from the territory allocated to it. Under this arangement, Timken shipped bearings manufactured in the United States to Limited's customers, charging prices determined by Limited, and paying the latter a commission on all such sales. Limited refused to permit Timken [fol. 35] to accept orders directly from customers located in Limited's territory, with the exception of unsolicited orders for replacement bearings in accordance with the Tripartite Contract. In the case of replacement bearings, it was agreed that Timken, rather than make inquiry on each order as to the price agreeable to Limited, could make quotations based upon a "protective discount" off Timken's export price list on standard bearings. As a result, Timken sold replacement bearings for use in Limited's territory at prices approximately 65 per cent higher than Timken's regular export price for such bearings.

30. In 1940, the largest distributor of anti-friction bearings in Australia urged Timken to break its agreement with Limited, so that said distributor could purchase its requirements of tapered bearings from Timken rather than from Limited. Timken refused, and the distributor was required to send its orders to Limited, which filled such parts of the orders as it could and then transferred

the balance to Timken. This procedure caused delays in the transmission and filling of orders, and in some cases Limited wholly failed to refer to Timken Australian orders which Limited was unable to supply. Finally, Limited agreed to permit Timken to handle orders from Australia direct for the duration of the war, but only at prices established by Limited.

31. Defendant Timken, throughout the period of the conspiracy herein alleged, has not accepted orders for anti-friction bearings for shipment to the territory allocated to Limited and Francaise, except with the consent of Limited and at prices agreed upon with Limited, and has referred to Limited and Francaise all inquiries relating to agency or distribution arrangements in said territories. Limited, in turn, has not accepted orders for anti-friction bearings for shipment to the territory allocated to Timken, except with Timken's consent and at prices agreed upon with Timken.

32. The Tripartite Contract and supplemental agreement hereinbefore referred to in paragraphs 27 and 28 are in full force and effect and the defendant and its co-conspirators threaten to and will continue the aforesaid illegal [fol. 36] practices and arrangements, unless the relief prayed for in this complaint is granted.

VII

Effects of the Conspiracy

33. As a result of the combination and conspiracy in restraint of trade hereinbefore alleged, the defendant and its co-conspirators have:

(a) unreasonably restrained the manufacture and sale of anti-friction bearings in the United States and its territories;

(b) unreasonably restrained the importation of anti-friction bearings into the United States;

(c) unreasonably restrained the importation of anti-friction bearings into the territories of the United States from foreign countries;

(d) unreasonably restrained and prevented the sale and export of anti-friction bearings from the United States to purchasers in foreign countries, despite the demand for lower price American-made bearings;

(e) unreasonably restrained and prevented American manufacturers of automobiles, and their dealers in

foreign countries, from purchasing American-made anti-friction bearings for shipment or sale outside the United States to territories allocated to Limited and Francaise as hereinabove alleged, and have caused such firms to buy British or French bearings at substantially higher prices; and

(f) arbitrarily and unreasonably increased the prices of replacement bearings sold to American manufacturers and exporters and to foreign purchasers for shipment or sale outside the United States to territory allocated to Limited and Francaise as hereinabove alleged.

[fol. 37] 34. The current world shortage of anti-friction bearings and the decrease of European bearing production caused by World War II has created large potential export markets for anti-friction bearings of American manufacture. Due to the demands of the war effort, Timken has expanded its productive facilities. The continuation of the combination and conspiracy herein alleged will have the effect of restraining and preventing Timken from seeking and acquiring many foreign markets with the eventual consequence of reducing Timken's production of bearings and employment of labor.

Prayer

Wherefore, plaintiff prays:

1. That the Court adjudge and decree that the defendant Timken has combined and conspired with its co-conspirators Limited and Francaise to restrain trade and commerce among the States and with foreign nations, and between territories of the United States and foreign nations, in violation of Section 1 and 3 of the Sherman Antitrust Act; and that the contracts, understandings, arrangements, and practices alleged in this complaint are in violation of the Sherman Antitrust Act.

2. That the defendant and its officers, directors, agents, representatives, and all persons and corporations, acting or claiming to act on behalf of them, be perpetually enjoined from combining, conspiring or agreeing to restrain commerce in anti-friction bearings among the several states of the United States and with foreign nations, and between territories of the United States and foreign nations; and that they be perpetually enjoined from engaging in or

participating in practices, contracts, relationships, or understandings, or claiming any rights thereunder, having the purpose or effect of continuing, reviving or renewing any of the violations of the Sherman Antitrust Act, in the complaint set forth and described.

3. That the contracts, understandings, and arrangements between defendant Timken and its co-conspirators Limited and Francaise, heretofore alleged, be adjudged to be illegal and ordered terminated and cancelled.

[fol. 38] 4. That the defendant, its officers, directors, agents, representatives, and all persons and corporations, acting or claiming to act on behalf of it, be perpetually enjoined from carrying out, claiming any rights under, or entering into any contract, agreement, or understanding, in any manner restricting the defendant's exports of anti-friction bearings from the United States, or dividing export markets, allocating territories, fixing prices for export sales, or in any manner restricting or affecting the importation of anti-friction bearings into the United States and its territories.

5. That the defendant Timken be enjoined from transferring, selling or assigning the trademark "Timken" to or for the use of co-conspirators Limited or Francaise, or the successors and assigns thereof, so as in any manner to exclude the defendant from using the trademark "Timken" anywhere in the world.

6. That defendant Timken be ordered to divest itself of its stock holdings and other financial interests, direct and indirect, in Limited and Francaise, upon such terms and conditions as shall be approved by the Court; and that until such time as said divestiture shall have been effected, the defendant Timken, its officers, directors, agents and representatives and all persons and corporations acting or claiming to act on behalf of such defendant, be enjoined from refusing to sell anti-friction bearings to the extent available in the normal course of such defendant's business to any person, partnership, or corporation ordering such commodities for export, and exporting the same from the United States, where such persons, partnerships, or corporations make appropriate payment or tender of payment at defendant's current export prices.

[fols. 39-57] 7. That the plaintiff have such other, further, general and different relief as the nature of the case may require and the Court shall deem proper.

8. That the plaintiff recover its taxable costs.

Dated: Cleveland, Ohio.

(S.) John F. Sonnett, Assistant Attorney General; (S.) Robert A. Nitschke, Special Assistant to the Attorney General; (S.) George L. Derr, Special Attorney; (S.) Bertram C. Dedman, Special Attorney.

[fol. 58] [File endorsement omitted]

IN UNITED STATES DISTRICT COURT

[Title omitted]

ANSWER OF DEFENDANT TO AMENDED COMPLAINT—Filed January 9, 1948

Now comes the defendant, The Timken Roller Bearing Company, and for its answer to the amended complaint herein says:

I

Answering generally, the defendant denies that it is now or has been at any time engaged with Limited and Francaise, (adopting herein the names used in the amended complaint to designate British Timken, Limited, and Société Francaise Timken, styled in the amended complaint Société Anonyme Francaise Timken, respectively), or either of them, or otherwise, in an agreement, combination or conspiracy in restraint of trade and commerce in anti-friction bearings among the several states of the United States, or with foreign nations, or between territories of the United States and foreign nations in violation of the Sherman Anti-trust Act; denies that, with Limited or Francaise, or either of them, or otherwise, it entered into the agreement of November 28, 1938 between the defendant, Limited and Francaise, described in paragraph 27 of the amended complaint, or any agreement, contract or understanding, to restrain trade or to eliminate competition between them, or with others, in the manufacture and sale of anti-friction bearings; denies that it has in any manner planned or acted with Limited and Francaise, or either of them, or with others, to restrain trade or to eliminate competition between them in the manufacture and sale of anti-friction bearings;

denies that the said agreement of November 28, 1938, or any of the agreements described in the amended complaint, [fol. 59] was or is in fact in restraint of trade and commerce in anti-friction bearings as is alleged in the amended complaint, and denies that it entered into any of the agreements or understandings or did any of the acts and things alleged in the amended complaint as means, methods, agreements or understandings in the formation or effectuating of the alleged agreement, combination and conspiracy described in the amended complaint.

II

And, without limiting the denials in the preceding paragraph, the defendant, answering more specifically the averments of the amended complaint, and with the following numbered paragraphs corresponding with the numbered paragraphs thereof, avers as follows:

1. Defendant denies the allegations of paragraph 1, except that it admits that the amended complaint purports to have been filed, and that these proceedings purport to have been instituted, under Section 4 of the Act of Congress of July 2, 1890, Chapter 647, 26 Stat. 209, as amended, entitled, "An Act to Protect Trade and Commerce against Unlawful Restraints and Monopolies," commonly known as the Sherman Anti-trust Act.

2. Defendant admits the allegations of paragraph 2.

3. Defendant admits the allegations of paragraph 3, except that defendant avers that Gambrinus is not an incorporated municipality, but is simply a name given to a plant of defendant located beyond the city limits of Canton, Ohio.

4. Defendant admits the allegations of paragraph 4, except that defendant avers that it owns 30.25% of the capital stock of Limited.

5. Defendant admits the allegations of paragraph 5.

6. Defendant avers that anti-friction or rolling contact bearings are rotating machine elements employed to carry loads and at the same time reduce friction between moving mechanical parts, their usual employment being between a stationary or rotating shaft and a rotating or stationary [fol. 60] body, such as an automobile axle and wheel or transmission shafts. The usual elements of an anti-friction bearing are a number of balls or rollers properly dis-

posed between an inner and outer race, which races in turn are mounted on or in the moving and stationary parts respectively. Rollers vary in shape from cylindrical or conical to configurations resembling spools or barrels. Except as herein averred, defendant denies the allegations of paragraph 6.

7. Defendant avers that ball bearings are generally utilized to carry light loads, cylindrical roller bearings to carry heavy loads and tapered roller bearings to carry heavy loads and loads that involve side thrust. Timken Roller Bearings are also used in high speed applications. Defendant denies that all types of bearings may be used interchangeably. Except as herein averred, defendant denies the other allegations of paragraph 7.

8. Defendant avers that an anti-friction bearing is distinquished from a plain bearing in that the anti-friction bearing employs rolling elements, while the plain bearing relies entirely on an oil film, to support a load. Except as herein averred, defendant denies the other allegations of paragraph 8.

9. Defendant admits the allegations of paragraph 9.

10. Defendant admits the allegations of paragraph 10, except that it denies that the current demand for anti-friction bearings in the United States, or such demand therefor as there may be for shipment abroad, is in connection with post-war reconversion and expension of industry and the rehabilitation of war areas.

11. Defendant admits that it is the largest manufacturer of tapered roller bearings in the world and that its gross sales thereof in the year 1944 amounted to approximately Seventy-Five Million Dollars ($75,000,000.00). Defendant does not have sufficient knowledge or information to form a belief as to the other allegations of paragraph 11.

[fol. 61] 12. Defendant admits that tapered roller bearings manufactured by it are shipped from its plants in Ohio to customers located in other states and territories of the United States, and to many foreign countries. Defendant avers that there is a Canadian corporation known as, "The Timken Roller Bearing Service and Sales, Limited," of which defendant owns all the stock, and that such corporation handles sales of tapered roller bearings for service purposes in Canada. Defendant avers that it is qualified to transact business in Canada and now has in operation a

tapered roller bearing plant at St. Thomas in Ontario, Canada, the operation of which is handled directly by defendant and not through such Canadian subsidiary. Defendant avers that it owns all the stock of an Ohio corporation known as The Timken Roller Bearing Company of South America, which corporation is qualified to do business in Brazil, and that all other sales operations of defendant in South American countries are conducted in the name of defendant and not in the name of said subsidiary. Defendant denies the allegations of paragraph 12, except as herein admitted.

13. Defendant admits that it sells tapered roller bearings manufactured by it to original manufacturers of various types of equipment, and to distributors for service or replacement purposes; but avers that the great bulk of defendant's business in such service and replacement field consists of the service or replacement of bearings originally manufactured and sold by it. Defendant denies the allegations of paragraph 13, except as herein admitted.

14. Defendant denies the allegations of paragraph 14, except that it admits that since 1933 Limited has manufactured, sold and at times has exported ball bearings and straight roller bearings as well as tapered roller bearings.

15. Defendant avers that, as licensor, defendant entered into a patent license agreement with The Electric & Ordnance Accessories Company, Limited, as licensee, originally executed by defendant under date of June 16, 1909, but [fol. 62] subsequently re-executed by defendant after certain changes and alterations, on August 4, 1909, and later executed by the licensee under date of August 1909, granting to such licensee an exclusive license to make, use and vend in the United Kingdom and the Isle of Man roller bearings of all kinds made under or in accordance with the specifications of the various Letters Patent described therein. This agreement was valid and lawful in every respect including the extent to which its operation was limited either as to scope or territory. Defendant, as such licensor, agreed, among other things, that it would not make or sell roller bearings to others in the United Kingdom and the Isle of Man while such license was in effect, subject to the proviso, however, that defendant, as licensor, reserved the right to make, sell or license others to make or sell bearings for automobiles or other vehicles manufactured outside the

United Kingdom and Isle of Man which might go into the territorial limits described in said license agreement. Said licensee agreed, among other things, that as long as said license agreement was in effect, the licensee would not sell any roller bearings outside the limits of the territory assigned to it thereunder knowing them to be for shipment outside said territory, subject to the proviso, however, that the licensee could sell tapered roller bearings for installation in automobiles or other vehicles manufactured in the United Kingdom or Isle of Man which might be shipped to countries outside the limits assigned to it. Defendant denies the allegations of paragraph 15, except as herein admitted.

16. Defendant avers that defendant, as licensor, entered into a patent license agreement with The Electric & Ordnance Accessories Company, Limited, as licensee, originally executed by defendant under date of June 16, 1909, but subsequently re-executed by defendant after certain changes and alterations, on August 4, 1909, and later executed by the licensee under date of August - 1909. This agreement granted to such licensee the exclusive right to make, use and [fol. 63] vend in the territory described therein roller bearings of all kinds, made under or in accordance with the specifications of the various Letters Patent described therein; and further granted the right to make, use and vend articles involving the subject-matter of said patents and roller bearings of every kind whatsoever in that part of the territory wherein said patent or patents had not been granted or had ceased to exist, the latter grant being subject to the proviso that it was effective only so far as the licensor could lawfully make it. This agreement was valid and lawful in every respect including the extent to which it was limited either as to scope or territory. Defendant avers that it, as such licensor, agreed, among other things, that it would not make or sell roller bearings to others in the territory described in said license agreement while such license was in effect, subject to the proviso, however, that it, as licensor, reserved the right to make, sell or license others to make or sell bearings for automobiles or other vehicles manufactured outside the territory described in the license agreement, which might go into the territory described therein. The licensee agreed, among other things, that as long as said license agreement was in effect it would

not sell any roller bearings outside the limits of the territory assigned to it thereunder knowing them to be for shipment outside said territory, subject to the proviso, however, that the licensee could sell bearings for installation in automobiles or other vehicles manufactured within the territory described in the license agreement which might be shipped to countries outside the limits assigned to it. Defendant denies the allegations of paragraph 16, except as herein admitted.

17. Defendant admits that the rights of The Electric & Ordnance Accessories Company, Limited, as such licensee, were subsequently transferred to Limited. Defendant denies the other allegations of paragraph 17.

18. Defendant avers that in 1927 it offered to purchase all the stock of Limited which offer was accepted by the [fol. 64] owner of such stock; that subsequently by agreement between defendant and M. B. U. Dewar, a portion of the stock was issued to Dewar; that during a part of the period from 1928 to the date of filing the amended complaint, Dewar has acted as managing director of Limited and of Francaise, respectively, pursuant to agreement with defendant. Defendant denies the allegations of paragraph 18, except as herein admitted.

19. Defendant denies the allegation of paragraph 19.

20. Defendant denies the allegations of paragraph 20.

21. Defendant denies the allegations of paragraph 21.

22. Defendant admits that on January 1, 1928, in England, the defendant and Limited entered into an agreement by which Limited agreed, among other things, that except with defendant's consent, it would not manufacture, sell or deal in any bearings except under the terms of the agreement and under the trade-mark "Timken". Defendant avers that paragraph 22 does not otherwise accurately or correctly describe the provisions of the said agreement to which it refers, and defendant denies the other allegations thereof.

23. Defendant admits that on June 16, 1928, Limited on its own account and on behalf of and with the approval of defendant, entered into an agreement with Francaise by which Limited agreed, among other things, not to sell in France, her colonies, dependencies and mandatory territories (except those in or adjacent to North or South America) except under the terms of said agreement. Defendant

avers that said agreement was entered into in England, and provided that it was to be construed and take effect according to English law. Defendant avers that paragraph 23 does not otherwise accurately or correctly describe the provisions of said agreement to which it refers, and defendant denies the other allegations thereof.

24. Defendant admits that in February 1932, in England, the defendant and Limited entered into a certain agree- [fol. 65] ment regarding their business relations. Defendant avers that paragraph 24 does not otherwise accurately or correctly describe the provisions of the said agreement to which it refers, and defendant denies the other allegations thereof.

25. Defendant admits that on December 29, 1934, in England, a new agreement was entered into between the defendant and Limited. Defendant avers that paragraph 25 does not otherwise accurately or correctly describe the provisions of the said agreement to which it refers, and defendant denies the other allegations thereof.

26. Defendant admits that on July 15, 1935, Limited on its own account and also for and on behalf of the defendant, entered into a new agreement with Francaise. Defendant avers that said agreement was entered into in England and provided that it was to be construed and take effect according to English law. Defendant avers that paragraph 26 does not otherwise accurately or correctly describe the provisions of the said agreement to which it refers, and defendant denies the other allegations thereof.

27. Defendant admits that on November 28, 1938, in England, the defendant, Limited and Francaise entered into an agreement, referred to by plaintiff in the amended complaint as the Tripartite Contract, which was to continue in effect for a period of twenty-seven years from January 1, 1938, admits that a copy of said agreement is attached to the amended complaint and marked Exhibit "A", and respectfully refers the court thereto for the terms and provisions thereof. Defendant avers that paragraph 27 does not otherwise accurately or correctly describe the provisions of the agreement to which it refers, and defendant denies the other allegations thereof.

28. Defendant admits that on November 29, 1938, in England, defendant, Limited and Dewar entered into a supplemental business agreement by which, among other things, arrangements were made for future business in Russia,

admits that a copy of said agreement is attached to the amended complaint and marked Exhibit "B", and respectfully refers the court thereto for the terms and provisions [fol. 66] thereof. Defendant avers that paragraph 28 does not otherwise accurately or correctly describe the provisions of said agreement to which it refers, and defendant denies the other allegations thereof.

29. Defendant admits that as a result of the outbreak of war and the requirements of the British armament program in 1939, Limited became unable to supply the requirements of its overseas markets, and avers that new and various arrangements were entered into between the defendant and Limited to provide Timken bearings. Defendant avers that paragraph 29 does not otherwise accurately or correctly describe such arrangements so entered into between the defendant and Limited, and defendant denies the other allegations thereof.

30. Defendant denies the allegations of paragraph 30.

31. Defendant admits it referred to Limited and to Francaise certain inquiries relating to agency or distribution arrangements in certain countries. Defendant denies the other allegations of paragraph 31.

32. Defendant admits that the agreements referred to in paragraphs 27 and 28 of the amended complaint are in full force and effect. Defendant denies the other allegations of paragraph 32.

33. Defendant denies the allegations of paragraph 33.

34. Defendant admits that its productive facilities were expanded during the war. Defendant denies the other allegations of paragraph 34.

Wherefore, the defendant having fully answered the amended complaint herein, prays that said amended complaint be dismissed and that it go hence with its costs.

(S.) Luther Day, John G. Ketterer, Counsel for Defendant.

Jones, Day, Cockley & Reavis, 1759 Union Commerce Building, Cleveland 14, Ohio.

Day, Cope, Ketterer, Raley & Wright, 1110 First National Bank Building, Canton 2, Ohio.

IN THE UNITED STATES DISTRICT COURT

[Title omitted]

ORDER ON MOTION OF THE TIMKEN ROLLER BEARING COMPANY TO RELEASE WITNESSES FROM OATH OF SECRECY—Filed March 18, 1948.

It appearing to the Court, upon motion of the defendant, The Timken Roller Bearing Company, for an order to release witnesses from the oath of secrecy taken before the Grand Jury in connection with the investigation of charges resulting in an indictment against General Motors Corporation, et al., Criminal Docket No. 18,915 in this Court, that an obligation of secrecy was imposed upon the following officers and employees of The Timken Roller Bearing Company who appeared before that Grand Jury:

Robert Riblet.
Sidney Partridge.
Albert Bertstrom.
Edwin H. Austin.
William E. Umstattd.
W. Robert Timken.
L. M. Klinedinst.
E. W. Austin.

and it further appearing to the Court that it is just and practicable that the above named witnesses should be released from that obligation of secrecy so that they may fully confer with counsel for The Timken Roller Bearing [fols. 68-72] Company and members of the organization of The Timken Roller Bearing Company in the preparation of the defense of this case.

Now, therefore, it is ordered that the above named witnesses who appeared before the Grand Jury be, and they are hereby released from the obligation of secrecy imposed upon them by the oath of secrecy and they may confer with counsel for The Timken Roller Bearing Company and members of the organization of The Timken Roller Bearing Company concerning their testimony before the Grand

Jury and all matters which pertain thereto, or which pertain to the defense of this case.

(S.) Freed, Judge.

March 18, 1948.

Notice by Clerk hereby waived.

(S.) Robert A. Nitschke, Per F. Cavanaugh.

[fols. 118-119] OPENING ARGUMENT FOR DEFENDANT

The French situation comes into the picture prior to 1927 in the fact that the evidence will disclose that British Timken had entered into a sublicense agreement with a French company known as S. M. G. Under this sublicense this S. M. G. Company had a right to make the bearings. Now, the evidence will show that the operation under that

sublicense was very unsatisfactory, practically from every point of view, until 1927, which is one of the crucial dates in this case, and which we believe your Honor will believe and which I think cannot be disputed was the beginning crucial date here. At that time, we have a situation where British Timken is operating under that assignment in Great Britain and in the territory of Great Britain, the United Kingdom, the Isle of Man, and Europe, with a sublicense to S. M. G. over in France, and the operations were generally of the character I have described.

* * * * * * *

[fols. 120-130] I cannot over-emphasize the importance of the situation in 1927 because, as we see it, the agreement which was made in 1927 between American Timken, the defendant, and Michael Dewar, is the basic, underlying agreement in this case. British Timken had no assets in 1927, it had made some money, and the record will show how much, it had a successful operation to a certain extent, but not, as I have already indicated, in the number of bearings that were sold, and that we hoped would indicate an acceptance by the British public of Timken Roller bearings. Its property was under lease from Wolsley. Its equipment was under lease. It had a contract by which it was making Timken roller bearings. That was a contract with the defendant, American Timken, and it was its sole authority for making Timken roller bearings. The contract had about a year and a half to run. My recollection is that these discussions took place early in 1927, perhaps the end of 1926—I know they did—and the contract expired the 1st of January, 1929.

* * * * * * *

[fols. 131-133] The Heads of Agreement were signed by Michael Dewar and American Timken, dated May 16, 1927. It is, to our minds, one of the most important documents in this case.

* * * * * * *

[fols. 134-135] So the ultimate control was in American Timken in that respect, the management and operation control was in Dewar.

* * * * * * *

[fol. 136] I want to talk about the contract, the first contract. That's January 1, 1928. That's when the complaint charges that the conspiracy began, some time in 1928. The evidence will show that whatever business British Timken had in 1928 was built up by reason of its relation to American Timken, and as of January 1, 1928, the first contract was drawn up between American Timken and British Timken. That contract will be in evidence. The Govern-
[fols. 137-162] ment will offer it and, of course, we will join in the offer of it. That's the contract that carries out pretty much the terms of the heads of agreement that was drawn up in May, 1927, between American Timken and Michael Dewar.

* * * * * * *

[fol. 163] Mr. Nitschke: I would like to call to the stand Mr. Klinedinst.

Thereupon the Government called as a witness Louis M. Klinedinst, who, being first duly sworn, testified as follows:

Direct examination

By Mr. Nitschke:

Q. Will you state your name?
A. Louis Meyers Klinedinst.
Q. What is your residence?
A. Hills and Dales, Canton, Ohio.
Q. What position do you hold with the Timken Roller Bearing Company?
A. Vice-president in charge of sales and Director.
Q. How long have you been with the Timken Roller Bearing Company?
A. Since April, 1905.
Q. What did you do for them at that time?
A. In the beginning?
Q. Yes.
A. I think I was an inspector at the start.
Q. Would you mind telling the character of the positions you have held with the company since that time up to date?

A. Well, for four or five years I think I was inspector, [fol. 164] that is, shop inspector. Following that I was follow-up man in charge of shipping, receiving, and so forth. Then I was transferred into sales; I had charge of the wagon and carriage axle division, selling axles and bearings for horse-drawn vehicles. That lasted until about 1915, when the company sold out that division of the business. Then I was assistant general sales manager for four or five years. About 1922 we decided to sell bearings in industries other than automotive and I had charge of what we call the whole industrial division, which included farm machinery, machine tools, road-building machinery, electrical devices, railroads, and what not. I had charge of that division, and in 1930 I was elected Vice-president, but still retaining that position.

Q. In charge of industrial sales?

A. Yes. In 1934 I was elected a director and put in charge of all sales, which position I hold today. That is substantially the way I recall it.

Q. You are the second ranking officer of the company, are you not?

A. No, I wouldn't say so. Henry Timken is the ranking officer, Chairman of the Board. Mr. Umstattd is President, and Henry Timken also holds the position of executive [fol. 165] vice-president.

Q. Let me put it this way: You are the second highest paid man in the company?

A. That is awfully nice of you to say that.

Q. Well, I won't ask you then whether it is true or not. I think it is true, though, isn't it?

A. I don't know.

Q. I wonder if you could tell the Court what anti-friction bearings are as distinguished from plain bearings?

A. Well, there are many types of anti-friction bearings but generally it is a series of rollers or balls maintained in a cage, rotating between two hardened surfaces, as against the plain bearing which slides over the shaft or spindle. That is essentially the main difference between a friction and anti-friction bearing. Now, there are different types of anti-friction bearings.

Q. Will you tell us what those are?

A. That is quite a long story. I will try to define, first, the tapered roller bearings, which contain the roller bear-

ings between two hardened surfaces. They are tapered to take the load radially and end-thrust.

Q. Will you tell us what radial and end thrust are?

[fol. 166] A. Well, the best way to define that is when you are sitting in your automobile and it is standing still you are putting a radial load on the bearings. If the automobile is driven around a curve it tries to pitch you out, and that is thrust, and I think that is the easiest way to illustrate that: if you went around a curve very rapidly you will feel the thrust trying to push you out of the car.

Q. What other types of bearings are there?

A. Then there are several types of ball bearings. What is called the radex type, which takes somewhat of the thrust. That has a series of balls rotating between two races. Then another type of ball bearing called the deep groove ball bearing, which has a series of balls rotating between two races that will take a slight amount of end thrust and the radial load. Then there is another type of ball bearing which is an all-thrust bearing, no radial load whatever, two races side by side and the balls lying between with no radial capacity. I think that covers the ball bearings.

Then there are several types of straight roller bearings, some of which will take a slight amount of thrust, the major parts of the straight roller bearing are two cylindrical [fol. 167] races with a series of rollers, which have to be backed up on the sides to hold the bearings in place. Another type of straight roller bearing which is popular has a grooved race-way which holds the rollers in place on the inside, and there is a washer on the outside of the race to hold the rollers from moving back and forth. That is the type of bearing used where they want to anchor one end so the shaft can't float through it.

Then there is a bearing called the hour-glass type, which is spherangular in a way but the hour-glass is a type where the rollers are made in the form of a sphere and the races the same way so you get what is called self-alignment in the bearing itself. Then there is a type of spherangular bearing which is called the barrel type. That particular type is the same with the rollers rolling between two hardened surfaces, and is also a self-aligning bearing.

Q. Now, you have given us tapered roller bearings, ball bearings, straight roller and two types of spherangular.

A. I think that about covers it. There may be some other types but they have very narrow usages.

Mr. Nitschke: I would like to have marked for identification as Government's Exhibit 1 a pamphlet entitled [fol. 168] "Anti-friction Bearings" published by the Timken Roller Bearing Company.

(So marked.)

Q. Do you recognize that pamphlet?

A. Yes.

Q. Is that put out by the Timken Roller Bearing Company?

A. It is.

Q. I would like to call your attention to the fifth page. Does that show illustrations of some of these various types of bearings you have described?

A. Not all of them. It doesn't show the spherangular bearing. It doesn't show either one of the spherangular, either the hour-glass type of the barrel type. It does describe the two types of ball bearings—flat thrust and radial.

Q. In the back of the front page, is that a picture of the Timken Roller Bearing plant at Canton?

A. Yes, both Canton and Columbus. I don't think they are the latest pictures but they were at one time.

Q. Mr. Klinedinst, could you describe for us the component parts of a tapered roller bearing?

A. I would prefer to have a bearing. There is one there in my portfolio. It is easier to do it by showing you a bearing.

The Court: Possibly before we get into that we better take a ten minute recess.

(Recess taken.)

[fol. 169] Mr. Nitschke: I have had marked for identification as Government's Exhibit 2 the Timken Reference Manual, and marked for identification as Government's Exhibit 3 a tapered roller bearing carrying the numbers 3984 on the cone and 3920 on the cup.

Q. Mr. Klinedinst, I was asking you before the recess if you could describe to the court the component parts of a tapered roller bearing, and I show you from Government's Exhibit 2, being Timken Reference Manual, on page

6, a diagram J-2, and ask you if that shows the component parts of a tapered roller bearing?

A. Yes, the one is what we term the outside race and the other the inside race, or the track for the rolls.

Q. That's called a cone?

A. That's called a cone, and the other is the cage with a series of pockets that hold the rollers. This shows a complete assembly, J-3 shows the complete assembly.

Q. That's also on page 6?

A. Also on page 6.

Q. I show you also Government's Exhibit 3——

[fol. 170] Q. Mr. Klinedinst, just before the recess you said you would like to illustrate to the judge from a Timken roller bearing what you had said before about thrust. I'll hand you this bearing.

A. This is different in design from any other type of bearing in, as I said before, that the rollers and races are tapered, and they are tapered for two reasons. One is to make the bearing adjustable, so it can be drawn up, can be adjusted by moving the cone further into the cup, and the other reason is in order to carry a heavy thrust load. The Timken bearing differs from all other types of bearings because it carries the load over the entire length of the roller. There are a lot of bearings that carry some thrust, ball bearings carry a little thrust, and a number of them carry a certain amount of thrust, spherangular bearings carry some, but none carries the same amount of thrust as the Timken roller bearing because, as I said, we carry the load over the entire length of the roller. That in itself is a unit and is never used separately. It takes two, they must be mounted in pairs always, because if you mount one singly it pushes the roller right out of the cup.

[fol. 171] Q. They are mounted in pairs?

A. They must be mounted in pairs, you can never use a Timken roller bearing alone.

Q. Tapered roller bearing.

A. Yes.

Q. I wonder, Mr. Klinedinst, if you can tell the court some of the uses of tapered roller bearings?

A. Well, I think I could describe that better by telling what some of the places are where they are not used. I think the largest use for tapered roller bearings is on auto-

mobiles and trucks and farm machinery. We find, for example, the average automobile has anywhere from ten to twelve tapered roller bearings, except General Motors, who make their own bearings, by the way. In farm machinery, tractors, for example, there are as high as twenty-two tapered bearings in one machine. In machine tools, take for example the Cincinnati miller, we might find fifty tapered roller bearings in one machine. In road building machinery, such things as road scrapers, cement mixers, and so on, you'll find anywhere from two to probably fifty bearings. Another large use of roller bearings is on railroad rolling stock, particularly in locomotives, gas, electric, and diesel.

[fol. 172] Q. Is that on the wheels?

A. Gas, electric, and diesel locomotives.

Q. They are used in the engines?

A. In the wheels.

Q. In the wheels?

A. Yes, in the wheels, in some cases on the crank shafts of steam locomotives, and in passenger cars, dining cars, club cars, and so on. Freight cars are our biggest market. We haven't yet made any great inroads there——

Q. Those are enough examples, Mr. Klinedinst.

A. Is that enough?

Q. Yes, I think so. I would like to call your attention to page 17 of Government's Exhibit 2, and ask you if on that page and on the following page are shown several applications for tapered roller bearings?

A. Well, we show there a marine drive engine reduction gear unit, which is used in paper mills and rolling mills and so on; and we use an automotive front wheel which shows the bearing in the inner and outer position; this happens to be a disc plow used by a farmer to disc his farm, if you ever saw them plow the furrows, this wheel is lying over on the side, that's where the thrust is getting very heavy, thrust on the inside bearing. The one in the bottom left corner is a worm drive truck, and the one at [fol. 173] the bottom right is a Jordan engine for paper mills. Jordan doesn't mean anything except that the man that invented this was named Jordan.

Q. And on the following pages are there also further illustrations?

A. Those are typical industrial applications.

Q. Does page 24 show illustrations of an automobile and a truck showing the applications for tapered roller bearings?

A. The upper position on page 24 shows a typical application of bearings in a passenger car, showing the bearings in the rear wheel, differential, transmission, and so on. The picture at the bottom of the page is a conventional type of motor truck showing the various positions in that application to show 26 bearings on that one. That's a typical truck.

Mr. Nitschke: We wish to offer in evidence Government's Exhibits 1, 2, and 3.

Mr. Day: No objection.

The Court: They may be received.

Q. Mr. Klinedinst, what are taper roller bearings made of, that is, what are the raw materials used to make them?

A. Well, tapered roller bearings are made out of a low [fol. 174] carbonized steel, I think it's number 4615, as contrasted with the high carbon steel used in ball bearings, where you harden it all the way through.

Q. In what forms and shapes do they come in for transformation into tapered roller bearings?

A. Well, they start out from the ingots and are rolled down, and made into tube, and both the inside and outside races are cut off from the tubing, you do that in the screw machine. The rollers are made out of cold bar steel, wire we call it, which is practically the same analysis as we use in the bearings.

Q. What are the cages made out of?

A. Straight carbon sheet steel.

Q. They are pressed out of that?

A. Well, sheet steel is used in automotive bodies, and all of that, and the steel is bought by us in strips and we perforate the cages.

Q. Could you tell the court how small and how large tapered roller bearings are made?

A. I think the smallest tapered roller bearing we have ever made is about 1½ inches outside diameter, with a ⅜ bore.

Q. About how much would that weigh?

A. Well, that gets down to a matter of ounces. The larg- [fol. 175] est bearing is a 26 inch bore—the largest tapered

bearing has a 36 inch bore and 58 inches outside diameter and weighs about 12,000 pounds.

The Court: What was that, 58 inches outside diameter?

The Witness: 58 inches outside diameter and weighs about 12,000 pounds.

Q. In other words, six tons?

A. Yes. In other words, a bearing like that is used very largely on rolling mills for rolling steel.

Q. What would a bearing like that cost?

A. Oh, I don't know. I guess a dollar a pound.

Q. As much as $12,000?

A. Yes.

Q. And how much would the smallest bearing cost?

A. About a quarter.

Q. Mr. Klinedinst, how does the Timken Roller Bearing Company sell tapered roller bearings?

A. The selling of tapered roller bearings really starts with machinery sales work, you take a manufacturer of equipment who makes machinery in which bearings can be used. A sales engineer will get drawings of the equipment, have them brought into the office, and a layout is made of the drawings showing the bearings mounted in [fol. 176] the various positions.

Q. That's on bearing sales to manufacturers of equipment that are going to install bearings in the equipment?

A. That's exactly what I'm trying to describe right now. When those drawings are made our engineers follow that through, and the salesman follows it through. They have to sell that layout, and they have to sell that in competition with probably four or five other drawings that other manufacturers have made, and the man with the best salesman and the best product usually gets the business. I want to make that point clear, because when you get a drawing and lay the bearings in it doesn't mean we have the business. That's when competition starts and we have got to sell that over the other fellows', and there may be ten, twelve, or fifteen, or however many competitors you may have.

Q. Is there any difference in the way you sell bearings for replacement purposes, that is, where a bearing is worn out in a machine somewhere?

A. All the difference in the world. In selling a bearing for replacement all we do is make the bearing available.

Availability is the kingpin in handling service. We don't sell any bearings to replace other bearings, it has to be a [fol. 177] Timken bearing to replace a Timken bearing.

Q. Do you have your own distributors handling the sale of bearings, or do you sell to companies engaged in that work?

A. Well, we have a series of sales offices. From those offices we appoint distributors. For example, I think in Cleveland here we don't have a branch here, it's operated under the Detroit branch, and I think we have eight or ten distributors here. That's done by the Detroit sales office, they appoint the distributors around Cleveland, and they resell, make the bearings available to anyone who may have a breakdown.

Q. And these distributors buy the bearings from you?

A. Yes, sir.

Q. And resell them to the people that need them?

A. Yes, sir.

Q. Is there any difference in how you sell bearings for export from the way you sell them in the United States?

A. No, we have agents in places like South America who appoint these authorized distributors for us. I think in South America we have got possibly two or three agents, and we have one in Mexico and one in Cuba, and so on, and let's say he spreads propoganda for us, and he picks out [fol. 178] the proper distributor and he appoints him, and then we make sales to him directly, or sometimes from the authorized agent.

Q. What is meant in your business by a manufacturing account?

A. Chrysler Motor Company is a manufacturing account.

Q. That is, a person who buys your bearings for inclusion in some product he is manufacturing?

A. That's right.

Q. Is that correct?

A. That is correct.

Q. What is meant in your business by the phrase "service bearings" or "replacement bearings"?

A. Well, there is no difference between a service bearing and a bearing that is used in a piece of equipment. The bearings are exactly alike, exactly the same, and it becomes a service bearing, I would say, when it gets out in the hands of an authorized distributor who does not sell to

a manufacturer, but so far as the bearings are concerned they are exactly the same.

Q. Can you tell us approximately what percentage of your sales in the United States are sales for original application and what percentage of your sales are sales for [fol. 179] replacement or service?

A. I don't know that division exactly, but my guess would be it's under five percent.

Q. Under five percent for replacement?

A. Yes.

Q. And is there any difference in that percentage as far as your export trade is concerned?

A. I imagine it would be less, although I have never made any figures on that. It's very difficult to set up figures like that because we don't handle much of it ourselves.

Q. Mr. Klinedinst, your tapered roller bearings, can they be interchanged with other types of antifriction bearings, such as ball bearings and straight roller bearings?

A. There may be certain instances where they will interchange in the bore, o.d. and width, but not in the mounting.

Q. In the what?

A. In the mounting of the bearing. As I told you before, the tapered roller bearing is adjustable. You might find a ball bearing the same size as the tapered roller bearing, but you couldn't put it in where the tapered roller bearing was, or you couldn't put the tapered roller bearing in where [fol. 180] the ball bearing had been, because you haven't got provision in the mounting, in the engineering of the position to take care of a tapered roller bearing.

Q. So that if a bearing in a Ford car front wheel, tapered roller bearing, wears out, it would not be sound engineering to replace it with a ball bearing or straight roller bearing?

A. You couldn't do it.

Q. You couldn't do it?

A. No, sir.

Q. And if the car were designed with ball bearings in the front wheels, could you replace them with a tapered roller bearing?

A. Not unless you made one especially for the application. That applies to the front wheels now, because you have got adjustment on both ball and tapered roller.

Q. That's an exceptional case where you could interchange?

A. When it could be done, but you would have to make the bearing fit the place, that is the bore, o.d. and width.

Q. Mr. Klinedinst, is Timken the largest manufacturer of tapered roller bearings in the United States?

A. Yes.

Q. Does it make anything else besides tapered roller bearings?

[fol. 181] A. Rock bits.

Q. What are they?

A. That's an attachable bit for rock drilling, a little bit you stick in the end of the drill rod, saving a lot of expense. The old method was to take the long drill rod and when it got dull replace it and throw it away. Now they use these rock bits in the end of the drill rod. We make those in the Mount Vernon plant and in Colorado Springs.

Q. Do you make anything else?

A. Well, we make various kinds of steels.

Q. You have a steel mill?

A. Yes.

Q. Is that steel used in the manufacture of your own tapered roller bearings?

A. Yes, sir.

Q. And do you also sell some of that steel?

A. Yes, sir.

Q. To other bearing manufacturers?

A. Yes, sir.

Q. Has Timken always been the largest manufacturer of tapered roller bearings in the United States?

[fol. 182] A. As far as I recall, yes.

Q. At least since 1904?

A. Yes.

Q. And was it the largest in 1927, 1928?

A. Yes.

Q. Do you have any idea of approximately what percentage of the United States production of tapered roller bearings Timken had in 1927 and 1928?

A. I wouldn't know. If I knew what the other fellows produced I could tell you that, but I don't know.

Q. Well, could you give us an approximation, give us your opinion as sales manager, about what it was?

A. Oh, if I had to make a guess I would say probably from 50 to 60 per cent.

Q. In 1927?

A. Yes. That's just a guess, by the way, because I have no figures on that.

Q. You think that's probably a fairly conservative guess?

A. I hope so.

Q. In 1927 or 1928, Mr. Klinedinst, who else made tapered roller bearings besides Timken, to the best of your recollection?

[fol. 183] A. Why, I think in 1927 Bower started that year, I believe. I think that's all there was at that time.

Q. And is it your recollection that they had as much as 50 percent of the business at that time?

A. I don't know. They got started sometime around there, and I don't know what they had. They had quite a bit of business. I don't think they had that much, though. That sounds like quite a lot, a little high for just getting started.

Q. I know as sales manager you probably wouldn't want to over-estimate the percentage of your company's sales, but isn't it true, Mr. Klinedinst, that about 1927 you had pretty nearly all the tapered roller bearing business in the United States?

A. Well, there was only one manufacturer that I can tell you about and I don't know how much they had. I would say we probably had the majority of it.

Q. Were there any tapered roller bearing manufacturers in the United States before 1927 or 1928?

A. Yes.

Q. Who were they?

A. Gilliam Manufacturing Company started, I think, in 1916 or 1917, and the Buck Roller Bearing Company of [fol. 184] Toledo started about the same time, or a little later. And the Wright Roller Bearing Company, they were a little later, probably 1920.

Q. What happened to those companies?

A. Well, I think they went broke, and we bought some of the machinery. They are not in existence any more.

Q. You think you bought them out?

A. We bought the assets. I don't know just when it was.

Q. Do you know what percentage of the tapered roller bearing production in dollars Timken has today?

A. What percentage in dollars?

Q. Yes.

A. No. I don't.

Q. Could you give us an approximation of that?

A. No, I haven't the least idea without knowing what the other fellow has. There are more tapered roller bearing companies today than we ever had in our history.

Q. Who else is making them now?

A. Well, the Tyson Roller Bearing Company in Massillon, Ohio; The Bower Roller Bearing Company in Detroit. The Bantam Roller Bearing Company of South Bend. Pratt Company of Joliet, Illinois, and there is one other in Muskegon, Michigan. I can't think of the name of that now.

[fol. 185] Q. Do all those companies make bearings for sale to manufacturing accounts?

A. Yes.

Q. Mr. Klinedinst, what is the Timken Detroit Axle Company?

A. What are they?

Q. Yes.

A. Well, they are a manufacturer of truck axles for heavy duty trucks, busses, and so on.

Q. Do they have any connection with Timken Roller Bearing Company?

A. And they manufacture the Timken oil burners.

Q. Do you know if they have any connection with the Timken Roller Bearing Company?

A. To my knowledge, none.

Q. Do you sell them bearings?

A. We do.

Q. For original application?

A. Yes, sir.

Q. And also for replacement?

A. Yes, sir.

Q. That is, for replacement in their axles when the bearings wear out?

[fol. 186] A. Well, we think they are for replacement. They don't make any distinction. They order so many bearings from us. We don't know where they put them. We have no way of knowing that, how many are for replacement and how many go into the axles.

Q. I would like to ask you about another company that I think we are going to hear quite a bit about in this trial. What is S. K. F.?

A. Antifriction bearing manufacturer.

Q. Do you know what the initials S. K. F. stand for?

A. Svenska Kugellager Fabriken. If there are any S. K. F. men here they will probably call me on that.

Q. Do they have a plant in the United States?

A. Yes, sir.

Q. What is the name of the company in the United States?

A. I think it's S. K. F., Inc.

Q. S. K. F. Industries, Inc.?

A. Yes, I believe that's right.

Q. That's located in Philadelphia?

A. Yes, sir.

Q. Are there other S. K. F. companies outside the United States?

A. Yes, sir.

Q. Do you know where they are located?

[fol. 187]. A. I can't name all of them. I can give you Skefco Company in England, and the company in Stockholm—I can't tell you the names of them, but there are several others.

Q. They make bearings with the trademark S. K. F. on them?

A. Yes, sir.

Q. Have you ever heard of the initials F. & S. in connection with the S. K. F. Company?

A. F. & S.?

Q. Yes.

A. I recall a company like that in Germany, yes, sir.

Q. That's Fechtel & Sachs?

A. Yes, sir.

Q. Do you know if that was taken over by S. K. F.?

A. I don't know.

Q. But you have heard of bearings bearing those initials which came from Germany?

A. I have seen them, yes, sir.

Q. For purposes of the record I would like to have you identify some of the people who are in your organization, or who have been. Who was Don P. Hess?

A. Donald Hess was at one time—I think he had the position of assistant works manager for a while in the Canton plant, and he was later on transfered to Columbus [fol. 188] and was our Columbus plant manager for a number of years, and then he was moved back to Canton as assistant to the president.

Q. Was that around 1928?

A. I believe so. He resigned.

Q. Do you know when he resigned?

A. I couldn't tell you the date, no.

Q. And he was assistant to the president until he resigned?

A. That's right.

Q. And who was president during the time he was assistant?

A. M. T. Lothrop.

Q. Do you know what Mr. Hess' duties were?

A. Well, as I told you, he was assistant works manager at the Canton plant. The duties comprised the conducting of the affairs of the shop, and in Columbus he had complete charge of the Columbus plant while he was there. When he came back to Canton his duties were executive, as assistant to the chief executive. It would be most difficult just to define those duties. I don't think I could do that.

Q. Do you know if he had any connection with your foreign activities?

A. I know he made several trips to Europe.

[fol. 189] Q. And who was R. E. Forsythe?

A. He was a young boy that was brought in and worked up through the various divisions to an executive assistant.

Q. Whose assistant is he now?

A. Right now he is assistant general manager of the foreign division under Mr. Sauer.

Q. Do you know what position he held before the war?

A. Well, he was executive assistant before the war.

Q. And assistant to whom then?

A. Well, he was assistant to me and to our president, Mr. Umstattd. He had quite a lot of bosses, I assure you.

Q. Who is Jud Spray?

A. Spray was formerly vice president in charge of sales.

Q. About what time was that?

A. Up to about 1933—no, from 1932 to about 1934. In 1934 he resigned.

Q. And at the present time Mr. Umstattd is president of the company, is he not?

A. He is.

Q. How long has he been president?

A. My guess would be fifteen years, although I may be wrong on that.

Q. Do you know what his position was back in 1928?

[fol. 190] A. No, I don't recall. He was in an executive

position in the shop, I don't know whether he was works manager or assistant works manager. I just don't recall, but he was one of the executives in the factory.

Q. And who was Harry J. Porter?

A. Harry Porter was also a former vice president in charge of sales. He preceded Mr. Spray.

Q. This Porter I'm speaking of is the one that was in Detroit, Harry J. Porter?

A. That's the one.

Q. How long was he vice president in charge of sales?

A. I think about—I think he was elected vice president in 1927, but he retired. He retired from the company, I think, about 1938 or 1939.

Q. What was his position at the time he retired?

A. Vice president in charge of sales.

Q. Is that automotive sales?

A. Well, yes, automotive sales.

Q. Do you know a man by the name of G. H. Turner?

A. Yes.

Q. What is his position?

A. He has charge of labor relations.

[fol. 191] Q. Do you know what he was doing around 1937 and 1938?

A. I have a hazy recollection, I think he was on rock bits. I think we had him in the field introducing our rock bit.

Q. Do you know if he had anything to do with trademarks or patents?

A. Not to my knowledge.

Q. And what is W. Robert Timken's position in the company?

A. He is a vice president and a director.

Q. And what are his duties?

A. His duties are primarily executive duties on finances, I believe.

Q. How long has he been vice president?

A. My guess would be ten years. I don't have any dates on that.

Mr. Nitschke: I would like to have marked for identification as Government's Exhibit 4, a document dated January 16, 1933, by L. M. Klinedinst.

[fol. 192] Further examination of L. M. Klinedinst.

By Mr. Nitschke:

Q. I want to show you Government's Exhibit 4 for identification, which is a memorandum dated January 16, 1933, and bears the typewritten name "L. M. Klinedinst" at the bottom, and I direct your attention to the first part of the second paragraph on the last page, where you say: "None of us and we here at the home office must be included know very much about selling in a highly competitive market. We have had about eight years, which is just about the length of time we took developing our Industrial Department, selling our tapered roller bearings without any tapered roller bearing competition."

Mr. Klinedinst, does that refresh your recollection as to the position of Timken in the tapered roller bearing market in 1927?

A. Not exactly. There were some competitors, Gilliam [fol. 193] and Bock, which are referred to, have passed out of the picture. There are a number of others which I looked up last night and I want to get those in the record.

The International Harvester Company——

Q. These are companies that were making bearings in 1927?

A. Making tapered roller bearings in '27. W. J. Pratt Company, Messenger Bearings Company, the Bower Roller Bearing Company.

The Court: I think you mentioned that yesterday.

Mr. Nitschke: Yes, I think you did. You are mentioning all of them?

The Court: Is that the same one or another one? That is the reason I asked.

The Witness: Bower I mentioned yesterday.

Mr. Day: I think the witness is a little hard of hearing, he probably didn't hear your question.

The Witness: What was the question?

Mr. Nitschke: The Judge wondered whether you were giving all the companies in the business making roller bearings in 1927, or whether these are additional ones.

[fol. 194] The Witness: That is right, the companies that were making tapered roller bearings in 1927, and Bower Roller Bearing Company, the Hoover Company, the Orange

Roller Bearing Company, and the Tiger Bearings Company.

Q. What was the last one Tiger?

A. Tiger Bearings Company.

Q. Mr. Klinedinst, what is your present recollection now as to Timken's position in 1927, what percentage of the market is it your opinion they had in 1927?

A. Of course in 1927 tapered roller bearings had not been developed to the extent that they are now. We were just getting along in our industrial division, and the biggest use for tapered roller bearings or any type of bearings at that time was really in automobile equipment. There was of course some we were getting along in in general industry, but the growth of that was later. As to the position of Timken in relation to other companies, I don't know what the percentage of business was, I have no way to check it any more than we have now. We know what our own total sales were, of course, in 1927, but I do not know what the other fellows' sales were, and without those it would be impossible to tell the Court what our percentage of the tapered roller business was at that time.

Q. Do you think you could give the Court an estimate, an [fol. 195] approximate estimate, your opinion as sales manager?

A. I don't think my opinion would be any good. In the first place it is twenty years ago, and I can't remember details back that far.

Mr. Nitschke: I offer Government's Exhibit 4 in evidence, your Honor.

[fol. 196] The Court: Suppose you do it. Suppose you have a copy of the second to the last paragraph made and offer it as an exhibit. This is Exhibit 5?

Mr. Nitschke: This is Exhibit 4.

The Court: That is right. That is the document dated January 16, 1933.

Mr. Nitschke: All right, we will do that.

Q. Mr. Klinedinst, do you think you could give the Court an estimate at the present time of Timken's position in the tapered roller bearing market of the United States in 1943?

[fol. 197] A. No, that would be a very wild guess for the reason that I have no way of getting figures. As an example——

Q. Well, that is all right.

The Court: Was that question with reference to tapered roller bearings or all roller bearings?

The Reporter: Tapered roller bearings.

Mr. Nitschke: I have had marked for identification as Government's Exhibit 5 a memorandum addressed to A. M. Donze, by L. M. Klinedinst, dated May 27, 1943.

Q. Do you recognize that document, Mr. Klinedinst?

A. Yes, I recognize that.

Q. Who is Mr. Donze?

A. Mr. Donze is vice-president in charge of operations, and this letter was addressed to him for the purpose of having him take better care of the customers.

Q. I will call your attention to the third paragraph of this letter where you said: "Many of the customers listed on the attached sheet have used our company exclusively for many years. They have not known of two sources of supply. They do not know that Timken supplied 85% of the tapered roller bearings in the country."

Does that refresh your recollection, Mr. Klinedinst, as [fol. 198] to Timken's percentage?

A. Well, I can testify as to the writing that letter, not as to the accuracy of the figures. However, if there was any such figure like 85% it certainly was a lot less than that when we lost these customers' business, or part of them, it showed we were slipping, and that was the reason for writing the letter, the other fellows were taking the business away from us and I wrote the letter, yes.

Q. At some time prior to 1943 you believed you did have 85%?

A. The 85% is very frankly, I checked last night with my associates, I don't know who compiled it for me, it was given to me by somebody, I certainly wouldn't testify before the Court as to the accuracy of it, because, in the first place, I don't think it is right. I am pretty certain it is not right.

Q. You think you were making an incorrect statement in this memorandum to Mr. Donse?

A. Not necessarily that.

Q. You thought it was an opinion——

Mr. Ketterer: Just let the witness answer.

A. (Continued) The letter was written to impress Mr. Donse that we were losing business. Just how some of

the other details crept in there I don't know but I cer-
[fol. 199] tainly have no way now, didn't have then to determine the exact amount in percentage of tapered roller bearings that the Timken Roller Bearing Company had. Of course we know our own but we can't find out the other fellows'. There is only one company in the tapered roller bearing business that publishes their figures and that is the Bower Company. And by the way, it came out the other day they had $20,000,000 worth of business last year. They made our company shake in its boots.

Q. What I want to have clear, would you say to the Court that is not your opinion?

A. That was undoubtedly a guess.

Q. You think it is high?

A. I think it is too high.

Q. You think it is high?

A. I do.

Mr. Nitschke: I wish to offer, I think in this case I perhaps should offer the first three paragraphs of Mr. Klinedinst's memorandum, which is Plaintiff's Exhibit 5.

The Court: Again excluding the other paragraphs. Without reading them, I am assuming they have no relevancy to the question asked. That is the reason I excluded the
[fol. 200] balance of that prior exhibit. Now, in making that statement, I repeat I assume that the balance of the exhibit has no relevancy to the matter in controversy. Now, is that true with reference to this exhibit?

Mr. Nitschke: Well, your Honor, I am satisfied to offer the portion I read.

The Court: Only these portions?

Mr. Nitschke: Yes.

The Court: In other words, I don't want to mutilate the exhibits. Where you offer paragraphs that are taken out of their proper context, the contents will have no meaning.

Mr. Nitschke: Well, that was the reason I was offering the first three rather than just the third which I read. I thought it might have that effect. But I think the third paragraph is sufficient and I will limit my offer to the third paragraph.

The Court: All right, it may be received.

Mr. Day: We have no objection to your offering the
[fol. 201] whole exhibit if you wish, this second one, the

Donse memorandum. Of course that is up to you whether you desire to do it or not.

Mr. Nitschke: I will confine my offer to the portion I read, the third paragraph.

The Court: The third paragraph only of Plaintiff's Exhibit 5? I am assuming these two volumes of exhibits which you have given me do not contain all the exhibits?

Mr. Nitschke: No, your Honor, they do not.

The Court: I think also that as I do not find these two I am to assume the two volumes do not contain all the exhibits.

Mr. Nitschke: That is correct. They contained all I anticipated using when the trial started. I didn't know I would use these. There may be a few others.

The Court: This is exhibit what?

Mr. Nitschke: No. 5.

[fol. 202] Q. We were talking, Mr. Klinedinst, about the problem of interchangeability yesterday, and there is just one thing I would like to clear up on that. Are there some applications for anti-friction bearings, such as ball bearings, for which tapered bearings cannot be used?

A. Yes, sir, many of them.

Q. What are some of those?

A. Electric motors, of which there are many millions built. We went into that industry and failed, got out of it, and it cost us several million dollars to get out of it. That [fol. 203] is a field of the ball bearing, it is a type where the bearings have to float, and the tapered bearing won't float. The two applications, one at each end, makes a very excellent application. The ball bearing people have had almost 100% of that business. That is one.

Q. Are ball bearings made in smaller sizes than tapered roller bearings?

A. Yes, sir.

Q. Than tapered roller bearings can be made in?

A. Yes, sir.

Mr. Nitschke: That is all I have at present.

Cross-examination of L. M. Klinedinst.

By Mr. Ketterer:

Q. Mr. Klinedinst, I believe you testified yesterday that you came with the Timken Roller Bearing Company in 1904 or 5?

A. Early in '05, to be exact.

Q. You have been with the company ever since that time?

A. Yes, sir.

Q. In 1905 how large was the Timken Roller Bearing Company in respect to the number of employees it had?

A. I believe 65. I think there is a photograph in the court that will show that.

Q. And it has grown progressively larger since the time [fol. 204] you came there in 1905?

A. It has.

Q. To your knowledge from 1905 up until 1922 did the Timken Roller Bearing Company make any other type of bearing other than tapered roller bearings?

A. No, sir.

Q. That was the exclusive product that they manufactured during that period?

A. Yes, sir.

Q. Now, what competition did you have during that period as to anti-friction bearings?

A. Our largest competitor—you are talking now about the period up to 1922?

Q. Up to 1922.

A. Our largest competitor then was ball bearings and plain bearings, ball bearings very largely in automobiles.

Q. And in the applications in which tapered roller bearings were used from 1905 until 1922 what is the fact as to whether or not they were largely used in automobiles and trucks and things of that sort?

A. I don't just get that.

(Question read by reporter.)

A. Yes, they were largely used in automobiles and trucks, practically no other applications.

[fol. 205] Q. And the competition that you had from ball bearings and tapered roller bearings was for use in automobiles and trucks, too, was it?

A. Yes.

Q. Now, was the ball bearing an older type of anti-friction bearing in the American market or had it been developed later than the tapered roller bearing?

A. The ball bearing was developed a number of years before the tapered roller bearing. As a matter of fact the

first ball bearings were brought here from Europe by Hess & Bright.

Q. And did the advent of the ball bearings in the anti-friction bearing market in America, did that precede the development of the tapered roller bearing in America?

A. Quite so.

Q. How much, by how many years did it precede the development of tapered roller bearings?

A. Well, tapered roller bearings actually were not developed to any extent until around 1905 and '06. Previous to that time everything was on ball bearings, all the automobiles. Of course there weren't so many, a lot of different kinds, but not a lot of cars and trucks, but they were practically exclusively ball bearings and straight roller bearings.

[fol. 206] Q. Then is it correct, Mr. Klinedinst, that in the period from 1905 to 1922 that the operations of the Timken Roller Bearing Company in developing tapered roller bearings in competition with the ball bearings was a process of putting out the ball bearing out of the automobile applications?

A. That is it exactly.

Q. And were ball bearings used during that period in the same kind of applications as tapered roller bearings?

A. Entirely so.

Q. Now, when you say the anti-friction bearing industry, Mr. Klinedinst, I would like to ask you what types of anti-friction bearings you include in that general definition?

A. Ball, straight roller bearing, spherangular, I would say that that would include the general line of bearings.

Q. Of anti-frictions?

A. Anti-friction bearings, yes.

Q. Without including tapered?

A. I have got to include tapered.

Q. Now, is there any competition between any other type of bearings and anti-friction bearings of the classes that you have described?

A. And tapered roller bearings?

Q. Well, is there any competition for business between [fol. 207] the types of anti-friction bearings you have described and any other types of bearings?

A. Yes, decidedly so.

Q. And what other types of bearings are in competition with the anti-friction bearing business?

A. Plain bearings, that includes bronze bushings, micarda bearings, there are probably more plain bearings made than all anti-friction bearings combined.

Q. So that we may better understand what you mean by plain bearings, will you refer for the Court to some of the common types of plain bearings and the applications to which they are applied?

A. Yes, we can only look at freight trains, and you can see they have a half bronze bearing which is called—I forget what the name of it is now—but practically 100% of all the freight cars operating on American railroads are of this plain bronze bearings. And it is a real competitor of the tapered roller bearing or anti-friction bearing in railroad use. There are others, of course, if you want me to proceed on that. Take the steel mills, some steel mills are going in to the roller bearings, tapered roller bearings, and barrel type, such as made by the S.K.F. Company; but the biggest competitor is the people who make the roller mill bearings, the Mesta Machine Company, and they use [fol. 208] the plain bearing on the back-up roll. The Morgan Construction Company at Worcester, who are in the bearing business, they call their bearing the morgoil, which is essentially a plain bearing.

Q. Is that at Worcester or Alliance?

A. Worcester, Massachusetts. There are many other applications of plain bearings where anti-friction bearings can be used but the market has not been broken down yet. There are millions of wheelbarrows and railroad trains and steel mills and many applications are still of those different types of plain bearings.

Q. Now, you were asked a while ago on direct examination whether there were any types of any applications in which ball bearings can be used and tapered roller bearings cannot be used. I believe you said there were some?

A. Yes,

Q. Now I want to ask you whether there are any large sizes of tapered roller bearings which are suitable to applications in which ball bearings are not suitable?

A. Yes. There are in the larger sizes places where the tapered roller bearings are suitable, whereas a ball would have to be very large to go into the same place that the tapered roller bearing will go, not only the tapered roller bearing but the straight roller bearing, the spherangular

[fol. 209] roller bearing, anti-friction, and the barrel type, such as made by the SKF.

Q. In this group of small applications on electric motors, I believe that was the example you used a little while ago, in this group of small applications can you give us some estimate of the total of the anti-friction bearing business represented by the small applications for which tapered roller bearings are not suitable and ball bearings are?

A. No, I couldn't but the market is very large. I would say in the electric motor industry alone probably the market probably is a market for ten million bearings where the tapered roller bearing isn't at all suitable, and where ball bearings are now used.

Q. And that is, I think you said a while ago, because of the fact the tapered roller bearing would float in the application?

A. In the first place the tapered roller bearing has certain peculiarities. It will not lubricate itself very well, and a ball bearing can operate with a very small amount of lubrication. That is point 1.

Point 2 is you must, in an electric motor, because of the expansion of the armature shaft, you must devise float. You must be able to have the armature shaft expand, and the bearing must move with it. The tapered roller bearing [fol. 210] will not move with it because it is a separable unit, but the ball bearing is a self-contained unit and mounted on the end of a shaft, as that shaft expands it moves the bearing on the end out a little farther, therefore it doesn't pinch the bearings and burn them out.

Q. Now, in between the small applications in which you say ball bearings are used in preference to tapered roller bearings, and the large applications in which you say it is impractical because of the size of the balls to use ball bearings, what is the fact as to whether there is competition at all times in the anti-friction bearing industry between tapered roller bearings, ball bearings, straight roller bearings and a combination of the three?

A. Well, I would say that on general applications, general industrial applications, farm machinery and automobiles, the ball bearing can be used just as well as the tapered roller bearing and straight roller bearing, but the whole thing becomes a matter of engineering and price and salesmanship. As I repeated yesterday, we don't go and sell so many bearings over the counter. We make a

lay-out and all the other bearing companies make a lay-out, also, with their product, and the engineers of the manufacturing company take those lay-outs, they go over them, and whichever one seems to make the best mounting, whatever one seems to be the most economical mounting, that is the [fol. 211] one they buy. It may be ball bearings, roller bearings, spherangular bearings, in some cases it may be plain bearings.

Q. And would you say that is the great bulk of the anti-friction bearing business as such, is the competition between the various types of anti-friction bearings?

A. I would, sir.

Q. That is, as to the number of applications and the uses of the different types of bearings?

A. Yes, sir.

Q. Is it also correct in that connection you also have the problem of competing with various types of plain bearings?

A. Absolutely.

Q. And part of the business of all anti-friction bearing manufacturers, including Timken, is the persuade users of plain bearings to substitute anti-friction bearings for plain bearings?

A. That is exactly it. The entire industry faces the same problem that we face on that.

Q. Now, you were asked yesterday, or you made some statement yesterday, as I understood it, that in 1922 the Timken Roller Bearing Company embarked on a program of industrial uses in respect of its tapered roller bearings. [fol. 212] Will you tell us what you meant by that?

A. Well, up to that period practically all of our business was automotive. By automotive I mean automobiles and trucks and trailers, very few trailers, and the business was more or less limited, that is as to growth. In other words the only growth we could expect would be the growth of the automotive industry. Along with the other companies we embarked into the general industrial field, which I had charge of, from the start up until about 1934 or '35, and the biggest battle we had in that industry, in all those industries was to knock out plain bearings. Ball bearings were very well established. Also we did show a lot of manufacturers where they could use Timken bearings to advantage over ball bearings, but the ball bearing people and the straight roller bearing people were very well estab-

lished, so that was the big battle in the general industry was to knock out plain bearings, and that was a considerable problem.

The Court: How do you spell that word—"plain" or "plane"?

The Witness: P-l-a-i-n.

The Court: Just "plain".

The Witness: Well, that means a lot of things. It is a bearing that rotates, a bushing that turns, and so forth.

[fol. 213] Mr. Ketterer: If the Court please, we will have, before we finish this case, for illustration a sample of a plain bearing and a mounting so that we will be able to tell with more accuracy by a model exactly what we are talking about when we say a plain bearing.

The Court: I just didn't know, in making reference to it, whether it was plain, p-l-a-i-n, or whether it had some technical connotation.

Mr. Ketterer: No.

A. This battle with plain bearings—I wanted to go a little farther. We made very little headway in pushing ball bearings out of the various industrial machines. Our greatest success there was pushing plain bearings out. As an example, on the railroads today, in spite of the fact that Timken, Hyatt, Fafnir and SKF maintain a tremendous pressure on the railroad industry to introduce anti-friction bearings in freight cars, we would make a little headway, but not very much. The fact of the matter is, I'm sure, that the other companies who are pushing that with us trying to get anti-friction bearings in these positions are not making any more, if as much, headway as we are. It's a long task. Another case we went into was steel mills, [fol. 214] these large rolling mills that are set up in tandem. We started out and we thought we had an excellent job. They had used plain bearings, they had straight roller bearings, and they had SKF ball type bearings, and we were trying to get our own bearings in, and I think all the bearing companies failed like we failed, and they went back to ball bearings.

Q. You mean by all the bearing companies all the anti-friction bearing companies?

A. All the companies making anti-friction bearings.

Q. For backup rollers on steel mills?

A. That's right. There was probably eight or ten companies involved there, and they all failed with us. As a matter of fact, the majority of those mills are now being built with plain bearings, such as in the Morgan Construction Company. A tremendous amount of business was lost because, you might say, it was an engineering blunder.

Q. This process of developing business in the industrial field on the part of Timken as against plain bearings, and as against ball bearings, during the period that commenced in 1922, did other manufacturers of tapered roller bearings in the United States, after they got started in business, engage in the same competitive picture as did Timken in trying to get that business?

[fol. 215] A. Exactly. They didn't do it in our way. We being the biggest, they thought we had to do the pioneering and the engineering, but the other fellows did come on in the industrial field and, as a matter of fact, just followed right after us. We had to work out designs and develop the bearings, and we didn't know whether we would get the orders. Sometimes we didn't. Sometimes the other fellow walked in and took it away from us. I'm talking about tapered roller bearings now. We were never sure we would walk away with the order.

Q. That business of going into the industrial field, you say, commenced in 1922?

A. Yes, sir.

Q. Well, what is the fact as to whether or not that has continued down to the present time, the invasion of the industrial field by anti-friction bearing manufacturers?

A. It is continuing, and in a larger sense now than ever before. I think the other bearing companies with ourselves have increased their sales organizations and their engineering and research organizations in order to tap that big plain bearing market.

Q. By the other bearing companies, there are ball bearing companies, straight roller bearing companies and tapered roller bearing companies? Is that what you mean?

[fol. 216] A. Yes, sir, I do.

Q. Now, there was something said yesterday, and again this morning, about the question of interchangability between ball bearings and tapered roller bearings, and I believe you testified yesterday something about the process that goes on in the placing of one type of anti-friction

bearing or friction bearing in a given application as against another type. How is that done? At the time a manufacturer is getting ready to put into production a particular type of business, what process do the sales engineers of the Timken Company, as representatives of the anti-friction bearing industry, follow in this competitive picture that you have described?

A. As a matter of fact, after a job has once been developed and started, that is very seldom done. That is done when the business is in its initial stages.

Q. And by its initial stages you mean when it is on the drawing board, or where?

A. I mean when it is on the drawing board, or when it comes off of the drawing board.

Q. Can we be a little more specific about that? An automobile that is going to be produced in 1949, when do the plans and drawings for that car go on the drawing boards?

A. That would probably be started a year ago. They [fol. 217] usually start about two years ahead on any new model, whether it be an automobile, or what not, because they go through the process of design, and the next thing is to build up four or five sample cars, and the next thing is to run them for a year or two and test out the bearings. If the bearings are not suitable, then they may tear the design apart again and try some other kind of bearing.

Q. What is done when the car is first conceived and put on the drawing board, what is done by the car manufacturer, as an illustration, as to what type of anti-friction bearing or friction bearing is going to be used at a given place in the automobile?

A. That usually starts with the heads of the companies. The engineers are instructed to develop an automobile or truck, or whatnot, and these engineers start to lay out the general plan of the car, and when they get down to developing the axle and transmission and steering pivots where anti-friction bearings are used, the sales engineers of the various bearing companies are called in to submit their best proposition.

Q. Let me interrupt you there at that point. You say the sales engineers of the various bearing companies are called in?

A. Yes, sir.

Q. What kind of bearing companies?

A. Anti-friction bearings. That's ball, straight, roller, [fol. 218] any type of bearing company—most likely the ball bearing are called in first because they are easier to put in.

Q. And then what happens after that, what do the representatives of these various companies in the anti-friction bearing industry do?

A. These people come in and they may sit down at a drawing board and lay in there some of their bearings, or the engineer, or the car builder or car company, may give them a drawing and they take it home and the engineers design these bearings into the various applications, and then the sales engineers of the various companies take these drawings back to the sheet designer of the motor company and he goes over it and studies it, and we are out of it then until he decides the question of whether a tapered roller bearing or ball bearing or spherangular bearing might be more economical, not only as to the price of the bearing, but as to the mounting of the bearing, a big point to consider. They take all those things into consideration, and then if they find out that the ball bearing is more economical all over, they buy ball bearings. If they find out a tapered roller bearing is more economical they buy tapered roller bearings. In other words, that thing is decided when the car or piece of machinery is in the process of design. After that there is very little interchang-ability because it's [fol. 219] almost impossible, except in ball bearings. That is, Hess-Bright, Hyatt, New Departure, or Fafnir, could go in and make a change, but that is not true with tapered, to interchange with the ball. The bearing itself could be made to interchange, but the mountings are not interchangeable on account of the adjustability of Timken bearings. Now, it can be done by a lot of supporting mechanism, a lot of washers, or threading of a shaft, or something like that, but that's a very costly procedure after the car is once designed.

Q. But when the designing process is going on, is it a fact, then, that there is a choice generally between different types of anti-friction bearings as to whether or not they are going to use the ball bearing, the straight roller bearing, the tapered roller bearing, spherangular bearing, or any one of the types of anti-friction bearings?

A. Definitely so.

Q. Now, you referred to the automobile manufacturer by

way of illustration. Is that true generally in the industry in which anti-friction bearings are used, the process you have described?

A. That is true with any piece of machinery, equipment, whether it be an automobile, a road machine, an electric motor—which we are not in, by the way—but any type of machine, any place where wheels and shafts turn, that is [fol. 220] true. The engineer is the fellow who starts it, and that's when the bearing people are called in to give the best type of application they have.

Q. Now, have there been instances, to your knowledge, where you have gotten into a given application and then at some later time have lost on that business?

A. Many of them.

Q. I think you referred a while ago to the electric motor industry.

A. Yes.

Q. Did you ever have tapered roller bearings on the shafts of electric motors?

A. Many of them.

Q. And that is the case where you say ball bearings are used almost to the exclusion of tapered roller bearings?

A. We recognize an engineering blunder. A ball bearing is better suited, and we not only pulled out but we were asked to get out by some of our best friends in the industry. We were doing a poor job and we were very willing to get out.

Q. Do you know of any other places where you have succeeded in getting tapered roller bearings in and then you have lost out to ball bearings or these other types of bearings?

A. Yes, sir. I know a number of them. One of the outstanding examples would be paper making machinery. I [fol. 221] don't know whether you people are familiar with that, but a paper mill for rolling newsprint may be 304 inches wide and they have a big roller 6 feet in diameter, hollow, where steam is shot through. They call it the drier section of a paper mill. We went into that, and that's the big market in the paper mills, we went into that, we thought, will not do the job, and these bearings they now have will bearings, or more, out in the field and they began to go down for us, and that has cost us hundreds of thousands of dollars trying to replace those. Those bearings are now replaced or will be replaced with a peculiar type, I might

say, with SKF ball type bearings, that is self-aligning, and the tapered bearing is not self-aligning. When a shaft expands, or there is a deflection in the roller, it throws a lot of the deflection in such a way that the Timken bearing will not do the job, and those bearings they now have will take care of that deflection.

Q. On the paper mill business, you say, you are losing out in that field?

A. We have already lost out. We hope we can sometime design something that will get by, or that will win, but as the matter stands today we are definitely out of the drier section of the paper mills, which is the big part of that industry. We have a few little applications scattered [fol. 222] around, but the main application is in the drier section, a very large bearing and a very expensive bearing.

Q. Are there any places in which you have tried to get tapered roller bearings to the exclusion of any other type of anti-friction bearing in which you have not succeeded?

A. Yes, many places like that. We go on the theory that Timken bearing is not a panacea for all friction ills, and we take some chances ourselves, but there are a lot of people, a lot of places where we don't even try to put our bearings in. We try to get our applications into places where the design of the bearing will fit and where the customer will get long-time satisfactory operation.

Q. Can you tell the Court any places where the company has worked up drawings and submitted proposals to possible users of Timken bearings in many applications in which they have not used Timken bearings but have used other types of anti-friction bearings?

A. Oh, I can't point to any particularly, but I would say that the records in our engineering department show that we probably don't sell 10% of the companies we make layouts for.

Q. Are you familiar with what has happened in the Hoover Suction Sweeper Company?

A. Yes, that was a long time ago. That slipped my mind. [fol. 223] We worked many years on the Hoover Company. They built 1500 to 2,000 little rollers a day, and they wanted an anti-friction bearing, and we developed a very small bearing for that application, and the ball bearing fellows walked in, and they made a quieter bearing, and they could make it cheaper, and they are still using several makes of ball bearings. There is a good illustration. We are very

close to the Hoover organization, as a matter of fact, they are all friends of ours, and regardless of that they were selecting the best bearing for its place, and that was a ball bearing.

Q. Now, prior to the time that they introduced ball bearings into Hoover Suction Sweepers they had used a plain type bearing?

A. Yes, a little bronze bearing.

Q. And the competition then was between plain type bearings that were already in use, and the choice lay between the ball bearings or tapered roller bearings?

A. That's right.

Q. In determining what should replace the plain type bearing?

A. That's it exactly.

Q. Have you had any experience in the aircraft engine industry in that regard?

A. Yes. In the beginning of the war we sold millions of [fol. 224] bearings for rocker arms on airplane engines, Wright, Pratt-Whitney—no, not Pratt-Whitney, but Wright and several other manufacturers. Pratt-Whitney tried the plain bearing, and by the way they are still using the plain bearing. We put our bearing into those engines and they were a distinct failure. The rollers would pound into the ribs and the rocker arm would lock up, and one of our competitors developed a bearing which is better than ours. If I may say it, the SKF Company developed a bearing better than ours, and they are using them in there now. There are very few Timken bearings used in rocker arms except for replacement. A lot of these Wright engines that are out, they will replace that bearing with a Timken bearing, but they are not putting them in new engines, and we could consider that as an absolute failure. The application was wrong, the bearing didn't function, the ball bearing went in and did function.

Q. Now, without going into too much detail about it, I just want to ask you one further question in this regard. Have you tried to get into the textile industry and into the automotive transmission with tapered roller bearings, and have you been successful in that regard?

A. Well, that's two questions. I'll answer the first one, in automobile transmissions. There isn't a passenger car built today, out of some four and a half million cars, that has [fol. 225] a Timken bearing in the transmission.

Q. Have you tried to get them into the automobile transmissions?

A. Absolutely. We spent years and years, on it, and they are all ball bearings, not any particular ones, but ball bearings are used, and the reason for that is our bearing doesn't fit. An automobile transmission would require four Timken Bearings on the main shaft because the bearing is set, as against two ball bearings, one at each end. It's practically an impossible job. We can't make a good job, so we don't have any automobile transmission business.

Q. How about the textile mills?

A. I think perhaps I have put more work in on the textile industry than any other industry because it is very large.

Q. And what type of bearings are used in that industry?

A. Very largely ball bearings. There are two reasons why. In the first place, the speed used in textile spindles is very high, and the Timken bearing is not a high-speed bearing. That should be recognized. We try not to sell it for those high speeds. If the bearing is small enough on certain spindles we can get away with it. But on the other applications there are two companies that have had that for many many, years, and we just haven't been strong enough to break it down. That's Fafnir and SKF. Hyatt does a little, but not much. They are in solid, and I certainly [fol. 226] like to break that down if I could.

Q. Have you gone through the process that you described a while ago, submitting layout drawings when textile machinery is being designed?

A. Yes, sir.

Q. Now, you were asked this morning as to the names of the tapered roller bearing companies that were in existence in 1927. Can you give us the names of the tapered roller bearing companies that are currently operating in the United States?

A. You want the tapered roller bearings?

Q. That's right.

A. Kay-Don Engineering Company.

The Court: These are all tapered bearings?

Mr. Ketterer: These are all manufacturers of tapered roller bearings as of the present time.

A. Hyatt Roller Bearing Company, Internation- Harvester Company, Messenger Company, Bower Roller Bear-

ing Company, Orange Roller Bearing Company, Pratt Manufacturing Company, National Supply Company, Tyson Roller Bearing Company, Bantam Bearing Company, Jack & Heintz Company. That's the list.

[fol. 227] Q. Those are the tapered roller bearing manufacturers in the United States as of the present date?

A. Yes, sir.

Q. Will you tell us the names of the ball bearing manufacturers in the United States as of the present time?

A. Marlin-Rockwell Corporation, New Departure Manufacturing Company, Fafnir Bearing Company, Norma Hoffman Company, Federal Bearings Company, B. C. Company of America, Kay-Don Engineering Company, Bantam Bearings Company, Jack & Heintz Company, Link Belt Company, Aetna Ball Bearing Company, Ahlberg Bearing Company, Andrews Bearing Company, SKF Company, Miniature Bearings Company, Hoover Company, Equitable Bearings Company, Stevens-Adamson Company, Nice Ball Bearing Company, Mathews Company, Auburn Ball Bearing Company, Western Bearings Company, Schatz Ball Bearing Company, International Harvester Company, Gwilliam Company.

Q. Now, can you give us the names of the straight roller bearing manufacturers in the United States?

A. Hyatt Roller Bearing Company, Roll-Way Bearings Company, American Roller Bearing Company, Roller Bearing Company of America, Fafnir Ball Bearing Company, International Harvester Company, Norma Hoffman Company, Marlin-Rockwell Company, Gwilliam Company, Orange Bearing Company, Turrington Manufactur-

[fol. 228] ing Company, Kay-Don Engineering Company, McGill Bearings Company, Messenger Manufacturing Company, SKF Company, Enterprise Wheel & Car Company, Electric Wheel Company, Orange Bearing Company.

Q. Now, there are special types of anti-friction bearings——

The Court: How many of those companies are there altogether?

Mr. Ketterer: How many?

The Court: Yes. I didn't want them all marked down, I just wanted the number of them.

The Witness: I have 18 of the straight roller bearing companies.

The Court: 18?

The Witness: 18 straight roller bearing companies, and 25 ball bearing companies.

The Court: Thank you.

Q. Now, there are certain special types of anti-friction bearings manufactured, such as the barrel type and spherangular bearing, hour-glass bearing, and so on?

A. Yes, sir.

Q. How many manufacturers of the special types of anti-friction bearings are there in the United States?

A. Do you want their names?

[fol. 229] Q. Yes, please.

A. SKF Company makes a barrel type spherical roller bearing; the Schaeffer Company makes a spherical bearing of the hour-glass type; Kay-Don Engineering Company makes a similar bearing to the SKF, the barrel spherical type; the Bantam Company—you can just ditto that, it's exactly the same thing; the Hyatt Roller Bearing Company makes a spherangular type barrel roller; the Link Belt Company also makes a similar bearing to the spherical, which is the hour-glass type.

Q. Now, as between these various companies that you have described as tapered roller bearing companies and ball bearing companies and straight roller bearing companies and special types of anti-friction bearing companies, I think you said a while ago that in the anti-friction bearing industry generally there was constant competition as to what type of bearing would be used in a given application?

A. Yes, sir.

Q. With the exception of the large sizes and small sizes?

A. Yes, sir.

Q. Can you give us an estimate of what percentage of the anti-friction bearing business the Timken Roller Bearing Company does as of the present time, approximately?

A. Yes, and I think that figure is very accurate. Last [fol. 230] year it was, I think, 24—between 24 and 25% of the total anti-friction bearing business.

Mr. Day: In this country.

Q. In this country?

A. Yes, sir.

Q. Now, do you know what that was in 1927?

A. No, I don't, but necessarily very much less.

Q. Well, has the Timken Company maintained the same relative position in the anti-friction bearing industry in this country from 1927 down to the present time?

A. I don't think so. As I take a look at the other bearing companies I'm inclined to feel their growth has been greater than ours. That is particularly true, I think, with New Departure Company. I think New Departure's growth, making only ball bearings, was greater than the Timken Roller Bearing Company's growth. I also believe that the growth of the Bower Roller Bearing Company has been greater than our growth. In other words, the competition is eating away, pulling us down. About the only way you could measure that, of course, is by the growth of the industry and the growth of the business, but to see the other people who are growing along with us, we certainly didn't make very much progress, which is very embarrassing for the head of sales. We should have made much [fol. 231] greater progress. We should have made much more progress than New Departure, because in our opinion we think we have got a better sales organization, and we have got a better product, we think. We certainly are disappointed in the growth that we have made and, as I told you a few minutes ago, we got a shock when we saw one of our competitor's figures of twenty million dollars worth of business for last year. That's the only fellow that has given out that report to S. E. C. That's where it came from. Timken also reports there, but I don't think these other bearing manufacturers make those reports, so we have got no way of knowing what the other fellows do. But my estimate is that the Timken Company has not grown to the extent that they should have grown.

Q. Yesterday you were asked about whether Timken produced any steel, as well as bearings. Does the Timken Company produce steel in this country?

A. Yes, sir.

Q. Will you tell the Court what if any sales are made by Timken to other anti-friction bearing manufacturers in this country?

A. Our company developed what is known as the high carbon chrome steel used in ball bearings. In the early days they used bar stock, and our company has a very highly developed mill for piercing tubes, we developed [fol. 232] tubes for our own business, and we developed

a high carbon chrome tubing, and the ball bearing people were very anxious to buy this tubing and they buy a lot of it from us. I want to frankly tell you I don't like it, because—it's steel business, yes, but we developed a steel which made a much better ball and straight roller bearing and, not only that, but developed this tubing as against bar stock. We have just cut the liver out of ball bearing prices, which made it tougher for us in competition, and today we have no margin to play with, which we had probably many years ago. The ball bearing fellows' prices are down to the point where there is no advantage whatsoever.

Q. In the type of steel that you have developed, or in the forms that the steel takes—for example, I have this Exhibit No. 3 that was offered in the record yesterday. It happens to be a tapered roller bearing, the outside member of which you identified yesterday as being a cup.

A. Yes, sir.

Q. That is made from what type, or what form does the steel take to produce the cup member of a tapered roller bearing assembly?

A. That starts out with an ingot, goes through our mills and is rolled down to what we call a piercing round. It goes into a tube mill and it is pierced to make the inside diameter and outside diameter.

[fol. 233] Q. And it comes out then as a long piece of tubing?

A. As a long tube, and then that tube enters screw machines and is cut off in form and size as you see it there.

Q. Is the same true of the cone member of the assembly?

A. Precisely, yes.

Q. And from what are the roller members of the assembly made?

A. I think from the same kind of steel—there may be a slight change, but they are not made from tubing, you see. They are made from what we call roll wire, and the roll wire is fed into a machine and headed like a bolt is headed.

Q. In the sales you make of steel to the manufacturers of ball bearings in the United States, do they buy tubing in the form that is produced in the plant of the Timken Roller Bearing Company?

A. Yes, sir.

Q. For the equivalent of the cup and cone members of the ball bearing assembly?

A. That's right. They call them the inside and outside race.

Q. How about the production of steel for the use of balls in the ball bearing industry? Does Timken produce steel for that purpose?

A. Yes, we supply a lot of it. We call it ball wire.

Q. How generally do you supply steel to the various [fol. 234] members of the anti-friction bearing industry in the United States?

A. I beg your pardon? You turned away.

Q. How generally, Mr. Klinedinst, do you supply steel to the various members of the anti-friction bearing industry in the United States?

A. I believe we supply all of them except one. As to percentage, in some cases I think we probably supply a hundred per cent of the steel, in other cases 50%, in other cases 60%. We don't know, we can't tell that, but we do know there are some of them that put such a high value on the Timken high carbon chrome tubing that they give us all their business. Nobody has ever developed a tubing just like that. It's quite an operation to pierce a high carbon chrome tubing. Other people make it, but we think we make a better steel and tubing. They like ours better. That's the answer to that.

Q. In addition to supplying steel, do you supply the members of the anti-friction bearing industry to whom your steel goes any metallurgical service as to the best way to work the steel and handle it in the production of bearings?

A. That is part of our selling. As a matter of fact, we sell the metallurgist first before we ever ship steel, and when the steel is delivered to them our man goes right [fol. 235] into the plant and shows them exactly how to treat this steel.

Q. By treatment you mean the method of hardening it?

A. Yes, sir.

Q. For use in manufacturing anti-friction bearings, either ball or straight roller bearings or tapered roller bearings?

A. That is right.

Q. When was the Timken steel mill developed?

A. This is merely a guess, but I believe we started it around 1916, during World War I. We didn't start out with the equipment we have now, we started out with merely a piercing mill, I believe, in the beginning, and then we added to it until we got quite a large mill.

Q. And the production of steel has been expanded since 1916?

A. It has.

Q. And how long have you been making sales of steel to the representatives of the anti-friction bearing industry in the United States?

A. I couldn't answer that. I would say, just guessing, probably 15 years.

Q. Now, you were asked this morning to look at a part of a paper marked Government's Exhibit 4, which was a memorandum.

The Court: I have those up here.

Mr. Ketterer: Oh, I beg your pardon.

Q. I meant to say Exhibit No. 5, which was a memo-
[fol. 236] randum addressed to Mr. Donze, whom you identified as the vice-president in charge of production at the Timken plants.

A. Yes, sir.

Q. What is the fact as to whether or not this was intended as a sort of pep talk to the production department to take better care of the customers of the Timken Company?

A. Quite so. It was an inter-communication.

Mr. Ketterer: That's all.

Redirect examination of L. M. Klinedinst.

By Mr. Nitschke:

Q. I have just a few questions. I believe you said Bowers' sales in 1947 were $20,000,000?

A. In 1947, yes, sir.

Q. And was that their total sales of bearings?

A. That was the figure given out to S.E.C. I suppose so. I don't know.

Q. That included straight roller bearings as well as tapered?

A. I don't know. That's the figure they gave S.E.C. That's all I know.

Q. What is that a figure of, their total sales?

A. Total sales.

Q. Total sales?

A. Yes, sir.

Q. And you know they do make roller bearings, straight [fol. 237] roller bearings, don't you.

A. They did during the war. I don't know about now. I know they made them for airplane engines during the war.

Q. You can't tell whether this figure of twenty million dollars is simply for tapered roller bearings or whether it includes other types?

A. No, I would have no way of knowing.

Q. What was Timken's production of bearings—what was its sales of bearings in 1947?

A. The figures aren't out yet. They won't be for a couple of weeks.

Q. I believe you stated you could make an estimate for the Court on Timken's percentage of the total anti-friction bearing sales in the country at the present time.

A. That just came out a minute ago.

Q. You gave that as 24 to 25?

A. Yes.

Q. If you can do that, Mr. Klinedinist, can't you give the Court an estimate of what Timken's percentage of the tapered roller bearing market is?

A. No. Let me explain that to you. The Anti-friction Bearing Association gives us the figures, total figures of the bearing industry, which you can get and which you [fol. 238] probably have, and we know what ours is. So we just take and divide one into the other and we get our percentage of the total. But we don't know what the Bower Company's sales were, although that's published—they don't give it to us, nor do any other bearing manufacturers, so we only know what our sales are and what the total sales were, so that we can get the percentage of our business to the total anti-friction bearing industry. I think they all report—I don't know, but I imagine they do—but that comes from the Anti-friction Bearing Association. That's from no figures that the Timken Roller Bearing Company compiles in its offices. The company has no means of doing it.

Q. Does the Association give you the total figures on

tapered roller bearing production in the United States?

A. No, no. No, sir. On all the anti-friction bearings produced. We take all the anti-friction bearing production and our figures, and that gives us the percentage of the total.

Mr. Nitschke: That's all.

Mr. Ketterer: Just one question, if the Court please.

Recross-examination of L. M. Klinedinst.

By Mr. Ketterer:

Q. This Anti-friction Bearing Association that you have referred to as compiling these figures, what is the fact as to [fol. 239] whether or not that includes manufacturers of ball bearings, straight roller bearings and tapered roller bearings, all kinds of anti-friction bearings?

A. By all members, the report by all members of the Association.

Q. But that includes manufacturers of these various types of anti-friction bearings?

A. Yes, sir.

Mr. Ketterer: That's all.

Mr. Nitshke: That's all.

[fol. 240] Stipulation re Offer of Agreements and Documentary Material

Mr. Nitschke: Your Honor, the Government now expects to proceed with putting in the agreements, of which there are a great many in this case, and the documentary material, and before I do that I would like to read to the Court a stipulation which Mr. Day and I have agreed to, which we hope will dispense with the problem of proving copies, and authenticity, and if this stipulation is agreeable to the Court I would like to have it made a part of the record.

"1. The Government and Timken each waives its right to object to the introduction of evidence of any contract, agreement, letter, memorandum or other document obtained or produced from or available in Timken's files on the ground that a photostatic copy has been offered instead of the document contained in such files.

2. The Government and Timken each waives its right to object to the introduction into evidence of any agreement obtained or produced from or available in Timken's files on the ground that it has not been shown that the signatures to such agreement were authentic or that it has not been shown that the individual signing such agreement had [fol. 241] authority to do so.

3. The Government and Timken each waives its right to object to the introduction into evidence of any original letter or other original communication obtained or produced from or available in Timken's files on the grounds that it has not been shown that such original letter or other original communication was signed by the person whose signature or initials appear thereon, or that it has not been shown that such original letter or other original communication was received by the person to whom it was addressed."

The Court: The stipulation as read is agreeable to the Court.

Mr. Day: I want to say just one or two things about that. Of course we don't waive the right there, either one of us, to object to the introduction of any of these documents on the ground of materiality and relevancy, and there may be others, other matters which we wish to take up with the Government before making further stipulation relating to some of our evidence. On the question of the authority of the writer of the letter, if it appears that he was an officer [fol. 242] or an agent, we of course will not dispute that he was that officer or that agent. There may be an occasion in this case where we may wish to offer some evidence as to the extent of the authority of the person as such officer or agent. I would like to make that clear.

That is, if you have a letter signed by, apparently signed by blank, vice-president, we don't claim he is not vice-president, but we may want to offer some evidence as to what his authority as vice-president was.

The Court: Well, do you say you want to offer some evidence, or do you want to reserve the right to object to the introduction of the letter in view of your contention that his authority is limited?

Mr. Day: Your Honor, I think we would like to do both, perhaps. I don't know just exactly what occasions may

arise, therefore I don't want to make the stipulation too sweeping.

The Court: Well, as I understand the extent of this stipulation, first, there will be no objection made to the authenticity of the documents because of the fact that they are [fol. 243] copies rather than originals.

Mr. Day: That is right.

The Court: Second, that there will be no objection made to the authenticity of documents if written by an officer of the corporation, but you do reserve the right to introduce testimony to show the extent of the authority?

Mr. Day: That is right.

The Court: And further reserving the right to object to some documents, even those signed by a duly authorized officer of the corporation?

Mr. Day: That is right.

The Court: If it should appear to you that the letter, the document which is sought to be introduced, is not competent or relevant to the issues involved.

Mr. Day: That is right.

The Court: Now, does that state the matter?

Mr. Day: I think it does.

Mr. Nitschke: That is correct, your Honor.

[fol. 244] The Court: All right.

Mr. Day: And of course we reserve the right, on both sides, to object to any document on the grounds of irrelevancy and materiality.

The Court: I understand that, Mr. Day.

Offers in Evidence

Mr. Nitschke: I wish to have marked for identification as Government's Exhibit 6 an agreement dated June 16, 1909, and July 16, 1909, between Timken Roller Bearing Company and the Electric and Ordnance Accessories Company, Ltd., which agreement is attached to the deposition which was taken in London as Government's Exhibit D-52.

The Court: The exhibit is No. 6. It is dated June 16, 1909.

Mr. Nitschke: And July 16, 1909.

The Court: And July 16, 1909, and it is an agreement entered into between whom?

Mr. Nitschke: Timken Roller Bearing Company and the Electric and Ordnance Accessories Company, Ltd.

The Court: You say that is a part of the deposition which was taken in London?

Mr. Nitschke: That is right, your Honor, and it is marked, [fol. 245] it is attached to the deposition as Government's Exhibit D-52, now marked Government's Exhibit 6.

I wish to have marked for identification Government's Exhibit 7 an agreement between the Timken Roller Bearing Company——

The Court: Now, let me understand you. You are simply marking these now for identification, or are you offering them?

Mr. Nitschke: Well, I am just marking them for identification now. As soon as they are marked I will offer them.

The Court: All right.

Mr. Nitschke: Government's Exhibit 7 is a second agreement between the Timken Roller Bearing Company and Electric and Ordnance Accessories Company, Ltd., which is attached to the deposition as Government's Exhibit D-51. That agreement is also dated June 16, 1909, and July 16, 1909.

(Government's Exhibit 7 so marked.)

I wish to have marked for identification Government's Exhibit 8 an agreement between Timken Roller Bearing Company and Wolseley Motors, Ltd., dated April 6, 1920, which is attached to the deposition and identified as Gov- [fols. 246-247] ernment's Exhibit D-53.

(Said exhibit so marked.)

I wish to have marked as Government's Exhibit 9 a second agreement between Timken Roller Bearing Company and Wolesley Motors, Ltd., of the date of April 6, 1920. [fols. 248-268] I wish to have marked for identification as Government's Exhibit 10, an agreement dated January 1, 1925, between The Timken Roller Bearing Company and British Timken, Limited, which is attached to the deposition as Government's Exhibit D-55.

(So marked.)

And I wish to have marked for identification as Government's Exhibit No. 11 an agreement between The Timken Roller Bearing Company and British Timken, Limited, dated December 31, 1924, which is attached to the deposition as Government's Exhibit D-56.

(So marked.)

We wish to offer in evidence Government's Exhibits 6 through 11, which are the documents which I have just had marked for identification.

The Court: I suppose that counsel for the defense have copies?

Mr. Day: Yes, we have.

The Court: And there are no objections?

Mr. Day: There are no objections.

The Court: They may be received.

[fol. 269] We now wish to offer part of the deposition of Mr. Ellis, which begins on Page 204 of the transcript of the deposition, and we wish to offer from Pages 204 through the first seven questions on Page 208.

Your Honor, as a relief from hearing me, hearing my [fol. 270] voice, I would like to suggest perhaps I read the questions and my colleague Mr. Derr read the answers.

[fols. 271-272] (Tuesday, March 23, 1948, 2:00 o'clock, P.M.)

The Court: You may proceed.

Mr. Nitschke: Your Honor, I just made an offer of part of the deposition of Mr. Ellis, who was examined by Mr. Ketterer, and my associates, Mr. Derr and Mr. Dedman, are going to read it. Mr. Derr is going to read Mr. Ketterer's part.

[fol. 273] (Thereupon a portion of the deposition of Llewellyn Milford Ellis was read into the record, the questions being read by Mr. Derr and the answers by Mr. Dedman, as follows:)

Direct examination.

By Mr. Ketterer:

"Will you state your name?

A. My name is Llewellyn Milford Ellis.

"Q. And you live where?

A. I live in Birmingham, 15 Poppy Lane, Erdington, Birmingham, England.

[fol. 274] "Q. You are employed by what company?

A. I am employed by British Timken Roller Bearing Company.

Q. Were you ever employed by a company known as The Electric and Ordnance Accessories Company, Limited?

A. Yes, I was for a number of years.

Q. When did you first commence work with the Electric and Ordnance Accessories Company?

A. In the year 1909.

Q. In what capacity were you employed by that company?

A. I was employed as jig and tool designer and plant lay-out draughtsman.

Q. You continued with that company for what period of time?

A. I continued with them until they were disbanded, which was somewhere about 1919. That is just after the end of the 1914-1918 war.

Q. With what company did you work after 1919?

A. All the time I was working with Vickers. The Electric and Ordnance Accessories was a subsidiary of Messrs. Vickers. I was simply transferred, after they disbanded Electric and Ordnance Accessories, to the Wolseley Motor [fol. 275] Company which also was a subsidiary of Vickers.

Q. Then you went with what company following the Wolseley Motor, term of employment?

A. With Wolseley Motors it lasted for a short time, a year, or it might have been a couple, when British Timken was organized and I automatically then became a member of the British Timken staff.

Q. Have you continued on the British Timken staff down to the present time?

A. Yes, that is so.

Q. And have you always worked in the same capacity as you were employed originally by the Electrical and Ordinance Accessories?

A. No. My responsibilities have greatly increased. They have been increased from time to time.

Q. What different positions have you held with the Electric and Ordnance Accessories, Wolseley Motors and British Timken over the years from 1919 down to the present time?

A. Well, to the end of the war, I held the position I mentioned, that is chief of the jig and tool design and plant. Afterwards, when the British Timken was formed and we broke away from the Wolseley Company, I still held that same position but in addition I was put in charge of the bearing design department and also the industrial applica- [fol. 276] tion department.

Q. That continued for how long?

A. That continued to the commencement, or just after the commencement, of this last war; that is, about the end of 1939.

Q. Since 1939 what has been your position?

A. Since 1939 I took a less active part. My health, and so on, would not enable me to carry on as I had been doing. It was really a matter of drifting into the position of adviser to the Directors on the strength of my past experience. But I still took a supervisory position particularly in regard to bearing design.

Q. Now, going back to 1909, I want to ask you whether Electric and Ordnance Accessories was manufacturing tapered roller bearings when you commenced working there?

A. No, they were not when I first went there. I think it was just after I went there that they got instructions from Messrs. Vickers, of whom they were a subsidiary, to start the manufacture, that is to equip certain shops and start the manufacture of tapered roller bearings.

Q. What, if anything, did you have to do with that [fol. 277] equipment of the shop for the manufacture of tapered roller bearings?

A. I had to lay out the shops; that is, I had the dimensions of the shops to begin with, and I had to lay out the different departments, Technical Department, Grinding Department, inspection, and so on, allocating the space available, as far as possible, so that we could manufacture the whole bearing.

Q. Did Electric and Ordnance Accessories make any other products at that time?

A. Yes. They were doing quite a lot of electrical work, electrical motors, and ordnance work, that is fuse manufacture, Government ordnance work, and a number of lines in electrical stuff, switch gear and electric motors, heating apparatus, fans, and so on.

Q. Where was that plant located?

A. That plant was located at Aston, Birmingham.

Q. Is that the same place as the British Timken plant is located now?

A. Yes, that is the same factory.

Q. How much space was utilized in the Electric and Ordnance Accessories plant at the time you first laid out any space for the manufacture of tapered roller bearings [fol. 278] in 1909?

A. They started off with one fair sized shop. It would be, I should say, about 200 feet by about 40 feet.

Q. That covered the entire operation as far as bearing manufacture was concerned?

A. Yes. The only thing done outside was a certain amount of press work for producing the cage which was made in another shop, in what we called the electric ordnance press shop.

Q. In other words, they made the cages?

A. Yes.

Q. How many people were working at that time on the manufacture of bearings?

A. We started off in the actual Timken shops with not more than about a couple of dozen people. That was rapidly increased.

Q. By 1919 or 1920, when Wolseley Motors came into the picture, how many people were involved in the manufacture of bearings, as you can recall?

A. In 1920 I should say it had increased to 350 or 400 people by that time.

Q. How many bearing sizes were being manufactured or assembled?

A. At that time?

[fol. 279] Q. Yes.

A. At that time I should say we had got to about 60 or 70 definite sizes that we made.

Q. That is by 1920?

A. Yes, that is by 1920.

Q. Were they largely automotive sizes?

A. Yes, nearly all of them were. I think I can say all of them were automotive bearings.

Q. I believe you said the year or so after 1919 or 1920 British Timken organization came into the picture?

A. Yes.

Q. What was that in respect of the Wolseley Motors Company? Was it a subsidiary, or how was it panelled?

A. No. Actually Wolseley had very little to do with it except they did exercise a certain advisory position in regard to Timken just to begin with because that did not last long before Timken was entirely separated.

Q. Did you always remain at this Aston plant site?

A. No. We remained at the Aston site until about 1915. It was a little while after the war started when the plant was moved from Aston to what we called the Ward End

Works. It was about a couple of miles nearer the outskirts of Birmingham.

[fol. 280] Q. When Wolseley Motors took over the manufacture in 1920, was anything else manufactured on the premises aside from bearings?

A. Well, taking the factory altogether, yes, because the Ward End factory covered a very considerable area and it was divided into one or two sections. The main factory building was occupied by Wolseley who started there the manufacture of certain types of small car. Then the Timken plant was in a self-contained building entirely separated from the main Wolseley factory.

Q. And you remained at the Ward End plant until what date?

A. Until 1927 I think it was.

Q. Was that when the separation from Wolseley Motors was completed?

A. Yes. It was completed perhaps a month or two before we actually moved.

Q. Up until 1927 who owned the equipment, if you know, that was used in the manufacture of bearings at the Ward End plant?

A. In the first place I believe the equipment belonged to the Wolseley Company.

Q. Did they perform, up until 1927, any manufacturing operations for the bearing business?

[fols. 281-282] A. Yes. They made the cages in the Wolseley press department.

Q. And that continued up until 1927?

A. Yes. Approximately 1927.

Q. How many people were employed by 1927, to the best of your recollection, in the manufacture of bearings at the Ward End plant just preceding the removal from the Ward End plant?

A. I think it had increased to probably 500. It might even have been a little bit more than that.

Q. How many bearing sizes were you making by that date, if you recall?

A. Perhaps 100 sizes by that time.

Q. In respect to their application, were they automotive, or were there any other applications?

A. Mostly automotive, although we had a certain amount of business, which was a growing business, for other appli-

cations, such as machine tools and mill equipment, and that sort of thing."

Mr. Nitschke: I now wish to have marked for identification Government's Exhibit 12, Agreement dated January 1, 1928, between Timken Roller Bearing Company, and British Timken, Ltd., which agreement is attached to the deposition as Defendant's Exhibit D-23.

[fol. 283] The Court: It will be received.

Mr. Nitschke: I also offer Government's Exhibit No. 13, which is an agreement between the Timken Roller Bearing Company and International Harvester Company, dated December 31, 1927.

(Agreement referred to above was thereupon marked by the Clerk, for identification, Government's Exhibit 13.)

[fols. 284-292] Mr. Nitschke: This agreement is referred to, Government's Exhibit 13, is referred to in Government's Exhibit 12, and I will call your Honor's attention to it as I go through the 1928 agreement.

[fol. 293] Now I wish to have marked for identification as Government's Exhibit 14, an agreement dated January 1, 1928, between Timken Roller Bearing Company and British Timken, Ltd., which I wish to offer in evidence.

The Court: It may be received.

(Agreement referred to above was thereupon marked by the Clerk, for identification, Government's Exhibit 14.)

[fol. 294] We also wish to have marked for identification as Government's Exhibit 15 an agreement dated January 1, 1928, between Timken Roller Bearing Company and British Timken, Ltd., designated as a supplemental agreement to the principal agreement between them. I wish to offer that in evidence.

The Court: It will be received.

(Agreement referred to above was thereupon marked by the Clerk, for identification, Government's Exhibit 15.)

[fols. 295-297] I wish to have marked for identification as Government's Exhibit 16, an agreement dated June 16, 1928, between British Timken, Ltd., and Societe Francaise Timken. I wish to offer Government's Exhibit 16 in evidence.

The Court: Exhibit 16 may be received.

(Agreement referred to above was thereupon marked by the Clerk, for identification, Government's Exhibit 16.)

[fol. 298] I wish to have marked for identification as Government's Exhibit 17, a letter agreement dated——

The Court: May I ask you, before you proceed, whether the last agreement, which is marked Government's Exhibit 16, was signed or executed by the parties?

Mr. Nitschke: Yes, it was executed. It was executed by [fols. 299-300] the French Company and British Timken, but not by American Timken.

The Court: Is this purportedly a photostat of the original?

Mr. Nitschke: Yes, it is.

[fol. 301] Mr. Nitschke: I now wish to offer Government's Exhibit 17, a letter agreement dated June 7, 1929, between Timken Roller Bearing Company and M. B. U. Dewar, and I offer this in evidence.

The Court: It may be received.

(The Agreement above referred to was marked by the Clerk, Government's Exhibit No. 17.)

Mr. Nitschke: I am sorry, I didn't call your Honor's attention to the fact that this document is attached to the deposition as Defendant's Exhibit D-25.

[fol. 302] I now wish to have marked for identification as Government's Exhibit 18, a letter dated June 1, 1931, from Lynch, Day, Pontius & Lynch, to the Timken Roller Bearing Company. This document bears certain attachments, the first of which is a letter dated November 1, 1929, which I would like to have marked for identification, as Government's Exhibit 18-A. It's on the letterhead of Stibbard, Gibson & Company. And another attachment, a letter dated September 23, 1929, which I would like to have marked for identification Government's Exhibit 18-B, which is a copy of a letter from Deutsche Timken Gesellschaft; and another attachment which is a letter from British Timken, Ltd., to Deutsche Timken, dated October 21, 1929, which I would like to have marked for identification as Exhibit 18-C; and the last attachment, a letter dated October 24, 1929, from Deutsche Timken to British Timken, which I would like to have marked for identification as Government's Exhibit 18-D.

The Court: Those may be received.

[fol. 303] (The letters above referred to were marked by the Clerk, for identification, as Government's Exhibits 18-A, 18-B, 18-C, 18-D.)

Mr. Nitschke: I would also like to have marked for identification as Government's Exhibit No. 19, an agreement between British Timken, Ltd., and Deutsche Timken Gesellschaft, dated January 1, 1928, which is attached to the deposition as Defendant's Exhibit D-43.

I would like to offer Exhibit No. 19 into evidence.

The Court: It may be received.

(The agreement above referred to was marked by the Clerk, for identification, as Government's Exhibit No. 19.)

[fol. 304] I wish to have marked for identification as Government's Exhibit 20, an agreement dated December 29, 1934, between Timken Roller Bearing Company and British Timken, Ltd.

Mr. Nitschke: This exhibit, Government's Exhibit 20, is the same as—or it is the one that is attached to the deposition as Government's Exhibit D-29. I offer in evidence Government's Exhibit No. 20.

The Court: It may be received.

(The agreement above-referred to was marked by the [fol. 305] Clerk, for identification, as Government's Exhibit No. 20.)

Mr. Nitschke: I also wish to have marked for identification, Government's Exhibit 21, a document dated January 8, 1935, which is headed "Note", signed by D. P. Hess, and which states:

"Attached herewith are various memoranda covering briefly, salient features of our new agreements necessary beween British Timken, French Timken and American Timken."

I should like to have marked for further identification, from this exhibit, Page 4, which is entitled "Memorandum II, Agreement #2." I should like to have that marked for identification Government's Exhibit 21-A. It is dated January 9, 1935, and entitled: "Memorandum II, Agreement #2."

For further identification Page 5, I would like to have marked for identification Government's Exhibit 21-B,

which is headed "Memorandum II (Sheet 2)" and signed "D. P. Hess."

I wish to offer only those portions of Exhibit 21 that have been further identified as Exhibits 21-A and 21-B.

The Court: Only those two portions?

Mr. Nitschke: Only those two portions, yes, your Honor.

[fol. 306] The Court: What do you want to do, do you want to separate Exhibit 21, Mr. Nitschke?

Mr. Nitschke: If that's agreeable to your Honor. I wanted to be sure the entire document was identified so that it wouldn't appear that I was dissecting a piece of evidence.

The Court: The Court has no objection to it.

Mr. Day: What is 21-A and what is 21-B of this Exhibit marked 21?

Mr. Nitschke: They are the second memorandum described in the agreement which has been put in evidence dated December 31, 1934, between American Timken and British Timken.

Mr. Day: I think we will object to this upon the ground that the documents themselves have been offered in evidence. We cannot see how a memorandum by Mr. Hess of the Timken Company setting forth the salient features of the agreements can add anything to the situation.

[fol. 307] Mr. Nitschke: Your Honor, we are not offering this portion to vary the terms of the 1928 Agreement. We are offering it to show the intent and purposes of the conspirators in this case, and as such we believe it is admissible.

Mr. Day: We signed a contract, we were parties to the contract. We have agreed to be bound by what the con-

[fols. 308-314] tracts provide. We can't see how this tends to show anything in addition to what might be shown or claimed by reason of the fact that we signed the contracts themselves.

The Court: Assuredly if it doesn't show any more than that, Mr. Day, there should be no objection to it. If it does tend to show some intent or motive on the part of an officer of the corporation, that's another question.

The Court: It may be received, exceptions may be noted.

(The documents above referred to were marked by the Clerk, for identification, Government's Exhibits 21, 21-A and 21-B.)

[fol. 315] I wish to have marked for identification a memorandum agreement dated December 29, 1934, between the Timken Roller Bearing Company and British Timken Ltd., and that will be Government's Exhibit 22.

[fol. 316] (The Agreement above referred to was marked by the Clerk, for identification, Government's Exhibit No. 22.)

I also wish to have marked for identification an agreement between Timken Roller Bearing Company and British Timken, Ltd., dated May 28, 1935, which is to be marked Government's Exhibit 23.

(The agreement above referred to was marked by the Clerk, for identification, Government's Exhibit No. 23.)

Mr. Nitschke: I offer Government's Exhibits 22 and 23 in evidence.

The Court: They may be received.

Mr. Nitschke: And I also wish to have marked for identification as Government Exhibit 24 an agreement dated the 6th day of June, 1935, between Timken and British Timken, also entitled "Supplemental Agreement," which [fols. 317-318] is attached to the deposition as Government's Exhibit 30.

I wish to offer Government's Exhibit 24 in evidence.

The Court: Exhibit 24 will be received.

(The agreement above-referred to was marked by the Clerk, for identification, Gov't Exhibit No. 24.)

I wish to have marked for identification as Government's Exhibit No. 25 an agreement dated July 15, 1935, between British Timken, Ltd., and Societe Francaise Timken, which is attached to the deposition as Government's Exhibit D-31. And I wish to offer Government's Exhibit No. 25 in evidence.

The Court: It may be received.

(The agreement above referred to was marked by the Clerk, for identification, Government's Exhibit No. 25.)

[fol. 319] I wish to have marked for identification as Government's Exhibit 26, an agreement under date of November 28, 1938, between The Timken Roller Bearing

Company, British Timken, and French Timken, which is also attached to the deposition as Defendant's Exhibit D-27.

Your Honor, as a matter of terminology, I probably will throughout this trial refer to Societe Francaise Timken as French Timken, and British Timken, Ltd., as British Timken.

The Court: I see no reason why that should not be done. I assume counsel for Defendant understand when reference is made to British Timken or Limited or Francaise, that it refers to those respective companies.

Mr. Day: Oh, yes. I think it might be simplified if we called them American Timken, British Timken, and French Timken, and leave the Limited and Francaise out.

Mr. Nitschke: Except the pleadings use "Francaise" and "Limited." I don't think it will confuse anybody.

Mr. Day: No, I don't think so.

[fols. 320-323] (The agreement above-referred to was marked by the Clerk, for identification, as Government's Exhibit No. 26.)

Mr. Nitschke: I would like to offer as Government's Exhibit No. 27 an agreement dated November 29, 1938, entitled "Supplemental Business Agreement" between Timken Roller Bearing Company, M.B.U. Dewar, and British Timken, and which is attached to the deposition as Defendant's Exhibit D-28.

[fol. 324] I would like to offer interrogatory number one of the Government and the Defendant's answer thereto. I will have the Answer marked as Government's Exhibit 28 for identification.

Your Honor, I want to offer Government's Exhibit 26 and 27, which I now offer.

The Court: They may be received.

Those are the original Business Agreements attached to the Complaint?

Mr. Nitschke: Yes, your Honor.

For reference, your Honor, I would like to read Government's Interrogatory No. 1, which is:

"List all countries, dominions, colonies, dependencies and mandatory territories comprising the territory allocated under the tripartite agreement to (a) Francaise, (b) Limited, and (c) the Defendant."

The Interrogatory also contains the definition for tripartite agreement. It says "Tripartite agreement" means [fol. 325] the agreement entered into November 28, 1938, between Defendant Limited and Francaise, and attached to the complaint as Exhibit A. That is the agreement which is now marked as Government's Exhibit 26.

And I wish to offer as Government's Exhibit 28 Defendant's Answer to this Interrogatory which shows the various countries allocated to each under the agreement.

The Court: That exhibit may be received.

Mr. Nitschke: I would also like to hand your Honor this map that is made up from Defendant's Answer to Interrogatory No. 1, which shows the allocation of territory under the '38 agreement. Timken's territory is colored in yellow; Limited's territory is red; Francaise is green, and the joint territory, Russia, with the red striped. [fol. 326] Mr. Day: If the Court please, yesterday Government counsel read from the deposition of the witness Ellis. I think the record should show that there are certain depositions here on file in this court and the depositions are of various witnesses taken and examined on the 22nd, 23rd, 26th, 27th, and 28th days of January, 1948, at the American Embassy, London, England, under and by virtue of an order issued out of this court in this cause. Of course there will be no objection to that but when we just start to read the questions and answers there won't be anything in the record to show just what these depositions are. I would like to have that in. They are on file, they are reading from copies, but the originals are here.

The Court: The record will so show.

[fol. 327] Mr. Nitschke: Your Honor, I would now like to proceed to offer part of the deposition of Michael Dewar, from Page 2 through the first three questions on Page 3 of the transcript of the deposition, and my associates will continue the reading.

The Court: All right.

Mr. Derr: This is from the direct examination by Mr. Day.

Mr. Derr: This is the deposition of Michael Bruce Urqhart Dewar of Little Horwood Manor, Bletchley, Bucks, England, Chairman of British Timken Limited, aged 61 [fol. 328] years, being duly and publicly sworn and exam-

ined on the part of the Defendant, doth depose and say as follows:

Direct examination by Mr. Day.

"Q. Mr. Dewar, you have already stated your name and your address and your business. Where were you born?

A. Cheltenham.

Q. Where did you get your education?

A. Rugby School and Cambridge University.

Q. Now will you tell us briefly, and to some extent chronologically the events of your business career?

A. After taking an engineering honours degree at Cambridge, I went to Vickers in Sheffield and worked there for a period of years. I then joined a firm of textile manufacturers who had works in Yorkshire and in New England, and I worked for them for several years up to the outbreak of the 1914 war. After about a year of the war, I was seconded from my regiment to the Ministry of Munitions and I served the Government as Deputy Director General of Shell & Gun Manufacture. After the war was over, I joined a firm called Leeds Forge Company, who were the origin of the Pressed Steel Car Company. I stayed with them until I joined the Metropolitan Carriage Wagon and Finance Company of Birmingham, England, who were the largest subsidiary company of Vickers. I [fol. 329] was Managing Director of that Company. In 1925 and 1926 I was made Vice Chairman of Wolseley Motors, which was another subsidiary of Vickers, Vickers at that time being in considerable financial difficulties, and I was told that my job in life was to try and save as much money as I could for Vickers out of the Wolseley Motors organization. Wolseley Motors had as a subidiary Company a company called British Timken, of which I became Chairman in March, 1927.

Q. You have been connected with British Timken Limited ever since that time?

A. Yes, I have.

Q. What is your present position with British Timken Limited?

A. I am Chairman and Chief Executive Director of the Company.

Q. You say you took an engineering degree in college?

A. Yes. I am also a member of a considerable number

of engineering societies, including the S.A.E. in the United States.

Q. Were you connected as a Director or otherwise at this time with Companies other than British Timken?

A. Yes. I am connected with electric power supply [fol. 330] companies, shortly to be nationalised, and a machine tool company, Cincinnati Milling Machine Company, and several other companies."

Mr. Nitschke: We will now proceed to offer further from Mr. Dewar's testimony the last of four questions on Page 46 of the transcript.

Mr. Derr: This continues the examination of Mr. Day, your Honor.

The Court: All right.

Mr. Derr: (Reading)

"Q. I will hand you now the Defendant's Exhibit D. 27, an Agreement between the Timken Roller Bearing Company, British Timken Limited and Societe Francaise Timken, and Defendant's Exhibit D. 28, a supplemental business Agreement between Timken Roller Bearing Company, M.B.U. Dewar Esq., and British Timken Limited. Will you look at those two documents and tell us if you identify them as being what they purport to be?

A. Yes.

Q. Now, this one Agreement,"——

At this point the record shows that photostatic copy of the agreement was handed to the witness, identified by him, and marked Defendant's Exhibit D. 27, attached to the [fol. 331] deposition.

(Continuing reading)

"Q. Now this one Agreement, D. 27, between the Timken Roller Bearing Company, (American Timken), British Timken and French Timken, has the three Companies as parties to one contract?

A. That is so.

Q. Do you recall any discussion in which you participated, upon the subject of drawing up a contract that way?

A. The idea was to try and get into one legal document what was then contained in, I think, 3 or 4 different ones. The original Agreement with France was made by British

Timken only and that Agreement you have there made the three of them parties to one Agreement.

Q. Is there, do you know, any distinct difference by way of provision between this contract and the contracts which preceded it, the main contracts?

A. There was certainly nothing of any substance. There may be a variation in the words but the substance was the same.

By Mr. Nitschke: Which contract is that?

By Mr. Day: The business Agreement of 1938 and the Agreement of January 1st, 1928, and those which followed and supplemented that. Of course they show for themselves what, if any, differences there are. [fol. 332]

By Mr. Nitschke: You are including both the original Agreement and the supplemental Agreement in the question?

By Mr. Day: No, I was not including the Agreement between American Timken, M.B.U. Dewar and British Timken. I was including the three-party Agreement and wish it to be so understood."

Mr. Nitschke: We will now proceed to offer, continuing from the deposition of Mr. Dewar, but my examination of him on Pages 118 through Page 121.

The Court: All right.

Mr. Day: I think perhaps the Court's attention should be called and the record should show what was said by counsel for the Government and counsel for the defendant when Mr. Nitschke proceeded to ask certain questions of Mr. Dewar. I don't know exactly the page it is at, but it has to do with his making Mr. Dewar his own witness for certain purposes.

The Court: Is that with reference to the deposition that is to be read, or that portion which has been read? [fol. 333]

Mr. Day: That is with reference to the deposition that is now to be read. What was said before consisted of questions that I put as one of the counsel for defendant.

The Court: May I ask whether you propose to offer the depositions in their entirety?

Mr. Day: Well, I think we expect to offer all of these depositions that we took of Mr. Dewar when we had him on as our own witness, and then we expect to offer, too, some things as cross-examination with relation to the part

of the deposition in which Mr. Dewar was the Government's witness.

Mr. Derr: That is on Page 56.

Mr. Day: Are you going to start at Page 56?

Mr. Nitschke: No, we are going to start at Page 118, but I think your suggestion is a good one, that you read to the Court our colloquy.

Mr. Day: Well, on Page 56, where it says "Cross-examination by Mr. Nitschke" it was stated between counsel in London that while some of the examination of Mr. Dewar was called cross-examination and some redirect [fol. 334] that it might properly be styled just "Examination by Mr. Nitschke" and "Examination by Mr. Day," except the first testimony of Mr. Dewar, which was our direct examination. I take it there is no dispute about that. Now this took place on Page 56. I said: "That concludes the direct examination, of course on the understanding that, if at any time before we are all through, something else occurs to us that we should ask by way of direct, we will do so; but, for the time being, that is our direct examination."

Then it says, "Cross-examination by Mr. Nitschke."

Mr. Nitschke said, this is in the form of a question:

"I would just like to say, Mr. Dewar, that in a proceeding of this type you are supposed to be nobody's witness. You are a deponent giving facts, so that we may know what the facts are in the case; and, at least in the first part, I am not cross-examining you as such on your Direct Examination.

By Mr. Day: I suggest that the record should show, [fol. 335] therefore, that you are calling Mr. Dewar at this time as your witness. You say you are not going to ask him at the outset of your questions by way of cross-examination. Therefore, you must be calling him as your own witness, and I think you should so state. Perhaps you have so stated.

By Mr. Nitschke: I have no objection to that characterization, except that I think it is true that he does not become the witness of either of us until the testimony he gives here is introduced in Court. In other words, I just wanted to make it clear that I am trying to get the facts and I do not consider that you are on either side."

Mr. Nitschke: That was addressed to Mr. Dewar.

Mr. Day: To Mr. Dewar, when he said that.

(Continuing reading)

"By the witness: I will do my best to assist, I promise you.

By Mr. Day: Then is it fair to state in the record at this time that, regardless of whose witness he may be regarded at the time evidence is offered at the trial, you are at the outset of your questions going to question him as [fol. 336] your witness?

By Mr. Nitschke: I intend at the outset and I think perhaps, insofar as I can—I think it is advisable because of the nature of putting in the testimony in a deposition—I will try to keep the matters with which I am concerned as far as the Government's case is concerned separate. I think it is practically impossible to do that entirely, but that is my intention at the present time, and I will tell you when I think I have completed that part of the examination."

Mr. Derr: We will proceed with the reading from Mr. Nitschke's examination, beginning at the top of Page 118 of the deposition.

(Reading—questions read by Mr. Derr and answers by Mr. Dedman.)

"Q. Yesterday you stated that prior to the modification of the business agreements between British Timken and American Timken and British Timken and French Timken in 1934 you visited Canton with Mr. Pascoe, and that present at the Conferences were Mr. H. H. Timken, Mr. A. C. Ernst and Mr. W. H. Timken. Was Mr. Hess present at any of your Conferences?

[fol. 337] A. Yes.

Q. And after you returned you had correspondence with him on the subject of the matters to go into the agreements which were finally entered into?

A. Yes.

Q. You also testified that the object of the 1938 agreement (the tripartite agreement) between British Timken, American Timken and French Timken was to gather the provisions of the earlier agreements together in one document; and you made the statement, Mr. Dewar, that there were no variations of substance in the 1938 business agreements

from the preceding agreements. At that time the 1934 and 1935 agreements had not been submitted to you, and I wonder if you are still of the opinion that there was no change made in those agreements.

By Mr. Day: I suggest you show him the 1934 and 1935 agreements and call his attention to these matters. We did not show them to Mr. Dewar because we do not have photostat copies of them.

Q. I call your attention, Mr. Dewar, to paragraph 6 of the 1934 agreement between American Timken and British Timken and to paragraph 6 of the 1935 agreement between British Timken and French Timken. I cannot find either of those clauses in the supplemental agreement. I wonder if you consider that those are per-
[fol. 338] haps the subject of substantial changes. I call your attention to the fact that they appear to be combined in paragraph 5 of the supplemental business agreement.

By Mr. Day: Of 1935?
By Mr. Nitschke: 1938.

(Government's Exhibits 29, 30 and 31 and defendant's Exhibits 27 and 28 handed to witness.)

By Mr. Day: If I might make a suggestion, all of these documents are being shown to the witness and his attention is being called to certain paragraphs. What is the point that you wish to bring out—that there is a difference between the 1938 agreement on the one hand and the 1934 and 1935 agreements on the other?"

Mr. Day: May I suggest, Mr. Ketterer suggested to me, that if you do not identify the exhibits with the numbers given in the depositions with the numbers of the exhibits which the Clerk has now in this trial, it will be very difficult for anybody examining the record to know that No. 29, for instance, in the deposition is No. so and so in the trial. If that could be done it seems to me it would help an awful lot.

[fol. 339] The Court: I think that would be very helpful. As a matter of fact I was about to ask the number of the exhibit in this case that corresponds with Exhibits D. 27 and 28 to which reference has been made a few moments ago.

Mr. Nitschke: We could do that as they are mentioned. We could get up a little cross index, as we go through the trial to show these numbers because all the exhibits have marks on them.

The Court: I think a cross index will answer the question.

The Clerk: I can answer that right now.

The Court: What is Defendant's Exhibit D. 27?

The Clerk: D. 27 is Government's Exhibit 26.

Defendant's Deposition Exhibit 28 is Government's Exhibit 27.

Deposition Exhibit D. 29 is Plaintiff's Exhibit 20; and deposition Exhibit 30 is Plaintiff's Exhibit 24.

The Court: You say deposition Exhibit 26 is 27, and that is the tripartite agreement between Timken, British [fol. 340] and French?

The Clerk: Dated November 28, 1938.

The Court: And 27 is the supplemental agreement of November 29, 1938, is that right?

Mr. Derr: That is correct. That is also deposition exhibit D. 28.

The Court: And that agreement is likewise a tripartite agreement between American, Dewar, and British Timken?

Mr. Derr: Yes, your Honor.

The Court: Is that correct?

Mr. Day: I think it is.

We will still have to identify Exhibit D-31.

The Clerk: That is Government's Exhibit 25.

The Court: What is 25 other than the number?

Mr. Derr: It is an agreement between British Timken and French Timken dated July 15, 1935.

Continuing from the deposition (reading):

"By Mr. Nitschke: I do not know what the point was of your saying that they are the same.

By Mr. Day: Mr. Dewar testified, without having before him the 1934 and 1935 agreements, he did not think [fol. 341] a substantial change was made by the 1938 agreement I understand. He also testified at the end of his testimony that he was testifying from recollection and referred to the records. Now what is the point as to what the difference is? I have no doubt Mr. Dewar could tell you if you ask him. What substantial change do you suggest there is?

By Mr. Whitney: "——

Mr. Nitschke: I think we should say that Mr. Whitney is Mr. William Dwight Whitney who represented Mr. Dewar at the deposition.

The Court: Counsel appeared for the witness.

Mr. Day: I don't know whether the record shows his appearance as counsel for the witness or not, but he was, as Mr. Nitschke says, William Dwight Whitney, of the Cravath firm in New York, and he is the London partner of that firm, and he appeared for the witness.

Mr. Derr: Continuing with the deposition. (Reading)

"By Mr. Whitney: It may be the other way around. He may ask you two gentlemen to advise him as to what the difference is.

[fol. 342] By Mr. Day: I understand that Mr. Nitschke is making the point that there is a difference. Of course we will concede if there is a change in there, there it is, and Mr. Dewar will also admit there is.

By the Witness: I still do not think there is.

By Mr. Day: I should like to know what the point is.

Mr. Nitschke:

Q. The change is in the main agreement, is it not? You are saying that the same language or almost the identical language is in the supplemental agreement—is that right?

A. Yes, that is correct.

By Mr. Day: And what does the language refer to?

By the Witness: The use of the trade mark 'Timken'.

Mr. Nitschke:

Q. I asked Mr. Day at the time that he asked you that question if in his question he was including both agreements and he said No, he was just asking if the main agreement of 1938 was generally a combination of the provisions in the 1934 and 1935 agreement, and I am calling your attention to these differences in which some of those parts are contained in the supplemental [fol. 343] agreement. Is it your intention that the provisions of the 1934 and 1935 agreements are combined not just in the original agreement but in both the 1938 agreements?

A. Yes.

Q. The main and supplemental agreements?

A. Yes. I am afraid I had always regarded these two agreements as one. What you call the business agreement and the supplemental agreement I had always regarded as one. I am sorry if technically I have committed an error.

By Mr. Day: It may be I should have referred to both the 1938 agreements myself, but whatever the agreements show, there they are.

By Mr. Nitschke: I did not know whether there was any significance in your referring to them separately.

By Mr. Day: I do not think so. May I ask a question to clarify the mafter in my own mind? Is it true then that taking the provisions of the 1934 and 1935 agreements and the provisions of the main and supplemental 1938 agreements, they are substantially the same in effect?

By Mr. Nitschke: A combination of the 1934 and 1935 [fol. 344] agreements?

By Mr. Day: Yes.

By Mr. Nitschke: Well, is that Mr. Dewar's answer?

By Mr. Day: I do not know. I am asking anybody who has examined the agreements.

By Mr. Nitschke: I think the agreements speak for themselves.

By Mr. Day: Yes, I think that is better; and I think also if Mr. Dewar was in error, I was in error in either the question I asked, or the assumption I made in the question, and Mr. Dewar in the answer he gave. We should like to have the question and the answer amended so as to conform to what the agreements actually do show.

Mr. Nitschke:

Q. Do you know why the combining of the provisions of the 1934 agreement between British Timken and American Timken and the 1935 agreement between British Timken and French Timken were done in two documents—a tripartite agreement between the three Companies, and a supplemental agreement between the American Company, the British Company and yourself?

A. I have no idea; it is purely a legal matter.

[fol. 345] Q. Who handled the drafting?

A. Mr. Duncan.

Q. And you never discussed it with him as to why it was done?

A. No, never. I do not remember discussing those agreements with him. As I told you before, we regarded them as putting into one agreement the agreements which already existed.

Q. Is it your understanding (and you have acted upon it) that there have been no changes in substance in the agreements of 1934 and 1935?

A. Certainly.

Q. You have acted on that assumption?

A. I have.

By Mr. Whitney: You cannot take that position. You are governed by the 1938 agreements, and have been for ten years. It makes no difference what the 1934 and 1935 agreements were. I am advising you that as a matter of law. For one thing, they are governed by English law—and there was no reference to previous agreements."

Mr. Day: That is the statement to the witness by Mr. Whitney.

The Court: I understood.

[fols. 346-347] (Reading continued.)

"By Mr. Nitschke: This is just a little private aside?

By Mr. Whitney: But I am doing it in your hearing, so that you are under no misconception. I just want you to know that we take that position."

Mr. Nitschke: We will now proceed to offer, continuing from my examination of Mr. Dewar, the first ten questions on Page 110 of the transcript.

[fol. 348] (Thereupon the following questions and answers from the deposition of Michael Dewar were read:)

"Q. I believe you stated that at the time you became interested in British Timken, Mr. Duncan was the attorney for American Timken?

A. Yes.

Q. And in 1927 he became a Director of British Timken?

A. Yes.

Q. Was he one of the American representatives on the Board?

A. He was the representative of the American interest. He is a British subject.

Q. Is he now still the attorney for American Timken?

A. In England?

[fol. 349] Q. Yes.

A. I believe so.

Q. Had he continued to be the attorney for American Timken even after the entering into of the 1928 agreements?

A. As far as I know.

Q. Is he also an attorney for British Timken?

A. He does work for British Timken, yes.

Q. Legal work?

A. Legal work, yes.

Q. Does he also consult with you on business problems?

A. Yes.

Q. Do you know if at the present time he is paid any fees as an attorney for British Timken?

A. Yes. He is paid fees for work done as an attorney."

Mr. Nitschke: We also wish to offer further from Mr. Day's examination of Mr. Dewar another portion of the transcript wherein he referred to Mr. Duncan, on Page 19, the first two or three questions.

(Thereupon the following questions and answers from the deposition of Michael Dewar were read:)

"Q. Who was, and who is, Mr. Duncan?

[fol. 350] A. Mr. Duncan was the British lawyer of the Timken Roller Bearing Company of Canton, Ohio, and he is now a Director of British Timken. He is also British Timken's legal adviser at the present time.

Q. He was, and still is, a member of the law firm of Stibbard, Gibson?

A. He is the senior partner."

Mr. Nitschke: We now wish to proceed to offer further from my examination of Mr. Dewar the last four questions on Page 137 and the first question on Page 138.

The Court: Is this the portion of the deposition where you have made Mr. Dewar your own witness, Mr. Nitschke?

Mr. Day: Yes.

Mr. Nitschke: Well, I don't think that this was, your Honor, because this was in connection with the 1938 agreement. I would have asked him about that if Mr. Day hadn't, so I would have made him my witness on this if Mr. Day hadn't. But Mr. Day brought it up first, so I just continued with it.

Mr. Day: Of course, if your Honor please, Mr. Dewar is Mr. Nitschke's witness now at the trial as to anything he offers.

[fol. 351] Mr. Nitschke: Oh, yes.

The Court: No doubt about that, but you raised the question, Mr. Day, with reference to that portion of the deposition where he was the Government's witness.

Mr. Day: That's right.

The Court: And I wanted to get it straight in my own mind whether these questions pertain to that portion or to the portion of the examination where he was not the Government's witness but was being cross-examined.

(Thereupon the following questions and answers from the deposition of Michael Dewar were read:)

"Q. There is one thing I would like to clear up, Mr. Dewar, with respect to the reasons for the 1938 agreement. I believe you stated that the purpose was to put all the agreements into one agreement. It seems to me that there were two agreements in effect prior to 1938—an agreement of 1934 December between British Timken and American Timken, and an agreement between British Timken and French Timken of 1935. Then when the 1938 agreements were drafted you ended up again with two agreements, the main agreement and the supplemental agreement?

[fols. 352-361] A. Yes.

Q. I am just wondering if there was a reason which occurred to you today in giving your testimony as being the reason for the two agreements?

A. The two agreements in 1938?

Q. Yes.

A. Well, I believe that the supplemental agreement was entered into because of some question of French taxation if the control of a Company in France was exercised from outside.

Q. Could you explain that a little further? I do not see why it had to be in two agreements. What is the nature of the agreements that required that?

A. I have no idea.

Q. Was that handled by Mr. Duncan?

A. It was a technical-financial-legal point."

[fol. 362] Mr. Nitschke: Your Honor, we would now like to proceed further with offering from the deposition. We

will offer the last three questions on Page 47 and the first two questions on Page 48, which are part of Mr. Day's examination of Mr. Dewar.

(Thereupon the following questions and answers were read:)

"Q. Reference has been made to the fact that there are territorial provisions in some of these contracts we have been talking about. What was the policy of both Companies under this agreement in the event that one of them was more able to make a sale in a given territory than the other?

[fol. 363] A. We had a common enemy in the Swedish S. K. F. who had begun the manufacture of tapered roller bearings, and our general policy was that if a tapered roller bearing was sold it had got to be a Timken and not a S. K. F. To us it was really immaterial whether it was made in the United States or whether it was made in Great Britain or France, provided it carried the name 'Timken'. We used to sell at the request of the American Company in the Argentine and the American Company has sold at our request in our territories.

Q. For the purpose of getting the Timken bearings sold?

A. Getting the Timken bearings sold, yes.

Q. Did S. K. F. begin the manufacture of tapered roller bearings?

A. Yes. I think it would have been about 1930 when they really came to the conclusion that they had lost something by not having tapered roller bearings in their repertoire.

Q. And they started to make them?

A. Yes.

By Mr. Nitschke: Are you referring to British S. K. F. Company?

By the Witness: When I say 'S. K. F.', I am afraid I [fol. 364] shall be referring to S. K. F. Sweden, S. K. F. England, S. K. F. France and S. K. F. Germany. As far as we are concerned, it is all one; European S. K. F. I am afraid I do not know enough about the American S. K. F.

By Mr. Nitschke: I just wanted to know which Company started to make tapered roller bearings in 1930.

By the Witness: The S. K. F. in Gottenburg, Sweden, the S. K. F. in England, at Luton, the S. K. F. Company in Paris, called C. A. M., and the S. K. F. people in Germany. They all started at the same time.

Mr. Day:

Q. I asked you this morning whether, back in 1927, anyone was manufacturing tapered roller bearings in Great Britain except British Timken, and you said you did not think there was anybody. Has it occurred to you that there was somebody?

A. Yes; you are quite correct. There was a Company called Bock which had a very small works in Glasgow. It was a subsidiary or an affiliated Company to the American Bock Corporation. It was so small that it was never really of any competitive danger to us, or of any sales danger. I would like to add that it went out of existence very shortly afterwards."

[fol. 365] Mr. Nitschke: We now proceed to offer from my examination of Mr. Dewar the first seven questions on Page 57.

(Thereupon the following questions and answers from the deposition of Michael Dewar were read:)

"Q. In 1927, or (let us say) January 1st, 1928, what types of tapered roller bearings was British Timken making?

A. Only one.

Q. Do you recognise any distinction between the types of bearings that the American Company was making and the types that British Timken was making at that time?

A. No. We all make one type. There is only one type.

Q. I know there are tapered roller bearings, but there are various categories within that classification?

A. Do you mean different sizes?

Q. No; different styles or types.

A. No; there are no styles.

Q. Would it refresh your recollection any if I mentioned F. type tapered roller bearings?

A. Yes, but I do not think either you or I, without a microscope, would know the difference. If you want one that is different, there was one we had with rolls with tails on them, but I never remember those, and ever since I [fol. 366] have had anything to do with Timken the bearing we have made in England, and the one they have made in Canton has been practically indistinguishable.

Q. That is since 1925?

A. Since 1927.

Q. March, 1927?
A. A bit before that."

Mr. Nitschke: We now wish to offer from my examination of Mr. Dewar the first question on Page 59, the last question on 59, through to the sixth question on Page 61.

(Thereupon the following questions and answers from the deposition of Michael Dewar were read:)

"Q. Do you have any idea approximately what percentage of the tapered roller bearing production in England was British Timken at this time?
A. I should have said 100 per cent or 99 per cent."

Mr. Day: What time was that?
Mr. Nitschke: From the next question it will appear we were talking about 1928.
Mr. Day: All right.

(Continuing the reading from deposition)

"Q. Could you tell me to what extent British Timken's [fol. 367] percentage of the tapered roller bearing market in England has changed from this first period in 1928?
A. It is back to just about where it was then, about 95 or 96 per cent.
Q. Did it vary at some time during that period?
A. I should think it went as low as 70 per cent.
Q. Has British Timken manufactured anything besides tapered roller bearings during this period from 1928 to date?
A. Yes.
Q. What products?
A. Ball bearings, parallel roller bearings.
Q. Anything else?
A. Axle boxes. I cannot think of anything else serious.
Q. When did it begin the manufacture of ball and straight roller bearings?
A. I am afraid I do not remember the exact date.
Q. Approximately.
A. I should think it would be about 1934 or 1933. I dare say my colleague can tell you.
Q. Do you recall if it was before the consummation of the 1935 agreement which contained that provision about Russia?

A. It would be about then, but I do not really know [fol. 368] whether it was before or after. It had no connection with it.

Q. What trade marks were used on the ball and straight roller bearings?

A. 'Timken'.

Q. The same as was used on the tapered roller bearings?

A. Yes.

Q. Did you ever use any other mark on the ball and straight roller bearings?

A. We have given up now. We do not make them.

Q. Up until the time that you stopped making ball and straight roller bearings.

A. We used to, yes.

Q. Always?

A. Yes.

Q. Have you ever manufactured tapered roller bearings which were of different dimensions than those made by the American Company?

A. Yes.

Q. To what extent?

A. I should think to a very small extent, because usually if we have manufactured a certain size the American Company have manufactured it afterwards because it becomes reasonably popular and the other way round.

Q. Do you manufacture bearings in both metric and inch [fol. 369] sizes?

A. Yes.

Q. How long have you done that?

A. 12 or 13 years.

Q. Originally, in 1927, they were all inch sizes?

A. Yes, except that we did make some metric sizes, but they were not metrically designed, if you understand what I mean. They were inch designed converted to metric.

Q. In other words, they were exactly the same size as your inch size of bearings, but were just measured in metric?

A. Not quite, no. The external, the boundary, dimensions were metric, but the internal dimensions were inches. We would have, say, a 30 millimetre bearing. It is not exactly anything in inches, and we just bored it a little bit bigger or a little smaller and called it a 30 millimetre bearing.

Q. Do you know whether or not the American Company made the same metric sizes?

A. I do not think they did unless we asked them to.

Q. Did you ask them to make them sometimes?

A. We probably did for our French factory, but I am merely saying 'probably'. I could not swear to it.

Q. In 1940 I understand that British Timken acquired a [fol. 370] plant in England owned by the Fischer Company?

A. That is right.

Q. Could you tell us about that?

A. The Fischer Company in Wolverhampton was a wholly-owned subsidiary of the Fischer Company at Schweinfurt in Germany. When the war broke out, they had no parent Company and we were asked by the Air Ministry if we would take it over and take it under our wing, and we bought it from the British Government, who took over the ownership of the Company under the Custodian of Enemy Property. We bought it from the official Custodian of Enemy Property at the request of the British Air Ministry.

Q. What was the Fischer Company manufacturing at the time you took it over?

A. Ball and cylindrical roller bearings.

Q. Did you just purchase the stock of the Company, or was it in the nature of an acquisition of the assets?

A. No; we purchased the stock of the Company, which covered everything, covered the assets as well.

Q. The letter-head of British Timken lists it as the registered proprietor of Fischer?

A. Yes.

Q. What does that mean?

[fol. 371] A. British Timken owns all the shares in the Fischer Bearing Company.

Q. Does Fischer have a separate management from British Timken Limited?

A. No.

Q. In other words, Mr. Pascoe is also the Managing Director of Fischer?

A. Not legally. In practice, Mr. Pascoe and I control Timken and Fischer.

Q. What did you do with the plant of the Fischer Company after you acquired the stock? Did you continue producing ball and straight roller bearings?

A. Yes. The object of us acquiring it at the request of the Government was to see that it did not stop.

Q. I believe you stated you are no longer manufacturing ball and straight roller bearings?

A. I said Timken was not.

Q. I take it, then, that Fischer is manufacturing?

A. Yes, but under the trade mark of the Fischer Company, 'F. B. C.'.

Q. After you had acquired Fischer, did you produce in its plant any bearings marked 'Timken'?

A. We make millions of bearings marked 'Timken', yes.

Q. In the Fischer plant?

[fol. 372] A. No; in the Timken plant.

Q. I am speaking about the Fischer plant.

A. I thought you meant: had we transferred the trade mark 'F. B. C.' to Timken?

Q. I am interested in knowing what mark the Fischer bearings have been produced under.

A. 'F. B. C.' They were being produced under 'F. A. G.' with a little star, which was the German Fischer trade mark. Then we changed it when we could to 'F. B. C.'

Q. What do those initials stand for?

A. 'Fischer Bearing Company'.

Q. That was a new mark which had not been used previously?

A. It had not been used before.

Q. Is the Fischer business conducted separately from the British Timken business? Do you have separate sales?

A. No.

Q. Do you have separate letterheads?

A. Yes, we have a separate letterhead for Fischer.

Q. So now when you sell ball or straight roller bearings you use a different letterhead?

A. It depends if the correspondence is done from the Fischer plant or the Timken plant. If our London office writes a letter to, say, Ford, about cylindrical roller bearings, it goes under a Timken heading, but the Timken head-
[fol. 373] ing has the name Fischer.

Q. When did you cease manufacturing ball and straight roller bearings?

A. When we bought the Fischer plant we transferred the machine tools there.

Q. All the machinery for making ball bearings were transferred to the Fischer plant?

A. Yes.

Mr. Nitschke: I would now like to have marked for identification as Government's Exhibit 34 a memorandum by W. Robert Timken dated February 23, 1944. The memorandum is headed "British Timken and Fischer plants" and described by Dewar. I wish to offer Government's Exhibit 34 in evidence.

(Thereupon the document last above referred to was marked by the Clerk for identification, Government's Exhibit 34.)

The Court: Do I hear any comment on that from defense counsel?

Mr. Day: We don't object to it.

The Court: It may be received.

Mr. Nitschke: I won't take the time to read that, your [fols. 374-391] Honor. It merely describes the properties of the British Company, of British Timken.

The Court: Very well.

Mr. Nitschke: We now proceed to offer further from the deposition of Mr. Dewar, this time the examination of Mr. Dewar by Mr. Day, the first question on Page 49.

[fol. 392] Mr. Nitschke: Does your Honor wish to proceed with further reading from the examination? I would like to offer from Mr. Day's examination of Mr. Dewar the first question on Page 49.

(Thereupon the following questions and answers from the deposition of Michael Dewar were read:)

"Q. Do you know what, if any, French company was selling Timken roller bearings prior to 1927?

A. The Societe Mechanique de Genevillers—S. M. G.—was making and selling Timken roller bearings in France."

Then turning to Page 64 of the deposition, from the examination of Mr. Dewar, last seven questions on Page 64, continuing on through Page 68.

[fol. 393] (Thereupon the following questions and answers were read from the deposition of Michael Dewar by Mr. Derr and Mr. Dedman):

"Q. I believe you stated that in France in 1927 and 1928 the S. M. G. was the sole producer of tapered roller bearings?

A. I did.

Q. Can you tell me about what time French Timken began production in France?

A. Not without referring to the book of words, but it is quite easily obtainable.

Q. Was it within a year after the arrangements with British Timken and the American Timken?

A. It was within a year after the arrangement with S. M. G. was finished. We could not do it while they were the owners.

Q. But you produced it immediately after?

A. When you say 'produced', it was a long time before we produced bearings from the raw material. We were importing components and semi-finished products and finishing them in France for some time before we really went into complete manufacture.

Q. How long would you say you were doing that?

A. Four or five years before we really got going.

Q. To the point where you were making all the components yourself?

[fol. 394] A. Yes.

Q. I believe you stated that even after that time French Timken continued to import some components from British Timken and American Timken.

A. We are importing more from American Timken.

Q. That is throughout the period from, say 1934 and 1935, up to date?

A. We could even import into France after the Germans succeeded in stopping France. We could not import from England. We could import from America, and we did some.

Q. What do you mean by 'components'? What is included in that word?

A. Rolls, cages, cups and cones. Those are the four components of a tapered roller bearing.

Q. And raw materials?

A. Tube or forgings.

Q. Were all those things imported from American Timken for French Timken?

A. Yes.

Q. From the time it began production right on through?

A. The first operations we did in French Timken were just the grinding of the two major components. I will bring a bearing here tomorrow.

Q. Would you say that as of 1934 or 1935, at the time of

the second agreement, that French Timken was still import-
[fol. 395] ing from America considerable quantities of components?

A. I do not think it has ever stopped. We imported an enormous quantity of raw material and finished bearings, as well as components, even this year. I would not in my own mind think there is any difference in level.

Q. There have been substantial quantities at all times?

A. There have been substantial quantities at all times.

Q. Does French Timken today make balls or roller bearings?

A. No.

Q. Has it ever made ball and roller bearings?

A. No.

Q. How has the percentage of tapered roller — production of France continued throughout this period?

A. That is awfully difficult to say, because it is so much more difficult to get figures. You see, there was importation from R. I. V. in Italy. There was the production of the Renault Works and the production of S. K. F.; in other words, there were four people in that business whereas there were only two in this country.

Q. And that is of what period?

A. As of now. It has been all the time since 1934 onwards.

Q. Did S. M. G. continue to make tapered roller bearings after 1928?

A. I do not think so. We never met any competition from them.

[fol. 396] Q. Do you know when C.A.M. began the manufacture of tapered roller bearings in France?

A. About the same time as we did.

Q. What trademarks has French Timken used during this entire period?

A. 'Timken' all the time.

Q. Approximately what time did you begin the production of tapered roller bearings in the German Company, D.T.G.?

A. We never really produced tapered roller bearings in Germany. We bought all the cages from America and England. We never machined from the raw material at all. We did the grinding there and the assembly and then, before we could really get going, we decided to quit.

Q. Can you recall approximately when you began assembling and grinding?

A. I should think about 1931. I would sooner not be tied down.

Q. I just wanted an approximate date.

A. Three years we were in operation.

Q. What trademarks were used?

A. 'Timken'.

Q. Has British Timken during this entire period from 1928 to date purchased components from American Timken for use in its products?

A. Yes.

[fol. 397] Q. In substantial quantities?

A. Yes. I saw very substantial quantities only a week ago when I was down at our works.

Q. What were the principal components purchased by British Timken?

A. The British components were rolls and cages.

Q. The tapered roll?

A. Yes.

Q. And the cage is the container?

A. The cage holds the rolls together.

Q. Has British Timken during this period also purchased finished and completed bearings from American Timken?

A. Yes.

Q. For resale in its territory?

A. Yes.

Q. I would like to pin that down to periods. From the beginning in 1928, did it purchase finished bearings?

A. Yes, and we do still, substantial quantities.

Q. In 1934?

A. Yes.

Q. And in 1938?

A. Yes.

Q. Were those sizes that you did not manufacture usually?

A. They were either sizes we did not manufacture, or special bearings for special equipment, where it was not sensible to spend enormous sums of money in tooling to [fol. 398] manufacture one off or two off.

Q. Were those bearings for original application and replacement purposes?

A. Yes, I should say both.

Q. Did the same situation exist for French Timken during this period for finished bearings?

A. Yes, except that they imported relatively far more finished bearings than British Timken did because their operations were not so great.

Q. From American Timken?

A. Yes. At this time they were importing far more than British Timken.

Q. Throughout the period, they had imported finished bearings from American Timken?

A. Yes.

Q. For resale?

A. For resale, yes.

Q. Could you give me any idea approximately of the relative quantities that French Timken has purchased from the American company? Was it half or a quarter of their sales, or 10 per cent or what?

A. I have no idea at all. We can easily get it for you.

Q. I would like that information. I assume that we can get that from American Timken?

[fol. 399] By Mr. Day: As a matter of fact, we expect to show that.

By the Witness: Then I need not make a note about it.

Mr. Nitschke:

Q. During this period have British Timken and French Timken purchased finished tapered roller bearings from any other United States manufacturers?

A. No.

Q. Do you know if American Timken has sold bearings directly to customers in the British territory during this entire period, 1928 to date?

A. Yes, they have.

Q. They have regularly done that?

A. They are selling them today.

Q. Have you any idea relatively how much of the sales of 'Timken' marked bearings in the British territory are made by American Timken?

A. I could not tell you. I should think the percentage is considerable today even.

Q. Do you know if the American Company has shipped bearings into the British territory for service or replacement purposes and for original applications?

A. It is very difficult to differentiate because, supposing Ford is buying bearings from the Timken Roller Bearing

Company, I cannot tell you what Ford does with them. He [fols. 400-410] may put them into original equipment, or put them into cartons and sell them as service. So I am afraid it is difficult to answer.

Q. You think perhaps they have been sold for both purposes?

A. Yes. I am certain they have been sold for both purposes, but what proportion I have no idea.

Q. Was that true in 1928?

A. Yes, it must have been true in 1928 if it is true today.

Q. And 1934?

A. Yes.

Q. And 1938?

A. Yes."

Mr. Nitschke: I now wish to offer from Mr. Ketterer's examination of Jean LeMarie.

[fol. 411] Mr. Nitschke: I wish to read from once more—I believe I said I was going to proceed to offer from Mr. Ketterer's examination of Lemarie, on page 223 of the transcript of the deposition, the first five questions and answers.

Mr. Day: Will you read the start of Mr. LeMarie's deposition, who he is, just like you did with Mr. Dewar, so the Court will get some idea.

Mr. Nitschke: I intend to do that. If I don't read enough you will point out where you want me to read and I will read it all.

(Mr. Nitschke reading:)

"Jean Lemarie of 11, Rue Parmentier, Neuilly sur Seine, near Paris, France, aged 53 years, being duly and publicly sworn and examined on the part of the Defendant, doth depose and say as follows."

Did you want me to read his colloquy between us?

Mr. Day: Oh, no.

(Mr. Nitschke reading:)

"Q. Will you state your name, pleazse?

A. Lemarie, Jean.

Q. Where do you live?

A. Neuilly sur Seine, near Paris.

Q. Do you have any connection with the French Timken Company?

[fols. 412-413] A. I am Director General of French Timken.

Q. How long have you been Managing Director of the French Timken Company?

A. Since 1st January, 1946.

Q. Did you have any connection with French Timken before January 1st, 1946?

A. Yes, I was Director from February 1st, 1943."

Now, turning to page 228 of the transcript, we offer my examination of Mr. Lemarie, the first two questions:

"Q. Do you know what percentage of the French tapered roller bearing market Francaise Timken has today?

A. I do not know exactly.

Q. Could you make an approximation, as you did for Mr. Ketterer with respect to all anti-friction bearings?

A. I think perhaps it would be 80 per cent."

I now wish——

[fol. 414] Mr. Nitschke: We will continue with offering further portions of the deposition. We will now proceed to offer the last four questions on page 53 of the transcript and the first five on page 54, which are part of Mr. Day's examination of Mr. Dewar.

(Thereupon, the following questions and answers were read from the deposition of Michael Dewar:)

"Q. What was the German situation as of that time?

A. During the first World War a man of the name of [fol. 415] Prausnitzer had registered for himself the name 'Timken,' I believe in 1916; anyhow, during the period of the war. He was a German citizen.

Q. What was his relation to British Timken?

A. His relation previous to the first World War had been that he was a representative of Vickers in Germany and he did sell what Timken tapered roller bearings were sold in Germany; so that when the 1914/18 War ended we found Prausnitzer in Germany owning a small company which, for short, I will call D.T.C., German Timken Company, and we were totally unable to wrest the name from him, because it was his own personal property, the name of Timken.

Q. That is, the trade mark 'Timken' was registered in Prausnitzer's name?

A. Yes. It belonged to Prausnitzer.

Q. Then what was done with relation generally to Germany?

A. We set out to form a Company exactly in the same way as we had in France, the idea being to import parts from England and the United States and finish them and assemble in Germany. We did this and we carried on till, I think, 1934, when the Hitler position became rather acute and we decided that we would get out from underneath as soon as possible, and we shut down and came out.

[fol. 416] Q. Was that the end of the German enterprise?

A. That was the end of the German enterprises; but, in order to enable us to get the German Timken Company under control of Timken again, we had to pay Prausnitzer, I think not in cash, but we gave him a 20 or 25 per cent interest in the German Company and a salary as manager of it.

Q. Then Prausnitzer assigned——

A. Prausnitzer assigned his Company to us.

Q. So that the trade mark which had been registered in the name of Prausnitzer passed to the German Timken; is that right?

A. Yes, that is right.

Q. In 1934 do you know what happened to the trade mark 'Timken' in Germany?

A. I presume the trade-mark still belongs to the Deutsche Timken Gesselschaft.

Q. Do you know whether or not it was acquired by British Timken?

A. No, I do not know."

Mr. Nitschke: We will now proceed to offer a part of Mr. Ketterer's examination of Andre Augis, beginning at page 229 of the transcript, going through page 231 and concluding with the first question on page 232. We will also offer [fol. 417] as this part of the deposition goes in, the exhibits attached thereto and referred to therein. Perhaps it would be convenient if we marked those for identification at this time, and then we can have them in as we read the deposition.

The Court: The exhibits?

Mr. Nitschke: Yes.

The Court: Very well.

Mr. Nitschke: I will have them marked right now. We wish to offer——

Mr. Day: Mr. Nitschke, would you be willing to read what it says about the witness on page 229 so the record will contain that introduction, showing who the witness is and where he comes from?

Mr. Nitschke: Yes, I was going to offer the documents first, or have them identified——

Mr. Day: I wish you would read that.

Mr. Nitschke: "Andre Bernard Jules Augis of 179, Avenue Victor Hugo, Paris XVI, France, Companies Director and Private Counsellor, aged 64 years, being duly and publicly sworn and examined on the part of the Defendant, doth depose and say as follows:"

Mr. Day: Thank you.

[fol. 418] Mr. Nitschke: Before going on to reading the deposition, I will have marked for identification these two documents which are attached to this portion of the depositions, the first of which I will have marked Government's Exhibit 35, which is attached to the deposition as Defendant's Exhibit D-35-A. It is written in French, dated the 7th and 10th of August, 1928, and is an assignment of a trade mark. It's entitled, "Assignment of Trade Mark."

The Court: What is the exhibit number here? Is it Government's Exhibit No. 35?

Mr. Nitschke: Our Exhibit No. 35.

The Court: That's the first one which seems to correspond.

Mr. Nitschke: Yes. I will have marked as Government's Exhibit 36, for identifiication, a translation into English of Government's Exhibit 35.

(Thereupon the documents above referred to were marked by the Clerk, for identification, Government's Exhibits 35 and 36, respectively.)

Mr. Nitschke: This is attached to the deposition as Defendant's Exhibit 35-B.

[fol. 419] (Thereupon, the following questions and answers were read from the deposition of Andre Augis:)

"Q. Will you state your name?

A. Andre Augis.

Q. Where do you live?

A. Paris XVIth Arrondissement, 179, Avenue Victor Hugo.

Q. What is your profession?

A. I am a lawyer by profession.

Q. Have you any official connection with the French Timken Company at the present time?

A. At the present time I am a Director of the French Timken Company.

Q. How long have you been a Director?

A. I was made a member of the Board at Bordeaux on the 19th June, 1940.

Q. Where was the German Army at that time when you were made a Director?

A. They were just arriving at Bordeaux.

Q. Have you continued to be a Director ever since?

A. Yes, since 1940 I have always been a member of the Board of French Timken.

Q. Prior to 1940 had you performed any legal services [fol. 420] for the French Timken Company as a lawyer?

A. Yes, since the inception of the Company I have been advising Mr. Michael Dewar on legal and fiscal matters mainly, and I have always been associated with the development of the company because Mr. Dewar always kept me au courant with what was done as to French Timken.

Q. Can you tell me in whose name the trade mark 'Timken' was registered in France prior to 1928?

A. Yes, the trade mark 'Timken' was registered in the name of Societe Mecanique de Gennevilliers, a limited company established in France.

Q. I have here a Certificate of Registration that has been marked for identification Defendant's Exhibit D. 34 and I ask you whether or not you can tell us what that is.

A. That is the official document delivered by the Registrar of Industrial Property and it is the only evidence which can be obtained in France as regards trade marks and what you call names used in the trade.

Q. What does that show in respect of the registration of the mark 'Timken'?

A. That shows, first of all, the identification of the mark and also it applies to certain trades which are specified on [fols. 421-422] the Certificate.

Q. What does it show as to the name of the person or company who is the owner of the mark 'Timken'?

A. It is always the name of the company, of the owner, they do not say anything except to whom it belongs.

Q. But to whom does it belong as shown by the Certificate?

A. It is shown as the Societe Mecanique de Gennevilliers.

Q. Does it show the date on which that registration was obtained in the name of the Societe Mecanique?

A. Yes, it was registered on 17th February, 1921.

By Mr. Ketterer: I would like to offer in evidence this certificate."

Mr. Derr: At this point, your Honor, the Government would like to offer that document.

The Court: That may be received.

[fol. 423] The Court: I'm afraid I have lost the connection there. I thought Government's Exhibit 35, which was Defendant's Exhibit 35 in the deposition, was the French document.

Mr. Nitschke: Yes, that's right.

The Court: And Exhibit 36 is the English translation?

Mr. Nitschke: That's right, your Honor.

The Court: This last one, Exhibit 37, what is that?

Mr. Nitschke: That is the certificate of registration of the trade mark "Timken" in France, which is attached to the deposition as Defendant's Exhibit D-34.

The Court: I see.

Mr. Nitschke: And which Mr. Augis just described in the deposition. I will get a copy of that for your book, your Honor.

The Court: Very well.

Mr. Nitschke: We offer that Exhibit 37 in evidence.

[fol. 424] The Court: It may be received.

I assume this was another one that you offered, Mr. Day, at the time?

Mr. Day: That's right, your Honor.

(Thereupon, the following questions and answers were read from the deposition of Andre Augis:)

"Q. Did you have anything to do with a transfer of that trade mark in 1927 or 1928?

A. Yes—in France?

Q. In France, yes.

A. The mark 'Timken' was transferred by the Societe

Mecanique de Gennevilliers to French Timken by a notarial deed which was made by the notary of French Timken.

Q. I hand you two documents marked for identification Defendant's Exhibit D.35A and Defendant's Exhibit D.35B, and I ask you if you can tell us what they are?

A. D.35A is a deed of cession of the trade mark 'Timken' by Mr. Alby, an engineer who was connected with the Societe Mecanique de Gennevilliers. He received special power from the Company to transfer the mark to Societe Francaise Timken.

[fol. 425] Q. Did you assist in the preparation of that document?

A. Yes, I did so.

Q. I understood you to say a while ago that it was referred to as a notarial instrument of transfer?

A. Yes, the notarial deed. To make the transfer valid in France you must have a written document. It may be what you call sous seing prives, a writing not before a notary. but generally it is done by the notary of the company for technical reasons to be certain they have the power to transfer the mark. That has been the case with Societe Francaise Timken, because the person who accepted the transfer for Societe Francaise Timken was appointed by a special meeting of the board of French Timken which had been formed not long before. The document is dated 7th and 10th of August, 1928.

Q. What is the document that has been marked Defendant's Exhibit D.35B?

A. That is what we call a true copy or rather a sworn translation of the notarial document.

Q. Of the one that has been marked D.35A?

A. It is legalised before the American Consul in Paris.

[fol. 426] By Mr. Ketterer: We would like to offer in evidence Defendant's Exhibits D.35A and D.35B."

Mr. Derr: At this point, your Honor, the Government will offer these two documents.

The Court: They will be received.

[fol. 427] Mr. Nitschke: There is just one more question in Mr. Augis' deposition that we might offer.

(Thereupon, the following question and answer were read from the deposition of Andre Augis:)

"Q. Do you know what consideration was paid to the Societe Mecanique in 1928 for the transfer of the mark to the new French Timken Company?

A. I think the document shows it was 12,000 Francs, [fol. 427-A] something like that."

Mr. Nitschke: I now wish to have marked for identification as Government's Exhibit 38 copy of a letter dated October 13, 1927, from D. P. H. to Mr. Lothrop.

(Thereupon, the document above referred to was marked by the Clerk, for identification, Government's Exhibit 38.)

Mr. Day: Was that offered in the deposition?

Mr. Nitschke: No, these were not in the deposition.

Mr. Day: I see.

Mr. Nitschke: I wish to have marked for identification as Government's Exhibit 39 a letter dated January 13, 1928, from W. E. Hobley to D. P. Hess.

(Thereupon, the document above referred to was marked by the Clerk, for identification, Government's Exhibit 39.)

Mr. Nitschke: I wish to have marked for identification as Government's Exhibit 40 a carbon original of letter dated February 17, 1928, from D.P.H. to W. E. Hobley.

[fol. 428] (Thereupon, the document above referred to was marked by the Clerk, for identification, Government's Exhibit 40.)

The Court: That is dated February 17th?

Mr. Nitschke: Yes, your Honor, February 17, 1928.

I wish to have marked for identification as Government's Exhibit 41 a letter from W. E. Hobley to D. P. Hess, dated March 6, 1928.

(Thereupon, the document above referred to was marked by the Clerk, for identification, Government's Exhibit 41.)

Mr. Nitschke: I wish to have marked for identification as Government's Exhibit 42 a letter from W. E. Hobley to D. P. Hess, dated March 22, 1928.

(Thereupon, the document above referred to was marked by the Clerk, for identification, Government's Exhibit 42.)

Mr. Nitschke: I would like to have marked for identification as Government's Exhibit 43 a carbon original of a letter from D. P. H. to W. E. Hobley, dated April 18, 1928.

(Thereupon, the document above referred to was marked [fol. 429] by the Clerk, for identification, Government's Exhibit No. 43.)

Mr. Nitschke: I wish to offer the first three paragraphs of Government's Exhibit 38, from the beginning down to the words "at once" in the middle of the page.

The Court: Let me turn back to it.

Mr. Nitschke: That's the letter dated October 13, 1927, which is marked Government's Exhibit 38.

The Court: Now, what portion of that are you offering?

Mr. Nitschke: The first three paragraphs, your Honor, just about the first half, down through the words "I impressed Mr. Dewar with the fact that this should be done at once."

The Court: How do you propose to do that? Do you propose to copy that portion of the exhibit and substitute it for the original letter?

Mr. Nitschke: Yes, I will do that, your Honor.

The Court: All right, they may be received.

[fol. 430] Mr. Nitschke: I offer all of the other letters, which are Government's Exhibits 39, 40, 41, 42, and 43.

The Court: They may be received.

Mr. Nitschke: Your Honor, I won't read all these letters to you. I think that it would save time if I just read the pertinent pages, if that is agreeable to you.

The Court: All right.

[fols. 431-436] Mr. Nitschke: Your Honor, I think Mr. Day will stipulate that these letters which are initialed "D. P. H." are carbon originals of letters written by Mr. Donald P. Hess?

Mr. Day: That's right.

[fol. 437] I now wish to have marked for identification [fol. 438] as Government's Exhibit 44 a carbon original of a letter from D. P. H. to British Timken Limited, dated July 13, 1929.

(Thereupon, the document above referred to was marked by the Clerk, for identification, Government's Exhibit 44.)

Mr. Nitschke: I wish to have marked for identification as Government's Exhibit 45 a cable f n Dewar to Hess, dated August 3, 1929.

(The document above referred to was marked by the Clerk, for identification, Government's Exhibit 45.)

Mr. Nitschke: As Government's Exhibit 46 a cable from Spray to Dewar, dated August 3, 1929.

(The document above referred to was marked by the Clerk, for identification, Government's Exhibit 46.)

Mr. Nitschke: As Government's Exhibit 47 a cable from Dewar to Hess, dated October 11th—there is no year shown here, as far as I can see.

[fols. 439-443] I assume it's 1929 because it follows right in sequence with the other cables.

(Thereupon, the document above referred to was marked by the Clerk, for identification, Government's Exhibit 47.)

Mr. Day: What is the last one you offered?

Mr. Nitschke: Government's Exhibit 47.

We want to have marked for identificatiaon as Government's Exhibit 48 a copy of a cable from Hess to Dewar, dated October 11, 1929.

(The document above referred to was marked by the Clerk, for identification, Government's Exhibit 48.)

Mr. Nitschke: I wish to offer Government's Exhibits 44, 45, 46, 47, and 48.

The Court: They will be received.

[fols. 444-464] Mr. Nitsche: Your Honor, we will now proceed to offer more of the deposition. This next portion, I think, Mr. Day will be glad to know will be a very substantial excerpt of about 50 or 60 pages, which contains the better part of what I designated as my examination of Mr. Dewar. This begins on page 71, starting with the last three questions on page 71, and it continues indefinitely—I'm not quite sure how far it goes.

Mr. Day: We wish to object to it, if your Honor please.

[fol. 465] The Court: I'm of the opinion that the testimony should be received at this time. If it should transpire after the testimony is received, and at the conclusion of this case, that, in the first place, the conspiracy or the activities of these people abroad were not a part of the general conspiracy, the Court may then disregard it and, again, if it should appear at the conclusion of this case that the matter of the intervention of war would make it not only unlikely but practically impossible for the revival of these contracts or these agreements, then the Court can likewise exclude

this testimony. I am of the opinion that at this time, on the [fol. 466] basis of the testimony heretofore offered, it should be received.

Mr. Day: And will your Honor, without our making objection, take it all under objection and exception?

The Court: Yes, the objection will be overruled and I will receive it.

We will take a recess at this time.

(Short recess taken.)

Mr. Nitschke: Your Honor, I will now proceed to offer that part of the deposition beginning with the last three questions on page 71 and continuing on my examination of Mr. Dewar, and my offer will include the exhibits attached thereto, and when I come to them I will specifically offer them with the trial exhibit numbers.

(Questions read by Mr. Nitschke, and answers read by Mr. Derr:)

"Q. I have here Government's Exhibit D.2 for identification, which is a letter dated June 6, 1932, from M.B.U. Dewar to D. P. Hess, Timken Roller Bearing Company. First of all, would you tell me if that is your signature on the photostatic copy of the letter?

A. Yes, that is my signature all right."

[fol. 467] I will interpose at this point to have that document marked for identification as Government's Exhibit No. 49.

(The document above referred to was marked by the Clerk, for identification, Government's Exhibit No. 49.)

Mr. Nitschke: Continuing the deposition:

"Q. And that is a photostatic copy of a letter you wrote?

A. I assume so. I did not sign the middle page. To the best of my knowledge it is, yes. May I read it?

Q. Certainly you may read it; you may read the whole thing if you like. I am going to call your attention to part 3.

A. Yes; thank you."

At this point Mr. Day said:

"I understand that we do not have to make any objections on the ground of materiality, or relevancy, or com-

petency at this time. We expect to object to this evidence, but we have the understanding with you that we do not have to make objections on that ground on either side at this time, only as to the form of the question."

[fol. 468] And then my statement:

"That is right, and I think you are agreed that we may have the same stipulation with regard to authenticity; you will not question the fact that these are photostats, and not the original?

"Mr. Day: Yes."

Continuing:

"Q. I will read from page 2 of Government's Exhibit D.2. At the bottom of the page, under the heading 3, it says: 'Price arrangement within the country: In this direction, you will be interested to hear that largely at the instigation of the R. I. V. Company, we have attended meetings of all the manufacturers in France with a view to finding means not only to prevent further price cutting, but to raise our prices.' Perhaps you would like to have this when I question you about it. (Samd handed)

A. Yes.

Q. What is the R. I. V. Company referred to in that letter?

A. It is an Italian Company making all types of anti-friction bearings.

Q. Where is it located?

A. Turin.

[fol. 469] Q. Do you know what the initials 'R.I.V.' stand for?

A. No. I think they were the initials of one of the early workmen for a company which is a subsidiary of the Fiat Company.

Q. And the Company is always known as the R.I.V. Company?

A. Yes.

Q. Do you know anything about the size of that company, and the range of products that it produces—the R.I.V. Company?

A. As of today?

Q. As of the time that this letter was written—1932?

A. Yes. Not as much as I do today.

Q. But generally?

A. Yes.

Q. Generally what was it in 1932?

A. It was a biggish company employing somewhere around 2,000 people.

Q. One of the largest anti-friction bearing producers in the world?

A. It was certainly the largest producer in Italy, and ranked with the large producers in Europe anyway.

[fol. 470] Q. Did it make tapered roller bearings in 1932?

A. It does today. I would not like to say that it did in 1932.

Q. Do you recall who were the manufacturers in France with whom you expected to meet, as referred to in your letter?

A. C.A.M.—I may give them by initials, may I?

Q. Surely. I think perhaps it would be a good idea if you gave both the initials and the full name. It would get it on the record, and hereafter we can always refer to it.

A. C.A.M. is the Compagnie d'Applications Mecanique; R.I.V.; the Swiss Company, S.R.O., Societe Roulements Oerliken, I think it is—I forget what the "O" stands for but the Managing Director's name was Mr. Schmidt, and they had a factory in Switzerland and a factory in France just across the border.

Q. Do you recall a Company that goes by the initials of M. & B.?

A. Yes, Malicet et Blin."

I wish to offer in evidence that portion of Government's Exhibit 49, beginning at the bottom of page 2, the paragraph marked 3, entitled, "Price Arrangement Within the [fol. 471] Country," beginning there and continuing through the rest of the document.

The Court: It may be received.

Mr. Nitschke: I have had marked for identification Government's Exhibit D.3, which is an exhibit attached to a report by Mr. Donald Hess dated February 29, 1932, from Turin, Italy. This is a document which I did not offer in evidence then but I used it to refresh the witness' recollection. Apparently that document isn't right here available at our finger tips. Since I will not offer it, only mark it for identification, would it be agreeable if I did that later?

The Court: All right.

Mr. Nitschke: I will continue reading:

The Court: What was that exhibit?

Mr. Nitschke: That is a report by Mr. Donald Hess dated February 29, 1932, which was marked Exhibit D.3 and which will be marked Government's Exhibit 50.

Mr. Nitschke: (Reading:)

"Q. I have had marked for identification Government's Exhibit D.3, which is an Exhibit attached to a report by Mr. Donald Hess dated February 29th, 1932, from Turin, [fol. 472] Italy. I just want to read this to you to see if it refreshes your recollection on the question I asked you previously, as to whether or not R.I.V. was manufacturing tapered roller bearings at this time. Mr. Hess says: 'The writer accompanied by Mr. Derr visited the Turin Plant (headquarters) of R.I.V. on February 29th, 1932'. Then I skip the next part, and go on reading: 'This plant produced all types of bearings but the bulk of the production going through at the time of our visit was tapered bearings of tractor and truck sizes for Russia.' Then further: 'Generally speaking, their methods are exactly like Canton, i.e., headed rolls (Manville header)', etc; I will not read any further. Does that refresh your recollection on that point?

A. Yes, that does, but Mr. Hess only went round one of their factories; he went round one that obviously was making tapered roller bearings. Yes, you are quite correct. I apologize for mis-remembering, but we ultimately bought some special machines from Italy which they were using on tapered roller bearings, and you are quite right. Their biggest factory, not in Turin but at Villar Perosa, was [fol. 473] making only ball and straight roller bearings.

By Mr. Nitschke: Mr. Day, I may offer some of these in evidence. I do not know at this point whether or not I shall. When I do know, I will make the offer.

By Mr. Day: All right.

By Mr. Nitschke: I have here Government's Exhibit D.4 which purports to be a letter dated June 22nd, 1932, written by Michael B. U. Dewar to D. P. Hess."

I will have that marked for identification as Government's Exhibit 51.

(The document above referred to was marked by the Clerk, for identification, Government's Exhibit No. 51.)

Mr. Nitschke: Continuing with the question:

"I will ask you to look at that and tell me if you wrote that letter? (Same handed) I think I should say that in all cases where I refer to 'the letter', I am referring to a photostatic copy of the letter unless I say otherwise.

"A. Yes, I acknowledge the authenticity of that. May I read it? Are you going to ask me anything about it?

Q. Yes, I wish you would read it.

[fol. 474] A. Yes.

Q. Can you tell us what each of the companies mentioned in the first paragraph of this letter was manufacturing: S.K.F., R.I.V., S.R.O., and M.&B.—in 1932, in France?

A. Anti-friction bearings.

Q. Were they manufacturing tapered roller bearings also?

A. If you will read them through again I will tell you which was and which was not.

Q. S.K.F.?

A. C.A.M.—S.K.F. had another company.

By Mr. Day: Did you say 'In France'? I did not hear the end of that.

By Mr. Nitschke: Yes, I did.

A. C.A.M. controlled by S.K.F. was manufacturing both.

Q. When you used the initials 'S.K.F.' you were referring to the French Company?

A. I covered everything controlled in France by S.K.F.

Q. And that went under the name of C.A.M.?

A. Yes, although they used the letters S.K.F. as their advertisement always. There was another company, a [fol. 475] small one, whose name I forget.

Q. Your answer to the question is that they were not making tapered roller bearings?

A. No—they were. C.A.M. were making tapered roller bearings.

Q. And R.I.V.?

A. Yes, in Italy, not in France.

Q. Did they have a factory in France?

A. No, not at that time; they were just going to.

Q. Did they, shortly after this time?

A. They built a factory at Chambery, which was closed down fairly soon after this date. I could not give you the exact date.

Q. Did they manufacture tapered bearings there?

A. They started to.

Q. S.R.O.?

A. S.R.O. did not manufacture tapered roller bearings.

Q. M.&B.?

A. No, they did not either.

Q. And Timken, I think you have told us before, was making tapered roller bearings?

A. Only tapered roller bearings.

Q. The second paragraph of this letter reads:

[fol. 476] 'The basis of this arrangement, which has been provisionally concluded to start as from the 1st July and to continue for eighteen months, is that each company should have a percentage of the total of the anti-friction bearing business in France, and that they shall not exceed this quota.'

Was this arrangement put into writing?

A. I cannot tell you whether the whole arrangement was put into writing. We never had a round table meeting with all the factories concerned. We dealt with S.K.F. and S.K.F. dealt with the others, so that I am afraid I cannot tell you.

Q. It was the hub of the wheel, so to speak?

A. Yes, it was.

Q. Did you have an arrangement with S.K.F. in writing?

A. Yes.

Q. We have a copy of such agreement which you sent to the Timken Roller Bearing Company in 1934, but we do not have a copy of this provisional agreement, as it is called, in 1932.

A. I do not know that the provisional agreement was ever put into the form of a legal agreement. I think it may have been, but to the best of my recollection it [fols. 477-478] was an exchange of letters between the French Timken Company and S.K.F.

Q. Would it be possible for you to supply us with copies of those letters?

A. I will do my best, but it is a longish time ago now."

[fol. 479] "Q. Then in the last paragraph on the first page of your letter you say: 'I am informed by S.K.F.

privately that they have concluded in France and in most parts of the world, a 20 years' agreement with R.I.V. In France, the average total SKF-RIV turnover for three years was given us as 136 million francs; of this figure we understand R.I.V. is 15 per cent.' Then continuing on the second page: 'Our average turnover worked out on the same basis came to 6.75 per cent of S.K.F. plus R.I.V.' I take it that your quota was figured on the basis of a percentage of the combined SKF-RIV turnover, is that correct? Would you like to look at this letter?

A. No. I do remember this, because I negotiated it all myself. As between ourselves and S.K.F., our percentage of the anti-friction bearing trade was regarded as the percentage compared with S.K.F. plus R. I. V.

[fol. 480] Q. Do you know why that was, why it was a percentage of the combined SKF-RIV business?

A. I do not know actually, although I may have a suspicion. If you read a little further on in that letter, I think I stated that SKF-RIV had a 20-year agreement.

Q. Was there something in that agreement which caused the basis for the quotas to be established on the combined total of their production?

A. I am afraid really honestly I do not know. I cannot testify to that directly.

Q. You state in this letter: 'I am informed by S.K.F. privately that they have concluded . . . a 20 years' agreement.' I am re-reading the last paragraph on the first page. Do you recall who told you about that?

A. Yes, I can recall the names of the two people. One was the head of S.K.F. in France for the time being, and the other was the head of R.I.V., who is now dead, Agnelli.

Q. Who was the head of the S.K.F. Company in France at that time. Was it Mr. Bratt?

A. Yes, Mr. Bratt.

Q. Were any penalties set up for violations of this first provisional agreement, or what is called a provisional [fol. 481] agreement?

"By Mr. Day: I object to the form of the question.

"By Mr. Nitschke: I will re-phrase the question.

"Q. Do you know whether or not there were any penalties set up for failure to keep the quotas established in this arrangement?

A. Yes.

"By Mr. Day: I object to the form of that. Go right ahead and answer, Mr. Dewar.

A. Yes, there were.

"By Mr. Whitney: You understand, Mr. Dewar, that when Mr. Day objects, that reserves the right to him to argue in the American Court that your answer should not be considered, but you still go ahead and answer.

"By Mr. Nitschke: We wish to offer Government's Exhibit D. 4 in evidence."

[fols. 482-483] I now offer Government's Exhibit 51 which is the letter of June 22, 1932, which was attached to the deposition as Government's Exhibit D. 4.

[fol. 484] Then, going back to the deposition:

(Reading:)

"Q. I have Government's Exhibit D.5 for identification, which purports to be a letter dated June 22nd, 1932, from M.B.U. Dewar to D. P. Hess. Did you write that letter?

A. Yes."

[fol. 485] I wish to have that now marked for identification as Government's Exhibit 52.

The Court: It may be received.

(The document above referred to was marked by the Clerk, for identification, Government's Exhibit 52.)

Returning to the deposition:

"Q. Who was de Benedetti?

A. I do not remember, I am sorry.

Q. Do you think perhaps he was an employee of R.I.V.?

A. I should have thought he would be an employee of S.K.F., but he might be R.I.V.

[fol. 486] Q. Perhaps from some of the next few documents we can refresh your memory on that. Do you have any recollection of what was his suggestion with respect to joining forces in France? I will read your exact language. You said: 'I saw de Benedetti in France last week, but apart from their general suggestion that we should join forces with them in France, they have not got any nearer making a direct proposal.'

A. I am afraid not, I am sorry. I have no recollection as to de Benedetti."

Then I had marked for identification Government's Exhibit D.6, which purports to be a copy of a letter to M.B.U. Dewar, dated July 7, 1932, and containing on the carbon the

initials D.P.H., which I now wish to have marked for identification as Government's Exhibit 53.

(The document above referred to was marked by the Clerk, for identification, Government's Exhibit 53.)

Mr. Nitschke: Also Government's Exhibit D.7, which purports to be a letter written by Dewar July 19, 1932, to D. P. Hess, which I have had marked for identification, Government's Exhibit 54.

[fol. 487] Also Exhibit D.8, which purports to be a copy of a letter of July 29, 1932, written to M.B.U. Dewar, and containing the initials "D.P.H.," which I now wish to have marked for identification Government's Exhibit 55.

Government's Exhibit D.9, dated August 4, 1932, which purports to be a copy of a letter written to M.B.U. Dewar from the Timken Roller Bearing Company, bearing the initials "D.P.H.," which I now wish to have marked for identification Government's Exhibit 56.

(Thereupon, the documents above referred to were marked by the Clerk, for identification, Government's Exhibits 54, 55, and 56.)

[fol. 488] Mr. Nitschke: Your Honor, I am not sure that the record is clear on whether or not I offered Government's Exhibits 49 and 51, but I now do so.

The Court: 49 is the letter of Mr. Dewar to Mr. Hess of June 6, 1932?

Mr. Nitschke: Yes.

The Court: What is the other one?

Mr. Nitschke: The first was 49, letter of June 6, 1932, [fol. 489] from Dewar to Hess; and then 51, a letter of June 22, 1932, of Dewar to Hess.

Government's Exhibit 50 is just marked for identification. It was used during the depositions to refresh the witness' recollection, but it is not being offered.

The Court: Those letters may be received in evidence.

Mr. Nitschke: I continued then with marking a few other documents for identification.

Government's Exhibit D.10 in the deposition, a letter dated August 23, 1932.

Mr. Day: May I ask what page of the deposition?

Mr. Nitschke: Page 79.

I wish to have that marked for identification as Gov-

ernment's Exhibit 57, what is attached to the deposition as Government's Exhibit D.10, a letter dated August 23, 1932, from Dewar to Hess.

(Thereupon the document above referred to was marked by the Clerk, for identification, Government's Exhibit 57.)

Government's Exhibit D.11 attached to the deposition, dated August 30, 1932, a letter from Michael Dewar to [fol. 490] R. P. Hess, I would like to have marked for identification Government's Exhibit 58.

(Thereupon the document above referred to was marked by the Clerk, for identification, as Government's Exhibit 58.)

Continuing with the deposition still on Page 79, after having marked these for identification, I state to the witness:

"Q. I would like to have you look at these letters, and, if you can, state whether or not you wrote the ones which are originals and signed by you? Do your letters in this group, Government's Exhibits D.7, D.10 and D.11 accurately state the nature of the arrangement in France, and its purposes and effect?

A. As far as we knew them, yes."

Mr. Day: I take it, your Honor, it is not necessary to renew any objections, all this is going in under objection and exception.

The Court: Yes, that is with reference to the depositions being read now referring to the agreements in the European countries between British Timken and French Timken.

Mr. Day: Yes, your Honor.

Mr. Nitschke: I now wish to offer in evidence Government's Exhibits 53, 54, 55, 56, 57 and 58.

[fols. 491-495] The Court: They may be received.

[fol. 496] I will now continue reading from the deposition, Page 80 of the transcript:

(Thereupon the following questions and answers from the deposition of Michael Dewar were read:)

"Q. On Page 2 of your letter dated July 19, 1932, Government's Exhibit D.7, it says: 'I note you are doubtful about the possibility of raising prices 20%. I am too, but the

French prices have been so long uneconomic that I do not think that there is likely to be quite the objection that there would be in some other countries. It has already been agreed to advance our service prices 10%. Do the words 'service prices' there mean the same as prices for bearings for replacement purposes?

A. That is so, yes.

Q. How was this agreement arranged? I am speaking about the agreement to raise service prices 10%. Do you [fol. 497] recall?

A. I am sorry; I do not quite understand.

Q. How did the agreement to raise service prices 10% take place?

A. We wrote to our distributors. When I say 'we' I am speaking of Francaise Timken. They wrote to their distributors in France saying that in future prices for replacements would be raised.

Q. Did you agree upon that C.A.M. or S.K.F., or was that with all the manufacturers in France?

A. No, only with C.A.M.

Q. In your letter of August 23, 1932, Government's Exhibit D.10, you state that you recently had the pleasure of meeting the Chairman of RIV at their French factory at Chambery. Who was the Chairman of RIV?

A. Agnelli.

Q. Do you recall what he told you with respect to the RIV-SKF arrangement? Do you have a present recollection of it?

A. Only from reading that letter. I think I have told you early on today that he was one of the people who told me of the SKF-RIV agreement.

Q. Does this letter correctly state what he told you?

A. It states what he told me, yes.

Q. Do you know who Bill Batt of SKF is?

[fols. 498-499] A. Yes.

Q. Who is he?

A. He is Mr. William Batt.

Q. What is his position with SKF?

A. I do not know today, but at that time he was the head of the American SKF.

Q. Do you know the name of the American company?

A. I am afraid I do not. SKF, I suppose.

Q. SKF Industries?

A. Yes, SKF Industries, Inc., that is right."

Mr. Nitschke: I now wish to have marked for identification as Government's Exhibit 59 a cable from Hess to Timken, Canton, Ohio, dated November 3, 1932.

(Thereupon the document referred to above was marked by the Clerk, for identification, as Government's Exhibit 59.)

I would also like to have marked for identification Government's Exhibit 60, a letter dated November 4, 1932, from Don P. Hess to Mr. H. H. Timken of the Timken Roller Bearing Company.

(Thereupon the document referred to above was marked by the Clerk, for identification, as Government's Exhibit 60.)

[fol. 500] Continuing with the deposition on Page 81, I stated:

(Thereupon the following questions and answers were read from the deposition of Michael Dewar:)

"Q. I have a letter dated December 5, 1932, from Michael B. U. Dewar to J. D. Spray, Esq., Timken Roller Bearing [fol. 501] Company, marked for identification Government's Exhibit D. 12."

I would now like to have that marked for identification as Government's Exhibit 61.

(Thereupon the document referred to above was marked by the Clerk, for identification, as Government's Exhibit 61.)

My question was:

"Did you write that letter?

A. Yes.

Q. Who was Judd Spray, or J. D. Spray?

A. He was head, I believe, of the sales organization of the Timken Roller Bearing Company at Canton.

Q. In 1932, at the time you wrote this letter?

A. When he wrote that letter.

Q. I will not bother to read the letter, except that on the second page, in the second paragraph, it says: "During

Mr. Hess's visit he told us of certain events on your side of the water. The result of this information has been that we are engaged at present in negotiating an arrangement with S.K.F to cover orders placed by Ford, Dagenham." What events did Mr. Hess tell you about?

A. I have no recollection at this time; I am sorry.

Q. Does the fact that you stated the result of the information had been to cause you to engage at present in [fol. 502] negotiating an arrangement with S.K.F. to cover orders placed by Ford, Dagenham, mean anything to you?

A. No. To the best of my recollection what we were trying to do was to stop S.K.F. selling bearings in Canada from Sweden.

Q. What was the arrangement that you were negotiating with S.K.F. with respect to orders placed by Ford, Dagenham?

A. I think it states that in the end we reached an agreement with them.

Q. You are referring to the sentence: 'Our proposed agreement for Dagenham will be on the basis of us having 70 per cent and SKF having 30 per cent. of the work'?

A. Yes.

Q. What is Ford, Dagenham; I think I had better ask you?

A. The Ford Motor Company, their British plant.

Q. It is located in a town named Dagenham?

A. Yes. It is about eight or ten miles from here—a suburb.

Q. The letter also says: 'I would add, in addition, that we hope to come to an arrangement on Service work for all bearings in England as part of the same arrangement.' Do you mean again by 'Service work', sales of bearings for replacement purposes?

A. Replacements."

[fols. 503-505] Mr. Nitschke: I would like to offer in evidence Government's Exhibit 61.

(Letter referred to was marked by the Clerk, for identification, Government's Exhibit 61.)

Mr. Nitschke: I'm sorry, your Honor, I neglected to offer Government's Exhibits 59 and 60.

The Court: Exhibits 59, 60 and 61 will be received.

[fol. 506] Continuing on Page 82 of the transcript:

"Q. I have 'Government's Exhibit D. 13', for identification, which purports to be a letter signed by M.B.U. Dewar and written to D.P. Hess dated December 13th 1932."

I now wish, your Honor, to have that document marked as Government's Exhibit 62.

(Document above referred to was thereupon marked by [fol. 507] the Clerk, for identification, Government's Exhibit 62.)

Mr. Nitschke: Continuing with the deposition:

(Thereupon the following questions and answers from the deposition of Michael Dewar were read:)

"Did you read that letter? (Same handed)

A. Yes.

Q. The letter you have just read refers to a meeting on Friday December 9th, 1932, at which were present the people mentioned here in the letter?

A. Yes.

Q. Do you recall that meeting?

A. Yes.

Q. Do you recall that Mr. Agnelli and Mr. de Benedetti were present?

A. Yes. I do not remember de Benedetti even now, but Agnelli I do remember well.

Q. And Mr. Forsberg?

A. Yes.

Q. What was his position? With whom was he associated?

A. S.K.F., Sweden. He was the Managing Director, I think, at the time.

[fol. 508] Q. And Mr. Batt?

A. Yes.

Q. And Mr. Bratt?

A. Yes.

Q. And Mr. Pascoe and yourself?

A. Yes.

Q. Do you remember where the meeting was held?

A. No, I do not at the moment.

Q. Can you tell me what took place at the meeting?

A. Is not that letter as good a description as I could give you verbally?

Q. Do you have any independent recollection of what took place there?

A. Nothing other than what is down in that letter.—

Q. When you wrote that letter to Mr. Hess did you intend to state to him accurately what had transpired?

A. What had taken place at the metting.

Q. And as far as you know, you did state accurately what had taken place?

A. As far as I know, I certainly did.

Q. On the third page of 'Government's Exhibit D.13' you state, at the end of the second paragraph: 'In England, Timken have just concluded an arrangement with SKF on prices to be quoted to Ford, Dagenham, and on Service bearings in England'. That is the arrangement [fol. 509] you mentioned just previously?

A. Yes, that is so.

Q. To divide the business of Ford, Dagenham, 70-30 with S.K.F.?

A. That was the idea.

Q. And did you also agree on the prices at which you would sell to Ford?

A. Yes.

Q. With whom did you make these arrangements? Who was the individual for S.K.F.?

A. Dohlerus. I am sorry to be so long in answering, but it is a long time ago.

Q. What was his position?

A. He was Managing Director of the British S.K.F.

Q. That is Skefco?

A. Yes, Skefco.

Q. Do you recall how this arrangement operated? Did you Exchange figures on your sales to Ford?

A. Yes, on the telephone.

Q. And did you have any method of correcting the quotas, if the sales of one got out of line?

A. Only by modifying prices.

Q. You mean that the person who had too much business [fol. 510] would quote a higher price?

A. Yes.

Q. Do you know how long these arrangements lasted with S.K.F.?

A. The particular arrangement regarding Fords?

A. The particular one regarding Fords, yes.

A. I think up to the outbreak of war in 1939.

Q. And the arrangement on prices of service bearings in England?

A. Up to the same time.

Q. Did you have any other arrangements of this type with S.K.F. with respect to customers?

A. In this country?

Q. In England, yes?

A. Yes.

Q. What were those arrangements, generally?

A. In what sense?

Q. Did you have arrangements with respect to other customers besides Fords?

A. We had a general arrangement, sometimes with regard to a customer, sometimes with regard to the general total turnover.

Q. On all bearings for original application as well as for replacements?

A. On tap-red roller bearings.

[fol. 511] Q. Then your answer is 'Yes'?

A. It is yes, but not entirely yes. It is yes partially, because we had no agreement on service bearings other than the one you have referred to on Fords.

Q. I believe the letters states you had an arrangement on service bearings in England?

A. Yes. That was with regard to Ford.

Q. That was just with regard to Ford?

A. Yes.

Q. I see, and on original applications?

A. On original applications, yes. We had other arrangements.

Q. You had agreed prices with respect to all the bearings, to all customers?

A. Yes.

Q. And all your sales?

A. Yes.

Q. How did you agre—the word has a rather artistic con-

notation in the United States—how did you get together on prices? Did you consult over the telephone?

A. Yes, and by letter.

Q. And you would discuss what the prices would be, and then determine that you would both sell at the same price, some fixed price?

A. Not necessarily sell at the same price, no.

[fol. 512] —. —reached an understanding as to what each other's prices would be, but they would be different?

A. Yes.

Q. In cases where you had decided that one party would not get the business, you would agree to have one Party's prices higher than the other's?

A. Yes. It does not always follow that you get the business, even if your price is lower.

Q. During this period from December 1932 up until the time of the war, did your arrangements with S.K.F. involve any division of the bearing market as to fields—that is, as to types of applications? Your answer is 'No'?

A. I do not understand what you mean. I wanted to ask you what you mean.

Q. To give you an example, for instance were railroad bearings allotted to S.K.F. and motor-cycle bearings perhaps to you?

A. No. Railway bearings were excluded from any agreement at all.

Q. That is what I meant.

A. Yes, I follow.

Q. Were there any fields for the application of bearings which were solely allotted to one or the other of the two companies?

A. No."

[fol. 513] I now offer Government's Exhibit 62 in evidence.

The Court: Exhibit 62 may be received.

I am continuing with the deposition on Page 87:

(Thereupon the following questions and answers from the deposition of Michael Dewar were read:)

[fol. 514] "Q. Have any of these arrangements that British Timken had with S.K.F. been renewed since they were discontinued in 1939?

A. No, none. Might I make one remark about service. I am afraid I may have misled you in answer to a previous question. Our general arrangement on service was that the service bearings should follow the original equipment. You asked me whether we had agreements with S.K.F. on service and I think I said, yes or no, if you remember. The general arrangement was that those service bearings should follow the original equipment.

Q. In other words if you sold the bearing for use in a machine tool and it eventually wore out, S.K.F. would not supply a replacement for that machine too, is that what you mean?

A. That is the idea—but you could not possibly make it work as closely as that.

Q. But your understanding was to try to work it that way?

A. Yes.

Q. There is just one other matter with respect to England I want to ask you about. Government's Exhibit D.14 is a copy of a report by D. P. Hess headed: 'European Trip. D. P. Hess. August and September, 1933.'" [fol. 515] I would like now to have that report marked for identification as Government's Exhibit 63.

(Document above referred to was thereupon marked by the Clerk, for identification, Government's Exhibit 63.)

Mr. Nitschke: Continuing with the deposition:

(Thereupon the following questions and answers were read from the deposition of Michael Dewar:)

"and in the section entitled: 'British Timken Limited', Mr. Hess says: 'The British Bock Company of Glasgow has finally decided to liquidate and the entire stock of bearings on hand has been taken over by us and S.K.F. and divided equally. In the contract which is in the name of British Timken, it is specified that all tools and gauges and special machinery is to be destroyed, and the writer agreed to cancel our present license to British Bock and transfer it to British Timken. No further manufacture of Bock bearings is contemplated so the license is merely to protect the name of Bock. The plan was to divide the present Bock customers between S.K.F. and ourselves, but at the

time of my visit this was not working out very well as most of the Bock customers were demanding Timken [fol. 516] bearings, but we are giving S.K.F. a copy of every inquiry so that they can quote on the business. We decided this was the fair and wisest thing to do, and if they cannot get the business, it is entirely their own fault.' Does that refresh your recollection with respect to my question yesterday about what happened to the British Bock Company?

A. Yes, I think I was fairly accurate.

Q. And the stocks of bearings were taken over jointly by you and S.K.F.?

A. Yes.

Q. You each shared in the paying for them, did you?

A. Originally we did the whole deal and then S.K.F. paid us.

Q. For half of them?

A. Yes, for half.

Q. And then disposed of them?

A. Yes.

Q. Do you recall that you had a contract with Bock to destroy their tools and gauges and special machinery?

A. Yes. It only meant the tools and gauges. To the best of my recollection no machinery was destroyed.

Q. What was the purpose of destroying the tools and gauges?

A. To prevent someone starting them up and starting to [fol. 517] manufacture Bock bearings.

Q. Did you divide the Bock customers with S.K.F.?

A. No, to the best of my recollection we got them all.

Q. Did you exchange inquiries with them?

A. Yes, they had a list of the customers.

Q. You gave S.K.F. a list of the customers?

A. Yes.

Q. Or did you divide them up?

A. I remember trying to divide them up.

Q. At the time these arrangements were entered into with S.K.F., did you discuss them with any of the people from American Timken?

A. Verbally?

Q. Yes.

A. Only if any of them happened to be in this country.

Q. The records indicate that Mr. Hess made a trip every year—at least he reported making a trip in this year?

A. Yes.

Q. Did you discuss it with Mr. Hess?

A. Yes.

Q. Who is Mr. Hess?

A. He is President of the American Bosch Corporation.

Q. And what was he at the time of this correspondence in 1932 to 1933?

[fol. 518] A. He was at that time, I believe, Assistant to the President of the Timken Roller Bearing Company.

Q. In what connection did you have business with him?

A. He was the channel through which our communications went to Canton both from England and from France.

Q. And Mr. Hess visited Europe each year?

A. I would not like to be made to say each year.

Q. But several times?

A. Several times, yes.

Q. During those visits did you discuss with him your operations?

A. We did, yes.

Q. And any problems which you had with respect to your relations with American Timken?

A. Yes.

Q. In other words he was the liaison man?

A. Yes, that is the word I was trying to think of.

Q. Between you and American Timken?

A. Yes."

I now wish to offer in evidence Government's Exhibit 63 which is the Hess report on the European trip.

The Court: August and September, 1933.

Mr. Nitschke: Yes, your Honor.

[fols. 519-522] The Court: It may be received.

[fol. 523] I now wish to have marked for identification as Government's Exhibit 64 a letter dated December 2, 1933, from Hess to Dewar.

(Letter referred to was thereupon marked by the Clerk, [fol. 524] for identification, Government's Exhibit 64.)

Continuing the deposition on Page 89:

(Thereupon the following questions and answers from the deposition of Michael Dewar were read:)

"Q. I have here Government's Exhibit for identification D.15 and hand to you a letter dated December 22nd, 1933, Mr. Michael B. U. Dewar to Mr. D. P. Hess enclosing a draft of an agreement which the letter states is between Francaise Timken and C.A.M."

I wish to have marked for identification as Government's [fol. 525] Exhibit 65 the letter attached to the deposition as Government's Exhibit D-15, being a letter from Dewar to Hess dated December 22, 1933.

(Letter above referred to was thereupon marked by the Clerk, for identification, Government's Exhibit 65.)

Mr. Nitschke: And attached to this letter is an agreement containing no date, but the pages bear the serial numbers 11135 through 11143, inclusive. I would like to have that marked for identification as Government's Exhibit 65-A.

(Document last above referred to was thereupon marked by the Clerk, for identification, Government's Exhibit 65-A.)

Mr. Nitschke: This is a copy of an agreement that is attached to Government's Exhibit 65.

[fol. 526] Mr. Nitschke: Your Honor, before I go ahead I would like to make the offer to receive in evidence Government's Exhibit 64, which was the letter dated December 2, 1932, from Hess to Dewar.

The Court: That may be received.

Mr. Nitschke: And I would like to offer in evidence Government's Exhibit 65 and 65-A, which is the letter and the contract attached to the letter.

The Court: Dated December 22, 1933?

Mr. Nitschke: Yes, your Honor.

The Court: Those may be received.

Mr. Nitschke: Continuing with the deposition on Page 89 of the transcript; referring to Government's Exhibit for identification D-15, which is identified in the deposition as being this letter of December 22, enclosing the draft of the agreement,

(Thereupon the following questions and answers from the deposition of Michael Dewar were read:)

[fol. 527] "Q. Did you write that letter, Mr. Dewar, and send along with it that enclosed draft of agreement?

A. Yes. I believe that to be the agreement for which you asked before. You asked me for the French agreement between C.A.M. and ourselves in France.

Q. That was referred to in a letter of June 22, 1932, the provisional agreement about which I asked you?

A. I beg your pardon. The one you have in your hand is the first agreement.

Q. This is the first agreement?

A. Yes.

Q. I have also Government's Exhibit D.16 purporting to be a telegram dated December 30, 1933, from Dewar to Hess which I hand to you, and ask you if you sent that telegram?

A. I presume I sent it. I am prepared to admit it."

I now ask that telegram to be marked for identification Government's Exhibit 66.

The Court: 66 is what?

Mr. Nitschke: It is a telegram from Dewar to Hess dated December 30, 1933. The deposition shows that I handed this to Mr. Dewar.

(Thereupon the telegram above referred to was marked by the Clerk, for identification, Government's Exhibit 66.)

[fols. 528-537] Mr. Nitschke: I wish to offer Government's Exhibit 66 in evidence.

The Court: It may be received.

(Thereupon the following questions and answers from the deposition of Michael Dewar were read:)

"Q. The telegram refers to Page 2 of your letter of December 22nd where figures are given of tapered roller bearing sales, and I ask you to look at Page 2 of that portion and say if that telegram refers to a correction in those figures?

A. Yes, I agree."

[fol. 538] Continuing now reading from Mr. Dewar's testimony in this record, on Page 90:

(Thereupon the following questions and answers were read from the deposition of Michael Dewar:)

"Q. (Mr. Nitschke): The second paragraph of this letter states: 'As you know, we have been working on this for some months. The idea of this arrangement is to divide the Tapered Roller Bearing market between ourselves and C.A.M. in a manner which is not constant but which depends on the total anti-friction bearing turnover of C.A.M.'. When you say: 'We have been working on this for some months', whom did you mean, Mr. Dewar?

A. French Timken.

[fol. 539] Q. Were you representing French Timken in this matter?

A. Yes.

Q. Was anyone from French Timken with you in the matter, anyone else familiar with the negotiations?

A. Well, there was Mr. Seward who was familiar with it and Mr. Pascoe who was also familiar with it. Mr. Seward has left us now and I do not know where he is.

Q. What was his position at that time?

A. He was the Manager of the French Timken Company resident in Paris.

Q. Did the three of you negotiate with persons from C.A.M. or a person from C.A.M.?

A. We negotiated; I will not say we all three were always present at every talk.

Q. Who represented C.A.M. in the discussions?

A. Mostly Mr. Bratt and Mons. Oliron.

Q. Also reading from the first page, at the beginning of the third paragraph you say: 'Taking the agreement clause by clause, I should like to make the following comments: Introduction: 'C.A.M.' will cover 'S.K.F.' and all its associated companies wherever situated.' Does that refer to the language of the agreement just preceding Article I which is the fourth page of Government's Exhibit D.15 which reads: 'The Compagnie d'Applications Me-[fol. 540] caniques', if you will read that out aloud.

A. 'The Compagnie d'Applications Mecaniques, with a capital of Frs. 27,000,000. hereafter described as 'C.A.M.'

having its registered office at Paris, 15 Avenue de la Grande Armee, being the only organisation for the sale of S.K.F. Bearings in France, French Colonies and Protectorates'.

Q. My question was did the language in your letter which I read entitled 'Introduction' refer to that portion of the attached agreement which you have just read?

A. I was under the impression that there was a clause in the agreement which is called 'Introduction' which states that C.A.M. does cover S.K.F.

Q. Will you look at the agreement and see if you can find anything like that in it?

A. This 'Introduction' refers to a preliminary clause in the agreement labelled 'Introduction', and then Article II was the next one to it as far as I remember—I beg your pardon; yes, you are quite right, it does.

Q. In other words those two preliminary paragraphs prior to the heading 'Article I' are the Introduction?

A. Yes.

Q. And you were referring to the second paragraph [fol. 541-542] which you had just read yourself?

A. Yes.

Q. At this time in December of 1933 do you know what were the associated companies of S.K.F.?

A. In what territory?

Q. Anywhere or wherever situated, as you say in the letter.

A. You mean as applying to France—you do not mean in the world?

Q. I mean with respect to the language in your letter where you state 'C.A.M. will cover S.K.F. and its associated companies wherever situated'.

A. Yes, within French territory. That agreement applied only to France.

Q. You interpret the words 'wherever situated' to mean 'wherever situated in France'?

A. In France or French territory.

Q. That is the French Colonies and Protectorates?

A. That is right.

Q. Article II of the agreement states: 'Timken agrees not to manufacture or sell, either directly or indirectly, in France, or in the French Colonies or Protectorates, bearings or thrust washers other than tapered roller bear-

ings and tapered roller thrust washers and their components'. What are thrust washers?

[fol. 543] Q. And in that sense the agreement also covers the sale of bearings in France of the other companies?

A. Yes, certainly.

Q. At this time in December 1933, Mr. Dewar, what were the associated companies of S.K.F.?

A. S.K.F. Gothenberg, Skefko Ball-Bearing Company in Luton, England, C.A.M. in France, S.K.F. Inc. in U.S.A.

Q. And Germany?

A. I am just hazy as to the date at which they really acquired the interest in Germany, but I think they had at this time an interest in Fichtel & Sachs which ultimately they acquired and is no- called V.K.F.

Q. I do not know that we have in the record the full name of S.K.F. Gothenberg—do you have it?

A. Svenska Kugellager Fabrik, Gothenberg.

Q. In Article III of the agreement attached as a part of Government's Exhibit D.15 it states at the bottom of page 2: 'In calculating the 'total' and the 'special markets', the following will be excluded: (a) The sales of the two contracting parties consisting of: (1) Bearings destined for use with axle boxes or wheels of Railways or Tramways'. What are axle boxes?

A. They are the bearing whic- supports the axle of a railroad train or a tramcar—street car.

[fol. 544] Q. Is there more to them than there is to an ordinary anti-friction bearing? Do they contain more than just the two races with the rollers in between separated by a cage?

A. They are naturally rather larger than the ones used on automobiles, but apart from that there is relatively no difference, no technical difference.

Q. There is no significance to the word 'box'—there is no housing?

A. Well, there is a housing with it, yes.

Q. Would you describe it just a little more, Mr. Dewar. What do you have in addition to the ordinary tapered roller bearing?

A. In this case you actually have a doubled tapered roller bearing mounted in a box through which the axle of the railroad car goes. The bearing is tight in the box and

the inside of the bearing spins round in the box tight on the axle.

Q. And is the outside of the box fastened to the car?

A. It is not fastened to it, it slides up and down in guides to allow the springs to work.

Q. Continuing with Article III and reading at the top of page 3 of the agreement: '(2) Castings for Plummer Blocks'. What are Plummer Blocks?

[fol. 545] A. It is like a very small axle box but it is used in line shafting in factories. You have a line shaft with pulleys on it and it is supported at intervals by bearings in Plumber Blocks.

Q. '(3) Tapered Rollers sold alone'. What does that mean?

A. I think it means exactly what it says—rollers sold separately from anything else.

Q. Rollers are the little tapered cones?

A. Little tapered rolls.

Q. Not assembled in a bearing?

A. Not assembled in a bearing.

Q. Then No. 4: 'Bearings employed on Rolling Mills'. What are 'Rolling Mills' as used in this agreement?

A. Machinery in which iron and steel is rolled down from one thickness to another.

Q. Did the 'special' and 'total' markets described in this agreement include bearings for original equipment—for original application and for replacement purposes? Would you like to refer to the agreement? (Agreement handed to witness).

A. Yes. To the best of my recollection it covered the service bearings, too.

Q. Reading further in Article III of the agreement on page 3 the second last paragraph: 'In calculating the 'spe-[fol 546] cial market', exception will in addition be made of any article which is not a true tapered roller bearing.' What is the meaning of 'true tapered roller bearing'?

A. S.K.F. had a bearing at that time which possibly might have been construed as something of the kind. It had not got a straight roll and it had not got a plain ball. It had a peculiar barrel-shaped roll.

Q. Is that the bearing which is sometimes called a spherical roller bearing?

A. A spherical roller bearing, yes.

Q. Was this agreement entered into for two years as proposed?

A. I expect so. It certainly was entered into but I am afraid I cannot say the number of years.

Q. Do you know how long it continued in effect?

A. It continued up to the entry of the Germans into Paris.

Q. And has it been renewed since that time?

A. No.

Q. Article VII of the agreement on page 7 of the agreement which is part of Government's Exhibit D.15 reads as follows: 'In order to arrive at the allocation of the market as provided in as precise a manner as possible, an intimate commercial collaboration will be established between the two contracting parties, which will have to determine by agreement the tariff prices and discounts for [fol. 547] the retail market, the prices and delivery dates quoted for all large orders, or for important customers.' What is the meaning of the phrase 'tariff prices'?

A. I expect in that case it means prices taken from a list. The word in French from which that is a translation really means just a list.

Q. Did both British Timken and French Timken sell bearings on a list discount basis as does the American Company?

A. Yes.

Q. Would you have a list price which was much larger than the actual price paid?

A. In most cases, yes.

Q. And you quote the customer a discount off the list?

A. Yes.

Q. And the expression 'tariff prices' refers to that?

A. To some form of list prices.

Q. Do you know who handled the administration and execution of this agreement for French Timken?

A. Mr. Seward and Mons. de Beauvivier.

Q. What was Mons. de Beauvivier's position?

A. He was the French Technical Manager of the French Timken Company. He died in 1943.

Q. Do you know if there were any modifications or

amendments made to this agreement during the period from [fol. 548] the time it was entered into until 1940?

A. I do not remember any substantial modifications in it. I cannot promise that there were not.

Q. I have Government's Exhibit D.17 which is a letter dated March 4th, 1935, from M.B.U. Dewar to D.P. Hess which I hand to you."

Mr. Nitschke: I would now like to have that marked for identification as Government's Exhibit 67.

(Thereupon the document above referred to was marked by the Clerk, for identification, Government's Exhibit 67.)

Continuing with the deposition:

(Thereupon the following questions and answers from the deposition of Michael Dewar were read:)

"Did you write that letter, Mr. Dewar?

A. Yes.

Q. That letter speaks of a temporary arrangement. What does it refer to?

A. It referred to the agreement which you have before you in which penalties were paid if one side or the other exceeded their quota. In this particular case owing to the failure of the Citroen Company the total number of tapered roller bearings sold by S.K.F. fell considerably and we agreed to a limitation of the resulting pen- [fol. 549] alty.

Q. That French Timken had to pay?

A. Yes."

Mr. Nitschke: Your Honor, I wish to offer in evidence Government's Exhibit 67.

The Court: It may be received.

Now, I have to go to my examination of Mr. Dewar at another point on Page 127 of the deposition where I went back and referred again to the contract, which has just been put in evidence.

"Q. I want to go back again to some questions on matters the Government introduced as distinguished from matters which related to Mr. Day's examination, and to clear up a few points. You will recall, Mr. Dewar, the letter of June 22nd, 1932, (Government's Exhibit D.4) and I believe

you want to clarify your testimony as to whether or not the arrangements described in that letter were oral or writ-
[fol. 550] ten. I believe that at the time we introduced Government's Exhibit D.15 which consisted of your letter of December 22nd, 1933, to which was attached a copy of a contract between French Timken and C.A.M. you thought at that time the contract attached to your letter of December 22nd, 1933, was the first written agreement between the French Timken and C.A.M. I will show you the contract which is now marked Government's Exhibit D.15A (Same handed to witness). The question is whether or not the contract now marked Government's Exhibit D.15A was the first written agreement on the French situation?

A. Yes.

Q. And the 1932 arrangements were oral?

A. I do not think there were any 1932 arrangements. This letter to which you previously referred related to the preliminary discussions with a large number of other firms with whom ultimately we had no agreement at all.

Q. With reference to the written agreement Government's Exhibit D.15A I believe you stated that under this agreement C.A.M.'s quota included S.K.F. bearings manufactured by S.K.F. Companies outside of France and imported into France?

A. Any bearings under the control of S.K.F., which I
[fol. 551] think is what you mean.

Q. Yes—any S.K.F. roller bearings manufactured anywhere which were sold in France?

A. Yes, not only S.K.F. but R.I.V. Any S.K.F. controlled bearings which were sold in France.

Q. Were included in C.A.M.'s quota under this agreement?

A. Yes.

Q. Similarly did French Timken's quota include Timken bearings manufactured elsewhere and imported into France?

A. Yes.

Q. I believe you call bearing- which are sold by French Timken that have been imported factored bearings—is that right?

A. Yes, I think it is—in England we do. I am afraid

the French word is not 'factored' so we cannot very well, can we, call them that in France?

Q. But you would say, speaking in English, that the French Company does 'factor' bearings which it acquired outside the country from British Timken or American Timken?

A. Yes.

Q. And the quota of French Timken therefore included factored bearings?

A. Yes.

Q. Did it also include Timken bearings which were sold [fol. 552] directly to customers in France by British Timken and American Timken such as for replacement purposes?

A. There were no bearings sold directly.

Q. They were all sold through French Timken?

A. Through French Timken, unless they went in original equipment. I mean, if a motorcar made in the United States was sold in France, of course it did contain some Timken bearings made in America. You do not mean that, do you?

Q. No, I mean bearings to use for replacement in such cars?

A. No, it was all imported through the French Company.

Q. I now call your attention to your letter of December 5th, 1932, marked Government's Exhibit D.12''——

Which is now in evidence, your Honor, as Government's Exhibit 61——

''—in which letter you referred to several cables passing between yourself and Judd Spray in which the word Blare is used?

A. Yes.

Q. Can you tell us what that word is and what it means?

A. Yes, it means S.K.F. You took it for granted on Friday when you examined about this letter, otherwise I came prepared to say it was.

Q. That was a code word which you used in cables to refer to S.K.F.?

[fols. 553-557] A. Yes.''

I now wish to have marked for identification Government's Exhibit 68 a letter from D. P. Hess to A. C. Ernst, dated January 18, 1934, of Ernst & Ernst, Union Trust Building, Cleveland, Ohio.

(Thereupon the letter above referred to was marked by the Clerk, for identification, as Government's Exhibit 68.)

And I wish to have marked for identification Government's Exhibit 69 copy of a letter dated February 12, 1934, from Hess to H. H. Timken.

(Thereupon the letter referred to above was marked by the Clerk, for identification, as Government's Exhibit 69.)

Government's Exhibit 70, which is a cable from Hess to Dewar dated January 22, 1934.

(Thereupon the cable above referred to was marked by the Clerk, for identification, as Government's Exhibit 70.)

And I wish to offer in evidence Government's Exhibits 68, 69, and 70.

The Court: They may be received.

[fol. 558] Now, continuing with the deposition, my examination of Mr. Dewar on Page 97 of the tran-

[fol. 559] script.

(Thereupon the following questions and answers from the deposition of Michael Dewar were read:)

"Q. I have Government's Exhibit D.18 for identification which purports to be a memorandum by D. P. Hess dated February 16th, 1932, from London, England, headed: 'Russian Situation'."

Which I would now like to have marked for identification Government's Exhibit 71.

(Thereupon the document above referred to was marked by the Clerk, for identification, Government's Exhibit 71.)

Continuing with the reading of the deposition.

(Thereupon the following questions and answers from the deposition of Michael Dewar were read:)

"The memorandum states: 'As cabled, the R.I.V. have quoted 83 per cent, off list and give two years time pay-

ments to the Russians. The entire amount of the invoice was guaranteed by the Italian Government. During 1931 they received approximately $500,000.00 of tapered bearing business in addition to their ball bearing and straight roller bearing business which amounted to $200,000.00. I questioned these figures, but Pascoe spent three weeks [fol. 560] in Russia and they were verified by Beneditti, Managing Director of R.I.V. to Dewar. Beneditti also stated the last order they received was in October for 50,000 cones and cups 78216/78531. No orders have been placed since that time and he and Dewar have agreement on bottom prices at 85 with interchange of information on quotations etc.' I asked you previously, Mr. Dewar, about Beneditti, and I thought perhaps that might refresh your recollection?

A. Well, you refreshed it before this too, because he appeared in another letter. I know who he was now.

Q. Would you tell us?

A. He was the General Manager I think of R.I.V. at that time.

Q. Is Mr. Hess's statement correct that he had an agreement?

A. We had a general agreement over prices to quote to Russia, yes. I am afraid at this time, as to whether the 85 per cent, was what we agreed, I cannot say, but we did have an agreement with Russia.

Q. In other words that you would not quote below a certain price?

A. That is so, yes.

Q. And did you interchange information and quotations? [fol. 561] A. Yes, we did.

Q. How long did that arrangement last?

A. The Russian flurry lasted only a very short time—it would be six or seven months, something of that kind. The Russian orders suddenly came and then suddenly disappeared.

Q. So that your answer is that the agreement lasted six or seven months also?

A. Yes, it faded out.''

I wish to offer in evidence Government's Exhibit 71.

The Court: What is 71?

Mr. Nitschke: 71 is the memorandum headed "Russian Situation" dated February 16, 1932, written by D. P. Hess, and it was attached to the deposition as Government's Exhibit D.18.

I won't bother to read from it because I read the important portions of it to Mr. Dewar.

(Thereupon the following questions and answers from the deposition of Michael Dewar were read:)

"Q. I have here marked for identification Government's Exhibits D.19, D.20, and D.21 which purport to be respectively a letter from Mr. Michael Dewar to 'My dear Don' [fol. 562] dated September 3rd, 1929, from Mr. Michael B. U. Dewar dated November 20th, 1930, to D. P. Hess and from Michael Dewar to D. P. Hess dated November 24th, 1930."

I would like to have marked for identification as Government's Exhibit 72 a letter from Dewar to "My dear Don" dated September 3, 1929, which is attached to the deposition as Government's Exhibit D.19.

(Thereupon the letter above referred to was marked by the Clerk, for identification, Government's Exhibit 72.)

I wish to have marked for identification as Government's Exhibit 73, a letter dated November 20, 1930, from M.B.U. Dewar to D. P. Hess, which is attached to the deposition as Government's Exhibit D.20.

(Thereupon the letter above referred to was marked by the Clerk, for identification, Government's Exhibit 73.)

I would like to have marked as Government's Exhibit 74 a letter dated November 24, 1930, from Michael Dewar to D. P. Hess, which is attached to the deposition as Government's Exhibit D.21.)

[fol. 563] (Thereupon the letter above referred to was marked by the Clerk, for identification, Government's Exhibit 74.)

Referring to these letters which have just been marked for identification I said:

"Did you write these letters, Mr. Dewar?

A. Yes.

Q. Is the 'My dear Don' referred to in Government's Exhibit D.19 Don P. Hess?

A. Mr. Hess, yes.

Q. Of the Timken Roller Bearing Company?

A. Yes.

Q. In your letter of September 3rd you state: 'We have made a temporary arrangement with the former which will prevent them cutting prices to our best customers' and in the preceding sentence you state: 'The reason for my pressing you on the question of heading rolls, and so on, as Bock and S.K.F. are continually forcing our prices down'. I take it this states that you had a temporary arrangement with Bock in 1929?

A. Yes.

Q. What was the nature of that arrangement?

A. I have no recollection at all."

I wish to offer Government's Exhibit 71.

[fol. 564] The Court: It may be received.

Mr. Nitschke: I also offer Government's Exhibit 72 in evidence.

The Court: They both may be received.

Mr. Nitschke: I also offer at this time Government's Exhibits 73 and 74.

The Court: 73 and 74 may be received.

Mr. Nitschke: Continuing with the reading of the transcript.

(Thereupon the following questions and answers from the deposition of Michael Dewar were read:)

"Q. In your letter of November 10th" (Which is Government's Exhibit 73) "in the first paragraph on the second page you made the statement: 'I have no intention whatever of letting them get in to our business under the pretext of a friendly arrangement'. I will not read you the rest of the paragraph. What was the 'friendly arrangement' that you referred to?

A. We were trying to come to an agreement with them at the same time we did not think they were quite playing the game by cutting the ground under our feet.

Q. And agreement on what?

A. Well, an agreement on an arrangement in England.

[fols. 565-566] Q. On prices?

A. Yes.

Q. And customers?

A. Yes.

Q. Of the sort which you eventually concluded?

A. That we eventually concluded, yes.

Q. In your leter of November 24th, 1930" (which is marked Government's Exhibit 74) "(Government's Exhibit D-21) you stated: 'They have now undertaken definitely to cover us in future on all commercial vehicle work pending the completion of the negotiations in America'. What do the words 'to cover us in future on all commercial vehicle work' mean?

A. I expect they mean to quote a higher price. May I glance at the letter?

Q. Certainly. (Letter handed to witness)

A. Yes, that is right. That is what it means.

Q. Do you know what 'negotiations in America' are referred to in this letter?

A. I am trying to think of dates.

Q. This is November 24th, 1930.

A. Yes, I really do not know, not with the context there at that length of time."

[fol. 567] I wish to have marked as Government's Exhibit 75 a letter, copy of letter, from Hess to Dewar, dated December 27, 1929.

(Letter above referred to was thereupon marked by the Clerk, for identification, Government's Exhibit 75.)

[fol. 568] Mr. Nitschke: Your Honor, I have had marked for identification Government's Exhibit 75, and I wish to offer it in evidence.

The Court: It will be received.

[fol. 569] Mr. Nitschke: Continuing with the deposition:

(Thereupon the following questions and answers from [fol. 570] the deposition of Michael Dewar were read:)

"I have Government's Exhibit D-22, a letter dated January 8th, 1930, from Michael Dewar to D. P. Hess."

I would like now, your Honor, to have that letter marked for identification Government's Exhibit 76. This is a letter from Dewar to Hess.

(Letter above referred to was thereupon marked by the Clerk, for identification, Government's Exhibit 76.)

Mr. Nitschke: Continuing from the deposition:

(Thereupon the following questions and answers from the deposition of Michael Dewar were read:)

"Did you write that letter?

A. Yes.

Q. You have read this letter, have you?

A. Yes, I have.

Q. In the last sentence you say: 'I do want to take every [fol. 571] possible step we can to keep S.K.F. out of the taper roller bearing business anywhere.' What steps did you have in mind?

A. Under-quoting them in price.

Q. Whether the sales were in your territory or the American Company's territory?

A. That is so, yes. I think I explained that before."

Mr. Nitschke: Your Honor, I wish to offer Government's Exhibit 76 in evidence.

The Court: It may be received.

[fol. 572] Mr. Nitschke: I now wish to have marked for identification as Government's Exhibit 77 a letter from Hess to Dewar dated December 16, 1932, and attached to the deposition as Government's Exhibit D-23.

(Letter last above referred to was thereupon marked by the Clerk, for identification, Government's Exhibit 77.)

Mr. Nitschke: I would like to have marked for identifi- [fol. 573] cation as Government's Exhibit 78 a letter dated January 12, 1943, from Dewar to Hess, and that is attached to the deposition as Government's Exhibit D-24.

(Letter above referred to was thereupon marked by the Clerk, for identification, Government's Exhibit 78.)

Mr. Nitschke: Continuing with the deposition, your Honor, from the bottom of Page 100:

(Thereupon the following questions and answers from the deposition of Michael Dewar were read:)

"Q. I have Government's Exhibit D.23, which is a copy of a letter written to M.B.U. Dewar, initialled 'D.P.H.',

dated December 16th, 1932, and Government's Exhibit D.24, which is a letter dated January 12th, 1933, from Michael Dewar to D. P. Hess."

Mr. Nitschke: These are the two letters, your Honor, which have just been marked for identification Government's Exhibits 77 and 78.

The Court: Yes, I understand.

(Thereupon the following questions and answers from the deposition of Michael Dewar were read:)

[fol. 574] "I will ask you first if you wrote the letter Government's Exhibit D.24. (Exhibit handed to the witness.)

A. Yes.

Q. Is Government's Exhibit D.23 the letter which you received from Mr. Hess and to which you refer in the first sentence of your letter? (Exhibit handed to witness).

A. Yes.

Q. I call your attention, on the second page of your letter of January 12th, 1933, to the first full paragraph: 'I have just written you another letter in connection with the competition with SKF Gothenburg. I merely would add here that we will, of course, do everything in our power to enable Timken to hold the Canadian market.' Were you referring there to American Timken?

A. No. I should say I was referring to British Timken in that case. The basic idea, as I think I explained before, was that bearings should bear the name 'Timken' whether they were made in England, France or the United States.

Q. The reason that I ask about Timken is that in Mr. Hess's letter of December 16th, to which you are replying, he says, in the third paragraph on page 2 of his letter:

[fol. 575] 'SKF using bearings shipped from Sweden have underquoted us in Canada to quite a marked degree and have obtained quite a good bit of the Ford Canadian business as well as some of the other automotive manufacturers. Judd and I have been discussing it and he left for Detroit early this week convinced, as I am, that the only way to handle the situation is with British made product, which we intend to do.'

A. Yes. You can take it either way. The idea was to retain the market for Timken, not necessarily U.S. Timken

or British Timken. He is asking us, really: can we supply bearings made by British Timken at a price that we can compete with S.K.F. in Canada?

Q. At this time American Timken was selling in Canada?

A. They were, yes.

Q. And Canada was included in their territory under the business agreements?

A. Yes.

Q. Did you have in mind selling bearings to American Timken for re-sale in the Canadian market at a lower price than they could sell their own bearings?

A. I do not think that the mechanism ever reached that stage. We quoted the American Timken Company for delivery of bearings in Canada, but, to the best of my recollection, no orders were ever placed.

[fol. 576] Mr. Hess, in his letter of December 16th, 1932, says (again reading from that paragraph I read from before): 'I, therefore, cabled for the maximum discount you could allow from your No. 317 List and I have just received an answer that this will be 87½ per cent,'

A. Yes.

Q. I think I asked you this morning or yesterday whether you know what the No. 317 List is. Does that refresh your recollection any?

A. No, not at all. It is a list of prices, but I am afraid I cannot separate it in my mind from any other by the number.

Q. Do you think perhaps Mr. Pascoe would know what that list is?

A. He might.

Q. Or who would know in British Timken—any of the persons who are testifying at this deposition?

A. I am afraid I cannot answer the question, because I really do not know who is testifying. It is not in my hands.

Q. Mr. Hobley?

A. He would know, certainly, what 317 meant.

Q. I have Government's Exhibit D.25, which is a copy of a letter from the Timken Roller Bearing Company, Assistant to the President, to Mr. M.B.U. Dewar, dated [fol. 577] December 14th, 1932, with the initials 'D.P.H.',"

Mr. Nitschke: I wish to have that letter marked for identification as Government's Exhibit 79. That's a letter from Hess to Dewar of December 14, 1932, and is attached to the deposition as Government's Exhibit D-25.

(Letter above referred to was thereupon marked by the Clerk, for identification, Government's Exhibit 79.)

Mr. Nitschke: Continuing reading from the deposition:

(Thereupon the following questions and answers were read from the deposition of Michael Dewar:)

"and Government's Exhibit D.26, which is a letter signed 'Michael Dewar', addressed to Mr. D. P. Hess, Timken Roller Bearing Company, dated December 29th, 1932."

Mr. Nitschke: I wish to have this letter marked for identification as Government's Exhibit 80. This letter is from Dewar to Hess dated December 29, 1930, and this is attached to the deposition as Government's Exhibit D-26.

(Letter above referred to was thereupon marked by the [fol. 578] Clerk, for identification, Government's Exhibit 80.)

Mr. Nitschke: Continuing reading from the transcript of the deposition:

(The following questions and answers from the deposition of Michael Dewar were read:)

"Is D.26 a letter you wrote and is D.25 the letter to which it was a reply?

A. Yes."

Mr. Nitschke: Your Honor, I offer Government's Exhibit 79 and 80 in evidence.

The Court: They may be received.

Mr. Nitschke: And I will also offer in evidence Government's Exhibits 77 and 78.

The Court: They may be received.

Mr. Nitschke: Continuing to read from the transcript:

(The following questions and answers from the deposition of Michael Dewar were read:)

"Q. In your letter of December 29th, 1932, do you thank Mr. Hess for his letter of December 14th 'regarding your

arrangement with Ford. The Co-Ordination Department of the Ford Company in London had apparently been advised by Detroit of your arrangement and wished to obtain the same concession from us'?

A. Yes.

Q. And in Mr. Hess's letter he says: 'Upon my return to this famous country I find a cable from Birming-
[fol. 579] ham with reference to a statement made by Ford Dagenham that we have granted Ford America a license to manufacture Timken bearings according to our patents, and it puzzled me just a little bit because this is the situation I described to you when I explained that we had dropped the Bower suit and had given Ford such a license as they describe'. Can you tell us what this arrangement was that Mr. Hess explained to you that American Timken had with Ford?

A. I am afraid not. I do not remember the detail of it at this range of time, I am afraid.

Q. Do you recall what concession it was that Ford in England wanted to obtain from you?

A. I am afraid I do not even remember that.

Q. Continuing your letter, you say: 'There is no doubt at all that Ford have decided here, as a policy, to have two sources of supply and they have certainly favoured SKF in the last month or two in placing orders. However, our arrangement with SKF will prevent this going too far.' What arrangement with S.K.F. are you referring to here?

A. To the one you questioned me about earlier this morning.

Q. The arrangement on price for service bearings?

A. For all bearings.

[fol. 580] Q. And for sharing the Ford business?

A. Yes."

[fol. 581] I now wish to have marked for identification as Government's Exhibit 81 a copy of a letter dated February 2, 1933, from the Timken Roller Bearing Company to the Ford Motor Company, to which there is attached a copy of a letter dated January 26, 1933, from Ford Motor Company to Timken Roller Bearing Company which I would like to have marked as Government's Exhibit 81-A for identification; and another letter attached to Exhibit

81 which I would like to have marked for identification as Government's Exhibit 81-B, a letter from Timken to Ford dated August 31, 1932, which also bears the notation "Date changed to September 19, 1932;" and the last attachment to Exhibit 81 I would like to have marked as Government's Exhibit 81-C, being a copy of a contract dated September 19, 1932, between Timken Roller Bearing Company and Ford Motor Company. I guess I should describe that as a letter agreement between Timken Roller Bearing Company and the Ford Motor Company.

(Thereupon the documents above referred to were marked by the Clerk, for identification, Government's Ex-
[fols. 582-583] hibits 81, 81-A, 81-B, 81-C, respectively.)

Mr. Nitschke: Your Honor, I would like to call your attention—first, I should offer Government's Exhibits 81, 81-A, 81-B, and 81-C, in evidence.

The Court: They will be received.

[fol. 584] Mr. Nitschke: I now wish to have marked for identification as Government's Exhibit 82 a memorandum of D. P. Hess dated February 16, 1932.

Mr. Nitschke: I offer Government's Exhibit 82, your Honor.

The Court: It may be received.

[fol. 585] I now wish to proceed to offer from the deposition of Walter Ernest Hobley of Churchill, Somerset, England, retired, aged 58 years, being duly and publicly sworn and examined on the part of the Defendant, doth depose and say as follows, and I'm reading now from Page 215 of the transcript. This is Mr. Ketterer's direct examination of Mr. Hobley.

(Thereupon the following questions and answers from the deposition of Walter Ernest Hobley were read:)

"Q. Will you state your name, please?

A. Walter Ernest Hobley.

[fol. 586] Q. Are you presently employed?

A. Not at present.

Q. Were you formerly employed by British Timken, Ltd.?

A. I was for 32 years.

Q. When did you stop working for British Timken?

A. 1946.

Q. Did you retire at that time?

A. I did.

Q. Did you ever work for a Company known as Electric & Ordnance Accessories, Ltd.?

A. Yes.

Q. When did you start working for that Company?

A. Early 1914.

Q. And you continued working for that Company for what period?

A. Until British Timken was formed as a Company in 1920.

Q. Then you continued working for British Timken for what period?

A. Until 1946.

Q. In what capacity were you employed by Electric & Ordnance Accessories?

A. In the sales office.

Q. Did you continue in the sales department of that Company until British Timken came into the picture?

A. Yes.

[fol. 587] Q. Did you continue in the sales department with British Timken until the time of your retirement?

A. Yes."

Mr. Nitschke: I now refer to the last seven questions on Page 218 of the transcript, being Mr. Derr's examination of Mr. Hobley. It is headed here "Cross-examination by Mr. Derr" in the transcript. The exhibit referred to there marked Defendant's Exhibit D-28 is the tripartite agreement, your Honor.

(Thereupon the following questions and answers from the deposition of Walter Ernest Hobley were read:)

"Q. I have here a copy of the business agreement dated 28th November, 1938, which has been introduced in evidence as Defendant's Exhibit D.28. I direct your attention to Paragraph 6(b) and ask that you read that.

(The witness studied the document.)

Q. I have here an agreement of 29th December, 1934, between the Timken Roller Bearing Company and British Timken, Ltd., which has been introduced in evidence as

Government's Exhibit D.29. I direct your attention to Paragraph 7(b) of that Agreement, and ask that you read it.

(The witness studied the document.)

[fol. 588] Q. It has been testified in these proceedings that your—and by 'your' I m-an British Timken's—ball and straight roller bearings were sold in South America and Canada during the period covered by these Agreements. Is that correct?

A. I think a certain number of bearings were sold by us in South America and Canada.

Q. Is that your best recollection?

A. To the best of my recollection they were.

Q. Could you give us the approximate dates of such sales?

A. It must have been the 30's, in the early 30's.

Q. Was an amount equal to 5 per cent. of the net sales price paid to American Timken on such sales?

A. Yes, as part of our arrangement with them.

Q. I hand you a letter dated December 16th, 1932, bearing initials 'DPH' to Mr. M.B.U. Dewar, which has been offered in evidence as Government's Exhibit D.23."

Mr. Nitschke: Your Honor, that's the letter now in evidence as Government's Exhibit 77.

The Court: Yes.

"It is a letter of three pages, and I direct your attention to the third paragraph on page 2 and ask that you read it."

Mr. Nitschke: Your Honor, just so you will know what he is referring to, it's the middle paragraph of the second [fol. 589] page of the letter from Hess to Dewar where there was a discussion about SKF bearings, and an inquiry as to whether or not Timken, British Timken, could furnish bearings to Canada.

(Thereupon the following questions and answers from the deposition of Walter Hobley were read:)

"Q. Just to refer back a moment, I asked you whether or not a 5 per cent. commission was paid on sales of British Timken straight roller and ball bearings in Canada and South America. I believe your answer was yes?

A. Yes.

Q. Was a commission also paid on straight roller and ball bearings bearing the trade mark 'FBC' sold in those territories?

A. I have no knowledge of FBC bearings, but on Timken ball bearings I believe we paid a commission.

Q. During the time you were with British Timken did British Timken sell tapered roller bearings to American Timken for resale in American Timken's territory?

A. No.

By Mr. Derr: I have here a document purporting to be a letter of 26th January, 1934, signed for British Timken, [fol. 590] Ltd., by W. E. Hobley, to D. P. Hess, Timken Roller Bearing Company, and I ask that it be marked for identification as Government's Exhibit 59."

Mr. Nitschke: I now wish to have that document marked for identification as Government's Exhibit 83. That's a letter dated January 26, 1934, from Hobley to Hess, attached to the deposition as Exhibit D.59.

(Letter referred to was thereupon marked by the Clerk, for identification, Government's Exhibit 83.)

Mr. Nitschke: Continuing from the deposition:

(The following questions and answers from the deposition of Walter E. Hobley, were read:)

"I have here a document purporting to be a letter dated 27th April, 1934, from W. E. Hobley to D. P. Hess and ask that it be marked for identification as Government's Exhibit D-60."

Mr. Nitschke: Your Honor, I wish to have that letter marked for identification now as Government's Exhibit 84, a letter from Hobley to Hess, dated April 27, 1934, and which was attached to the deposition as Government's [fols. 591-597] Exhibit D-60.

(Letter last above referred to was thereupon marked by the Clerk, for identification, Government's Exhibit 84.)

Mr. Nitschke: I wish to offer Government's Exhibits 83 and 84 in evidence.

The Court: They may be received.

Mr. Nitschke: Returning to the transcript of the deposition:

(The following questions and answers from the deposition of Walter E. Hobley were read:)

"Q. I would like you to read those letters, please.

(The witness studied the letters.)

Q. Do those two letter and Government's Exhibit D.23, which you read just a moment ago, refresh your recollection that tapered roller bearings manufactured by British Timken were sold?

A. Seeing those were my letters I cannot very well go back on them. Apparently a small number of bearings were sold."

[fol. 598] Mr. Nitschke: Your Honor, I discovered over the week-end that an amendment to one of the contracts was inadvertently left out. Listed as Government's Exhibit 13 was a contract between Timken and International Harvester Company referred to in the agreement with British Timken and American Timken. To make that agreement complete it is necessary to have along with it a letter agreement made May 14, 1936, amending the agreement dated December 31, 1927, which is in evidence as Government's Exhibit 13. I would like to have this letter agreement amending Government's Exhibit 13 to be marked for identi-

[fols. 599-602] fication as Government's Exhibit 13-A, and to offer it in evidence.

The Court: It may be received.

(Thereupon the document above referred to was marked by the Clerk, for identification, Government's Exhibit 13-A.)

[fol. 603] Continuing from the deposition, Page 219, at the bottom:

(Thereupon the following questions and answers from the deposition of W. E. Hobley were read; questions read by Mr. Derr, answers read by Mr. Dedman:)

"Do those two letters and Government's Exhibit D.23, which you read just a moment ago, refresh your recollection that tapered roller bearings manufactured by British Timken were sold?

A. Seeing those were my letters I cannot very well go back on them. Apparently a small number of bearings were sold.

Q. Now your recollection has been refreshed, can you tell us when and where such bearings were sold?

A. Do you mean those bearings?

Q. British Timken tapered roller bearings in American territory—when were they sold and in what territories?

A. Our territory, of course, was Europe, the whole of Europe.

Q. I mean American Timken's Territory?

A. We had no territory over there; we did not regard that as our territory.

Q. But you have just said that you did sell, that those [fol. 604] letters refreshed your recollection that you did sell?

A. Yes, to the Timken Roller Bearing Company, but we would not take orders from any other clients in that territory.

Q. At what prices did you sell to the American Timken Company?

A. The prices are given there.

Q. There are prices given in the letter. Are they the prices at which you sold?

A. Yes, they must have been.

Q. How did these prices at which you sold to American Timken compare with the prices which were given to other customers of British Timken?

A. Those prices were much more favourable than we would give to other customers.

Q. Were they more favourable than the prices given to other distributors of British Timken?

A. I would say Yes."

I will now continue with the "Re-direct examination by Mr. Ketterer."

"Q. In a question that was directed to you by Mr. Derr you were asked whether or not there was any commission paid to American Timken on sales in American Timken [fol. 605] territory of ball bearings or straight roller bearings?

A. Yes.

Q. I believe you said you thought there was?

A. To the best of my recollection I think there was.

Q. Was it your job to handle the payment of commission to the American Timken Company on any sales made, or was that handled by anybody else?

A. It was handled by the Accounts Department.

Q. So that you might be mistaken about that?

A. Quite.

Re-cross-examination.

By Mr. Derr:

Q. Did you get the consent of the American Timken Company to sell straight roller and ball bearings in Canada and South America?

A. I do not think the consent was necessary, because our agreement only covered tapered roller bearings.

Q. I show you again the Agreement dated 29th December, 1934, between American Timken and British Timken, Ltd. (Government's Exhibit D.29), and refer you to the first part of Paragraph 7. I also show you the preamble to this Agreement and ask that you please read it including the 'Whereas' clause.

(The witness studied the document.)

Q. Clause (b) of the 'Whereas' clause reads: 'The expression 'bearings' for the purposes of this Agreement [fol. 606] means anti-friction bearings of all kinds'?

A. Yes.

Q. Does that refresh your recollection as to the limitations on the authority of British Timken under the Agreements to sell in American territory?

A. Yes. The arrangement, as I recall it, was that we could supply in the Timken Company's territory, they could equally supply in our territory, and a commission was payable either way.

Re-direct examination.

By Mr. Ketterer:

Q. You have been asked about the matter of selling bearings by British Timken in American Timken territory, and a payment of commission on that. Reference has been

made to provisions in one of the business Agreements between British Timken and American Timken. I want to ask whether you had anything to do with the making of that contract?

A. No, I had nothing to do with the making of it.

Q. Did you have anything to do with its administration?

A. Yes.

Q. What did you have to do with that?

A. Mainly this question of trading in each other's territory.

[fol. 607] Q. And your best recollection about that now is what?

A. The whole object of that arrangement was that if clients in our territory insisted on buying bearings from America we would let them do so. If there were clients in the Timken Company's territory who wished to buy from Great Britain we would supply them. A commission would be granted in either case. That was in order to combat competition; that was the chole basis of it.

Q. That is your best recollection of that?

A. That is to the best of my recollection.

Q. What is your best recollection now as to whether the consent of American Timken was asked for in respect of sales by British Timken in American Timken's territory of ball and straight roller bearings as distinguished from tapered roller bearings?

A. Well, I really cannot recollect whether we did make application to the Timken Company to supply ball bearings in South America or not, but we did supply them, I am sure of that."

Mr. Nitschke: The disposition now refers to Government's Exhibit D.27, a letter dated September 11, 1934, from Dewar to "My dear Don:" which I would like to [fol. 608] have marked for identification Government's Exhibit 85.

(Letter above referred to was thereupon marked by the Clerk, for identification, Government's Exhibit 85.)

I would also like to have marked for identification a letter dated September 20, 1934, from Hess to Dewar, as Government's Exhibit 86.

(Letter above referred to was thereupon marked by the Clerk, for identification, Government's Exhibit 86.)

[fol. 609] Continuing with the deposition, referring to deposition Exhibit 27, Page 104 of the transcript of the [fol. 610] deposition, the last two questions:

(Thereupon the following questions and answers from the deposition of Dewar were read:)

"Did you write that letter? (Exhibit handed to the witness).

A. Yes.

Q. In this letter you state: 'The question of your selling steel to Russia was never mentioned to me either during your visit to England or during our visit to Canton. The only question of the sale of steel that was discussed was the question of selling your steel in England or making an arrangement for some firm in England or elsewhere to make your special steels.' Do you recall what the discussion was regarding the sale of American Timken steel in England?

A. The American Timken Company were developing a series of very special steels and at that time they asked me about getting some firm in England to manufacture them under license over here. At that time it never came to anything. I do not think it ever has yet. In that letter I took exception to the thought that they might sell their special bearing tubing to our competitors."

Then the deposition shows I offered that exhibit in evidence.

[fol. 611] Your Honor, I offer Government's Exhibits 85 and 86 in evidence.

The Court: They may be received.

Mr. Nitschke: Continuing with the deposition of Mr. Dewar, Page 129, the question:

(Thereupon the following questions and answers from the deposition of Michael Dewar were read:)

"Who is Mr. Prytz?

A. Who was Mr. Prytz at the date of these conferences, would that suit you—because I am afraid I do not know what he is now.

Q. Say in 1934 and 1935?

A. He was then Chairman of the SKF Swedish Company.

Q. He held the top position?

A. Yes."

I now wish to have marked for identification several letters that are referred to in the deposition. The first is a letter dated August 14, 1934, from Hess to Dewar, attached to the deposition as Government's Exhibit D.43, which I now wish to have marked for identification Government's Exhibit 87.

(Letter above referred to was thereupon marked by the [fol. 612] Clerk, for identification, Government's Exhibit 87.)

I wish to have marked for identification Government's Exhibit 88 a letter from Dewar to Hess dated September 19, 1934, attached to the deposition as Government's Exhibit D.44.

(Letter above referred to was thereupon marked by the Clerk, for identification, Government's Exhibit 88.)

I wish to have marked for identification as Government's Exhibit 89 a letter dated November 28, 1934, from Hess to Dewar, attached to the deposition as Government's Exhibit D.45.

(Letter above referred to was thereupon marked by the Clerk, for identification, Government's Exhibit 89.)

As Government's Exhibit 90, a letter from Dewar to Hess dated December 7, 1934, and attached to the deposition as Government's Exhibit D.46.

(Letter above referred to was thereupon marked by the Clerk, for identification, Government's Exhibit 90.)

For identification as Government's Exhibit 91 a cable from Dewar to Hess dated December 11, 1934, attached to the deposition as Government's Exhibit D.47.

[fols. 613-614] (Cable above referred to was thereupon marked by the Clerk, for identification, Government's Exhibit 91.)

As Government's Exhibit 92, for identification, a letter from Hess to Dewar dated February 4, 1935, attached to the deposition as Government's Exhibit D.48.

(Letter above referred to was thereupon marked by the Clerk, for identification, Government's Exhibit 92.)

As Government's Exhibit 93, a letter from Dewar to Hess dated February 14, 1935, and attached to the deposition as Government's Exhibit D.49.

(Letter above referred to was thereupon marked by the Clerk, for identification, Government's Exhibit 93.)

And as Government's Exhibit 94 a letter dated February 22, 1935, from Dewar to Hess, attached to the deposition as Government's Exhibit D.50.

(Thereupon letter above referred to was marked by the Clerk, for identification, Government's Exhibit 94.)

Mr. Day: I think we will object to those upon the ground that nothing ever came of the matters that are referred to in those exhibits.

[fol. 615] The Court: Let me do this then: your objection will be overruled at this time and I will entertain the objection at the time you enter it not as an objection but rather on the motion to strike.

Mr. Day: Thank you very much.

Mr. Nitschke: I would like to offer in evidence Government's Exhibits 87, 88, 89, 90, 91, 92, 93 and 94.

[fols. 616-619] The Court: They will be received in evidence.

[fol. 620] Mr. Nitschke: We will now proceed to offer [fol. 621] from my examination of Dewar, beginning on Page 122,

(Thereupon the following questions and answers from the deposition of Michael Dewar were read:)

"Q. Mr. Day asker you yesterday, Mr. Dewar, making reference to the territorial provisions of the business agreements, what the policy of your company was under this agreement in the event that one of them was more able to make a sale on the given territory than the other. You replied: 'We had a common enemy in the Swedish SKF

who had begun the manufacture of tapered roller bearings, and our general policy was that if a tapered roller bearing was sold, it had got to be a Timken and not a SKF. To us it was really immaterial whether it was made in the United States or whether it was made in Great Britain or France, provided it carried the name 'Timken'.' "

And then Mr. Day said: "You are reading from what?"

"By Mr. Nitschke: I am reading from the transcript of the testimony on the previous day, Page 47, and I have also read from Mr. Dewar's answer to your question.

Q. Is it your intention to say that it was immaterial to you who sold as between American Timken and British Timken at all times, or just when you were in competition [fol. 622] with S.K.F.?

A. Our main object in life was to sell Timken tapered roller bearings. Naturally, I did not want the American Timken Company to sell bearings in our territory unless—well, in our territory.

Q. In other words, you did not mean that as between a bearing made in Canton and one made in Birmingham, you did not care which was sold in your territory—they both have the name 'Timken' on them?

A. Yes.

Q. But you are interested in selling bearings made in Birmingham in your territory?

A. Yes, certainly; but if we were unable to sell a bearing made in Birmingham, we preferred to sell in our territory a bearing made in Canton or in France rather than a S.K.F. bearing made in Gothenburg.

Q. So in other words, if you were trying to get the business from S.K.F., it was then that it was immaterial to you which Timken bearing was sold?

A. Well, I should have put it the other way round: it was when S.K.F. was trying to get the business from us. After all, we started.

Q. You used the phrase 'common enemy' referring to Swedish S.K.F. Were they a common enemy at all times, [fol. 623] or were they not during some time?

A. They were a common enemy all the time.

Q. And they were a common enemy at the time you

entered into the arrangements in France in 1934, and the arrangements in England in 1932?

A. They were largely a common enemy from the time we ever heard of them up to now inclusive.

Q. So that they were a common enemy with whom you had friendly arrangements?

A. We occasionally had a truce—like the Russians and the Germans.

Q. Then it is a case of the American slang expression—if you can't beat them, you join them?

By Mr. Day: I object to that question."

Mr. Nitschke: I now wish to have marked for identification as Government's Exhibit 95 a cable dated May 16, 1938, from Umstattd to Dewar.

(Cable referred to was thereupon marked by the Clerk, for identification, Government's Exhibit 95.)

Mr. Nitschke: And as Government's Exhibit 96 a cable from Pascoe to Umstattd dated May 20, 1938.

(Cable referred to was thereupon marked by the Clerk, for identification, Government's Exhibit 96.)

Mr. Nitschke: And as Government's Exhibit 97 an inter-[fol. 624] office letter from Harry J. Porter to Mr. W. E. Umstattd, dated May 23, 1938.

(Letter above referred to was thereupon marked by the Clerk, for identification, Government's Exhibit 97.)

Mr. Nitschke: I wish to offer in evidence Government's Exhibits 95, 96 and 97.

The Court: They may be received.

[fol. 625] I wish to have marked for identification as Government's Exhibit 98 a letter from W. Robert Timken to British Timken Ltd. dated April 25, 1939.

(Letter above referred to was thereupon marked by the Clerk, for identification, Government's Exhibit 98.)

Mr. Nitschke: I wish to offer Government's Exhibit 98 [fol. 626] in evidence.

The Court: It may be received.

Now I wish to have marked for identification as Government's Exhibit 99 a letter from Klinedinst to Dewar dated August 25, 1939.

(Letter above referred to was thereupon marked by the Clerk, for identification, Government's Exhibit 99.)

Mr. Nitschke: I wish to offer Government's Exhibit 99 in evidence.

The Court: It may be received.

Mr. Nitschke: I would like to have marked for identification as Government's Exhibit 100 a letter from Dewar to Klinedinst dated September 11, 1939, and attached to the deposition as Government's Exhibit D-28.

(Thereupon letter above referred to was marked by the [fols. 627-628] Clerk, for identification, Government's Exhibit 100.)

Mr. Nitschke: I would like to offer Government's Exhibit 100 in evidence.

The Court: It may be received.

[fol. 629] Mr. Nitschke: Reading from Page 105 of the transcript, where Mr. Dewar's attention was called to this letter of September 11, 1939, Government's Exhibit 100:

(Thereupon the following questions and answers from the deposition of Michael Dewar were read:)

"Did you write that letter?

[fol. 630] A. Yes.

Q. In this letter you are replying to a letter of the 25th August from Mr. Klinedinst 'regarding the trouble you are having with SKF in Canada. We will give this matter our most careful consideration, but at the present time it is rather unlikely that we shall be able to help you very much. If, however, we can help you by persuading SKF not to fight you, that would appear to be the best way! I just wanted to ask you if, in stating that 'at the present time it is rather unlikely that we shall be able to help', you are referring to the fact that your production was going into the war effort.

A. Yes; we had a war at that time.

Q. And that therefore you could not ship any bearings abroad?

A. That is right."

Mr. Nitschke: I now wish to have marked for identification as Government's Exhibit 101 a letter from W. Robert Timken to Dewar dated September 27, 1939.

(Letter above referred to was thereupon marked by the Clerk, for identification, Government's Exhibit 101.)

Mr. Nitschke: And I wish to have marked as Government's Exhibit 102 a letter dated October 26, 1939, from Dewar to W. Robert Timken.

(Letter above referred to was thereupon marked by the [fols. 631-633] Clerk, for identification, Government's Exhibit 102.)

Mr. Nitschke: And as Government's Exhibit 103 a further letter from Dewar to W. Robert Timken dated November 14, 1939.

(Letter above referred to was thereupon marked by the Clerk, for identification, Government's Exhibit 103.)

Mr. Nitschke: I wish to offer in evidence Government's Exhibits 101, 102, and 103.

The Court: They may be received.

[fol. 634] Mr. Nitschke: I wish to have marked for identification as Government's Exhibit 104 a letter dated October 23, 1939, from British Timken Limited to W. Robert Timken.

(Letter above referred to was thereupon marked by the Clerk, for identification, Government's Exhibit 104.)

Mr. Nitschke: And a letter from W. Robert Timken to British Timken, Ltd., dated December 28, 1939, which I [fols. 635-644] wish to have marked for identification as Government's Exhibit 105. This is attached to the deposition as Government's Exhibit D-32.

(Letter above referred to was thereupon marked by the clerk, for identification, Government's Exhibit 105.)

Mr. Nitschke: And also I would like to have marked a copy of a contracted dated September 1, 1939, entitled "Memorandum of Agreement By and Between British Timken Limited and Percy Grant & Company Limited," bearing the notation "File copy for TRB" and "Contract File."

(Contract above referred to was thereupon marked by the Clerk, for identification, Government's Exhibit 106.)

Mr. Nitschke: I wish to offer in evidence Government's Exhibits 104, 105 and 106.

The Court: They may be received.

[fol. 645] I should now like to read from Page 107a of the deposition, last question on the page:

"I have here, again for identification, Government's Exhibit D.32, a copy of a letter written by W. Robert Timken to British Timken Limited, dated December 28, 1939. This letter states:

'We have gone over *over* the draft of a proposed Agreement between yourselves and Messrs. Percy Grant & Company inclosed in your letter of October 23, 1939. While we were in substantial agreement with the terms included, our counsel felt that some changes were advisable from our viewpoint. I have underlined in red these changes on an extra copy and would appreciate your comment on them.' Do you recall that agreement?

A. Yes.

Q. Was such an agreement entered into?

A. I think so.

Q. Do you recall what it related to?

A. Yes.

Q. What was that?

A. Most of the Argentine railways at that time were British-owned and they wished to place orders for passenger stock and locomotives in this country fitted with Timken bearings. Then they wished also be able to import spares in the shape of axle boxes and bearings complete. The agent that we employed for that purpose was [fol. 646] Percy Grant, and it was agreed that the Timken Roller Bearing Company should employ the same agent.

Q. Agreed between who?

A. British Timken and American Timken."

Mr. Derr: At that point Mr. Nitschke said, "I will not offer D.32 at this time."

Mr. Nitschke: I now wish to have marked for identification Government's Exhibit 107, a copy of a memorandum from Mr. Klinedinst to Mr. Goodwin, dated December 5, 1939.

The Court: Did I hear you say you were offering it?

Mr. Nitschke: Having it marked for identification first, then I will offer it.

(Thereupon the memorandum above referred to was marked by the Clerk, for identification, Government's Exhibit 107.)

And for identification Government's Exhibit 108, a memorandum from Klinedinst addressed to four people, J. R. Comber, W. B. Moore, W. H. Richardson and W. D. Sanders, dated December 6, 1939.

(Thereupon the memorandum above referred to was marked by the Clerk, for identification, Government's Exhibit 108.)

[fols. 647-652] As Government's Exhibit 109, a memorandum by W. R. Timken, dated January 29th, 1940, attention W. Robert Timken, subject "Mr. L. M. Klinedinst's General Letter No. 11-13 of 12-6-39."

(Thereupon the memorandum above referred to was marked by the Clerk, for identification, Government's Exhibit 109.)

I wish to offer in evidence Government's Exhibits 107, 108 and 109.

The Court: They may be received.

[fol. 653] Mr. Nitschke: I would like to have marked for identification as Government's Exhibit 110 a letter from Colin S. Gibson to Mr. R. E. Forsythe, of The Timken Roller Bearing Company, dated September 20, 1940. The letter bears the heading "C. S. Gibson, Technical Representative. S. C. Campbell, Resident Service Engineer of [fols. 654-663] British Timken Ltd., Birmingham, England."

(Letter last above referred to was thereupon marked by the Clerk, for identification, Government's Exhibit 110.)

For identification as Government's Exhibit 111, a letter from R. R. Thomas, Deputy Chairman of Directors, Bearings Service Co. of Australia, Limited, to Mr. R. Forsythe, of Timken Roller Bearings Company, dated October 23, 1940. Attached to Government's Exhibit 111 is a copy of a letter from R. R. Thomas to C. S. Gibson, and on the

same date, which I would like to have marked as Government's Exhibits 111 and 111-A, respectively.)

(Letters above referred to were thereupon marked by the Clerk, for identification, Government's Exhibits 111 and 111A, respectively.)

I wish to offer in evidence Government's Exhibits 110, 111 and 111-A.

The Court: They may be received.

[fol. 664] Mr. Nitschke: Now I wish to have marked for identification as Government's Exhibit 112 a memorandum from R. E. Forsythe to L. M. Klinedinst, dated December 3, 1940, which I wish to offer in evidence.

The Court: It may be received.

(Thereupon the memorandum above referred to was [fol. 665] marked by the Clerk, for identification, Government's Exhibit 112.)

Mr. Nitschke: Government's Exhibit 112 was attached to the deposition as Government's Exhibit D.33.

This Government's Exhibit 112 attached to the deposition as D.33 was mentioned in the transcript of deposition on Page 108 of my examination of Mr. Dewar. I said to him:

(Thereupon the following questions and answers were read from the deposition of Michael Dewar:)

"I have Government's Exhibit D.33 which appears to be a memorandum dated December 3rd, 1940, from R. E. Forsythe to L. M. Klinedinst on the subject of sales into British Timken's territory. This is an inter-office memorandum that came from the files of American Timken.

A. Would you give me the date?

Q. December 3rd, 1940.

A. I was not in England.

Q. I do not think that will make any difference with respect to my use of the document. Do you know who Mr. Forsythe and Mr. Klinedinst are?

[fol. 666] A. Yes; I know Mr. Klinedinst and Mr. Forsythe.

Q. I will just ask you to read the third paragraph and see if that refreshes your memory on the question of the

modification or understanding relating to paragraphs 7 and 8 of the 1935 agreement. (Exhibit handed to witness.)

A. I am afraid not. It does not help me at all.

Q. We have been referring to the practice of selling replacement bearings, quoting at a protective discount of 50 per cent off the list, rather than enquiring as to what the price should be, and I take it you have no recollection of yourself making any such understanding?

A. No; I have none.

Q. Who do you think in British Timken would have made such an arrangement with the American Timken people?

A. I do not know that such an arrangement was necessary. We should have quoted automatically a figure of that kind, knowing quite well that we could not get any business at it, anyway. It may be there is an agreement. Please do not take it from me that there is not.

By Mr. Whitney: I am afraid that we cannot turn up witnesses for you. We can answer questions, but I do not think you can reasonably ask Mr. Dewar to go round looking for who might be a witness to something he does not [fols. 667-674] know about. It is not within the scope of the examination.

By Mr. Day: (To the witness): When did you come to America in 1940?

By the Witness: In July.

By Mr. Day: What is the date of that memorandum?

By Mr. Nitschke: 3rd December.

By Mr. Day: That is five or six months after you came to America."

Mr. Day: I think we should state that Mr. Dewar came to America at that time in connection with some official capacity he had with the British Government during the war.

[fol. 675] (Monday, March 29, 1948, 2:00 o'clock p.m.)

Mr. Nitschke: Your Honor, we will now proceed with the reading of part of the deposition of Frederick John Pascoe, starting at page 157 of the transcript. This is the examination of Mr. Pascoe by Mr. Ketterer, and we will proceed to offer it.

(Thereupon, the following questions and answers from the deposition of Frederick John Pascoe were read:)

"Q. Will you state your full name, please?

A. Frederick John Pascoe.

Q. Where do you live?

A. Broom Hill, Spratton, Northamptonshire.

Q. Will you give us a description of your education and early business connections?

A. I was educated at Exeter School and Cambridge University, where I took an Engineering Degree—Mechanical Sciences Tripos, to be exact. At the end of the war——

Q. You mean the first World War?

A. Yes, in 1919 I first went into industry by joining the Leeds Forge Company. My job there was in the nature of an apprenticeship. I spent some few years with the Leeds Forge Company in Leeds. I afterwards came to London and spent a little time in their London office. Following that I joined the Electric & Railway Finance Cor- [fol. 676] poration in the capacity of Personal Assistant to the Chairman. There I was mostly engaged in financial business, new issues, underwriting, investment work, and a certain amount of technical work. I afterwards became Secretary of the Electric & Railway Finance Corporation. While with them I was associated with one or two other companies. In 1930-1931 I first became interested in British Timken and French Timken, being invited by Mr. Dewar to join the Boards of those companies. During the period from 1930 up to 1938, a year before the war, I became progressively more interested in and progressively spending more time in the service of British Timken, until in 1938 I severed my connection, which by that time had grown rather thin, with the Electric & Railway Finance Corporation and became a full-time Director of the Timken Companies, British Timken and Francaise Timken.

Q. Have you continued since 1938 to devote your full time to the business of British Timken and French Timken?

A. Yes, and during the war, from 1940 to 1943, Mr. Dewar was in America for the British Government and I was for that period the chief executive Director of the [fol. 677] Timken organization in this country. On Mr. Dewar's return I was appointed Managing Director, when

my duties were general supervision and direction of the Company's affairs, subject to the instructions of Mr. Dewar as the chief executive Director."

Mr. Derr: Continuing from the deposition of Mr. Pascoe, your Honor, we would like to offer all that occurred on page 192 and the first question and answer on page 193:

(Thereupon, the following questions and answers from Frederick John Pascoe were read:)

"Q. Now I want to go back to the sales of bearings that are made in the territory that is set aside for operations of British Timken in the 1938 contract. When bearings are sold by American Timken in that territory what, if any, commission is paid to the British Timken Company in respect of those sales?

A. Sales by American Timken into our Territory?

Q. That is right.

A. The only payments of any size were payments on Australian business. They were the only payments of any real size that I remember.

Q. And that was payment for what purpose?

A. They did not pay us a commission when they sent bearings out there. They supplied the bearings at a price [fol. 678] which we indicated to them as being the price level. Then we asked the American Company to invoice the bearings at that price and give us the difference between that price and the price which they would have invoiced to us had they supplied the bearings to us. We were very anxious to get that price difference, because we had to maintain our technical force in Australia, although we were not getting the business. The business was going to America and we were maintaining the technical engineers in Australia. Therefore, we said: 'This is Australian business and we want a contribution to the cost of maintaining those engineers.' I think that was the arrangement.

Q. Were those payments in any sense penalty payments?

A. No, they were what we demanded to meet our costs in Australia. We did not see why we should maintain the engineers and indeed why we should, as we expected to have to do and indeed did towards the end of the period, have to make payments to our agents to compensate them for the fact that they did not get any commission on bear-

ings supplied from this country. So we had a considerable expense in Australia and we made that arrangement with America.

[fol. 679] Q. Has that same procedure been followed in any other territories outside Australia where sales have been made in circumstances where you have, for one reason or another, not been able to make delivery?

A. I cannot think of one. I can only say I should certainly follow that principle. I cannot think of one at the moment—I cannot think of any."

Mr. Derr: Now, your Honor, we would like to offer the last question and answer on page 198 from the testimony of Mr. Pascoe, all of pages 199, and 200, and the first question and answer on page 201.

(Thereupon, the following questions and answers from the deposition of Frederick John Pascoe were read:)

"Q. I hand to you Government's Exhibit D.33 which is the letter from Forsythe to Klinedinst that I used in attempting to find out what protective discount of 50 per cent. off the American list meant with reference to prices charged by American Timken when it was selling in British Timken's territory. Do you recall any understanding arrived at or discussion between American Timken and British Timken when American Timken sold replacement bearings in British Timken's territory—would it say at a protective discount of 50 per cent off the American list? I call your attention to the third paragraph in that letter and ask you if that is of any aid to you?

[fol. 680] A. This third paragraph?

Q. Yes.

A. I cannot tell you from memory what 50 per cent off was.

Q. My question was whether or not you recall any understanding between British Timken and American Timken?

A. Yes, I recall an understanding. In other words I think I said so in answer to Direct examination that we asked American Timken to quote prices which we gave. We had established a price level in Australia, a price level which not only gave us our cost of manufacture but also enabled us to maintain this expensive sales force in Australia, and we were anxious that that price level should

not be disturbed by odd orders which were seized under special conditions from anywhere.

Q. Did you establish prices in every case where American Timken received an order or an inquiry from your territory?

A. Are you talking about Australia or any territory?

Q. Any of your territory, what is designated as the British territory?

A. I do not remember details particularly, but I think [fol. 681] it is quite possible that we did.

Q. You have no recollection, however, of an understanding that American Timken could sell at a 50 per cent. discount off American list without inquiring of you as to what the price should be in each case?

A. The way we should inform American Timken of the price level was by reference to a list. We could not send them an enormous list of dozens of bearings and say: 'This is the price of each particular bearing.' We should refer to some particular price list and say: 'The price level we wish you to quote is a certain percentage from this list.' That was the normal procedure.

Q. That is what you did do?

A. That is what we undoubtedly did do.

Q. But you have no recollection of a general understanding that American Timken, without getting a specific price from you in each case, could sell in your territory at a 50 per cent discount off list?

A. Well, we have said that when the question arose of the American Timken Roller Bearing Company selling in our territory we should indicate to them what the price level was and we should indicate it by quoting a discount off the list; and if they asked us: 'We are having orders [fol. 682] from Australia; what price shall we quote?' we should say: 'Quote a certain percentage off the list,' and that would remain until we wanted to alter it, when we should again alter it by altering the discount.

Q. And is it your recollection that you did tell them that in all sales in Australia they should quote 50 per cent off the American list?

A. I should say it was quite possible that we told them that. I say that we should have given them a discount off the list which we could quote.

Q. You do not recall any discussion of that sort with any of the Timken people?

A. Well, it was during the war, was it not?

Q. I was not limiting it to any particular time.

A. Well, we are talking about 1940. I should say that our procedure always would be to ask them to quote, when they are quoting into our territory, a discount off list. When you say you are covering the whole time, we are going back now in my memory to 1930 which is eighteen years ago. I cannot remember now whether we said: 'Quote 50 per cent off list in every territory' or 50 per cent in one territory and 49 per cent in another. I can only say that we should have given them a discount off [fol. 683] list as being the simplest way of indicating what the price level was in any particular territory.

Q. And you have no recollection during this period from 1930 to date of either yourself or anyone else having to arrive at a general understanding that throughout an indefinite period American Timken could quote for replacement bearings in your territory—on unsolicited orders from your territory—a 50 per cent discount, a protective discount? You do not recall that that arose or any understanding or discussion which you had with them?

A. I am afraid I can only repeat myself. I cannot recall——

Q. I am just trying to make it specific.

A. I cannot recall myself that we ever said to the American Timken Company: 'Quote anywhere you like at 50 per cent.' I do not say we did. I do not say we did not. I only say I remember during the war—it is fresher in my memory during the war, I was the whole time with Timken and for a time during the war I was the Chief Executive Officer of the Company—that during that period I should undoubtedly have given them a discount off list."

Mr. Derr: I think, your Honor, the record should show that the last part of the deposition, that which was read [fol. 684] from page 198 to 201, was in the examination by Mr. Nitschke. The first part was by Mr. Ketterer.

The Court: Very well.

Mr. Nitschke: I wish to have marked for identification as Government's Exhibit No. 113 a letter from Klinedinst to Dewar dated December 4, 1940.

(The letter above referred to was thereupon marked by the Clerk, for identification, Government's Exhibit No. 113.)

Mr. Nitschke: I would like to have marked for identification as Government's Exhibit No. 114 a letter dated December 18, 1940, from Gibson to Forsythe.

(The letter above referred to was thereupon marked by the Clerk, for identification, Government's Exhibit No. 114.)

Mr. Nitschke: I would like to call your Honor's attention to the second page of Mr. Klinedinst's letter to Mr. Dewar of December 4, 1940, Government's Exhibit No. 113, where Mr. Klinedinst writes:

"We have in mind a situation——"

The Court: You haven't offered them yet.

Mr. Nitschke: I am sorry, your Honor. I want to offer in evidence Government's Exhibits 113 and 114.

The Court: They will be received.

[fols. 685-690] (The letters heretofore marked Government's Exhibits No. 113 and 114, for identification, were received in evidence.)

[fol. 691] Thereupon, Louis M. Klinedinst was recalled as a witness, and, having heretofore been duly sworn, was examined and testified further as follows:

Direct examination.

By Mr. Nitschke:

Q. Mr. Klinedinst, in the subpoena which was issued to you you were asked to bring a bearing bearing certain number manufactured by British Timken and one made by French Timken. Do you have those with you?

A. We have got the French Timken this morning and expect to have the British Timken tomorrow morning.

Q. Will you give those to Mr. Day so that he can give them to me?

A. Yes, sir.

Q. When they arrive?

A. Yes, sir.

Mr. Nitschke: Your Honor, if they fail to arrive before the Government's case is in, I would like to have them marked for identification whenever they do arrive and put them in evidence.

The Court; Very well.

Q. Mr. Klinedinst, did you see Mr. Harrison of the Bearing Service Company of Australia, Ltd. when he was in Canton in 1940?

A. Yes, sir.

Q. And did you talk with him when he was there?

[fol. 692] A. Yes, sir.

Q. Was anyone else with you when you had these discussions with Mr. Harrison?

A. I believe not.

Q. Did you talk to him on more than one occasion?

A. Just once.

Q. Just once?

A. Yes, sir.

Q. Did Mr. Harrison ask you to cancel your agreement with British Timken so that you could sell to his company direct in Australia?

A. No, he did not.

Q. How?

A. He did not.

Q. Or did he ask you to modify the contract in such a way as to permit yourself to deal with him direct?

A. No, sir.

Q. You are sure of that, are you, Mr. Klinedinst?

A. Positive.

Mr. Nitschke: Your Honor, I would like to ask permission to use the Grand Jury transcript to refresh the witness' recollection on that question. Would you like to see the portion first before I ask him about it?

The Court: Yes.

[fol. 693] (Thereupon, Mr. Nitschke handed Grand Jury's transcript to Court.)

Mr. Day: May we see that?

Mr. Nitschke: I have no objection to your seeing that portion of it.

Mr. Day: That's all we want to look at right now.

(Thereupon, Mr. Nitschke handed the Grand Jury transcript to Mr. Day.)

Mr. Day: How much are you going to ask him from this? I don't want to look at anything you are not going to ask about.

Mr. Nitschke: Just that one question.

The Court: Very well.

Q. I will read you my questions and your answers, Mr. Klinedinst, from your testimony before the Grand Jury:

"Q. I have here a copy of a letter from British Timken to Kemsley & Company in Australia in which they say that for the remaining war period the Australian requirement of Timken bearings will be supplied by their American associate, and that this decision results from discussion which their chairman, Mr. Dewar, has had with Timken Roller Bearing Company of America, and he goes on [fol. 694] to say that he thinks Mr. Dewar was in some way influenced by Mr. Harrison of the Bearing Service Company who visited Canton while he was in America."

Your answer was:

"A. Bearing Service Company is, as I remember—Yes, they were a jobber for British Timken in Australia.

"Q. Does that refresh your memory of that situation?

"A. Yes.

"Q. Could you tell the jury what happened in connection with the Bearing Service Company?

"A. Well, this Harrison was the Bearing Service man and was very much dissatisfied with the service he was getting from the British company, and he wrote several letters to us and wanted us to cancel the British Timken contract, and he said British Timken had taken over a dealer down there, Kemsley & Company—does he mention that—who was entirely unfit and couldn't possibly replace the bearings in operation. Nothing happened on that. As I understand, Kemsley is the British representative and the things stand just as they did at that time, as far as I know. Kemsley is a very big house in Australia, [fol. 695] much larger than is Bearing Service Company.

"Q. But, as I understand it, British Timken had insisted that the Australian people order their bearings through British Timken, and British Timken would then forward

any orders to you that they wanted you to fill for Australia?

"A. Not exactly that. British Timken wanted the Bearing Service Company to place their orders with Kemsley & Company, and Kemsley undoubtedly got a profit, and then Kemsley would send the orders to British Timken. In other words, you had an added step in there, and the Bearing Service Company didn't like that. They tried to get us to upset the contract and do business directly with them. You will find in that correspondence where they said other competition was coming in and we would lose a lot of business if we continued to have British Timken handling their sales through Kemsley."

Does that refresh your recollection as to whether Mr. Harrison sought to have you cancel your contract?

A. Harrison did not tell me that. Since you read that, it was talked over, but Harrison didn't tell me. The only point Harrison took up with me was that the deliveries were rotten and somebody had to get back of it and get some shipments for them, but I don't think there was [fol. 696] any request or any discussion about trying to upset the contract. I don't recall that. I think that I did hear something said about it, with Forsythe or someone, but I only had a very short visit with Harrison when he was there. He was there only the one day.

Mr. Nitschke: Your witness.

Cross examination.

By Mr. Ketterer:

Q. Mr. Klinedinst, who is Kemsley & Company?

A. I understand that they are, not exactly a jobber themselves, but they are commission people who place jobbers, and, as I understand it, that's the way they functioned for British Timken. They placed jobbers in Australia, for which they received a commission.

Q. Now, were they in any way a representative of American Timken, Kemsley & Company?

A. No, not that I recall.

Q. You had no connection with Kemsley & Company of any kind?

A. No.

Q. Bearing Service Company of Australia, who were they?

A. Well, they were a jobber appointed by Kemsley to handle Timken bearings—not only Timken bearings, I understand they handled other automotive parts, but they were a jobber acting for British Timken.

[fol. 697] Q. And they were located in Australia, too?

A. Yes.

Q. And, as I understand it, they had several places of business in Australia, that is, Bearing Service Company?

A. Yes. I don't know how many.

Q. You had no contract—by you I mean American Timken—had no contract of any kind with Bearing Service Company, either?

A. No, sir.

Q. When Mr. Harrison came over here in 1940—was that when it was?

A. I believe so.

Q. How long did you say you saw him in Canton?

A. I saw him one day for a very short time.

Q. How long?

A. Oh, I wouldn't say over an hour.

Q. During that period of time what subjects did you discuss with him, or what did he say he came over there for?

A. He was very much dissatisfied with the deliveries that they were getting from British Timken, and he asked if some arrangement couldn't be set up whereby they could place their orders directly with Canton.

Q. To the best of your knowledge now, was there ever any discussion between you and Harrison the purport of which was that American Timken should cancel any agree-
[fol. 698] ment that it had with British Timken, during the time you talked to Mr. Harrison in 1940?

A. I don't recall anything like that being said by Harrison to me.

Q. Did Bearing Service Company, to your knowledge, represent any other anti-friction bearing manufacturers?

A. Not that I know of. I think they do handle ball bearings, but I don't know what type.

Q. Do you know whether Mr. Harrison was here for the purpose of talking with any other anti-friction bearing

manufacturers about deliveries of other types of anti-friction bearings, or the product of any other manufacturer?

A. If I remember correctly, he told me that he was in here not only on Timken bearings, that he was jobbing other bearings, but he didn't tell me what kind. He did, however, tell me that, as I recall it, that Bower was getting in pretty strong, and that if he couldn't get tapered roller bearings from Timken that the only recourse would be to go to Bower.

Mr. Ketterer: I think that's all.

Mr. Nitschke: That's all, Mr. Klinedinst, and if you will give Mr. Day those bearings when they come in, then Mr. Day can give them to me.

[fol. 699] The Witness: Yes.

OFFERS IN EVIDENCE

Mr. Nitschke: I wish to have marked for identification as Government's Exhibit 115 a cable dated December 24, 1940, from Pascoe to Robert Timken.

(Thereupon the cable referred to was marked by the Clerk, for identification, Government's Exhibit 115.)

Mr. Nitschke: I wish to have marked as Government's Exhibit 116 a cable from Gibson to Timken Roller Bearing Company dated December 28, 1940.

(Thereupon the cable referred to was marked by the Clerk, for identification, Government's Exhibit 116.)

Mr. Nitschke: And as Government's Exhibit 117 a letter from Gibson to Forsythe dated December 31, 1940.

(Thereupon the letter referred to was marked by the Clerk, for identification, Government's Exhibit 117.)

Mr. Nitschke: I wish to offer in evidence Government's Exhibits 115, 116, and 117.

The Court: They may be received.

(The documents heretofore marked for identification Gov-
[fol. 700] ernment's Exhibits 115, 116, and 117, were received in evidence.)

[fol. 701] I wish to have marked for identification as Government's Exhibit 118 a memorandum by Umstattd,

which has a notation at the top "CC M.B.U. Dewar, L. M. Klinedinst, F. J. Pascoe, H. H. Timken, Jr., W. Robert Timken," and is dated February 20, 1941.

(The memorandum above referred to was marked by the Clerk, for identification, Government's Exhibit 118.)

Mr. Nitschke: And as Government's Exhibit 119 a copy of a letter from E. B. Clapp, British Purchasing Commission, Australian Division, 15 Broad Street, New York, to Mr. Umstattd, dated February 26, 1941.

(The letter above referred to was thereupon marked by the Clerk, for identification, Government's Exhibit 119.)

Mr. Nitschke: And as Government's Exhibit 120 a carbon original of a letter dated March 1, 1941, from Umstattd to Clapp.

(The letter above referred to was thereupon marked by [fols. 702-705] the Clerk, for identification, Government's Exhibit 120.)

Your Honor, I believe I forgot to offer these last three exhibits in evidence, which I do at this time.

The Court: They may be received.

(The documents heretofore marked, for identification, Government's Exhibits 118, 119 and 120, were received in evidence.)

[fol. 706] I now wish to have marked for identification as Government's Exhibit 121 a copy of a cable from Robert Timken to British Timken dated February 18, 1941.

(The cable above referred to was thereupon marked by [fol. 707] the Clerk, for identification, Government's Exhibit No. 121.)

Mr. Nitschke: And as Government's Exhibit 122 a carbon original of a letter from W. Robert Timken to British Timken Limited dated February 18, 1941.

(The letter above referred to was thereupon marked by the Clerk, for identification, Government's Exhibit No. 122.)

Mr. Nitschke: And as Government's Exhibit 123 I would like to have marked, for identification, a letter dated February 24, 1941, from L. M. Klinedinst to M.B.U. Dewar.

(The letter above referred to was thereupon marked by the Clerk, for identification, Government's Exhibit No. 123.)

Mr. Nitschke: And as Government's Exhibit 124 a letter dated February 24, 1941, from L. M. Klinedinst to F. J. Pascoe.

(The letter above referred to was thereupon marked by the Clerk, for identification, Government's Exhibit No. 124.)

Mr. Nitschke: I would like to have marked for identification as Government's Exhibit No. 125 a letter from Pascoe to Timken Roller Bearing Company dated March 14, 1941.

[fols. 708-716] (The letter above referred to was thereupon marked by the Clerk, for identification, Government's Exhibit No. 125.

Mr. Nitschke: I wish to offer in evidence Government's Exhibits 121, 122, 123, 124, and 125.

The Court: They may be received.

(The documents heretofore marked for identification Government's Exhibits 121, 122, 123, 124, and 125, were received in evidence.)

[fols. 717-721] Mr. Nitschke: I should like to have marked for identification as Government's Exhibit No. 126 copy of a letter from C. Robert Timken to F. J. Pascoe, dated April 15, 1941.

(The letter above referred to was thereupon marked by the Clerk, for identification, Government's Exhibit No. 126.)

Mr. Nitschke: I wish to have marked for identification as Government's Exhibit 127, a letter from Pascoe to W. Robert Timken, dated May 6, 1941.

(The letter above referred to was marked by the Clerk, for identification, Government's Exhibit No. 127.)

Mr. Nitschke: I wish to offer Government's Exhibit No. 126 and 127 in evidence.

The Court: They may be received.

(The documents heretofore marked for identification Government's Exhibits 126 and 127, were received in evidence.)

[fol. 722] (Recess taken.)

Mr. Nitschke: I wish to have marked for identification Government's Exhibit No. 128, a memorandum dated June 12, 1941, from Robert P. Kelly to W. G. Turner, with the notation "Carbon copy to R. E. Forsythe."

(The document above referred to was marked by the Clerk, for identification, Government's Exhibit No. 128.)

Mr. Nitschke: I wish to have marked for identification Government's Exhibit No. 129, a memorandum by R. E. Forsythe, entitled "Commission Contract with British Timken Ltd." dated March 19, 1942.

(The document above referred to was thereupon marked by the Clerk, for identification, Government's Exhibit No. 129.)

Mr. Nitschke: I wish to have marked for identification as Government's Exhibit No. 130, a memorandum by W. Robert Timken, entitled "General Discussion With Dewar," dated February 23, 1944.

(The document above referred to was thereupon marked by the Clerk, for identification, Government's Exhibit No. 130.)

Mr. Nitschke: I wish to offer in evidence Government's Exhibits 128 and 129, and the last three paragraphs of [fols. 723-724] Government's Exhibit No. 130.

The Court: They will be received.

(Whereupon, the documents above referred to and previously marked Government's Exhibits 128, 129, and 130, were received in evidence.)

[fols. 725-730] The Court: Is there any way of identifying the two individuals who signed these memoranda? Who is Kelly?

Mr. Day: We will be very glad to state in the record who he is.

Mr. Ketterer: He is a representative in the Service Sales Department.

[fol. 731] Mr. Nitschke: I wish to mark for identification as Government's Exhibit No. 131, a memorandum dated June 10, 1944, from E. H. Austin to R. A. Baal.

Mr. Ketterer, could you stipulate who Mr. E. H. Austin is, and R. A. Baal, of New York?

Mr. Ketterer: Mr. Austin is the head of the Timken Sales Division at the Timken plant in Canton, and Mr. Baal has been in charge of export business in the New York office.

Mr. Nitschke: I thank you.

I wish to have marked as Government's Exhibit No. 132 a memorandum from R. A. Baal to E. H. Austin, dated June 15, 1944.

(Thereupon, the documents above referred to were marked by the Clerk, for identification, Government's Exhibit 131 and 132.)

Mr. Nitschke: As Government's Exhibit 133, a carbon original of a letter from L. M. Klinedinst to M. B. U. Dewar, [fols. 732-738] dated July 10, 1944, to which is attached a memorandum from Austin to Klinedinst dated July 6, 1944, and a memorandum from Austin to Klinedinst dated July 7, 1944, and referred to in Government's Exhibit 133.

(The letter above referred to was thereupon marked by the Clerk, for identification, Government's Exhibit No. 133.)

Mr. Nitschke: I wish to offer in evidence Government's Exhibits 131, 132 and 133.

The Court: They may be received.

(The documents heretofore marked for identification Government's Exhibits 131, 132, and 133, were received in evidence.)

[fol. 739] Now, I wish to proceed to offer from Mr. Ketterer's examination of Mr. Pascoe that part of Pascoe's deposition which begins on page 174 of the transcript, going through to the first question on page 176.

(Said portion of deposition, questions read by Mr. Derr and answers by Mr. Dedman:)

"Q. Now I would like to direct your attention to the situation that has prevailed since the war. Since the war, what procedure is it necessary to follow before there can be any importation of bearings into England?

A. If any Company wanted to import bearings into England now, the first thing they have got to do is go to the Ministry of Supply and get permission, get what is known as an import license, which in effect is a license to enable them to spend the dollars. When that happens now, when [fol. 740] you apply for an import license from America, whether it covers a machine tool or a bearing or anything else, it is extremely difficult to get these licenses, owing to the dollar position.

Q. What showing has to be made by any person applying for a license to import bearings since the war?

A. If any users of bearings go to the Ministry of Supply now and say 'We want to buy some bearings from America,' the first thing they will be asked is: 'Cannot you get them from British sources?' It may be they would say: 'No, we cannot get them.' If they were tapered bearings, they may say: 'No; we cannot get them from British Timken, because British Timken now cannot give us delivery, because their capacity is not enough.' Then, after saying that, the next thing that would happen would be that the officials of the Bearing Division of the Ministry of Supply would refer to us and say: 'We have a request for an import license from Company AB of so many thousand tapered roller bearings and they claim that you cannot promise them any delivery of these bearings within some very long period. Is that the case?' If we say 'Yes, that is the case,' then [fol. 741] they might get the import license. They probably would get it. We should be asked our opinion about it, of course, and we are frequently in contact with this Department. Our general attitude has always been, if we cannot supply from our factories—and we cannot meet the demand from our factories now; our capacity is not big enough to meet the demand—we say: 'Yes; we cannot meet that demand, but we are increasing our capacity as rapidly as possible.' We are doing so, as the Ministry

well know, with their encouragement, even more than their encouragement, and we say: 'Of course, we shall one day be in a position, when our capacity has increased, to meet this demand.' So we welcome the importation under those conditions, because by the time the next order comes along, our capacity will be large enough to meet it.

Q. What, if any, effort do you make in connection with the request for import licenses to direct sales of that kind to American Timken?

A. Very often when the import license is applied for, the user will apply for the import license and make the case to the Ministry and then we should import bearings from American Timken. There has been very little direct importation. It has usually been guided that way. Some-[fol. 742] times we might apply for the license.

Q. What, if any, effect, in your opinion, has that procedure had upon the volume of imports from American Timken into this territory? Has it resulted in their making more sales or less sales than otherwise would have been made?

A. More sales, because naturally we have directed all our orders for tapered roller bearings and directed as many orders as we could direct to the Timken Roller Bearing Company. There is only one real instance to my knowledge where the orders have not gone direct to the Timken Roller Bearing Company.

Q. Will you tell us what that is?

A. That is the Ford Motor Company, Dagenham. We have imported—and, indeed, we are importing ourselves. from the Timken Roller Bearing Company at this moment—bearings for the Ford Company at Dagenham. Also, they themselves have placed, naturally to our full knowledge, through the procedure I have previously described, substantial orders for bearings with the Ford Company of Detroit. That is the only instance I know of any quantity of tapered roller bearings coming into this country other than through ourselves.'

Mr. Nitschke: I now wish to offer from my examination [fol. 743] of Mr. Dewar the last question on page 109 and the questions on page 109a.

"Q. (Mr. Nitschke): I have Government's Exhibit D.34, which came from the files of the Timken Roller Bearing

Company at Canton and which appears to be a photostat of a typewritten copy of a letter headed '65 Cheaton Road, Birmingham, 7, 30th November, 1943,' addressed to 'My dear Louis' and the typed signature 'Michael Dewar.' "

Mr. Nitschke: I would like to have that document marked for identification as Government's Exhibit 134, copy of a letter from Michael Dewar to "My dear Louis," dated November 30, 1943, attached to the deposition as Government's Exhibit D34.

(The document above referred to was thereupon marked by the Clerk, for identification, Government's Exhibit No. 134.)

Mr. Nitschke: (Reading:)

"It has some other notes on it. I would like to ask you if you recall writing that letter to Mr. Klinedinst, or writing the letter of which that is a copy. (Exhibit handed to the witness). Do you recall that letter?

[fol. 744] A. Yes.

Q. I would like to call your attention to the fourth paragraph, where you say: 'If we are to play our part in the discussions which are beginning and which may conceivably lead to negotiations on a Governmental level between Great Britain, the United States and Sweden, I should like to feel that we are in a position to say that we are not being prevented by you from exporting to any markets by reason of a trade agreement between us.' Do you still have a feeling that you would like to be in a position to say that?

"By Mr. Day: I object to the form of that question."

Mr. Day: Go ahead.

Mr. Nitschke: (Reading:)

"A. I do not think my opinion has changed really since I wrote that letter.

Q. Your statement 'I should like to feel that we are in a position to say that we are not being prevented by you from exporting to any markets by reason of a trade agreement between us' expresses your present views on that subject?

A. Yes."

Mr. Nitschke: I wish to offer in evidence Government's [fol. 745] Exhibit 134.

The Court: It may be received.

(The document heretofore marked for identification Government's Exhibit No. 134, was received in evidence.)

Mr. Day: Is that part of the deposition?

Mr. Nitschke: Yes, attached to the deposition as Government's Exhibit D.34.

[fol. 746] Counsel for the plaintiff having concluded the offer of depositions we would now like to offer by way of cross-examination certain part of the testimony of the witness M.B.U. Dewar taken in London.

I would like to call the Court's attention to the fact that over in London when the depositions were taken, on Page 239, counsel for the defendant said this:

"Mr. Day: Let the record show also that we wish also to make the same preservation of rights with relation to our examination of Mr. Dewar as has already been set [fol. 747] forth in the record by opposing counsel."

Prior to that time Mr. Nitschke had made a similar reservation.

"In other words, we want to preserve whatever right we have under the rule to offer any of Mr. Dewar's testimony by way of direct examination, cross-examination or rebuttal."

With the Court's permission I will read the questions and Mr. Ketterer will be the witness.

What is called "redirect" begins in the transcript on Page 139. It is really cross-examination now, but we will not read anything at this time earlier than Page 144, because those matters weren't touched upon in the evidence offered by the plaintiff.

The last question on Page 144:

"Q. Coming now to another part of the evidence you were asked about certain letters—cables perhaps—passing between you and Mr. Don Hess (Government's Exhibits D.43 to 50, inclusive)."

Those numbers are now Government's Exhibits 87 to 94. [fol. 748] "dated in 1934 and 1935 having to do with some possible arrangement applying to Mexico and South Amer-

ica. I call your attention now to a statement by you in your letter to Mr. Hess of February 22nd, 1935 (Government's Exhibit D.50): 'You will recollect that you asked me some months ago to find out from SKF whether they would be willing to make an agreement for service prices in Mexico and South America. I took this matter up with Mr. Forsberg when he was in England last, and he said he would be very willing to consider any proposals that you might put up and seemed to think some arrangement could be made. I informed you of this and in reply you wrote to me and told me that, owing to the fluctuation of the rates of exchange, you did not consider any useful purpose would be served by trying to arrive at an agreement.' You remember you wrote that to Mr. Hess?

A. Yes.

Q. Here is Government's Exhibit D.49 which is a letter from you to Hess of February 14th, 1935: 'My dear Don, I have to thank you for your letter of the 4th inst. regarding a working agreement with SKF in Mexico and South America. I notice you find it impossible to put forward any proposal. Very sorry that you cannot do so and I am writ-[fol. 749-754] ing to Mr. Forsberg to tell him that you do not wish to pursue the matter further'. Was that the end of the matter?

A. I think that was entirely the end of the matter. Mr. Forsberg shortly after that went over to America."

Mr. Day: Now, without spending much time on it, we repeat the motion we made the other day, or move to move at this time to exclude these Exhibits 87 to 94 having to do with South America and Mexico, on the ground it clearly appears in the record nothing ever came of the transaction. [fol. 755] The Court: It is not the type of evidence which the Government is entitled to introduce. The matter of collateral agreements or actions which show intent or motive or course of conduct is a matter that is entirely within the sound discretion of the Court.

The objection will be sustained and the motion to strike those out.

(Mr. Day read the following questions and Mr. Ketterer the answers thereto, commencing at the end of page 145.)

[fol. 756] "Q. You were asked some questions by Mr. Nitschke last week concerning the shipment of bearings by American Timken to Great Britain and France, and to the French and British Companies. Would you tell us in what circumstances those bearings were shipped and have been shipped?

A. If the shipment is made by the American Timken Company the shipments are almost entirely made direct to the British and French Companies.

Q. And not by the American Company directly; is that right?

A. They are shipped by the American Timken Company directly to the British and French Companies, not directly to their customers.

Q. Do you know into what countries those shipments have been made by American Timken? Are they shipped in substantial quantities into the United Kingdom?

A. Bearings shipped by the American Timken Company to British Timken?

Q. Yes.

A. They are shipped in considerable quantities, and to French Timken.

Q. Do you know whether or not some of the bearings that come into this country come in connection with the Ford Motor Company?

[fol. 757] A. Yes, but those are not shipped direct by the American Company.

Q. Will you explain that situation, please?

A. The Ford Motor Company here sometimes, if they cannot get delivery of bearings from British Timken, ask the Ford Company in Detroit if they can provide them with bearings shipped direct from Detroit to Dagenham. At this time we are advised of all these requests through the Bearing Division of His Majesty's Government and whether or not His Majesty's Government give permission depends on whether we can give delivery from England.

Q. What effect does your answer to that question have upon bearings being shipped here to be used by Ford?

A. We have lately, owing to the enormous increase in the tractor output in this country, had to agree to bearings being shipped by Ford from Detroit to Dagenham direct.

Q. Do you know whether or not the bearings thus shipped

constitute an important percentage of the bearings shipped into this country from America?

A. I think, yes, very important.

Q. And we are talking about tapered roller bearings in these connections, are we not?

A. Yes.

[fol. 758] Q. Something was asked you by Mr. Nitschke last week about Fischer bearings being sold in, I think he said, American territory?

A. Yes.

Q. Are those Fischer bearings shipped into the United States of America?

A. No.

Q. Where are they shipped?

A. Canada and certain South American countries.

Q. I want to call your attention now to a letter offered in evidence by the Plaintiff here dated November 10th, 1930, and written by you to Mr. Hess. It is Government's Exhibit D.20. (Government's Exhibit 73 in this trial.) You were asked the other day concerning the paragraph at the top of the second page which I wish to read to you, or perhaps two paragraphs. Will you read to yourself those first two paragraphs on the second page? (The witness studied the document) I will call your attention now to this statement on the top of page 2: 'I do hope that you will be able to come to a decision soon regarding SKF. I am on the verge of a real row with them in this country. I agreed that pending all these discussions—which have now been going on for a year—we would let them have [fol. 759] Motor Cycle Bearings to make provided they would not interfere with our large bearing business'. I think you testified the other day in substance that you believed that the paragraph beginning with that statement referred to certain arrangements with SKF having to do with Great Britain?

A. I was not intending to refer to the first ten lines. I was referring to the agreement by which they had offered one of our customers—Dennis—a rebate of 10 per cent. and so on. In connection with that I was not intending to infer that the other remark applied to the British agreement with SKF.

Q. Calling your attention to the part I have read and

the part contained also in the second paragraph of that page referring to Prytz and Grover Higgins, to what do those matters refer?

A. They refer to the proposal that Prytz made to me that the SKF Swedish Company should buy the American Timken Company's interests in Europe and that the Timken Roller Bearing Company in the United States should purchase the SKF interests in that continent.

Q. Do you know from what source that suggestion originated?

A. It came from Prytz really, from SKF.

Q. State what, if anything, ever came of it.

[fol. 760] A. Nothing came of it. It dragged on for a year or more, and in the end it was turned down flatly by Mr. H. H. Timken and Mr. A. C. Ernst.

Q. And they were connected with American Timken?

A. Yes, that is so.

Q. You have been asked by Mr. Nitschke concerning certain documents and arrangements relating to British Timken and SKF in England and there has been introduced in evidence a contract, which I think is marked Government's Exhibit D.15A, (Government's Exhibit 65-A in this trial) between French Timken and SKF in France. I think you were asked some question having to do with an arrangement or a suggested arrangement applicable to Russia. You were asked about certain letters that refer to conferences between French Timken and representatives of SKF and RIV. Was American Timken a party to any of those arrangements or agreements or discussions?

A. No.

Q. Did any of those arrangements, agreements or discussions relate to United States of America?

A. None of them.

Q. Will you state whether or not in your opinion any of those arrangements, agreements or discussions could have an effect of restricting the shipment of tapered roller bear-

[fol. 761] ings from the United States or their receipt into the United States?

A. I should not have thought they had any effect at all on the import of tapered roller bearings into the United States. My feeling is that they have facilitated the export

of bearings from the United States, but that is only an opinion.

Q. I think you said in examination the other day that the French agreement was terminated when the Germans invaded France?

A. That is so, yes.

Q. I think you said that was in 1940?

A. I think it was.

Q. And it was not renewed, I think you said?

A. That is so, yes.

Q. I think you also stated the other day that whatever arrangements were made in Great Britain they terminated with the advent of the war?

A. That is so, yes.

Q. That was in what year?

A. 1939, the September, I think.

Q. I think you also stated they have never been renewed?

A. That is also true, yes.

Q. Is British Timken a party now to any agreement or [fol. 762] understanding or arrangement with any other company or competing company with relation to the sale of Timken tapered roller bearings or any bearings which are a product manufactured by British Timken?

A. No, no product at all.

Q. You say 'no product'. Do you mean by that 'no agreement'?

A. There is no agreement for any product.

Q. Has there been any agreement as to any product since the advent of the war and the entry of the Germans into France, as you have described?

A. No, none.

Q. Will you tell us something about the origin and background of the arrangement that was made between French Timken and SKF as embodied in Government's Exhibit D.15A (Government's Exhibit 65-A in this trial)?

A. The SKF part of it, the agreement between French Timken and SKF?

Q. Yes.

A. Not the preliminary discussions?

Q. No, I will ask you about them later.

A. The basis of the starting of the French Timken Company in France la, with a contract that we obtained with

the Citroen Company for the supply of bearings for their [fol. 763] cars. The Citroen Company a year or two later fell on rather evil days and the SKF Company in Sweden financed them until such time as they were ultimately bought by, I believe, the Michelin Company. Part of the financial arrangement was that Citroen should buy their steel from Sweden and all their bearings from SKF. So Citroen were compelled to cease to place any orders with us, with the French Company, and they left us with practically no orders at all. We felt—and looking back I think correctly—that it was better for us to have some arrangement with SKF to keep the French Timken Company alive rather than let it die which it would have done without such an arrangement.

Q. Do you recall how much of a loss had been accumulated by French Timken in its operations?

A. To the best of my knowledge we had lost about half our capital.

Q. Amounting approximately to how much?

A. In francs in those days I think it was about eight million francs, something of that kind.

Q. Before this arrangement was made with SKF?

A. Yes.

[fol. 764] Q. There are in evidence here some Exhibits referring to conferences relating to France between representatives of British Timken and SKF and RIV and perhaps others. Then there is in evidence also the contract between French Timken and SKF marked Government's Exhibit D.15A (Government's Exhibit 65-A in this trial). What relation does that contract, that is the contract between French Timken and SKF, have to the matters that are in evidence here as to talks between the various companies I have named?

A. I think the position at the time of that round-table conference between all the people interested in bearings in France is due to the fact that SKF were experiencing very severe competition from RIV, the Italian manufacturers. They were anxious to come to an agreement on ball bearings with RIV. Those discussions then I think gave us the opportunity of ultimately coming to an agree-

ment with SKF, as I told you, on the taper roller bearings position.

Q. Then, as I understand it, the only agreement which was actually entered into by French Timken in this regard was the agreement in evidence with SKF; is that right?

A. Yes, that is true, nothing else.

[fol. 765] Q. And SKF had its own relations with these other companies; is that right?

A. That is so.

Q. Do you know whether or not in 1928 and since 1928 SKF in USA was shipping bearings into France?

A. I can only say that it is extremely improbable.

Q. And would your best judgment be that it was not?

A. Certainly not, yes.

Q. I think the SKF Company that was a party to this contract was CAM?

A. That is so, yes.

Q. Do you know from what SKF Company CAM got its bearings during this period of time about which I am asking you?

A. It made bearings itself in France; any imported bearings would come from Gothenburg—did come from Gothenburg.

Q. That is Sweden?

A. Yes, Sweden.

Q. I think I asked you something and Mr. Nitschke also asked you something as to whether or not tapered roller bearings were interchangeable with ball bearings. Do you think you have sufficiently answered that in response either to his questions or mine, or is there anything you would like to add to that?

[fol. 766] A. It is possible that I, being rather intimately connected with the bearing industry, may have unintentionally misled you. Taper roller bearings compete a very great deal—90 per cent. of the time—with ball bearings, but it is a question of getting an engineering job arranged in the design stage to receive taper roller bearings or ball bearings. We cannot suddenly have an exchange of ball bearings for taper roller bearings, say in motor cars. We are in direct competition always.

Q. I think you were asked in your previous examination as to the percentage of taper roller bearings manufactured

by British Timken in 1927 and thereafter and at the present time, and I think you testified that it was something like 90 per cent, or over, that then it dropped to 70 per cent: and that now it is up to 90 per cent. again?

A. Yes, about that—I forget; that is approximately the curve, yes.

Q. Do you know whether or not the manufacture of tapered roller bearings has increased in volume over the years?

A. Yes, I do.

Q. And it has increased?

A. Enormously, yes. It has increased from the employ-
[fol. 767] ment of 400 people to the employment of about ten times that amount.

Q. That is all together?

A. That is all together, so that the output must be 20 or 30 times what it was.

Q. Have you any recollection of the percentage of anti-friction bearings sold in England manufactured by British Timken compared with the entire anti-friction output in England in 1927?

A. From an estimate based on my knowledge of the other companies at the time I should think it would be under 5 percent.

Q. Have you a knowledge or can you give an estimate in the form of a percentage as to the situation in that regard now?

A. Based again on people employed I should think about 20 per cent. of the total anti-friction bearings in Great Britain.

Q. Have any American Companies do*en* any substantial exporting of anti-friction bearings into England since 1927?

A. Only during the war period."

Mr. Day: I think that is all, your Honor.

Of course, we reserve the right, with your Honor's per-
[fol. 768] mission, to offer any part of Mr. Dewar's deposition when we come to our case.

The Court: All right.

Mr. Day: I would like to renew the motion I made the other day, perhaps it was in the form of an objection, to exclude the evidence with relation to the trade arrangement in England and France between the British Timken

and SKF upon the ground that the record now shows that those contracts expired and arrangements expired in 1939 and 1940 and have never been renewed. I don't care to argue it any further than I argued it the other day.

And, as Mr. Ketterer suggests, upon the further ground that it now appears that those arrangements could have no effect upon United States commerce either by way of exports or imports.

The Court: The motion will be overruled and the objection overruled.

Mr. Nitschke: Your Honor, I would like to have marked for identification French and British bearings. I'll leave them in the box. I think that is probably the best way to have them marked. I would like to have the British Timken bearing marked as Government's Exhibit 135.

[fol. 769] (Thereupon the bearing referred to was marked by the Clerk, for identification, Government's Exhibit 135.)

Mr. Nitschke: I have had marked for identification as Government's Exhibit 135 the carton entitled "Timken Tapered Roller Bearing made in England by British Timken Limited" and containing a tapered roller bearing, being cup No. 3920 and cone No. 3984.

The Court: You are marking them as separate exhibits?

Mr. Nitschke: Yes. As I understand it, Mr. Day, these just arrived, this one just arrived from England?

Mr. Day: I'm advised they just arrived, as I understand it, from England and France respectively, the two bearings. They were given to me by an officer of the defendant.

Mr. Nitschke: I would like to have the French bearing marked as Government's Exhibit 136.

(Thereupon the bearing referred to was marked by the Clerk, for identification, Government's Exhibit 136.)

[fol. 770] Mr. Nitschke: I have had marked for identification as Government's Exhibit 136 a carton bearing notation "Societe Anonyme Francaise, Timken, Roulements A Rouleaux Coniques, Asnieres (Seine)", and containing a tapered roller bearing made by French Timken bearing cup No. 3920 and cone No. 3984. I offer Government's Exhibits 135 and 136 in evidence.

The Court: They may be received.

[fol. 771] Mr. Nitschke: I wish to have marked for identification as Government's Exhibit 137 a letter from H. O. Smith of the Anti-friction Bearing Manufacturers' Association addressed to me, dated January 18, 1946.

Mr. Day: Well now, this is going in by way of the stipulation, and we are willing to stipulate that the figures contained in these documents may be offered in evidence with [fol. 772] the understanding that no further proof need be required at this time, so far as we are concerned, and with the right preserved for us to make any corrections if our evidence shows they should be made. But I don't think that the letter should be read into the record.

Mr. Nitschke: Well, that's agreeable to me.

Mr. Day: All right.

Mr. Nitschke: I will put in the tabulation if you will stipulate that it is a tabulation prepared from the statistics of the Anti-friction Bearing Association.

Mr. Day: Yes, we will stipulate that.

The Court: I assumed that was the purpose of the offer.

Mr. Day: Yes.

Mr. Nitschke: Yes, that was the only reason, your Honor, I referred to the letter. I will withdraw the letter and I will have marked for identification, instead of the letter, the table. This will be Government's Exhibit 137, and it is entitled "Complete Unit Production of Ball and Roller Bearings and Steel Balls reported to the AFBMA by mem-[fol. 773] bers of the Association, from January 1941 through July 1945."

(Tabulation referred to was thereupon marked by the Clerk, for identification, Government's Exhibit 137.)

Mr. Nitschke: And I also would like to have marked for identification a table of figures showing the total percentage by units of the total tapered roller bearing production for the years 1941, 1942, 1943, 1944 and part of 1945.

The Court: I believe I didn't understand your comment, Mr. Nitschke. What was that again?

Mr. Nitschke. This chart shows the percentage of the total tapered roller bearing production for these years comprising Timken's production, and these figures are obtained from the table I have just put in here which has been

identified as Government's Exhibit 137. I will have this tabulation marked as Government's Exhibit 138.

(Tabulation referred to was thereupon marked by the Clerk, for identification, Government's Exhibit 138.)

Mr. Nitschke: And I wish to offer these in evidence. It is agreeable to me that they be subject to Mr. Day's [fol. 774] privilege to correct them if he finds that, in fact, there are some errors in the figures.

The Court: They will be received.

Mr. Derr: Your Honor, we would like to have marked for identification as Government's Exhibit 139 a letter dated August 10, 1939, bearing the typewritten signature [fol. 775] of W. Robert Timken to British Timken Limited, and as Government's Exhibit 139-A——

Thereupon the letter above referred to was marked by the Clerk, for identification, as Government's Exhibit 139.)

Mr. Derr: And as Government's Exhibit 139-A a memorandum dated August 1, 1939, from R. A. Baal to Canton, subject: Rudolf Morberger.

(Document last above referred to was thereupon marked by the Clerk, for identification, Government's Exhibit 139-A.)

Mr. Derr: I should like to have marked as Government's Exhibit 140 a letter dated September 21, 1939, bearing the typewritten signature of W. Robert Timken to British Timken, Limited.

[fol. 776] (Letter above referred to was thereupon marked by the Clerk, for identification, Government's Exhibit 140.)

Mr. Derr: And as Government's Exhibit 140-A a memorandum attached, dated September 15, 1939, from R. A. Baal to Canton, subject: Parres Hermanos.

(Memorandum above referred to was thereupon marked by the Clerk, for identification, as Government's Exhibit 140-A.)

Mr. Derr: And as Government's Exhibit 140-B a letter attached dated August 26, 1939, the copy of which is unsigned, addressed to The Timken Roller Bearing Sales & Service Company, New York, New York.

(Document last above referred to was thereupon marked by the Clerk, for identification, as Government's Exhibit 140-B.)

The Court: May I inquire at this time whether the Timken Roller Bearing Sales & Service Company is a subsidiary of Timken Roller Bearing Company?

Mr. Ketterer: It was, your Honor, but there is no com-[fol. 777] pany named Timken Roller Bearing Service & Sales Company any more. The sales and service is handled by a division of Timken Roller Bearing Company. There was at one time a Timken Roller Bearing Service & Sales Company which was a wholly owned subsidiary.

The Court: Was there in 1939 when this communication was addressed?

Mr. Ketterer: Yes, I think there was in 1939.

Mr. Derr: I should like to have marked for identification as Government's Exhibit 141 a letter dated September 20, 1945, bearing the typewritten signature of H. C. Sauer to British Timken Limited.

(Letter last above referred to was thereupon marked by the Clerk, for identification, Government's Exhibit 141.)

Mr. Derr: And as Government's Exhibit 141-A a letter dated August 31, 1945, the signature of which I cannot read, but it's headed "General Sales Manager, British Timken Limited. Fischer Bearings Company Limited.", addressed to the Timken Roller Bearing Company, Canton.

(Letter last above referred to was thereupon marked by the Clerk, for identification, Government's Exhibit [fols. 778-789] 141-A.)

Mr. Derr: Your Honor, I would like to offer Government's Exhibits 139, 139-A, 140, 140-A, 140-B, 141 and 141-A in evidence at this time.

The Court: They may be received.

[fol. 790] Mr. Derr: Your Honor, before offering the illustrative examples, the Government would like to read into the record the second interrogatory and have marked for identification and offered in evidence the response of the defendant to that interrogatory.

The Court: All right.

Mr. Derr: The Government's second interrogatory is as follows:

"State the following concerning each inquiry and order [fol. 791] to purchase anti-friction bearings for shipment and inquiry for distributor representation, outside of the territory allocated to the defendant under the tripartite agreement, received by the defendant from July 1st, 1935, to date; the date of the inquiry or order, the inquirer's or buyer's name and address, type and quantity of anti-friction bearings inquired for or ordered, the name and location of the intended user thereof and the disposition of such inquiry or order."

I believe the record should also show, your Honor, that the Government's interrogatory was filed on February 20, 1947. This question read from "July 1st 1945 to date". "To date" was February 20, 1947.

Mr. Nitschke has already read into the record the definition of the tripartite agreement used in the interrogatory, and I think the record should show the meaning of "Defendant", "Limited", and "Francaise" as shown in the interrogatory. The sum and substance of it is right in it and perhaps it is surplusage, but "Defendant" means Timken Roller Bearing Company, "Limited" means British Timken Limited and "Francaise" means French Anonyme Francaise Timken.

[fols. 792-794] I would like to have marked for identification Government's Exhibit 142, defendant's reply to Government's interrogatory No. 2.

We now offer Government's Exhibit 142 in evidence.

The Court: It may be received.

(Document above referred to was thereupon marked by the Clerk, for identification, Government's Exhibit 142.)

[fol. 795] I should like to have marked for identification as Government's Exhibit 143-A this letter dated November 16, 1944, from Ibrahim Tascioglu to The Timken Roller Bearing Company, Canton, Ohio.

(Document above referred to was thereupon marked by the Clerk, for identification, Government's Exhibit 143-A.)

I should like to have marked for identification as Government's Exhibit 144 a letter dated April 16, 1945, bearing the

typewritten signature of H. C. Sauer, to France-Auto, Bou-
[fol. 796] levard de Paris, Casablanca, Morocco, N. Africa.

(Letter above referred to was thereupon marked by the Clerk, for identification, Government's Exhibit 144.)

I should like to have marked for identification as Government's Exhibit 144-A a translation of a letter dated March 8, 1945, from France-Auto to Timken Roller Bearing Company, Canton, Ohio. Attached to that is a specification sheet order to Allied Countries, which I would like to have marked for identification Government's Exhibit 144-B.

(Documents above referred to were thereupon marked by the Clerk, for identification, Government's Exhibits 144-A and 144-B, respectively.)

I should like to have marked as Government's Exhibits 144-C the letter in French dated March 8, 1945, from France-Auto to the Timken Roller Bearing Company, and the attached specification of two sheets.

(Letter above referred to was thereupon marked by the Clerk, for identification, Government's Exhibit 144-C.)

I should like to have marked for identification as Government's Exhibit 145 a letter of June 5, 1945, from H. C.
[fol. 797] Sauer to Rene Amiel, Paris, France.

(Letter above referred to was thereupon marked by the Clerk, for identification, Government's Exhibit 145.)

I would like to have marked for identification as Government's Exhibit 145-A a letter of April 6, 1945, from Rene Amiel to The Timken Roller Bearing Company, Columbus.)

(Letter above referred to was thereupon marked by the Clerk, for identification, Government's Exhibit 145-A.)

I would like to have marked for identification as Government's Exhibit 146 a letter dated July 24, 1945, from H. C. Sauer to Propaganda A. G., Bern, Switzerland.

(Letter above referred to was thereupon marked by the Clerk, for identification, Government's Exhibit 146.)

I would like to have marked for identification as Government's Exhibit 146-A a letter from Propaganda A. G., Bern,

Switzerland, dated June 28, 1945, to The Timken Roller Bearing Service & Sales Company, Canton, Ohio.

(Letter above referred to was thereupon marked by the [fols. 798-801] Clerk, for identification, Government's Exhibit 146-A.)

I should like to have marked for identification as Government's Exhibit 147 a letter dated August 22, 1945, from J. E. Spear, General Sales Manager, British Timken, Limited, Fischer Bearings Company Limited, to The Timken Roller Bearing Company, Canton, Ohio.

(Letter above referred to was thereupon marked by the Clerk, for identification, Government's Exhibit 147.)

I would like to have marked as Government's Exhibit 147-A a letter dated August 22, 1945, from J. E. Spear to Messrs. A. Martinez e Hijos Sda de Rsp. Lda., Cordoba, Argentine.

(Letter above referred to was marked by the Clerk, for identification, Government's Exhibit 147-A.)

I now offer in evidence Government's Exhibits 143, 143-A, 144, 144-A, 144-B, 144-C, 145, 145-A, 146, 146-A, 147, 147-A.

The Court: They may be received.

[fol. 802] Mr. Day, I understand the defendant is willing to stipulate these letters offered and read to the Court are illustrative and typical of the referal and method of handling inquiries by the defendant during the year 1945?

Mr. Day: They are typical. We are willing to stipulate, we understand, and will so stipulate that they are typical of the letters contained in that folder there.

Mr. Nitschke: Since the folder isn't in evidence I am not sure that is quite adequate.

Mr. Day: What is the stipulation you would like to have?

Mr. Nitschke: Those are typical of inquiries received and answers made by Timken Roller Bearing Company.

Mr. Ketterer: Well, there is no question about that. We are perfectly willing to stipulate that.

Mr. Day: That is right.

Mr. Derr: I think in this connection I might also state [fol. 803] that, from the letters we have in the folder, which

are to be now withdrawn, there were inquiries received by the Timken Company in France and Morocco, from the territory allocated to the French Company by agreement, which were referred to the French Company, and inquiries received from some 28 countries in British territory which were referred to the British company. I have a list of those countries. I should like to read those into the record to show the areas from which inquiries were received.

The Court: Those inquiries are the ones contained in that volume, concerning which the stipulation has been made?

Mr. Derr: Yes.

(Reading)

Australia, Belgian Congo, Belgium, Bulgaria, Czechoslovakia, Denmark, Egypt, Finland, Gibraltar, Greece, India, Iran, Iraq, Italy, Mozambique, Netherlands, New Zealand, North Africa, Norway, Palestine, Portugal, Roumania, South Africa, Spain, Spanish Morocco, Sweden, Switzerland, Syria, Turkey.

The Court: How many of those letters are included in [fol. 804] that volume of exhibits?

Mr. Derr: All of those, your Honor, all those countries.

The Court: No, I said how many letters are there, how many inquiries are there?

Mr. Derr: I am sorry, I haven't counted them.

The Court: Can you estimate them?

Mr. Derr: Two hundred.

The Court: And those inquiries are from the countries you have just read?

Mr. Derr: Yes, your Honor.

At this time, your Honor, I would like to read into the record Government's interrogatory No. 6 and the defendant's answer thereto. The answer in this case was given in the answer which is, I believe, on file.

(Reading)

"State which of the inquiries and orders described in answer to interrogatory No. 2 relate to anti-friction bearings which at that time embodied an invention of an unexpired patent owned by defendant, and designate each such patent by registration number."

[fol. 805] And then the Answer:

"None of the inquiries and orders described in the Answer to Interrogatory No. 2 relate to antifriction bearings which at that time embodied an invention of an unexpired patent owned by the defendant."

We are offering it to show that the defendant had no patent covering anti-friction bearings which were the subject of these inquiries and orders.

I should like also to read in the record interrogatory No. 7 and answer thereto.

"No. 7. Designate by catalogue number which of the antifriction bearings listed in defendant's complete current catalogue embody an invention of an unexpired foreign patent, (a) licensed by the defendant to Limited or Francaise; (b) owned by Limited or Francaise; designate each such patent by number, date, and country of issue and describe generally the feature or features of the antifriction bearing covered by each such patent."

Defendant's answer is:

"There was no current catalogue of the defendant, as of the date of the plaintiff's interrogatories, which listed any antifriction bearings which embody an invention of an [fol. 806] unexpired foreign patent licensed by the defendant to Limited or Francaise or owned by Limited or Francaise."

[fols. 807-808] Mr. Derr: Your Honor, I should like to have marked for identification as Government's Exhibit 148, a memorandum dated February 4, 1937, signed G. H. Turner, subject "Timken Trade-Marks". (So marked)

I offer Government's Exhibit 148 in evidence.

The Court: It may be received.

[fol. 809] Now, I would like to read in the record Government's Interrogatory No. 8 and offer defendant's answer thereto.

"8. List all trademarks and trade names used in the sale of antifriction bearings (a) registered by defendant from 1909 to date; (b) registered by Limited from 1928 to date; and (c) registered by Francaise from 1928 to date; setting forth as to each (1) the country of registration, (2) the

registration number, (3) the title, design and description, (4) registration date, (5) expiration date, (6) the expiration date of any possible renewal thereof, and (7) with respect to all rights therein granted by the defendant to Francaise, Limited or others state; (A) the date, (B) name of guarantee or other user, and (C) nature of contents of each agreement or writing relating to the grant or direction of such rights."

[fol. 810] "Answer: The list of trademarks and trade names called for by this category has been furnished to the plaintiff by the defendant."

I would like to have marked for identification——

The Court: I believe you said you offered it?

Mr. Derr: Exhibit 149, that is the answer to Interrogatory 8.

[fol. 811] Mr. Derr: I would like to have marked for identification as Government's Exhibit 150 the file wrapper from the Department of Commerce of the United States Patent Office of the trade mark "Timken".

The Court: That is the actual trade mark registration?

Mr. Ketterer: Yes, it is the file wrapper certified by the Patent Office and also shows the registration under the

[fol. 812] Act of July 5, 1946, on the supplemental register.

I offer Government's Exhibit 150 in evidence.

The Court: It may be received.

Mr. Derr: I should like to have marked for identification as Government's Exhibit 151, a letter of March 18, 1948, from Frank Dow, the Acting Commissioner of Customs, to Mr. John F. Sonnett, Assistant Attorney General, Department of Justice.

(Document above referred to was thereupon marked by the Clerk, for identification, Government's Exhibit 151.)

I should like to have marked for identification as Government's Exhibit 151-A, the file wrapper, content, and certified copies of five letters mentioned on the cover from the Treasury Department of the United States of America.

(Document above referred to was thereupon marked by the Clerk, for identification, Government's Exhibit 151-A.)

I should like to have marked as Government's Exhibit 151-B the excerpts from the Customs Regulations for 1943

which were referred to in Government's Exhibit 151 and enclosures thereto.

[fol. 813] (Document above referred to was thereupon marked by the Clerk, for identification, Government's Exhibit 151-B.)

I offer Government's Exhibits 151, 151-A, and 151-B in evidence.

Mr. Day: What number is this letter from somebody in the Treasury Department of Customs to John F. Sonnett, Attorney General of the Department of Justice?

Mr. Derr: 151.

Mr. Day: We want to object to that.

[fol. 814] Mr. Derr: As I understand it, Mr. Day, you are willing to stipulate this file wrapper was obtained from the Treasury Department, Bureau of Customs, in accordance with special request made by the Department of Justice?

Mr. Day: Yes, we will stipulate, that if that is the fact we will stipulate that and be glad to.

Mr. Derr: We withdraw 151, leaving 151-A and 151-B in evidence.

The Court: All right.

[fols. 815-817] Your Honor, the Clerk reminds me 151-A and 151-B were not formally offered. I now make that offer.

The Court: They may be received.

[fol. 818] Mr. Derr: That closes the Government's case. We now rest, subject to these matters of course to be taken up later.

Mr. Day: If the Court please, we have a motion here which we would like to file with the Clerk. It is a motion by defendant to dismiss the case at the conclusion of evidence offered by plaintiff, signed by counsel, and reads:

"Now comes The Timken Roller Bearing Company, de-

[fols. 819-820] fendant, and, without waiving its right to offer evidence in its behalf in the event this motion is not granted or is taken under advisement by the Court, respectfully moves the Court, at the conclusion of the presentation of the plaintiff's evidence, to dismiss this case and to enter judgment for the defendant herein upon the ground that, upon the facts and the law, the plaintiff has

shown no right to relief. This motion is made pursuant to Rule 41(b) of the Federal Rules of Civil Procedure." [fol. 821] The Court will take your motion under advisement at this time and you may proceed with your defense.

[fol. 822] TUESDAY, March 30, 1948—2:00 P. M.

Mr. Nitschke: If the court please, we are ready to put in those appendices which we referred to this morning.

Mr. Derr: Your Honor, through an oversight this morning, with all the confusion we had about the documents at the end, I also neglected to read into the record Government's Interrogatory No. 12, and the defendant's answer thereto, and I should like to do it at this time.

Government's Interrogatory 12 reads:

"State the manufacturers or producers of vehicles in the United States authorized by the defendant to import bearings manufactured by them into the territory allocated to Limited and Francaise under paragraph 6 (c) of the tripartite agreement."

The defendant's answer to Government's Interrogatory 12 is:

"No manufacturers or producers of vehicles in the United States have been authorized by the defendant to import bearings manufactured by them into the territory allocated to Limited and Francaise under paragraph 6 (c) of the agreement entered into on November 28, 1938, be-[fol. 823] tween the Defendant, Limited and Francaise, styled the tripartite agreement by the plaintiff."

I should like to have marked for identification as Government's Exhibit 153 a document entitled Appendix A, Exports of Bearings to British Timken Limited, Birmingham, England, by The Timken Roller Bearing Company.

The Court: That's Exhibit 153-A?

Mr. Derr: No, Exhibit 153, sir. This includes the information for the years 1928 through and including 1947.

(Document last above referred to was thereupon marked by the Clerk, for identification, Government's Exhibit 153.)

Mr. Derr: I should like to have marked for identification as Government's Exhibit 154 document entitled Appendix

B, Exports of Bearings to Francaise Timken, Asnieres, France, by The Timken Roller Bearing Company. This document includes that information for the years from 1928 through and including 1947.

(Document last above referred to was thereupon marked by the Clerk, for identification, Government's Exhibit 154.)

[fol. 824] Mr. Derr: I should like to have marked for identification as Government's Exhibit 155 a document entitled Appendix C, Steel Sales to British Timken Limited, 1928-1947.

(Document last above referred to was thereupon marked by the Clerk, for identification, Government's Exhibit 155.)

Mr. Derr: This document includes this information for the years 1929, 1930, 1931, 1932, 1933, 1937, 1938, 1939, 1940 and 1946.

I should like to have marked for identification as Government's Exhibit 156 a document entitled Appendix D, Steel Sales to S. A. Francaise Timken. This document includes this information for the years 1930, 1931, 1939 and 1940.

(Document last above referred to was thereupon marked by the Clerk, for identification, Government's Exhibit 156.)

Mr. Derr: I should like to have marked for identification as Government's Exhibit 157, a document entitled Appendix E, Summary of Purchases from British Timken Limited——

The Court: From?

[fol. 825] Mr. Derr: Yes, your Honor, from British Timken Limited by The Timken Roller Bearing Company of tapered roller bearings. This document includes the information for the years 1945 and 1946.

(Document last above referred to was thereupon marked by the Clerk, for identification, Government's Exhibit 157.)

Mr. Derr: I should like to have marked for identification as Government's Exhibit 158 a document entitled Appendix F, Purchases from British Timken Limited purchased by Timken Roller Bearing Service & Sales Limited, and appearing below that in parenthesis is "formerly Timken

Roller Bearing Company, Ltd." This document includes——

The Court: Now, I'm sorry, I didn't understand that. Purchases from British Timken Limited by Timken Roller Bearing——

Mr. Derr: By Timken Roller Bearing Sales & Service, and then in parenthesis below that it says "formerly Timken Roller Bearing Company, Ltd." I assume that's done because it embraces two concerns.

The Court: I see.

Mr. Derr: This includes the information for 1928 [fol. 826] through 1947.

(Thereupon the document last above referred to was marked by the Clerk, for identification, Government's Exhibit 158.)

Mr. Derr: I should like to have marked for identification as Government's Exhibit 159 a document entitled Appendix G, Total Sales on Which Commissions Were Paid by British Timken Limited to The Timken Roller Bearing Company. This document includes that information for the years 1928 through 1947.

(Thereupon the document last above referred to was marked by the Clerk, for identification, Government's Exhibit 159.)

Mr. Derr: I should like to have marked for identification as Government's Exhibit 160 a document entitled Appendix H, Sales by the Timken Roller Bearing Company in British Timken Limited Territory on which Commissions Were Paid. This document includes the information for the years 1928 through and including 1947.

(Thereupon the document last above referred to was marked by the Clerk, for identification, Government's Exhibit 160.)

[fol. 827] Mr. Derr: Sales in dollars for each year from 1928 to 1947, inclusive, of tapered roller bearings and components by The Timken Roller Bearing Company to British Timken Limited are shown on Government's Exhibit 153. I offer Government's Exhibit 153 in evidence.

The Court: Exhibit 153 may be received.

Mr. Derr: Sales to British Timken South America Limited and to the various governmental purchasing agencies are not included in the figures given in Government's Exhibit 153.

The Court: What are not included now?

Mr. Derr: Sales to British Timken South America Ltd. and to the various governmental purchasing agencies. Total sales in dollars——

Mr. Ketterer: If the Court please, in connection with that last statement by counsel for the Government, since we prepared those figures I think we ought to explain why that was, that the sales that went to England and other places in the world too were handled during the war by the British Government purchasing agencies first and then handled through Lend-Lease, and it was impossible for us to determine what sales went to exactly what parties, since they were handled through the governmental agencies in [fol. 828] Washington. That's the reason that does not appear in those charts.

The Court: I see.

Mr. Derr: Total sales in dollars for each year from 1928 to 1947, inclusive, for tapered roller bearings and components made by the Timken Roller Bearing Company to French Timken are shown in Appendix B, Government's Exhibit 154. I offer Government's Exhibit 154 in evidence.

The Court: Exhibit 154 will be received.

Mr. Derr: There were no sales from the Timken Roller Bearing Company to Fischer Bearing Company of tapered roller bearings during the period 1928 to 1947.

The total sales in dollars for each year from 1928 to 1947, inclusive, for steel made by the Timken Roller Bearing Company to British Timken Limited are shown in Government's Exhibit 155. I offer Government's Exhibit 155 in evidence.

The Court: Exhibit 155 may be received.

Mr. Derr: The total sales in dollars for each year from 1928 to 1947, inclusive, of steel made by the Timken Roller Bearing Company to French Timken are shown in Govern-
[fol. 829] ment's Exhibit 156. I offer Government's Exhibit 156 in evidence.

The Court: Exhibit 156 may be received.

Mr. Derr: The total purchases in dollars for each year from 1928 to 1947, inclusive, of tapered roller bearings by the Timken Roller Bearing Company from British Timken Limited are shown in Government's Exhibit 157. I offer Government's Exhibit 157 in evidence.

The Court: Exhibit 157 may be received.

Mr. Derr: Government counsel has been advised by counsel for the defendant that the information appearing in Government's Exhibit 157 has been broken down by purchases, customs, clearances, charges, etc., and other miscellaneous expenses, and certain of these payments were shown on Timken Company's books for 1946 although the bulk of the purchases were made in 1945. Counsel for Timken Company further advised that the picture is somewhat distorted, that the Timken Company does not know how they can accurately allocate the extra charges. Counsel further advised that there were no purchases in years other than 1945 and 1946, there were no purchases made by the Timken Roller Bearing Company from British Tim-
[fol. 830] ken Limited of ball and straight roller bearings or bearing components. There were no purchases by the Timken Roller Bearing Company from French Timken in any category. There were no purchases from Fischer Bearing Company in any category.

The total purchases in dollars for each year from 1928 to 1947 of ball and straight roller bearings made by the Timken Roller Bearing Company of South America from Fischer Bearing Company were as follows:

For 1946, $3,831.79.

For 1947, $22,569.71.

Counsel for the defendant have advised that this was based on a conversion rate of $4.04 per pound.

The Timken Roller Bearing Company of South America did not purchase any tapered roller bearings or bearing components from Fischer Bearing Company and did not purchase any from British Timken Limited or French Timken.

The total purchases in dollars for each year from 1928 to 1947, inclusive, of bearings by the Timken Roller Bearing Sales & Service, Ltd., from British Timken Limited are shown in Government's Exhibit 158. I offer Govern-
[fol. 831] ment's Exhibit 158 in evidence.

The Court: Exhibit 158 may be received.

Mr. Derr: Counsel for the defendant advise that the records in this particular schedule are not complete, and that they have no record of any purchases prior to 1931. From 1931 through 1938 the records were kept in Canton and much of the detail is not available. The records shown on the Appendix are the debits to the account on the ledger labelled "British Timken Inventory." Counsel further advise that generally speaking these debits are purchases, subject to small adjustments. From 1939 to 1947 defendant's counsel further advise that the records were kept at Toronto, and that the figures have been presented to them and are considered to be accurate.

Now, counsel for the defendant advises it is impossible for them to break down the type of bearings as between tapered, roller bearings, ball and straight roller bearings. They do say, however, that all from 1939 on were tapered roller bearings, and they believe only one purchase of ball bearings was made and that in 1934.

The total sales in dollars for each year from 1928 to 1947, inclusive, of bearings made by British Timken Limited on [fol. 832] which payments or commissions were made to the Timken Roller Bearing Company, either in the form of a percentage of invoice prices or in an amount based upon the difference in invoice price and the price normally charged to the Timken Roller Bearing Company for such bearings, is set out in Government's Exhibit 159. I offer Government's Exhibit 159 in evidence.

The Court: Exhibit 159 may be received.

Mr. Derr: In connection with that exhibit, your Honor, counsel for the defense have advised that it is impossible for them to ascertain how much of those sales were tapered roller bearings and how much were ball and straight roller bearings. They further advise that in a few cases it would be impossible to determine the percentage upon which the commission was calculated, but that they have used the same percentage which they have been able to substantiate for commissions paid by Timken to British Timken Limited.

So far as defense counsel know, French Timken and Fischer Bearing have never paid any commissions to the Timken Roller Bearing Company. In some cases French Timken might have shipped bearings into this territory,

but the commissions were paid to British Timken, and for that reason it is impossible for defendant and its counsel [fol. 833] to ascertain any such shipments.

The total sales in dollars for each year from 1928 to 1947, inclusive, of tapered roller bearings made by the Timken Roller Bearing Company on which payments of commission were made to British Timken Limited, is set out in Government's Exhibit 160. I offer Government's Exhibit 160 in evidence.

The Court: Exhibit 160 may be received.

Mr. Derr: Defendant's counsel have advised that the Timken Company did not sell any ball and straight roller bearings in British Timken territory. So far as they know, no commissions were paid for either the tapered roller bearings or ball bearings to French Timken or Fischer Bearing Company. So far as they have been able to determine, no commissions were paid by the Timken Roller Bearing Service and Sales Ltd., or Timken Roller Bearing Company of South America to British Timken, French Timken, or Fischer Bearing Company.

Thank you, your Honor, I think that clears the problem we had this morning. I understand defense counsel will stipulate that the matters that have been read into the record are accurate based upon information which they supplied the Government.

Mr. Ketterer: Yes, that is correct.

[fol. 834] Mr. Day: May the record show that Defendant's motion to dismiss may be considered as having been filed after all this additional evidence?

The Court: Yes, Mr. Day. I wanted the record to show that.

Mr. Day: Thank you.

[fol. 835] DEFENSE

Mr. Day: Now, your Honor, we would like to offer in evidence on behalf of the Defendant certain parts of the deposition of Michael Bruce Urquhart Dewar, part of which has already been read by counsel for the Plaintiff.

(Thereupon the following questions and answers of the deposition of Michael Dewar were read by Mr. Day:)

"Q. Mr. Dewar, you have already stated your name and your address and your business. Where were you born?

A. Chaltenham.

Q. Where did you get your education?

A. Rugby School and Cambridge University.

Q. Now will you tell us briefly, and to some extent chronologically the events of your business career?

A. After taking an engineering honors degree at Cambridge, I went to Vickers in Sheffield and worked there for a period of years. I then joined a firm of textile manufacturers who had works in Yorkshire and in New England, and I worked for them for several years up to the outbreak of the 1914 war. After about a year of the war, I was seconded from my regiment to the Ministry of Munitions [fol. 836] and I served the Government as Deputy Director General of Shell & Gun manufacture. After the war was over, I joined a firm called Leeds Forge Company, who were the origin of the Pressed Steel Car Company. I stayed with them until I joined the Metropolitan Carriage Wagon and Finance Company of Birmingham, England, who were the largest subsidiary company of Vickers. I was Managing Director of that Company. In 1925 or 1926 I was made Vice Chairman of Wolseley Motors, which was another subsidiary of Vickers, Vickers at that time being in considerable financial difficulties, and I was told that my job in life was to try and save as much money as I could for Vickers out of the Wolseley Motors organization. Wolseley Motors had as a subsidiary Company a company called British Timken, of which I became Chairman in March, 1927.

Q. You have been connected with British Timken Limited ever since that time?

A. Yes, I have.

Q. What is your present position with British Timken Limited?

A. I am Chairman and Chief Executive Director of the [fol. 837] Company.

Q. You say you took an engineering degree in college?

A. Yes. I am also a member of a considerable number of engineering societies, including the SAE in the United States.

Q. Were you connected as a Director or otherwise at this time with Companies other than British Timken?

A. Yes. I am connected with electric power supply companies, shortly to be nationalised, and a machine tool company, Cincinnati Milling Machine Company, and several other companies.

Q. While you were connected with Vickers, what, if anything, did you have to do with the trade that Vickers had in countries other than Great Britain?

A. I forget the exact title, but I was a Director of Vickers on their Commercial Board, as opposed to their Armaments Board, and I was Chairman of the Committee of all their subsidiary companies dealing with the sales of all their companies all over the world.

Q. What was the business of Vickers?

A. A caustic commentator once remarked that Vickers [fol. 838] made everything from rag dolls to battleships. They made sewing machines, forgings, waterproofs, motorcars, machine tools, electric generators and turbines—everything.

Q. And their business was how far flung in scope?

A. World wide—everywhere.

Q. You spoke of Wolseley Motors. What was its business?

A. The manufacture of passenger automobiles entirely.

Q. The passenger automobiles carried what name?

A. Wolseley.

Q. When was it that you first obtained any knowledge of British Timken?

A. When I first was asked to take charge of Wolseley Motors."

(Thereupon the following questions were read by Mr. Day and the following answers by Mr. Ketterer, from the deposition of Michael Dewar:)

"Q. And you have fixed that time as when?

A. 1925 or early 1926.

Q. Did you learn at that time in what business British Timken was engaged?

A. Yes.

[fol. 839] Q. What did you learn about that?

A. British Timken was a company which owned practically no assets. The plant and machine tools belonged to Wolseley Motors and the machines were actually in-

stalled in part of the Wolseley Motors' factory. British Timken had an agreement with Timken Roller Bearing Company on patents and the territories covered.

Q. What did you learn when you looked into the affairs of Wolseley Motors as to whether or not they owned the stock interest and, if so, how much of British Timken?

A. You must bear in mind this is quite a long time ago and I may be wrong about one or two figures; but in principle the share capital of British Timken was owned entirely by Wolseley Motors, but it was pledged to the bank to support an overdraft which was guaranteed to Wolseley Motors by Vickers.

Q. Then is it true that Wolseley Motors owned the stock of British Timken?

A. Yes, entirely.

Q. And Vickers owned the stock of Wolseley?

A. That is so, yes.

Q. You were Chairman of a Committee, as I understand [fol. 840] you—if I am wrong you will correct me—of Vickers having to do with the liquidation of Wolseley. Is that right?

A. Not entirely. There was a Committee assisting Vickers in a financial reorganization which covered the whole of the Vickers group. My endeavours covered only a much smaller part of the Vickers Group which consisted practically of the Birmingham district and Glasgow.

Q. Then I understand from you that Vickers was in some financial difficulty at that time itself. Is that right?

A. Yes, that is so.

Q. You have said something about Vickers having business branches in various countries. State whether or not, while you were connected with Vickers, you had occasion to travel to those branches and into those countries?

A. Yes. We had an office in New York. We had offices in almost every capital city in the world. We had even registered companies, Vickers (Australia) Limited, Vickers (New Zealand) Limited, Vickers (France) Limited, and so on.

Q. State whether or not, while you were connected with Vickers in the capacity you have stated you had occasion [fol. 841] to gain knowledge as to the manner of transact-

ing business in these foreign countries and between the foreign countries?

A. Certainly, yes.

Q. Were you a member of a Commission representing your country, Great Britain, that made a visit to America about 1926?

A. Yes, I was.

Q. Will you tell us what that Commission was?

A. It was appointed by the British Government to go to the United States to study and if possible to find the reason why the production per head per man hour in the United States was so much higher than the production per man hour in Britain. That was to cover all industries and not only just one industry.

Q. Can you recall any of the other members of that Commission?

A. Ernest Bevin is now the most prominent member left of that Commission.

Q. While we are on that subject, during the last world war, were you located for some time in America?

A. Yes. I was in Washington for the British Government from July 1940 to May 1943.

[fol. 842] Q. In what capacity?

A. I went originally as head of the Tank Mission and I stayed on as Deputy Director General of the British Purchasing Commission which was ultimately called the British Supply Mission.

Q. You were located in Washington?

A. In Washington, yes.

Q. Going back now to the Commission that was created in 1926, you did visit America?

A. Yes.

Q. Before you left on that Commission, had you looked into the Affairs of British Timken somewhat?

A. Yes, I had.

Q. In connection with the position you held with Vickers, as you have already stated?

A. That is so.

Q. When you came to America in 1926 with the Commission, state whether or not you visited the plant of the Timken Roller Bearing Company at Canton?

A. Yes, I did.

Q. What was the purpose of that visit?

A. The purpose of that visit was that we had between British Timken and the Timken Roller Bearing Company [fol. 843] a definite comparison as to productivity per man hour between British workers and American workers, and I was very anxious to see that as part of my work on this British Government mission, and also when I got back to endeavour to reduce the cost of production of British Timken so that British Timken could make more profit for Vickers.

Q. What was British Timken manufacturing at that time?

A. Taper roller bearings.

Q. What was Timken Roller Bearing Company manufacturing? I am going to call that company "American Timken' from now on.

A. Taper roller bearings.

Q. How long did you stay in Canton, if you remember way back 21 or 22 years?

A. It was not more than a few days. I could not tell you exactly.

Q. You have already stated, as I understand you, that the purpose of comparing cost of man power production between the British bearing industry and the British industry generally in America, was in connection with your membership of this Commission?

A. Yes.

[fol. 844] Q. While you were in Canton do you recall seeing any official of American Timken?

A. I met Mr. H. H. Timken who was the President at that time. I cannot remember at this date the others that I met.

Q. Do you recall whether or not on that trip you talked to Mark Lothrop?

A. Yes. I must have done because we had corresponded before. Mark Lothrop had been over in England.

Q. Do you recall whether or not you had a conversation with Mark Lothrop on that visit as to costs?

A. Yes, certainly on costs.

Q. About how long after you visited the Timken plant in connection with your work generally for the Commission did you return to England, if you remember?

A. It would be within six weeks or so. I was away for nearly three months at that juncture on that trip.

Q. On that trip did you have any talk with anybody of American Timken upon the subject of your acquiring, or their acquiring, an interest at any time in British Timken?

A. No, none.

[fol. 845] Q. Prior to the time you came home, while on the visit, had you conceived any such idea yourself?

A. No, none at all."

(Continuing to read from the deposition of Michael Dewar:)

"Q. I am now going to hand you a paper marked 'Defendant's Exhibit D.1' which purports to be a letter dated 4 Central Buildings, Westminster, S.W.1. What was that?

A. My office.

Q. In connection with Vickers?

A. Yes.

Q. That is in London?

A. Yes.

Q. Addressed to Mr. M. Lowthrop. As a matter of fact, there was no "w" in his name?

[fol. 846] A. No, there was not.

Q. 'Timken Roller Bearer Company, Canton'. I ask you if you recall sending the original of that letter?

A. Yes, I remember this.

Q. I now hand you 'Defendant's Exhibit D.2' purporting to be a letter from Mr. William Dallow to you dated January 28, 1927, British Timken Limited, and it says up on the right-hand side of the letterhead 'Common Lane, Ward End, Birmingham.' Do you remember receiving that letter?

A. Yes.

By Mr. Nitschke: May we have the date of the first letter?

By Mr. Day: Yes. It is February 11th, 1927.

Q. I now hand you 'Defendant's Exhibit D.3' consisting of six pages, the first of which is a letter dated March 30th, 1927 to you from the Timken Roller Bearing Company with the name J. F. Strough in the left-hand corner 'Secretary and Treasurer' on the right-hand corner under the

place where you would expect to find the signature, this being a photostat of a carbon. Who was Mr. Strough?

A. As far as I knew Mr. Strough, he was Secretary and [fol. 847] Treasurer of the Timken Roller Bearing Company of Canton, Ohio.

Q. What was Mark Lothrop's connection with the Timken Roller Bearing Company?

A. He was the next man to Mr. Henry Timken; whether at that time Mark was the President or Deputy to Mr. H. H. Timken, I do not know.

Q. Is H. H. Timken dead?

A. Yes.

Q. Is Mr. Strough dead?

A. Yes.

Q. Is Mr. Lothrop dead?

A. Yes.

Q. Is Mr. Herman Ely also dead?

A. Yes.

Q. I hand you now 'Defendant's Exhibit D.3' consisting of this letter and attached to it pages which have to do with costs, comparisons and figures and computations. Did you receive the original of that letter in due course?

A. Yes, I remember that.

Q. Please understand when I say 'Did you receive this letter' and hand you a photostat I am asking you whether you received the original of it.

A. I presume I received the original.

[fols. 848-849] Q. These exhibits that I have asked you about 'Defendant's Exhibits D.1., D.2., and D.3' refer generally to the matter of costs, do they not?

A. Yes.

Q. Costs of what company?

A. The comparative costs of the Timken Roller Bearing Company, Canton, Ohio, and British Timken Limited, Ward End, Birmingham, England.

Q. Do you know whether or not those letters were exchanged and that information was exchanged pursuant to the talk you had with Mr. Lothrop when you were in Canton?

A. Yes, certainly."

Mr. Day: Now, your Honor, I would like to offer in evidence the exhibits marked in the deposition D. 1, D.2, and D.3.

[fol. 850] Mr. Day: Defendant's Exhibit 1, your Honor, is a letter dated February 11, 1927, from Mr. Dewar to Mr. Lothrop, Timken Roller Bearing Company.

(The document referred to was thereupon marked by the Clerk, for identification, Defendant's Exhibit 1.)

[fols. 851-853] Defendant's Exhibit 2 is a letter dated January 28, 1927, to Mr. Dewar from William Dallow, written from Commons Lane, Ward End, Birmingham, on the stationery of British Timken Limited.

(The document last above referred to was thereupon marked by the Clerk, for identification, Defendant's Exhibit 2.)

Mr. Day: Defendant's Exhibit 3 is a letter dated March 30, 1927, to Mr. Dewar from Mr. J. F. Strough, Secretary and Treasurer of The Timken Roller Bearing Company, and has attached to it some figures.

(The document last above referred to was thereupon marked by the Clerk, for identification, Defendant's Exhibit 3.)

Mr. Day: I would like to offer those in evidence, Defendant's Exhibits 1, 2, and 3.

The Court: They may be received.

[fols. 854-855] The Court: Would you be kind enough to identify Dallow?

Mr. Day: Dallow was an officer of British Timken, at least he was an employee, holding a position of what?

Mr. Ketterer: Secretary.

Mr. Day: Secretary of British Timken when Mr. Dewar was with British Timken, and when he came over to see the business at the Timken plant in connection with this commission back in 1927.

Mr. Ketterer: In 1926, it was.

Mr. Day: 1926, yes.

[fol. 856] We will continue reading from the deposition.

(The following questions read by Mr. Day and the following answers read by Mr. Ketterer:)

"Q. Will you fix as nearly as you can after 21 or 22 years the date when you first conceived the idea of your [fol. 857] acquiring an interest in British Timken?

A. Early 1927, very soon after this correspondence.

Q. At that time you were engaged in the work for Vickers which you have already described?

A. Yes.

Q. You were familiar at that time, were you not, with the business operations of British Timken?

A. Yes.

Q. Did you know at that time that there was in existence an agreement between American Timken and British Timken?

A. Yes.

Q. Were you familiar with the terms and provisions of that agreement?

A. In general, yes.

Q. Did you know that it had certain provisions as to territory and certain provisions as to royalty and trademark, and things of that kind.

A. That is so.

Q. And you were familiar with those?

A. Yes, in general.

Q. When you were in Canton on the Commission, did you go through the plant of the American Timken?

[fol. 858] A. Yes.

Q. Did you see what they were doing and how they were doing it in the manufacture of taper roller bearings?

A. Yes.

Q. Did you acquire some knowledge from your examination of the plant in your trip through it?

A. Yes, a great deal.

Q. As to the extent generally of their operations?

A. Yes.

Q. You have stated that you believed that it was early in 1927 that you first conceived the thought of your becoming connected in some way with the business of British Timken and you have stated that you had knowledge of

the terms and provisions of the contract it had with American Timken?

A. Yes.

Q. You have also stated that British Timken was making taper roller bearings?

A. Yes.

Q. What kind of taper roller bearings was British Timken making at that time?

A. The same kind as the American Timken Company.

Q. They were Timken roller bearings, were they?

A. They were taper roller bearings made to the designs [fol. 859] of Timken.

Q. Did you acquire knowledge at that time that the Timken taper roller bearings which British Timken was making were being made under a license agreement with American Timken?

A. Yes.

Q. Did you know at that time how long that license agreement had to run generally, either at that time or shortly thereafter?

A. Before I came to the conclusion that I should like to be interested in British Timken, I certainly studied that point.

Q. I think there is some reference in exhibits which we will offer here, with which I think you are perhaps familiar, that the license agreement had about eighteen months to run. Would you say that was about right?

A. Yes, about right.

By Mr. Nitschke: From what time?

By Mr. Day: As I understand it from the time that these talks were had between Mr. Dewar and Mr. Ely. If that is not right, we can get it right without any difficulty on both sides.

Q. What plant did British Timken have at this time in 1927 that we are talking about now?

[fol. 860] A. None.

Q. You say 'None.' Just what do you mean by that?

A. I mean absolutely none.

Q. Will you explain your answer as to why you say 'None'?

A. I have already mentioned it. The British Timken was a company with no actual physical assets. It leased from Wolseley Motors the buildings and the machine tools on which and in which Timken Roller Bearings were made.

Q. Where was that building situated?

A. On the outskirts of Birmingham.

Q. Will you describe the building?

A. It was a modern steel structure about 40 feet bays. I was there only about a few months ago, so I know it quite well.

Q. How much of the building did British Timken occupy or had they occupied?

A. I should say under a hundredth part of the total area of Wolseley Motors.

Q. Did I understand you to say that they had leased that plant from Wolseley?

A. Yes.

Q. Was Wolseley making anything on the same premises [fol. 861] as were occupied in part by British Timken at that time?

A. Yes, motorcars.

Q. About how many persons were employed by British Timken at that time?

A. 300 to 350.

Q. You stated, as I understood you, that they leased their equipment from Wolseley?

A. Yes.

Q. Can you tell in general what that equipment consisted of briefly because we do not want a detailed description of it now.

A. Machines by names?

Q. Generally, what kind of machinery was it?

A. Four-spindle Acmes, single spindle Gridleys, grinding machines for grinding between centres.

Q. See if I understand you correctly. Before the financial difficulties that befell Wolseley and Vickers and British Timken, the plant you have briefly described had been operated by British Timken under lease from Wolseley. Is that right?

A. Yes.

Q. And the equipment that you have to some extent described was also leased by British Timken from Wolseley? [fol. 862] A. Yes.

Q. When you stated a while ago that they had no plant, as I understand it that was because of the financial difficulties of Vickers and the financial difficulties of Wolseley?

A. No. The fact was that British Timken owned no assets other than a certain amount of goodwill and had made a very good profit. But its manufacturing operations were carried out by Wolselely Motors under agreement.

Q. And whatever equipment and plant British Timken had, it had under lease?

A. They had under lease up to about this time that we are talking of.

Q. What kind of bearings were being made? What bearing size was being made by British Timken?

A. Motor-car and motor-cycle sizes; in other words, the relatively small ones.

Q. How many sizes of bearings were being made by British Timken at that time, if you know?

A. Very few compared to the number made by the American Timken Company.

Q. Can you give us any notion of how many?

A. 50 or 60, I should say.

Q. That would be your best recollection at this [fol. 863] time?

A. Yes.

Q. Can you give us any recollection as to how many sizes were being made by American Timken at that time?

A. Several hundreds.

Q. I hand you now 'Defendant's Exhibit D.4' which is a letter from you to Mark Lothrop dated March 10th, 1927, and ask you to examine it and tell us whether you recall it and generally what it says.

A. Yes.

By Mr. Day: Do you want to see this?

By Mr. Nitschke: No, not now.

By Mr. Day: If you want to see any of our exhibits before we question the witness on them or offer them in evidence, we shall be glad to give you the opportunity so to do.

Q. It says here in the first paragraph: 'Last week I was elected Chairman of the British Timken Company and I have been examining the position very closely.' That was the week before the week that included March 10th, 1927?

A. Yes.

Q. There are numerous other statements in the letter [fol. 864] to which we will not refer expressly at this time, but I wish to call your attention particularly to the last paragraph of the letter on page 3: 'I have also been thinking of making an offer to Vickers for the Timken business as it is so much outside their own lines now that they have so little association with the motor car trade. I fancy that the total capital that would be required to take it over would be about 300,000 pounds. I do not know whether your company would care to be interested if I were to make such an offer, either permanently or on the basis of the money loaned being repaid out of profits.' Do you recall writing that to American Timken?

A. Yes.

Q. State whether or not this was written at about the time you first conceived the idea of your being connected with the business of British Timken?

A. I was already connected with the business of British Timken.

Q. But I mean individually?

A. As an individual?

Q. As an individual or as a part owner.

[fol. 865] A. Yes.

Q. State whether or not, so far as you know, that statement in this letter was the first suggestion from either you or American Timken of the possibility of the two of you becoming connected with the business of British Timken as owners.

A. It certainly was I am quite certain.

By Mr. Day: I offer that in evidence."

Mr. Day: That's a letter dated March 10, 1927, from Mr. Dewar to Mr. Lothrop. I offer that in evidence as Defendant's Exhibit 4.

(The letter above referred to was thereupon marked by the Clerk, for identification, Defendant's Exhibit 4.)

The Court: It may be received.

Mr. Nitschke: Your Honor, I would like to make an objection to the admissibility of that document and to the admissibility of subsequent evidence of this sort in this case. It is the Government's view that the offenses which have been charged in this case, agreements to restrain trade, divide territories and fix prices, are of the kind that cannot be justified. There is no excuse for it, and the only evidence which the defense can properly offer in this case is evidence that they did not engage in that offense, that they did not enter into those agreements, that they did [fol. 866] not enter into the conspiracy to restrain trade. But it is not proper, and there is no justification for those agreements, and, therefore, any evidence on that subject is irrelevant. If your Honor would bear with me for a moment, I would like to state my argument a little more fully on that point.

Mr. Day: May I ask, with the Court's permission, do you expect now to argue the proposition that we are not entitled to offer any evidence at all except evidence which shows we did not sign the agreements?

Mr. Nitschke: That you did not enter into the conspiracy which we charge here.

Mr Day: Well, the conspiracy is something else. I understood him to say that he objected to our offering any evidence except that we didn't sign the agreements.

Mr. Nitschke: Well, I don't consider that the case involves just the agreements. I think it involves other things besides that, but I think you can justifiably put in evidence to show that you did not do a thing, such as the foreign agreements and cooperation against third parties. But I don't think you can put in evidence to justify the agree- [fol. 867] ments.

Mr. Day: Well, of course, I don't want to interrupt Mr. Nitschke, your Honor. He has a perfect right to state his objection. Maybe he better do that, and then I will have something to say. But I do want to say this, that if we are going to have an argument at this time in the trial as to our right to show our basic defenses, then, of course, we want to be heard at quite considerable length, because this might involve a large part of the whole case. But I don't want to anticipate.

The Court: Is it your thought to have that matter presented to the Court now, Mr. Nitschke?

Mr. Nitschke: Yes, I would like to present the Government's position on that point, your Honor, with respect to the relevancy of this document and others which I know from the deposition are going to follow.

The Court: Well, of course, I have had no occasion to examine these documents and that is the reason why, when it was offered, before you objected I said that the exhibit will be accepted, or the offer of the exhibit will be accepted.

Mr. Day: I wonder, if your Honor please, whether this testimony couldn't be taken under objection? We have a situation here where if we have to argue all of the reasons [fol. 868] why we believe the defense to which this evidence relates should be received, we will be required in performing our duty to our client, to make just as complete an argument as perhaps we would make if this Court had before it all of the evidence. We have no desire not to argue it if your Honor wishes to hear us at this time, but under the rule your Honor can hear it under objection, if you so desire, and it seems to me, that in view of the fact that we have witnesses here from outlying points who are ready to testify, that it might expedite the orderly trial of this case if this testimony were taken under objection and exception, just the same as our motion for dismissal has been taken under advisement. The reason for that is this—your Honor knows these rules—Rule 43 is one rule, and that rule provides, as your Honor knows, that in actions tried without a jury the same procedure may be followed, that is, a statement as to what the evidence will be, the old-fashioned offer of proof, except that the Court shall take and report the evidence in full unless it clearly appears that the evidence is not admissible on any ground, or that the witness is privileged.

Now, if we are going to have an argument now as to whether any of this evidence supporting this joint venture [fol. 869] defense, because that's what that relates to is admissible, then your Honor, I take it, will either let it in provisionally or finally, or you will sustain an objection to it and rule it out, in which event upon our request your Honor would take the evidence notwithstanding the fact

you sustain the objection, unless it clearly appears that the evidence is not admissible on any ground.

Now, the only point I am trying to make is that it would expedite the trial of this case, it seems to me, if this evidence were taken under objection and exception, the same as our motion was, because if we are going to argue right out now at this stage of the trial the question of whether or not we are entitled to offer evidence on the joint venture defense, obviously, in the performance of our duty to our client we want to make a full presentation of that to you with our reasons and our authorities, and I assume the Government will want to do the same thing. So your Honor will have presented to him, at least on that phase of the case, the same question which you would have if all the evidence went in, with the situation existing under the rule that in any event the evidence would not be entirely excluded unless it was not admissible on any ground and that clearly appeared.

[fol. 870] The Court: That's the very rule I had in mind, and that is the reason I thought I would hear from Mr. Nitschke to determine whether or not under that rule I may or may not receive the evidence which you are now seeking to offer. If you wish to argue the proposition now, bear in mind that the question that I have before me particularly is with reference to the provisions of Rule 43(b). It think we will take a fifteen-minute recess and then I will hear from you on that subject. I do want to say to you before we do take the recess that I am very much inclined to the view that in a matter of this nature, where it may become apparent, even though the Court would feel that your position is well taken, that the defense might be entitled to make its offer of proof of all of the evidence, which they seek to offer, it might be far more advisable to proceed rather than to engage in lengthy argument at this moment.

Mr. Nitschke: I appreciate that, your Honor.

The Court: If you will just bear that in mind in getting whatever argument you wish to make to the Court together, I will appreciate it. It must be borne in mind that in cases of this nature where there is no jury the Court is obliged, unless it appears to the Court, as the rule indicates, that the evidence is not admissible on any ground,

[fols. 871-882] and the Court is firmly convinced that it should not be received, that is the only time when the Court is justified in excluding it, and even though the Court does exclude it, I see no method for this Court to bar the right of the Defendant to offer that testimony so that the matter may be properly reviewed.

[fol. 883] The Court: Isn't the position of the defense not that they are seeking to show justification for restraint, but to show that there was no restraint?

Mr. Nitschke: Well, we have no objection to them showing there was.

The Court: I understood from the opening——

Mr. Day: That there is no restraint upon United States commerce, interstate commerce, or commerce with foreign nations. Whatever the provisions are in the contract they are legal provisions.

The Court: That is what I meant to say. I believe that to be the defense. I fully appreciate the significance of your argument and the significance of the cases to which you have made reference. I am firmly of the opinion at this time, however, that I will receive the evidence or will receive the evidence over the objection of the Department, and will rule on all of these questions, which are questions of law, and as a matter of fact the ultimate questions of law that the Court will have to apply to the facts in this case, and that no harm can come either to the Government or to the defense by receiving this evidence. At the proper time the Court will then be enabled, as I said, to apply the law as the Courts have decided to the facts presented in this case, I believe that it is far better at this [fol. 884] time to proceed and receive the evidence over your objection than to exclude it at this time or to listen to lengthy arguments without even having the opportunity to closely examine the documents that you have introduced into evidence and to examine the documents that will be offered by the defense.

I want to point out one thing to you very definitely, and that is this, that you men who have presented the Government's case, of course, are fully familiar with your case. You must realize, however, that you have presented numerous agreements, numerous documents here which were given to the Court by way of exhibits, and the Court

has not even had an opportunity to examine those. So that for the Court at this time to sustain the position that you are arguing would be doing it without the adequate and the complete opportunity to examine all of those documents and to examine all of the exhibits you have offered in support of your position. To say it briefly, then, and finally, I believe it is far better at this time to receive all of this evidence over the objection of the Government, and I will hear at length from both you and defense counsel and then be in position to apply the law to the facts as they were presented.

[fols. 885-888] Mr. Nitschke: I will be permitted to make specific objections from time to time on some of the evidence?

The Court: I have no doubt you will. In order to avoid any difficulty along that line it may be assumed your objections are made to all of the testimony which seeks to show the reasonableness of the restraint, or to show any justification for the restraint, or to show any justification for price fixing or reasonableness of price fixing.

Mr. Nitschke: Thank you, your Honor.

The Court: Will that take care of your record?

Mr. Nitschke: Yes, that is fine.

[fol. 889] (Questions read by Mr. Day and answers by Mr. Ketterer, as follows:)

"Q. I hand you 'Defendant's Exhibit D.5', purporting to be a cablegram dated March 28th, 1927, from yourself to Mr. Lothrop, Timken Roller Bearing Company, Canton, and ask you if you remember sending that cable?

A. Yes, I do.

Q. This says: 'Would you be prepared to extend your agreement with British Timken for ten years if I take over the British Company subject to modification of terms of sublicenses from us to other European countries as sug-[fol. 890] gested in my letter stop I have to make up my mind within next ten days stop should much like to do it but do not think it wise without a ten years arrangement with you stop should like to have arrangements to lower royalty on very large accounts on same basis as we have with Ford. Dewar.' When you referred to a ten year ar-

rangement, what did you have in mind, an extension of what?

A. The existing agreement subject to the modification as mentioned in there.

Q. Between American Timken and British Timken?

A. Yes."

Mr. Day: Now, we offer in evidence the cablegram which we just read in the question, and ask that it be marked Defendant's Exhibit 5. It is Deposition D.5.

(The document above referred to was thereupon marked by the Clerk, for identification, Defendant's Exhibit 5.)

The Court: It may be received.

[fol. 891] (Reading of deposition continued:)

"Q. Now I hand you 'Defendant's Exhibit D.6' purporting to be a cable from Canton, Ohio, March 29th, 1927, from Timken, which means American Timken, to yourself. Did you receive that?

A. Yes, I did.

Q. It reads: 'Replying your letters and cable we are willing to give consideration to ten-year term of license and reduction in foreign royalty. We also have written you today fully about manufacturing costs. We feel your costs can with our cooperation be reduced twenty-five per-cent or more. We would be more interested however in joining with you in purchasing company from Vickers and making the necessary investment. Do you plan to give your full time to British Timken. Can you inform us what net earnings have been also total assets and liabilities. If we can come to substantial agreement on major matters could you come here at this time our expense to close deal [fol. 892] incase we could not send representative to England? Timken.'

A. Yes."

Mr. Day: Now, we offer in evidence the cablegram which we just read in the question, and ask it be marked Defendant's Exhibit 6. It was marked D.6 in the London deposition.

The Court: It may be received.

(The document above referred to was thereupon marked by the Clerk, for identification, Defendant's Exhibit No. 6.)

(Reading of deposition continued:)

"Q. I now hand you a cablegram dated March 30th, 1927 signed Dewar to Timken, Canton, Ohio—that is American Timken—and ask you if you recall sending that cablegram?

A. Yes.

Q. It reads: 'Your telegram twentyninth net profits before paying income tax 1922 pounds sterling 33000 1923 33000 1924 37000 1925 43000 1926 63000 last balance sheet 30 September 1926 plant 3000 debtors 39000 stocks 42000 cash 46000 liabilities shares 50000 sundry creditors 18000 profits 63000 works and plant are leased from Wolseley stop Can purchase plant 35000 and suitable works 25000 all installed can purchase complete business 260000 with [fol. 893] profit from last September stop Matter extremely urgent other negotiations by Vickers in hand stop Am prepared devote all necessary time to Timken but consider undesirable sever my connections which are material benefit in obtaining orders stop What amount are you prepared to invest essential that company has British control of ordinary capital I am prepared to put up approximately half. Dewar.' To what did you refer when you said: 'Undesirable sever my connections which are material benefit'?

A. I thought it was unwise for me to give up all my connection with the other companies with which I was interested because they were materially beneficial in contacts to help in the sales program of British Timken. Might I comment on one word in that cable. The word 'plant' in this country means machine tools. In the United States, from my recollection, one talks of the plant as being the whole shooting match. I differentiate between plant and works; in other words, machine tools and buildings in the United States all come under one word 'plant'.

Q. You say here 'essential that company has British control of ordinary capital.' What did you mean by [fols. 894-895] that?

A. I meant that the control of the company, vis-a-vis the British consumers of tapered roller bearings, the Government included, would be a British controlled company.

Q. And why did you believe that?

A. Why did I suggest it?

Q. Yes.

A. Because, in my experience, foreign controlled companies always met in this country with greater sales resistance than British controlled.

Q. Jumping ahead just a moment, when Mr. Ely came over and you talked to him about this matter, did you make the same suggestion to him as you are just telling us?

A. Yes, certainly."

Mr. Day: Now, we offer in evidence the cablegram which was just read in the previous question, dated March 30, 1927, and which was offered in evidence at the deposition as Defendant's Exhibit D.7.

The Court: It may be received.

(The document above referred to was thereupon marked by the Clerk, for identification, Defendant's Exhibit No. 7.)

[fol. 896] (At 9:45 A.M., March 31, 1948, the trial was resumed.)

Mr. Day: I think we did not offer Defendant's Exhibit 7 yesterday. It was identified, they tell me, but was not offered. Is that right?

The Clerk: Yes.

Mr. Day: I would like to offer Defendant's Exhibit 7.

The Court: It will be received.

(The following questions read by Mr. Day and answers by Mr. Ketterer:)

"Q. I hand you now a cable dated March 31st, 1927, to yourself signed 'Timken' and ask if you remember receiving that?

A. Yes, I remember that.

Q. It reads: 'Replying your cable we are willing to become interested to extent of one-half or more of amount necessary to acquire and reorganize business. We can

have representative in England in about ten days authorised to close deal. Shall we send him?'

A. Yes."

Mr. Day: Now, we wish to offer in evidence Defendant's Exhibit 8, which is the document I just read as being em-
[fol. 897] bodied in the question.

The Court: It may be received.

(Reading continued.)

"Q. Then 'Defendant's Exhibit D.9' is a cable from you to Timken, Canton marked 'Received April 2nd'. I ask you whether you remember cabling Timken 'Delighted see representative as soon as possible'?

A. Yes."

Mr. Day: I offer that document as Defendant's Exhibit 9. It is marked Defendant's Exhibit D.9 in the deposition.

The Court: It may be received.

(Reading continued.)

"Q. Then 'Defendant's Exhibit D.10' is a cable from you to Timken dated April 3, I think it is: 'Please cable date and steamer your representative leaving Dewar'. Do you remember sending that?

A. Yes."

Mr. Day: I want to offer that cable as Defendant's Exhibit 10. It is D.10 attached to the deposition.

The Court: It may be received.

[fol. 898] (Reading continued.)

"Q. Defendant's Exhibit D.11 is a cable dated April 4th, 1927 to you from Timken—that is American Timken. Do you recall receiving that?

A. Yes.

Q. That reads: 'Cabled Saturday to Duncan our lawyer with Stibbard Gibson to advise you Ely sailing Friday steamer Homeric and also asked Duncan to begin preliminary negotiations with you.'

A. Yes."

Mr. Day: I want to offer that in evidence as Defendant's Exhibit 11; it was D.11 attached to the deposition.

The Court: It may be received.

(Reading continued.)

"Q. I hand you Defendant's Exhibit D.12 purporting to be a letter dated April 4th, 1927, to you. The carbon is signed 'Secretary & Treasurer', but over in the corner it says 'J. F. Strough.' I ask you if you remember getting that?

A. Yes.

Q. This has to do with Mr. Ely sailing on the Homeric. It states: 'Mr. Ely was formerly Vice President & Treasurer of this company for a great many years, and of course [fol. 899] carries with him the proper credentials to represent and act for us in the pending negotiations with you and with British Timken.' State whether or not you in your negotiations and talks with Mr. Ely you did believe that he was a duly appointed representative of American Timken?

A. Yes, I am sure he was."

Mr. Day: I want to offer in evidence that document as Defendant's Exhibit 12, from Strough, Secretary & Treasurer of the defendant to Mr. Dewar, dated April 4, 1927.

The Court: May I ask at this point whether Mr. Strough was Treasurer at that time and is no longer connected with Timken?

Mr. Day: Yes, that is right. He is dead now.

The Court: That is the reason his name is not included in this list?

Mr. Day: Yes. I said:

"I do not think it is necessary to read the rest of the letter and I offer it in evidence and ask that it be attached to the deposition."

(Reading continued.)

"Q. I have here Defendant's Exhibit 13, consisting of two [fol. 900] pages, which purports to be a letter dated April 11th 1927 to you from A.J.M. Duncan. Do you recall receiving that? (Same handed).

A. Yes, I remember that.

Q. Who was, and who is Mr. Duncan?

A. Mr. Duncan was the British lawyer of the Timken Roller Bearing Company of Canton, Ohio, and he is now

a Director of British Timken. He is also British Timken's legal adviser at the present time.

Q. He was, and still is, a member of the law firm of Stibbard, Gibson?

A. He is the senior partner.

Q. And he is the Mr. Duncan to whom reference was made in the Exhibit about which I just asked you?

A. That is so.

Q. There are some longhand notes on Defendant's Exhibit 13. Are those in your hand-writing, or are those in the hand-writing of somebody else?

A. No, they are not mine.

Q. I will read Defendant's Exhibit 13: 'Dear Mr. Dewar, There are one or two points which I think we might possibly be making some progress with before the representative of the American Company arrives here. I refer to the [fol. 901] following:— (1) Do you propose to form a new Company, or do you propose to work with the existing Company? (2) Will there be any change in the name of the Company? (3) Do you propose a public company or a private company? (4) Some alterations in the existing Articles of Association, or new A.A., will be needed. Which do you propose?"

[fol. 902] (Continuing reading.)

"(5) What do you propose for the share capital of the new company? (6) Will all the shares be of one class? If not, what will be the preferential rights? (7) Transfers; do you propose to have a simple clause that no transfer can be registered without the consent of the Directors? (8) You have already mentioned to me what you propose in the case of one of the parties wishing to sell his shares; as to the other party having the refusal of them at a price to be fixed? (9) What do you suggest as the number of Directors? (10) I presume that you will wish to leave over the final selection of the first Directors until the American Company's representative arrives. (11) Have you any suggestion to make as yet with respect to Director's remuneration? (12) The same with respect to Directors' qualification. (13) The appointment of Directors will require consideration so as to secure ade-
[fol. 903] quate representation for the American Com-

pany. Have you any ideas on this subject? (14) There is also the question of rotation, retirement and removal. Yours faithfully, A.J.M. Duncan.' I have not read the longhand words on that. Did you discuss the matters referred to in that last Exhibit D.13 with Mr. Duncan?

A. Yes.

Q. You considered all these questions with him?

A. Yes, all of them.

Q. And did you give Mr. Duncan your ideas as to the answers to that so far as you were concerned?

A. I did, yes."

Mr. Nitschke: I would like to interpose a further objection at this time to that testimony and to the further testimony that he gives with respect to the financial arrangement and the affiliation between the defendant and its co-conspirators.

We believe that the law is clear that the relationship between the conspirators in a conspiracy does not have any effect on the alliance and combination between them to restrain trade.

[fol. 904] I would like, if I might, to just call your Honor's attention to the language of the Supreme Court in a very recent case of United States vs. Yellow Cab Company 332 U.S. 218, decided last year, where at Page 227 the Court said:

"The test of illegality under the Act is the presence or absence of an unreasonable restraint on interstate commerce. Such a restraint may result as readily from a conspiracy among those who are affiliated or integrated under common ownership as from a conspiracy among those who are otherwise independent. Similarly, any affiliation or integration flowing from an illegal conspiracy cannot insulate the conspirators from the sanctions which Congress has imposed. The corporate inter-relationships of the conspirators, in other words, are not determinative of the applicability of the Sherman Act. That statute is aimed at substance rather than form."

I particularly wanted to call your Honor's attention to that case because on the facts it is almost identical with one phase of this case. In that case the Yellow Cab Company, a company manufacturing taxi cabs, had several subsidiaries operating fleets of cabs, and drivers operating the

cab service in various cities. The parent company, Yellow [fol. 905] Taxi Cab Company defendant in that case, required its operating subsidiaries to buy their cabs from the parent in exclusion of buying them from any other manufacturer of taxi cabs. The Court found that was unlawful and that there was no immunity granted in the restraint involved by virtue of the fact that there was a parent-subsidiary relationship.

Now, in this case we don't have, of course, the parent-subsidiary relationship. We don't even go that far but we do have the situation where the British and French Companies constitute a substantial market for tapered roller bearings manufactured in this country, but under the terms of the agreement they are prohibited from dealing in bearings other than Timken bearings. The result being that by virtue of this conspiracy British and French Timken must buy any tapered roller bearings that they need for their requirements, beyond what they can produce themselves, from the defendant, and other manufacturers in this country are excluded from that market.

We believe, therefore, that we should interpose an objection to the testimony relating to the affiliation or the relationship, financial stockholdings, and otherwise between the defendants.

The Court: Mr. Nitschke, doesn't this objection you are [fol. 906] now making fall in the same category as the other one? In the ultimate determination of the issues in this case if the Court should arrive at the conclusion that there was restraint and that there was a violation of the Sherman Antitrust law, that the defense offered here would not constitute a defense, then in the ultimate determination of the question the very matter which you are discussing will have to be determined. Personally, I see no difference between the objection which you made yesterday and the objection which you are making to this testimony today. That is, it seems to me it is the identical objection. In other words, I am of the opinion that the Court ought to receive it over your objection and if, to repeat myself, if, on the final determination of the case the Court should arrive at the conclusion your contentions are correct, no possible harm can come by the introduction of this testimony.

Mr. Nitschke: Well, I just don't want your Honor to misunderstand me, I felt I should state our objection. I understand your Honor's position, I am not urging you change it.

[fol. 907] The Court: I think it is correct and quite right that you call it to my attention but I did want to ask you whether or not you felt that this objection was in any wise different than the overall objection that you made to all of the testimony that was sought to be introduced. That is, your objection yesterday was to the effect that all of the testimony that is sought to be introduced does not constitute a defense. That is, the Government having, in your mind or your argument, having established a conspiracy in restraint of trade, that any defense that may be given to show the reasonableness of this thing or all of the other matters raised in the defense do not constitute a defense.

Mr. Nitschke: That is correct.

(Continuing reading.)

"Q. Now I hand you Defendant's Exhibit D.14, which is a letter from Stibbard, Gibson to the Timken Roller Bearing Company, and ask if you can examine that with relation to and in association with, Exhibit D.13, and tell us whether Exhibit D.14 accurately records the answers you gave to Mr. Duncan to the questions in Exhibit D.13?

A. Yes."

The Clerk: I haven't had 13 yet to mark.

Mr. Day: Will you mark 13 and 14, please?

[fol. 908] Defendant's Exhibit 13 was Exhibit D.13 in the deposition and 14 was Defendant's Exhibit D.14.

I think I will ask your Honor to examine D.13, which has certain questions and answers written in longhand. It is difficult in just reading the exhibit to show how that took place.

(Exhibit handed to Court.)

(Reading continued.)

"Q. Do you recall that Mr. He-man Ely did come over to London?

A. Yes.

Q. You have already stated that you regarded him as the representative of American Timken?

A. Yes.

Q. As near as we can figure out, from the correspondence, he reached London about the 12th or 13th April, 1927, and do you recall that you had conferences with him concerning the matters that are referred to in these Exhibits, and upon the possibility or probability of you and American Timken becoming interested in British Timken?

A. Yes.

Q. We are going to offer in evidence a document which is styled 'Heads of Agreement', signed by you and American Timken under date of May 16th, 1927. That is approximately a month, as to date of signing, after Mr. Ely came over to London. How frequently during that inter- [fol. 909] val of about a month did you talk to Mr. Ely?

A. Almost daily.

Q. Where did you talk to him, generally?

A. At my office in London, and Stibbard Gibson's office, and down in Birmingham.

Q. What was the occasion of his going to Birmingham?

A. He came to look at the Wolseley Motors Factory, and to see what the operation of the British Timken Company was like.

Q. State whether or not, during those conferences, you discussed, as you saw it, many or all phases of British Timken.

A. Every phase; I was vitally interested then.

Q. As you saw it, every phase?

A. Yes.

Q. When you had those talks with Mr. Ely, was anyone also present at any of them?

A. Two of the Directors of Vickers were present at certain times, and another man who was the Chairman of the Committee that was endeavouring to re-organise Vickers, but most of the discussions were really between me and Mr. Ely with the help of Mr. Duncan of Stibbard Gibsons.

Q. I hand you a document now consisting of nine pages marked Defendant's Exhibit D.15. It is styled 'Heads of [fol. 910] Agreement' and 'British Timken Limited'. It is signed 'M.B.U. Dewar' and 'He-man Ely, for the Timken

Roller Bearing Company'. It is dated May 16th, 1927, and I ask you if you identify that document. (Same handed)

A. Yes.

Q. Is that your signature to it?

A. Yes, it is.

Q. And Mr. Ely's signature to it?

A. I cannot swear to Mr. Ely's signature, but I know he signed it.

Q. He signed it, and you signed it—you know that?

A. Yes.

Q. There is also a signature here to a rider. Do you recognise your signature and Mr. Ely's signature, to the rider, and recall that they were signed by you and by him?

A. Yes.

Q. You are familiar with the terms of these Heads of Agreement?

A. Yes.

Q. We have had occasion, as Counsel for American Timken, to talk to you about it within the last few days here in London, have we not?

A. You have, yes.

Q. And discuss certain provisions with you concerning it?

[fol. 911] A. Yes.

Q. State whether or not in your discussions with Mr. Ely, the various matters covered in these Heads of Agreement were talked about.

A. Yes.

Q. Do you recall anything being said in those conferences upon the question of the name 'Timken'?

A. Yes.

Q. What was said, and who said it?

A. Mr. Ely was always very insistent that the name 'Timken' should be kept as far as humanly possible the property of the American Timken Company; that it should never be hyphaned or associated in any way with any other name, but should always be distinct, and the property of the American Company.

Q. You stated that Mr. Ely was insistent. Do you mean by that, that that is what he said, or the substance of what he said, in these conferences with you?

A. It is the substance of what he always said.

Q. Including what he said at these conferences?

A. Including what he said at the conferences, yes.

Q. It says that 'an Agreement shall be entered into between the American Company and the Company.' 'The American Company', of course, is American Timken, is not it?

[fol. 912] A. Yes.

Q. And 'the Company' is—what? British Timken?

A. British Timken.

Q. 'Extending for ten years the terms of the existing agreements between them subject to modifications and generally upon such terms and conditions to be mutually agreed'. The existing Agreement which was therein described was—what?

A. It was the existing Agreement between British Timken and the American Timken Company.

Q. There are some provisions in here, are there not, concerning the control of the business operations of British Timken?

A. Yes.

Q. Can you state what was said upon that subject in your conferences with Mr. Ely?

A. As I had mentioned before, and mentioned at this time also, to Mr. Ely, it was my contention that the control of this Company should be British. Mr. Ely was prepared to agree to that provided certain protection was given to the American Company in the event of my control turning out to be bad. In other words, if the profits of the Company fell below a certain percentage, then the control of the Company would automatically revert to them. Also, if I were to go mad, or die, or be incapable of operating for six consecutive months, then also the con-

[fol. 913] trol would go to them.

Q. Do you recall what, if anything, you said to Mr. Ely as to why you thought the control of the business of the Company should be in your hands?

A. I told Mr. Ely that I was convinced that it was much better for a British Company operating in Britain to be operated by a Briton, on account of the knowledge of conditions and of sales resistance, and from my own point of view I was regarded as something of a salesman on the Continent of Europe and in the British Empire.

Q. State whether or not you discussed with Mr. Ely the subject, or question, of British control of operations in connection with British employees and British workmen and so forth.

A. Yes. My own personal experience in the reverse direction, with a Company operating in the United States, was that we insisted on employing American citizens and American Directors, and the whole operation was conducted by American citizens. In my opinion the same thing applies to a Company in Britain; it is much better to look after British workmen with British foremen and British superintendence, rather than with Americans, who are not aware of the local conditions.

Q. There are provisions in these Heads of Agreement having to do with the transfer of shares by the holders [fol. 914] of the stock. Do you recall any conversation with Mr. Ely upon that general subject?

A. Yes, I do.

Q. Can you tell us what, as you recall, was the substance of what was said?

A. It was a mutual arrangement; I did not want to have the Timken Roller Bearing Company suddenly selling their shares to someone else, say General Motors, whom I did not know, and as far as I remember, Mr. Ely was very anxious that the Timken Roller Bearing Company should have an option on my shares in the event of my wanting to sell them.

Q. And was that provision in the Heads of Agreement?

A. Yes; it was carried out in our continuing agreement.

Q. I notice in this rider that there is some provision concerning what should be the rights of the parties in the event of your death. Do you recall that being discussed?

A. Yes. It was a question of fixing the value, as far as I remember—some means of fixing the value of my share interest."

Mr. Day: I now offer in evidence the Heads of Agreement as Defendant's Exhibit 15. It was Defendant's Exhibit D.15 in the deposition.

[fols. 915-923] The Court: It may be received.

I offer Defendant's Exhibits 12, 13 and 14, if I inadvertently omitted to do so.

[fol. 924] (Continuing reading from deposition of Michael Dewar:)

"By Mr. Day: I now ask that there be marked for identification a cable from Mr. Ely to American Timken dated April 19th, 1927. We expect to offer this in evidence later. I want to call your attention to this statement in this cable: 'Dewar objection to American control solely on account of restricted sales stop. Product made by foreigners tho produced here is unpopular stop. All letter heads must carry list of Directors and nationality if other than British stop. Under foreign control feels his investment in jeopardy stop. Might protect us by conditional option on his stock Have not discussed this stop. Dewar willing to [fol. 925] make entire investment personally with fair ten year contract but prefers us as partners account our interest thereby in profits. Stop. Can buy cheaper than first figure given stop. Dewar apparently keen on reducing cost.' I will ask you whether or not you recall that in your talks with Mr. Ely you said anything upon the subject of not wishing American control?

A. Yes. That cable conveys my sentiments then, and now, and will continue to do so.

Q. I will ask you whether or not, in your conversation with Mr. Ely, you stated to him the matters that he has set forth here in his cablegram home to his Company?

A. Yes. The exception is the first few words, which I am afraid I do not understand.

Q. It says: 'Dewar objection to American control solely on account of restricted sales'.

A. I do not know what he means by 'restricted sales', I am sorry, but after that, I am entirely in agreement.

Q. Do you remember whether or not in your discussions with Mr. Ely anything was said along the line of American control of the Company having any effect on the sales of this product in England?

A. Yes. If that is what the wording means, I agree.

Q. Regardless of what it means, did you talk about that? [fol. 926] A. Yes, certainly we did.

Q. Can you tell us what you said on that, in substance, as nearly as you can remember?

A. I think I mentioned this before today, but it is the same comment, that a foreign company foreign controlled

meets with greater sales resistance in this country than a British Company, British controlled.

Q. Sales resistance from whom?

A. From the local inhabitants, the British.

Q. 'Product made by foreigners tho produced here is unpopular'. You did state that, in substance, I think?

A. Yes.

Q. Then it says here: 'Under foreign control feels his investment in jeopardy'. Did you state that to Mr. Ely?

A. Yes.

Q. Did you tell him why you believed your investment would be in jeopardy in those circumstances?

A. Because I did not think we should be successful.

Q. Then there is a statement here: 'But prefers us as partners'. Do you remember stating that, in substance, to Mr. Ely?

A. Yes."

Mr. Day: I want to offer in evidence as Defendant's Exhibit 16, which was Exhibit D-16 in the deposition, this cablegram which I think has been read in the questions [fol. 927] propounded.

The Court: It may be received.

(Thereupon the cablegram above referred to was marked by the Clerk, for identification, Defendant's Exhibit 16.)

(Continuing reading from deposition of Michael Dewar:)

"Q. Here is another letter, marked 'Received May 2nd—1927, I assume—from Mr. Ely to American Timken, 'Attention J. F. Strough', which we have marked for identification and expect to offer in evidence at the trial of this case. I ask you whether or not in your discussions with Mr. Ely you discussed any or all of the three plans I am now going to read to you as described in this letter by him? '1st. Our complete control of British Timken or its successor, without other stock holders, other than qualifying directors' shares, and this is the plan I would recommend if there was available in our organisation the proper person or persons to spend a year to two years reorganising plant, sales, etc. capable of cantacting properly in Germany, and starting there a small company, and making en-

tirely new arrangements in France. The present arrangement is most unsatisfactory'. Did you discuss that with Mr. Ely?

[fol. 928] A. Yes. I discussed the French arrangement and the German arrangement, but I am certain I never discussed the possibility of complete American control, because I just should not have bothered with it. What is the good of discussing something one cannot agree to?

Q. You did not discuss it?

A. No, I am sure I did not.

Q. '2. Our control'—that is American Timken?

A. Yes.

Q. 'with a working minority of British interest. This also requires time in making proper and suitable connections, and would be probably the best plan, if Mr. Dewar, or a man of his type were available. To my straight questions to Mr. Dewar on this set-up, he said 'No' without qualification'. Do you remember that?

A. Yes.

Q. That did take place in the conversation?

A. Yes, that did.

Q. '3. British control of new Company, only so long as British control operates Company with satisfactory profit and dividends. This is the plan I now recommend, and will cover in more detail'. Do you remember that was discussed?

A. Yes, it was discussed and finally operated.

Q. Referring to page 3 of this letter, it says: 'Subject [fol. 929] to your approval we have agreed on major points as follows: That we will together treat with Vickers for British Timken's shares, and it is agreed that we must buy them considerably under the figure first given. That if satisfactory figure is agreed upon, some changes should be made in British Timken's Articles of Incorporation to take care of the new deal. That British Timken must clear the Timken name in Germany. To do this they will probably have to buy off Prausnitzer. The proposed capital authorised: £200,000 divided into 100,000 A. stock; divided into 100,000 B. stock. Both A. and B. Stock are equal as to dividends and in liquidation, and the cost of A. and B. shares shall be the same, but B. stock is to control the Board

and manage the Company'. Do you recall that was discussed?

A. Yes.

Q. 'If 12½ per cent. is not earned and paid in dividends on both stocks for a period of one year, then A. stock controls Board and Management'. Do you recall that that was discussed?

A. Yes, correct.

Q. That 12½ per cent. was changed, I think, to 15, was it not?

A. It was ultimately changed to 15, yes.

Q. 'Proposed Division of Stock: A. Stock 100,000. Timken takes and pays for 55 per cent of amount [fol. 930] issued. Dewar takes and pays for 45 per cent of amount issued. B. Stock £100,000. Timken takes and pays for 45 per cent of amount issued. Dewar takes and pays for 55 per cent of amount is-ued'.

A. That was altered.

Q. That was changed?

A. Yes.

Q. As set forth in the Heads of Agreement?

A. I cannot remember when exactly.

Q. 'Of the total we each then have 50 per cent and our investment would be equal. So long as 12½ per cent earnings are made and 12½ per cent dividends are paid, B. Stock has three Directors and A. Stock two Directors, for publicity A. Directors should probably be Britons of Timken choosing and representing Timken. The Company should be a private Company, then earnings are not published. Neither party shall sell his shares without first offering the other party, at a price agreed to by public accountants appointed by each party, and they failing to agree, by a third accountant chosen by the other two. Timken interest must be safeguarded by fair option on Mr. D's stock, in event of Mr. D's death or incapacity. Mr. D. desires agreement that he remain a Director as long as he is a stockholder, and this seems fair'. Those matters were [fol. 931] discussed?

A. Yes, they were.

Q. 'Of course a new ten year license agreement must be drawn, covering complete interchange of ideas, methods, etc. etc. It must cover royalty, make mutually satisfactory

arrangements as to the service business, arrange for Timken supplying rolls and cages and many other details that it seemed unnecessary to discuss in detail, until we could agree fully on a new set-up'. Were those things discussed to some extent?

A. Yes, they were.

Q. 'As an alternative, if Timken does not wish to be a partner, Mr. D'—that is Mr. Dewar—'will put up all the money, provided, of course, a satisfactory ten year contract is agreed upon, and if this should be done, then Mr. D. might form a public company, and sell some preference shares, giving small bonus of common stock keeping the balance of common stock for himself'. Was that discussed?

A. Yes, it was.

Q. 'I do not think, however, you would care for this arrangement, and Mr. D. very much wants us as partners, on account of our interest then in the profitable operation of the Company'. Did you discuss that to that effect with Mr. Ely?

[fols. 932-942] A. I did."

Mr. Day: We want to offer in evidence Defendant's Exhibit 17. It is a letter from Mr. Heman Ely to Timken Roller Bearing Company marked "Received May 2nd," it must be 1927. It's blurred here, but that must be the date. That's deposition Exhibit D-17.

(Letter last above referred to was thereupon marked by the Clerk, for identification, Defendant's Exhibit 17.)

[fol. 943] (Continuing reading from deposition of Michael Dewar:)

"Q. Here is Defendant's Exhibit D.18, which is a cablegram from Mr. Ely, I assume, though I do not see any signature to it, to the American Timken Company: 'May 5th 1927. Dewar proposes leasing suitable plant for a year or two until needs are definitely determined. Rental probably less than present plant and more suitable located in Birmingham district'. Do you remember discussing that?

A. Yes, we did.

Q. You have already told us this morning about the situation of British Timken as to a manufacturing building?

A. Yes.

Q. When you were there discussing with Mr. Ely leasing a suitable plant, what did you mean by 'plant'?

A. Building.

Q. And did you lease a plant at that time?

A. We did—almost immediately afterwards, even if not at that date.

Q. Where was that plant located?

A. About a mile from the other—a little more in Birmingham.

Q. And that was leased from whom?

A. From Vickers.

Q. Does British Timken still have that plant?

[fol. 944] A. It does. It purchased it.

Q. When did it buy it? About when?

A. About 1932 or 1933, I think.

Q. Then it says: 'No definite opinion price Vickers will accept until start trading. Some additional investment necessary Can better advise on this after visit to Birmingham'. By the way, did you and Mr. Ely go to Birmingham?

A. Yes, we did."

Mr. Day: I want to offer in evidence as Defendant's Exhibit 18 the cablegram dated May 5, 1927, from Heman Ely to Timken Roller Bearing Company. That's marked D-18 in the taking of the depositions.

The Court: It may be received.

(Cable last above referred to was thereupon marked by the Clerk, for identification, Defendant's Exhibit 18.)

Mr. Day: It has been suggested I read it, and I will read it with your Honor's permission. It states:

"Dewar proposes leasing suitable plant for a year or two until needs are definitely determined rental probably less than present plant and more suitable located in Birminham district stop no definite opinion price Vickers will [fol. 945] accept until start trading stop some additional investment necessary can better advise on this after visit to Birmingham next Tuesday."

I offer just the part that I have read and not the other part, if I may, your Honor.

The Court: Very well.

Mr. Day: The last part that I offer is where the cable states "Can better advise on this after visit to Birmingham next Tuesday."

We offer the cable up to that point.

The Court: All right.

(Continuing reading from deposition of Michael Dewar:)

"Q. Without offering this cable at this time, did you have a discussion, which we will come to later, with Mr. Ely concerning the German situation?

A. Yes.

Q. And Mr. Prausnitzer?

A. He was the German situation.

Q. Are you familiar in a general way with the offer that was made to Vickers in the name of Mr. Ely?

A. Yes.

Q. For the purchase of the stock of British Timken?

A. Yes.

[fol. 946] Q. I have here Defendant's Exhibit D.19. One paper is a letter headed 'London, May 12th, 1927', and signed 'Heman Ely', addressed to Sir Mark Jenkinson. It has to do with confirming an offer to purchase the stock of British Timken. Also a letter of May 12th, 1927, addressed 'Dear Mr. Ely', signed by 'Mark Jenkinson', having to do with the offer and acceptance in connection with that transaction. You are familiar in a general way with the fact that that is the way it was done?

A. Exactly, yes.

Q. Do you know who put up the money?

A. I put up my share, and the Timken Roller Bearing Company put up their share.

Q. Do you remember how much you put up and how much they put up?

A. Yes, exactly £47,500 was put up by me, and £52,500 by them."

Mr. Day: I want to offer in evidence as Defendant's Exhibit 19 the letter to Sir Mark Jenkinson from Heman Ely dated May 12, 1927, and attached to it is a letter to Heman Ely from Mark Jenkinson dated May 12, 1927.

(Document above referred to was thereupon marked by the Clerk, for identification, Defendant's Exhibit [fols. 947-948] 19.)

[fol. 949] (Continuing reading from deposition of Michael Dewar:)

"Q. This is a cable from Mr. Ely to American Timken dated May 12th, 1927, having to do with arranging for the transfer to his order of £52,500 to cover the purchase money put up by American Timken, saying that 'Dewar and our offer of two pounds per share for all of British Timken shares has been accepted', and then dealing with certain other matters having to do with the purchase of that stock. If there is no objection to that, I would like to offer it at [fols. 950-951] this time.

By Mr. Nitschke: I have no objection with respect to its authenticity.

By Mr. Day: Then you have no objection to our putting it in with Mr. Dewar on the stand, though it was not addressed to him?

By Mr. Nitschke: I reserve my rights to object to its admissibility."

Mr. Day: I would like to offer Defendant's Exhibit 20, this cable, dated May 12th, 1927, from Mr. Ely, deposition Exhibit D.20.

The Court: It may be received.

[fol. 952] Mr. Day: Cablegram from Mr. Ely to Timken Roller Bearing of May 12, 1927.

Mr. Nitschke: I don't have a copy of the last one.

The Court: These copies do not contain the last portion.

Mr. Day: I think there are two cables and the May 12th one, the last one we have here reads:

"Please arrange immediate transfer to my order funds to amount fifty two thousand five hundred pounds to cover purchase fifty two and half per cent British Timken capital stock night letter cable details follows."

You say you do not have this? We will give you a copy.

Mr. Nitschke: No, I do not.

Mr. Day: We would like to offer that in evidence.

The Court: It may be received.

(Continuing reading from the deposition of Michael Dewar:)

"Q. I have here a letter to Mr. Ely under date of May 14th 1927, signed by Mr. Dallow. Who was Mr. Dallow? [fol. 953] A. Mr. Dallow was a Director of Wolseley Motors and a Director of British Timken.

Q. After you and American Timken acquired the stock of British Timken what, if any, connection did Mr. Dallow have with British Timken?

A. Mr. Dallow was a Director and he was also the Manager of the first works we had.

Q. In this letter, which has been marked Defendant's Exhibit D.21 Dallow states to Ely: 'As requested by Mr. Dewar, I enclose inventory of plant which it is proposed should be purchased from the Wolseley Company, showing the year of purchase.'. Then there are some other parts of the letter referring to other items. Do you recall the preparation of that inventory?

A. Yes, I do.

Q. And is the inventory of the plant and so forth, which is a part of this Exhibit, the one that was prepared at your request? Is that it?

A. Yes, that is the one.

Q. That is an inventory of what?

A. Machine tools.

Q. Machine tools as of what time?

A. 1927.

Q. Machine tools acquired by whom?

[fols. 954-955] A. These were the property of Wolseley Motors. Wolseley Motors was then, as you know, purchased by Morris and the machine tools were purchased ultimately from Wolseley Motors, the owner of which was Morris.

Q. Who was Morris?

A. He is an automobile manufacturer. His present name is Lord Nuffield.

Q. And he bought Wolseley Motors?

A. Yes, from Vickers.

Q. They were engaged in the manufacture of Wolseley car?

A. Yes, and they are now.

Q. You bought these items here from Morris, is that it?

A. From Morris, yes—technically from Wolseley Motors."

Mr. Day: I would like to offer in evidence now as Defendant's Exhibit 21 a letter to Mr. Ely from Mr. Dallow, dated May 14, 1927, and attached thereto an inventory of plant to which the letter refers.

The Court: It may be received.

[fol. 956] Attached to that is an "inventory of plant, and so forth, agreed by Mr. Darrow and Mr. Boden to be included in purchase by the Timken Company from Wolseley, March 31, 1927." And then it says in writing "Also plant the property of Timken Co." Then there is a "List of plant." I won't take the time to read that, it is an enumeration of grinders and different kinds of machinery, big long inventories here, I won't take the time to read it. I want to offer it all in evidence.

The Court: It may be received.

Mr. Day: Then I said:

"These two pages I hold have to do with the letter from Ely to Sir Mark Jenkinson of May 16th, 1927, and a reply from Vickers Limited. They have to do with the waiving of certain conditions and I offer them in evidence and ask that they be attached to the Depositions."

They have already been offered in evidence.

(Continuing reading from the deposition of Michael Dewar:)

"Q. At the time of these negotiations and the time these heads of agreement were signed up by you and American [fol. 957] Timken, British Timken were making tapered roller bearings, were they not?

A. Yes."

The Clerk: Those things have not been offered.

Mr. Day: All right, I will offer them. These are two short letters, I think they refer to the long ones.

Those are Defendant's Exhibits 22.

The Court: What is 21?

Mr. Day: 21 is the letter of Mr. Ely, of May 14, 1927. These other two will be Defendant's Exhibit 22, just the

same as they were in the depositions. The one is letter from Herman Ely to Sir Mark Jenkinson, May 16, 1927, and reads:

"I have your letter dated the 12th instant. I am now prepared to waive the first three conditions in my letter of the same date and to complete the purchase forthwith so that it will only rest with Messrs. Vickers to give effect to the fourth condition when required."

The other part of the exhibit is a letter from Vickers Limited to Mr. Ely:

"We beg to acknowledge receipt of your letter of even [fol. 958] date, addressed to Sir Mark Webster Jenkinson, waiving the first three conditions stated in your letter of the 12th May 1927, with which we are in agreement."

(Continuing reading from deposition of Michael Dewar:)

"Q. At the time of these negotiations and the time these heads of agreement were signed up by you and American Timken, British Timken were making tapered roller bearings, were they not?

A. Yes.

Q. Was anybody else making tapered roller bearings in England or on the Continent at that time?

A. No.

Q. Then would it be fair to say in your opinion that in that territory British Timken was pioneering?

A. Yes, certainly.

Q. As to the market for anti-friction bearings in Great Britain at that time what was the situation of that market as to the kind of anti-friction bearings that were involved?

A. They were almost all ball-bearings. The introduction of tapered roller bearing- had hardly begun.

Q. Were tapered roller bearings used or could they be [fol. 959] used to replace ball-bearings?

A. Yes.

Q. You have stated that at that time there were no companies or manufacturers making tapered roller bearings except British Timken. Were there other manufacturers in England making ball-bearings?

A. Yes, there were plenty—three or four anyway.

Q. Will you name them?

A. The Hoffman Manufacturing Company, Ransome & Marles Bearing Company, Skefko Ball Bearing Company, and there were two other small ones whose names I forget —they do not cut any ice anyway.

Q. Skefko is sometimes called 'SKF', is it not?

A. Yes.

Q. Is that a Swedish company?

A. Yes.

Q. You were familiar with the anti-friction bearing market in the United States, were you, in 1927?

A. Superficially, yes.

Q. You were familiar, of course, with all of the activities of British Timken, were you not?

A. Yes.

Q. Have you an opinion as to whether or not in 1927 British Timken could have sold tapered roller bearings in [fols. 960-966] the American market?''

Mr. Nitschke: Your Honor, I wish to object to that question and to further questions on the same line of testimony on the grounds that where a conspiracy to restrain trade has been charged it is immaterial and irrelevant whether or not the factor or possibility of restraining trade is present.

[fol. 967] The Court: I will receive the evidence. The objection will be overruled.

(Reading continued from the deposition of Michael Dewar:)

''Q. Have you an opinion as to whether or not in 1927 British Timken could have sold tapered roller bearings in the American market?

A. I was sure they could not.

[fols. 968-976] Q. From 1927 on you have been connected with British Timken, have you not?

A. Yes.

Q. And during that time have you had knowledge of the market conditions in Great Britain and America in tapered roller bearings and anti-friction bearings generally?

A. Yes.

Q. What would you say whether or not at the present time and in 1946 and 1947 British Timken could sell or could have sold anti-friction tapered roller bearings upon a commercial basis in the United States?''

Mr. Nitschke: I wish to object to that question.

[fol. 977] The Court: I will receive this testimony. I am not going to label it for what purpose it is received and I am going to repeat again that ultimately the question of whether or not the Government is entitled to succeed in [fols. 978-979] this action will be decided upon the law as it applies to the facts that are presented. I don't believe that any great harm can come from the introduction of the testimony, if after it is received the Court interprets the law correctly and brushes aside such factual matters as are of no consequence insofar as the established law is concerned.

I will receive the testimony.

Mr. Nitschke: Your Honor, on the question as to relief, the Government hasn't attempted in its case to put in the facts which would form the basis for your Honor's granting appropriate relief should we prevail in the case. I assume if the time should come when that question was raised that I would have the opportunity of presenting whatever additional facts were needed to show that our requests for relief were proper.

The Court: Of course, this is an injunction suit, it is an action in equity and the Court isn't going to stop the lawsuit at a certain point without considering all questions that should be considered.

I will receive the testimony and your objection will be overruled at this time.

[fol. 980] (Thereupon, the following questions were read by Mr. Day and the following answers by Mr. Ketterer from the deposition of Michael Dewar:)

"Q. What would you say as to whether or not at the present time and in 1946 and 1947 British Timken could sell or could have sold anti-friction tapered roller bearings upon a commercial basis in the United States?

A. It would be quite impossible.

Q. Will you tell us why you make the answer that to do that would be quite impossible?

A. (1) We could not compete in price, not at the present rate of exchange anyway; (2) we are so far behind the requirements in this country that there is no surplus;

Q. And you are speaking of that, as I understand it, regardless of whether or not there was an agreement?

A. Oh, yes, the agreement just makes no odds.

Q. (Mr. Nitschke): I did not catch the last word of that answer.

[fol. 981] A. Whether we had an agreement or not makes no difference, because we have not anything to export.

Q. (Mr. Day): You say you have not anything to export. I also understand you to say that British Timken could not ship bearings into America upon a competitive basis now, even if you did have them to export?

A. Yes, that was my first statement. The second was that we had not got any.

Q. I now hand you a document marked Defendant's Exhibit D. 23 purporting to be an agreement executed as of 1st day of January, 1928, between the Timken Roller Bearing Company and British Timken Limited. When I have been referring to British Timken of course I mean British Timken Limited. I ask if you recognise that as being the agreement?

A. Yes, I do."

[fol. 982] Mr. Day: It is already in evidence as Government's Exhibit 12, and will you please mark it also as Defendant's Exhibit 23? It's the agreement between American Timken and British Timken dated as of January 1, 1928.

(The agreement referred to was thereupon marked by the Clerk, for identification, Defendant's Exhibit No. 23.)

(Continuing reading from deposition of Michael Dewar:)

[fol. 983] "Q. I will ask you whether or not this Agreement, to the extent that it covers matters referred to in the heads of agreement of May 16th, 1927, was, as you understand, carrying out those heads of agreement?

A. Entirely, yes.

Q. In manufacturing business what is generally understood by the phrase 'know-how'?

A. The phrase has even reached Great Britain.

Q. What does it mean?

A. It means knowledge of materials to use and methods to use in the manufacture of any specific product to make it as cheaply in manner and in material as possible.

Q. I notice in this agreement there is a provision for a royalty to be paid by British Timken to American Timken?

A. Yes.

Q. What discussions did you have with American Timken as to the reason and basis for the royalty?

A. We felt at that time that the American Timken Company had a right to payment for services rendered in addition to anything they might achieve from the Company in the shape of dividends.

Q. I ask you whether or not the trade name also entered into that?

[fols. 984-988] A. Yes, the trade name was included.

Q. And any patent rights entered into it?

A. It covered all the patent rights and what you described just now as 'know-how.'.

Q. And the trade names?

A. And the trade names.

Q. I notice that Paragraph 4(a) of this Exhibit says: 'The American Company will from time to time advise and instruct the British Company in the manufacture of bearings and particularly in connection with the quality of the steel used and its composition and analysis the method of case hardening the machinery and processes for grinding gauging sizing quenching die working forging upsetting forming sorting plating and other operations and in connection with any special tools and machinery.' What did the American Company do after this contract of January 1st, 1928, by way of furnishing information along the general line and co-operating and rendering services a'ong the general line described in that paragraph?''

Mr. Nitschke: Your Honor, I object to that question.

[fol. 989] The Court: Well, I believe I have understood your contention, either yesterday or the day before, when you expressed the opinion that all the defense is permitted to show here is that they did not enter into the agreement in restraint of trade, and that no other evidence is admissible.

Mr. Nitschke: That's right.

The Court: Your objection is in no wise different from that one, is it?

Mr. Nitschke: No, except I wanted it specifically applied to this particular type of testimony regarding know-how.

The Court: The objection will be overruled.

[fol. 990] (Continuing reading from deposition of Michael Dewar:)

"Q. —What did the American Company do after this contract of January 1st, 1928, by way of furnishing information along the general line and co-operating and rendering services along the general line described in that paragraph?

A. Apart altogether from written help in the shape of cutting times, grinding times and the number of pieces per hour and so on, they sent us over mechanics, tool room superintendents, screw machine operators and so on to try and put our output on the same basis as the output at Canton.

Q. How frequently would those American Timken men come over?

A. In the early days we had one or two every year who stayed for some time—one of them stayed for six or seven months, I remember.

Q. Can you describe generally what they did while they were over here?

A. They tried to get us to manufacture bearings as cheaply as they could at Canton, modified our methods of using our screw machines and reduced the tolerances we [fol. 991] had on the parts before they were hardened so as to make them easier to grind, introduced us to new machines and so on.

Q. And that has kept up for how long?

A. It is still going on; we got a new machine the other day, a machine designed by the Timken Roller Bearing Company.

Q. What would you say, occupying the position you have with British Timken and being an engineer yourself, as to the value of the co-operation that British Timken got from America. Timken along the lines suggested by that paragraph in the contract and of your own knowledge?

A. It is difficult to conceive that we could have started without that.

Q. And if it did assist you in starting, as you have just

suggested, state whether or not it has been of great value or not to you throughout all the years? By 'to you' I mean 'to British Timken'?

A. 'Me' is British Timken. It has been of very great advantage.

Q. And is still now?

A. And is still now, yes.

Q. You have stated, I think, as to the assistance rendered by American Timken as to manufacture and proc-
[fol. 992] esses. State whether or not anything was done by American Timken along the line of applications?

A. Yes, in our early days and even in new applications today the American Timken give us all the information they have at their disposal and they have spent a very great deal of money on certain applications which we have just adopted, say on locomotives and things like that. We just take their experience and their de igns and just put them nearly straight in.

Q. From an engineering standpoint what do you mean by 'application'? Here we are talking about application of tapered roller bearings.

A. You are talking about application of anti-friction bearings to machine tools, to every conceivable form of rolling motion.

Q. Have the British Timken representatives visited America and American plant over the years?

A. Yes, often.

Q. Outside of yourself, and I will ask you about yourself later, have other representatives of British Timken gone over to America?

A. Yes, considerable numbers.

Q. And when they went over there for what purpose did they go and in so far as you know what did they do when
[fol. 993] they got there?

A. They went over to study the methods of operation that were actually functioning at Canton and the experimental research department at Canton, where they were always experimenting with new ideas, and to look and see how they were getting on with new applications on things like locomotive connecting rods and so on.

Q. When they got back to England again would they report what they saw over there?

A. They did, yes.

Q. Did you know whether the ideas and methods that they learned over there were to some extent at least adopted by British Timken?

A. I think the answer is in general, yes, we have benefited greatly from those visits.

Q. And that is continuing right up to the present time?

A. Yes, we had four men over there at the time of the Machine Tool Exhibition in Chicago last fall.

Q. Did you from time to time go over to America and visit the Timken plant at Canton?

A. I did.

Q. Did you learn anything of advantage to British Timken by those visits?

A. I think so.

[fol. 994] Q. State whether or not British Timken maintained or does maintain a research department.

A. Yes, we do.

Q. How extensive is it?

A. I should think it is probably about one-fifth of the size that Canton have.

Q. Have you any idea of the expenditure of American Timken in connection with its research department?

A. Yes, only from hearsay.

Q. We can show that otherwise if you do not know it of your own knowledge. In carrying on the operations of British Timken state whether or not you relied upon the research department information you received from American Timken?

A. Yes; I cannot say entirely, because there are differences in conditions between this side of the Aflantic and the other.

Q. I do not mean entirely, but was it of value to you?

A. Yes, of great value.

Q. I am going to hand you Defendant's Exhibit D.24, an agreement of April 20th, 1928, between British Timken Limited and yourself and ask you if you recognise it?

A. Yes, that is the first one."

Mr. Day: Now, we would like to mark that as our Ex-
[fols. 995-1000] hibit 24. It was D.24 in the deposition and we want to offer it in evidence.

(The agreement above referred to was thereupon marked by the Clerk, for identification, Defendant's Exhibit No. 24.)

[fol. 1001] (Thereupon the following questions and answers were read from the deposition of Michael Dewar:)

"Q. After January 1st, 1928, or at least after the heads of agreement were signed up, did British Timken make any purchases of equipment or plant or other things of that kind?

A. Yes, a great deal.

Q. Can you tell us in a general way what they did acquire, just briefly?

A. Up to what date?

Q. Up to 1934, let us say?

A. I should think we at least trebled the size of the place. I can get actual figures if you want them.

Q. We will have the figures, but did the business of British Timken increase after 1934?

A. Yes, it flourished very greatly.

Q. From 1928 to 1934, how closely did you keep in touch with the business?

A. Entirely closely, very closely, daily.

Q. And you have at all times?

A. Yes.

Q. State whether or not after you severed your connection with Vickers and became connected with British Timken, British Timken became your life-work?

A. Yes, it did.

[fol. 1002] Q. Defendant's Exhibit D.25 is a letter of June 7th, 1929, from Timken Roller Bearing Company to yourself. Do you recognize that?

A. Yes, I remember that.

By Mr. Day: That provides that the existing license agreement between the Timken Roller Bearing Company and British Timken Limited shall be amended to the effect that such Agreement shall continue in force for fifteen years, instead of ten years. It also provides that the compensation of Mr. Dewar from British Timken Limited, then provided by contract to be 3,000 pounds per year shall, as from January 1st 1929 be increased to 5,000 pounds per

year. We offered that in evidence and ask that it be attached to the depositions."

Mr. Day: Now, I understand that letter is already in evidence.

Mr. Rudolph: Yes, that's Government' Exhibit 17.

Mr. Day: We would like to offer it as efendant's Exhibit 25.

The Court: It may be received.

(The document mentioned above was marked by the Clerk, for identification, Defendant's Exhibit No. 25.)

[fol. 1003] (Continuing reading from deposition of Michael Dewar:)

"Q. Do you recall coming to America in 1934 on business connected with British Timken?

A. Yes.

Q. Who came over with you, if anybody?

A. Mr. Pascoe.

Q. Who is Mr. Pascoe?

A. Mr. Pascoe has been my colleague and he has been a Director of British Timken since 1930. He is now Managing Director of the Company.

Q. What is your office now?

A. Chairman.

Q. I think I did ask you that.

A. You did.

Q. When you came to America did you confer with some of the American Timken folks?

A. We did.

Q. Where did those conferences take place?

A. They took place mostly at Canton.

Q. Can you recall who were there, as representing or connected with American Timken?

A. Mr. H. H. Timken, Mr. A. C. Ernst, and Mr. W. R. Timken sometimes. They were the principals. I would not like to say how many of the others, from time to time, [fol. 1004] were there.

By Mr. Nitschke: Could I ask which W. R. Timken that is?

Q. (Mr. Day) That is W. R. Timken senior?

A. Yes.

Q. I have here a document marked Defendant's Exhibit D.26. It is typewritten and is headed on the first page 'British Timken'. I ask if you know what that is?

A. This was a document prepared by myself, with the help of my colleagues, which was in the shape of what diplomatically, I think, is called an aide memoire, for discussions.

Q. This was produced from what files?

A. I have no idea. It is my own I expect.

Q. It came from American Timken, probably, Mr. Ketterer says, but you identify it?

A. Yes, rather.

Q. When you came over to America and talked to the American Timken representatives upon this occasion, did you show them that memorandum?

A. I think so, yes.

Q. Was there a suggestion made at that time that there be stock in British Timken sold to the public?

A. Yes, the suggestion came from me.

[fols. 1005-1006] Q. Was that the first suggestion, do you know, along that line?

A. I think so, yes; I do not remember discussing it before.

Q. There is a heading here 'British Timken,' 'Placing B.T. Shares on the market,' 'Control' and there are other headings dealing with other subjects. Did this set forth some of the reasons why you were in favour of additional stock?

A. Of stock being sold?

Q. Yes.

A. Yes, it did."

Mr. Day: I want to offer in evidence now and have marked as Defendant's Exhibit 26 this document which is headed "British Timken," consisting of several typewritten pages. It was offered in evidence in the deposition taken, as D.26. I would like to offer it now as our Exhibit 26.

The Court: It may be received.

(The document above referred to was thereupon marked by the Clerk, for identification, as Defendant's Exhibit 26.)

[fol. 1007] Mr. Day: We offer our Exhibit 26 in evidence.

The Court: It may be received.

(Continuing reading from deposition of Michael Dewar:)

"Q. When was it that the additional stock was sold?

A. I think the following year to that.

Q. 1935?

A. Yes, I think it was 1935.

Q. Do you remember how much stock was sold?

A. Yes, half the existing Common Stock—Ordinary Shares, in this country.

Q. Do you remember whether or not the Company was changed from a private Company to a public Company?

A. Yes, it became a public Company.

Q. Can you tell from memory the number of shares that were sold? You can refresh your recollection as to anything from this document D.26, if you wish.

A. I do not know that even this will be correct as to the ultimate arrangement. I think half the shares were sold.

Q. How many shares would that be?

A. Might I ask you to invite Mr. Pascoe to give testimony on that particular point, because he dealt with the whole share issue and I would much sooner not make mis-[fol. 1008] leading statements.

Q. Very well. Do you recall that there was a contract made in 1935 between American Timken and British Timken?

A. In connection with this issue of shares? There were several.

Q. Would you prefer that we asked Mr. Pascoe about that?

A. I am perfectly willing to be asked about that but you said 'a contract' and I was trying to think to which specific one you were referring.

Q. Do you recall that there was organized, in connection with the sale of stock to the public, a British Corporation known as The Timken Holdings Company?

A. Yes, certainly.

Q. What was the purpose of organizing that Company?

A. You will recollect that in the original British Timken, before the sale of stock, control of the Company was vested in me by virtue of dividing into 'A' and 'B' shares and giving the control to one or other class of share. When we sold half the Common Stock on the market it left obviously not enough to swing control, so the control was vested

in Timken Holdings and if the profits of British Timken Limited did not reach a certain figure, then the control of [fol. 1009] Timken Holdings was to pass from the control by my shares to the control by American Company shares.

Q. State whether or not the provisions in that regard, as a part of the organization of Timken Holdings were the same as in the original contract?

A. Yes, the object of Timken Holdings was to continue the implementation of that Agreement.

Q. And is that Timken Holdings contract still in effect?

A. Yes.

Q. So that the control of British Timken is now where?

A. With me.

Q. Under this agreement?

A. Yes.

Q. I will ask you whether or not, when you talked to the people in Canton concerning the sale of additional stock, and the manner of working it out, anything was said as to the importance of retaining control where it was prior to that time?

A. Yes. The formation of Timken Holdings was a sign that that was so, because that was what Timken Holdings were for. There is one thing: this was not a sale of additional stock. It was a sale of stock.

Q. On page 2 of this memorandum, D.26, heading 2, it [fol. 1010] says: 'Placing B.T. Shares on the market'. Reading the third paragraph it says: 'This could be done, as I have shown in a short memorandum, by the T.R.B.' (that is Timken Roller Bearing)' and myself selling shares on the British Market, while the control of the company could still remain between the T.R.B. Co., and myself, through the formation of a holding company, holding say 51% of B.T. share capital.' Was that discussed?

A. Yes.

Q. And that was done?

A. It only held 50%, but it was done.

Q. Do you recall in connection with the sale of the stock to the public about which we have been talking, some negotiations with the Brokers connected with the sale, upon the subject of extending the term of the contract between American Timken and British Timken?

A. Yes, I do very closely.

Q. Will you tell us what they said upon that subject?

A. They were of the opinion that we could not really expect to sell stock to the British public without a long term contract with the Timken Roller Bearing Company, particularly for the use of the name; in other words the goodwill of the Company rested largely in the association [fol. 1011] with the American Timken Company.

Q. And as a result (if such were the fact) of that position taken by the Brokers, what if anything was done to your knowledge as to extending the term of the then existing contract?

A. It was, I believe, extended to 30 years.

Q. So that the contract runs now how long, do you know?

A. Without refreshing my memory, I cannot tell you.

Q. After the stock was sold to the public, state whether or not the operations of British Timken continued along the same lines that you have already described?

A. Yes, exactly the same lines.

Q. You are not familiar, as I take it, with the terms of the 1935 contract sufficiently to testify about it?

A. The one with me personally?

Q. Between British Timken and American Timken?

A. I would prefer Mr. Pascoe to testify to that.

Q. Do you know whether or not any change was made in the existing contract by the terms of the 1935 contract as to Russia?

A. Yes, there was as to Russia."

Mr. Day: That contract is dated December 31, 1934, is it not?

Mr. Ketterer: Yes, I think it is.

[fol. 1012] Mr. Day: I think that the contract referred to in this case is 1935 but dated the last day of 1934.

(Continuing reading from deposition of Michael Dewar:)

"Q. Will you state what that was?

A. Previously, Russia had been British Timken territory and it was decided after a good deal of discussion that Russia should be a neutral territory because the Russians were at one moment in the mind to put their orders in England and the next moment in the mind to put their orders in the United States, so we thought the best way of sharing it was to have it neutral.

Q. And is that what you mean by saying Russia was neutral?

A. Well, perhaps!

Q. I will hand you now the Defendant's Exhibit D.27, an agreement between the Timken Roller Bearing Company, British Timken Limited and Societe Francaise Timken, and Defendant's Exhibit D.28, a supplemental business agreement between Timken Roller Bearing Company, M.B.U. Dewar Esq., and British Timken Limited. Will you look at those two documents and tell me if you identify them as being what they purport to be?

A. Yes.

[fol. 1013] Q. Now this one agreement, D.27, between the Timken Roller Bearing Company, (American Timken), British Timken and French Timken, has the three companies as parties to one contract?

A. That is so.

Q. Do you recall any discussion in which you participated, upon the subject of drawing up a contract that way?

A. The idea was to try and get into one legal document what was then contained in, I think, 3 or 4 different ones. The original agreement with France was made by British Timken only and that agreement you have there made the three of them parties to one agreement.

Q. Is there, do you know, any distinct difference by way of provision between this contract and the contracts which preceded it, the main contracts?

A. There was certainly nothing of any substance. There may be a variation in the words but the substance was the same.

By Mr. Nitschke: Which contract is that?

By Mr. Day: The business agreement of 1938 and the agreement of January 1st, 1928, and those which followed and supplemented that. Of course they show for themselves what, if any, differences there are.

[fol. 1014] By Mr. Nitschke: You are including both the original agreement and the supplemental agreement in the question?

By Mr. Day: No, I was not including the agreement between American Timken, M.B.U. Dewar and British Timken. I was including the three-party agreement and wish it to be so understood.

Q. I asked you before the intermission as to the attitude of the brokers in connection with the sale of stock to the public in 1935 upon the subject of an extension of the agreement between American Timken and British Timken.

A. Yes.

Q. Do you recall whether or not anything was said by the brokers as to such an extension bringing about a better acceptance of the Timken product?

A. We, I think, assumed that we should be better off as the result of that and that must include improved sales.

Q. Do you recall whether they said anything about it?

A. No, I would not recall.

Q. Reference has been made to the fact that there are territorial provisions in some of these contracts we have been talking about. What was the policy of both companies under this agreement in the event that one of them was [fol. 1015] more able to make a sale in a given territory than the other?

A. We had a common enemy in the Swedish S.K.F. who had begun the manufacture of tapered roller bearings, and our general policy was that if a tapered roller bearing was sold it had got to be a Timken and not a S.K.F. To us it was really immaterial whether it was made in the United States or whether it was made in Great Britain or France, provided it carried the name 'Timken'. We used to sell at the request of the American Company in the Argentine and the American Company has sold at our request in our territories.

Q. For the purpose of getting the Timken bearings sold?

A. Getting the Timken bearings sold, yes.

Q. Did S.K.F. begin the manufacture of tapered roller bearings?

A. Yes. I think it would have been about 1930 when they really came to the conclusion that they had lost something by not having tapered roller bearings in their repertoire.

Q. And they started to make them?

A. Yes.

By Mr. Nitschke: Are you referring to the British S.K.F. Company?

[fol. 1016] By The Witness: When I say 'S.K.F.', I am afraid I shall be referring to SK.F Sweden, S.K.F. Eng-

land, S.K.F. France and S.K.F. Germany. As far as we are concerned, it is all one; European S.K.F. I am afraid I do not know enough about the American S.K.F.

By Mr. Nitschke: I just wanted to know which Company started to make tapered roller bearings in 1930.

By the Witness: The S.K.F. in Gottenburg, Sweden, the S.K.F. in England, at Luton, the S.K.F. Company in Paris, called C.A.M., and the S.K.F. people in Germany. They all started at the same time.

Q. (Mr. Day): I asked you this morning whether, back in 1927, anyone was manufacturing tapered roller bearings in Great Britain except British Timken, and you said you did not think there was anybody. Has it occurred to you that there was somebody?

A. Yes; you are quite correct. There was a Company called Bock which had a very small Works in Glasgow. It was a subsidiary or an affiliated Company to the American Bock Corporation. It was so small that it was never really of any competitive danger to us, or of any sales danger. I would like to add that it went out of existence [fol. 1017] very shortly afterwards.

Q. The questions and answers have brought us up to 1938. I think you testified this morning that you became connected with the war effort in 1940?

A. Yes. You mean official war effort?

Q. Yes. I mean in connection with the Government.

A. Yes.

Q. I want to refer now, if I may, to the French Timken situation. Without going back to it by actually referring to it, it is a fact, is it not, that the heads of agreement of May 16th, 1927, between you and American Timken provided for the organization or creation of Continental Companies?

A. That is so, yes.

Q. Do you know what, if any, French Company was selling Timken roller bearings prior to 1927?

A. The Societe Mecanique de Genevilliers—S.M.G.—was making and selling Timken roller bearings in France.

Q. Do you know the arrangement between British Timken and S.M.G. in that regard?

A. Yes. I am not closely conversant with the details

of the contract, but the general arrangement was a royalty one and that S.M.G. had the name 'Timken'.

Q. Do you know whether or not S.M.G. was manufacturing Timken tapered roller bearings?

[fol. 1018] A. They were manufacturing in a very desultory and rather crude way.

Q. What was the situation as to the trade name in France?

A. It was rather difficult, because it did not appear that if the contract with S.M.G. was cancelled we should be certain of getting the name back.

Q. Do you know whether or not the name had been registered in France?

A. I believe it had.

Q. By S.M.G.?

A. By S.M.G., yes.

Q. What was the extent of the manufacture by S.M.G. of Timken tapered roller bearings?

A. Trivial.

Q. What discussion did you have with Mr. Ely before the heads of agreement were signed up, generally, upon the subject of the situation in France?

A. That it was extremely unsatisfactory, but we were rather in a cleft stick, because if we decided to terminate with S.M.G., we wanted to be quite sure we should get the name back; I mean, that the Timken organization would get the name back and not leave it in the hands of someone else.

Q. When you say 'the name', you mean the name 'Timken'?

[fol. 1019] A. Yes.

Q. Do you know whether or not S.M.G. was a ball bearing manufacturer?

A. Yes.

Q. Do you know whether or not the market for bearings in France at that time was predominantly a ball bearing market?

A. Almost entirely.

Q. Can you recall now anything else that was said between you and Mr. Ely upon the subject of organizing a Company in France?

A. We decided that it would be much better to organize

our own Company in France, and we proceeded to do so.

Q. State whether or not anything was said about having your own Company manufacture bearings in France.

A. Yes.

Q. Was anything said about the importance of having a Timken organized Company manufacture the Timken tapered roller bearings in France?

A. Yes.

Q. What was said upon that subject?

A. It was agreed that it should be a Timken Company owned and operated by the Timken Roller Bearing Company of Canton and myself.

[fol. 1020] Q. You say the company was organized?

A. Yes. It is in operation today.

Q. It was organized as a corporation under the laws of France?

A. It was; a corporation of limited liability.

Q. By whom was the capital provided?

A. By the Timken Roller Bearing Company and myself.

Q. Why was it necessary, if such was the fact, to have your bearings manufactured by a French Company?

A. There was the problem of duty, there was the problem of sales resistance to foreign corporations—and the French are particularly anxious to have, or were then, products used in their engineering industry made in the country—and also the automotive industry at that time was looking very much to America for its designs. Citroen had decided that he was going to use tapered roller bearings in his car, and we decided that here was an excellent opportunity to make them in France for Citroen.

Q. Can you give us some notion as to the size and importance of Citroen as a manufacturer of automobiles at that time?

A. He was the biggest manufacturer in France. Citroen was probably making a quarter.

Q. Did you get a contract with Citroen?

[fol. 1021] A. We did.

Q. After you organized your French Company, did it start operations, manufacturing operations?

A. Yes.

Q. What, if anything, was done by the British Company

by way of assistance to the French Company and cooperation with the French Company?

A. The British Company did towards the French Company what the American Company had done towards the British Company, provided all the know-how and the men, and so on, to start them up.

Q. Do you know whether or not the American Company also directly participated in that assistance?

A. Yes, they did. When British Timken had American technicians over, they always went to France, and they do still to this day. We started in France by importing unground components from England and from America and grinding them in France, some of the components from England and some from America. We still import from America, too.

Q. Is it a fact that both the British Timken and American Timken co-operated with French Timken and assisted French Timken materially?

A. Yes.

Q. In the matter of manufacturing processes?

[fol. 1022] A. Certainly.

Q. Did they also assist them in the matter of manufacturing applications, if that is the proper term to use?

A. Yes, they did.

Q. I will ask you whether or not, in your opinion, the cooperation and assistance provided French Timken by British Timken and by American Timken was essential to the success of French Timken?

A. Certainly.

Q. You say that cooperation and assistance has continued right along?

A. Yes, very closely.

Q. And is continuing now?

A. Yes.

Q. I hand you Defendant's Exhibit D.29, an agreement, it is here recited, made as at the 16th June, 1928, between British Timken and the French Timken. Do you recognize this as a copy of that agreement? It says 'The Common Seal of British Timken Limited was hereunto affixed in the presence of' M.B.U. Dewar and others, signed on behalf of the French Timken with the French name by a man

named Seward. Do you recognize that as being the agreement? (Exhibit handed to the witness).

[fol. 1023] A. Yes.

Q. This was the agreement between British Timken and French Timken which preceded the agreement of 1938, ten years later, between American Timken, British Timken and French Timken, was it not?

A. That is so, yes."

[fol. 1024] Mr. Day: I think we have this straightened out now, your Honor. Defendant's Exhibit 26 is this typewritten memorandum, and that was D.26 attached to the deposition. We offer that in evidence.

The Court: It may be received.

Mr. Day: Defendant's Exhibit 27 was Government's Exhibit 26, and deposition exhibit 27.

[fol. 1025] We offer this Defendant's Exhibit 29, which is a contract between British Timken Limited, and French Timken, dated June 16, 1928.

The Court: That is the agreement between British and French Timken?

Mr. Day: Yes, your Honor, dated 1928.

We offer Defendant's Exhibit 28, which is the agreement [fol. 1026] between American Timken, British Timken, and Mr. Dewar.

The Court: That is the agreement of November 29, 1928. That will be received.

Mr. Day: And Defendant's Exhibit 27, we offer that also.

The Court: That will be received.

Mr. Day: These exhibits, as your Honor knows, when we took the deposition, were attached to the Order and marked, and of course both sides now are offering them as exhibits in this trial.

I am on page 52.

(Reading of deposition of Mr. Dewar resumed:)

"Q. You stated a while ago that this S.M.G., to the best of your recollection, had registered the name 'Timken'; is that right?

A. That is so, yes.

Q. After the French Timken was organized, what dealings took place between S.M.G. and French Timken? What happened in that regard?

A. We got the name back, but I would not like to say exactly how. I think that perhaps one of my French colleagues is more conversant with that, Mr. Augis.

Q. Is it true that in any event after French Timken was organized in the manner we have been talking about the [fol. 1027] name 'Timken' passed from S.M.G. to French Timken?

A. Yes, it did.

Q. What do you recall about the purchase of equipment and plant and buildings or the acquisition of them for French Timken after it was created?

A. We rented buildings at that time, some of which we have since bought, some of which we still rent, and we purchased machinery, some of which came from Canton, some of which came from England and some of which came from France.

Q. How many men are employed at French Timken now?

A. About 500.

Q. How many men were employed by S.M.G. in 1927 or 1928?

A. On tapered roller bearings?

Q. Yes.

A. A couple of dozen, I should think; perhaps not as many.

Q. How many were employed by S.M.G. on ball bearings in 1928?

A. I am afraid I would not like to commit myself. Mr. Lemarie can give you that information.

Q. Something is said in the heads of agreement (without referring to it by getting it out of the exhibits) about the situation in Germany as to British Timken at the time that [fol. 1028] you had had your discussions with Mr. Ely?

A. Yes.

Q. What was the German situation as of that time?

A. During the first World War a man of the name of Prausnitzer had registered for himself the name 'Timken', I believe in 1916; anyhow, during the period of the war. He was a German citizen.

Q. What was his relation to British Timken?

A. His relation previous to the first World War had been that he was a representative of Vickers in Germany and he did sell what Timken tapered roller bearings were

sold in Germany; so that when the 1914/18 war ended we found Prausnitzer in Germany owning a small company which, for short, I will call D.T.G., German Timken Company, and we were totally unable to wrest the name from him, because it was his own personal property, the name of Timken.

Q. That is, the trade mark 'Timken' was registered in Prausnitzer's name?

A. Yes. It belonged to Prausnitzer.

Q. Then what was done with relation generally to Germany?

A. We set out to form a company exactly in the same way as we had in France, the idea being to import parts [fol. 1029] from England and the United States and finish them and assemble in Germany. We did this and we carried on till, I think, 1934, when the Hitler position became rather acute and we decided that we would get out from underneath as soon as possible, and we shut down and came out.

Q. Was that the end of the German enterprise?

A. That was the end of the German enterprise; but, in order to enable us to get the German Timken Company under control of Timken again, we had to pay Prausnitzer, I think not in cash, but we gave him a 20 or 25 per cent interest in the German Company and a salary as manager of it.

Q. Then Prausnitzer assigned——

A. Prausnitzer assigned his Company to us.

Q. So that the trade mark which had been registered in the name of Prausnitzer passed to the German Timken; is that right?

A. Yes, that is right.

Q. In 1934 do you know what happened to the trade mark 'Timken' in Germany?

A. I presume the trade mark still belongs to the Deutsche Timken Gesselschaft.

Q. Do you know whether or not it was acquired by British Timken?

[fol. 1030] A. No, I do not know.

Q. Was the operation of French Timken affected by the second World War?

A. Yes, slightly. The machines were lubricated with water for the best part of four years.

Q. I have here a cablegram that we can mark Defendant's Exhibit D.30, May 12th, 1927. That is while you were negotiating with and conferring with Mr. Ely?

A. Yes.

Q. It says: 'Tuesday in Birmingham today active negotiations Vickers stop First conference solicitors both sides Thursday.' Inasmuch as we are now dealing with the German situation, I call your attention especially to this: 'Prausnitzer matter complicated since rights were given under original contract and British Company has agreed in supplemental contracts to restore name which in this case they are powerless to do without Prausnitzer consents stop Careful search being made for all records in the case stop We and Dewar can better treat with Prausnitzer than Vic-ers if in accord on other items as Prausnitzer than to be a party to bigger business in Germany stop At present all sales to Germany are made thro Prausnitzer stop Believe he will release name for some small prospective interest in future business.' Does that set forth some of [fol. 1031] the things with relation to Germany and Prausnitzer that you and Mr. Ely discussed in your conferences?

A. Yes; I think that sets out practically what I have told you."

Mr. Day: Now, this is a cable from Ely to American Timken dated May 12, 1927. It has already been read. That will become Defendant's Exhibit 30. I would like to offer it in evidence.

The Court: It may be received.

(Reading from the deposition of Michael Dewar continued:)

"Q. After the liberation of France during the last World War, did you visit France?

A. Yes. I was flown over twice by your United States War Department and United States Navy Department.

Q. From where—here?

A. Here, yes.

Q. To France?

A. Yes.

Q. What was the object of that mission?

A. To try and get the French Timken Company going again to provide tapered roller bearings for American transport vehicles.

Q. Did you go over?

[fol. 1032] A. Yes, I did.

Q. And do all you could in that direction?

A. Yes.

Q. I think I have reached the end of the direct examination. You have been talking about dates and matters that had to do with transactions that now are 20 years old, some of them. I assume that if any of those dates are matters of record, we will refer to the record for them; is that right?

A. Most certainly. As I told you, there are some dates which one would always remember, like one's birthday and so on, with which one was vitally concerned. In this case I have been vitally concerned in a good many dates.

By Mr. Day: That concludes the direct examination, of course on the understanding that, if at any time before we are all through, something else occurs to us that we should ask by way of direct, we will do so; but, for the time being, that is our direct examination."

Mr. Nitschke: Your Honor, we would like to offer now our cross examination on this part of Mr. Dewar's testimony. The part of Mr. Dewar's testimony that affected our affirmative case we have already put in. The portion which we will offer in cross examination begins on page 124 [fol. 1033] of the transcript. My examination of Mr. Dewar.

(Questions in examination of Mr. Dewar read by Mr. Nitschke and answers by Mr. Dedman:)

"Q. Do you have your own application department?

A. Yes.

Q. Which develops bearings for various uses on machine tools, trucks and automobiles and things of that sort?

A. Yes.

Q. And have you developed applications in your research department which have been put in use?

A. Oh, yes.

Q. And you have persuaded customers that they were

desirable and persuaded them to buy tapered roller bearings?

A. Yes—and necessary.

Q. Were all of those applications transferred to the American Company—in other words, did you make your know-how known to the American Company?

A. Yes.

By Mr. Day: When you say 'transferred,' do you mean communicated?

Q. (Mr. Nitschke) Yes.

A. Yes, certainly.

[fol. 1034] Q. Did you ever receive any applications or any proposals or designs for applications from the American Company which were objected to by British manufacturers, or which you could not use in selling to British manufacturers?

A. Only in those cases where the engineering practice of the two countries is so different that it makes them impracticable.

Q. So that there were some applications received from American Timken which you could not use?

A. And vice versa.

Q. In which case you used your own application, or one of your own designs?

A. Yes.

Q. You also mentioned that tapered roller bearings are interchangeable with ball bearings. Is that true in all cases, Mr. Dewar?

A. No—oh, no.

By Mr. Ketterer: I object to the form of that question. He did not say that to begin with.

Q. (Mr. Nitschke): You correct me if I am wrong, Mr. Dewar, and tell me what you did say with respect to interchangeability.

A. I believe you asked me if in certain cases they were interchangeable.

[fol. 1035] Q. You mean, Mr. Day asked you?

A. Yes, Mr. Day; that is right—only there are many cases where they are not interchangeable, and certainly the design has to be modified to make them interchangeable.

Q. So that a manufacturer of a truck who has dies and

equipment set up for manufacturing an axle and a wheel of a certain size may find he often requires himself to change the design of his axle and wheel in order to change from a straight roller bearing to a tapered roller bearing—is that what you mean?

A. I do not mean he has to change anything quite as much as that, but the thing would have to go through his drafting office again and be redrawn, and the machining would be different.

Q. He could not just take the ball bearing out and in the hole place the tapered roller bearing?

A. No, he could not.

Q. Can you do that in some cases or in no cases?

A. Well, I should say in almost no cases, because the tapered roller bearing is in two parts. The ball bearing is one and cannot come to pieces by itself.

Q. So it would not be an appropriate engineering practice to sell tapered roller bearings for replacement of ball bearings?

[fol. 1036] A. No. There is one special case where there is a ball bearing was made in two loose parts; that is in the front wheel of General Motors cars, Chevrolet.

By Mr. Ketterer: I think that question is somewhat equivocal. Are you talking about replacement of bearings in equipment originally designed to take roller bearings, or are you talking of the installation of tapered roller bearings in equipment at the time of its original design?

By Mr. Nitschke: I was talking of both.

Mr. Ketterer: Well, there is some difference between the two.

Q. (Mr. Nitschke): Do you think on Mr. Ketterer's suggestion that you should change your testimony in any way, or modify it?

A. No, not at all. I think, from an engineering point of view, I am quite satisfied with my own answer.

By Mr. Nitschke: Well, I am satisfied with it."

Mr. Nitschke: Then, your Honor, there are some further questions in connection with my affirmative case. I go now to page 130 of the transcript where I read the cross examination of Mr. Dewar on the date that Mr. Day's questions were continued, starting with the last four questions.

[fol. 1037] The Court: Is that included in any of these looseleaf books?

Mr. Nitschke: No, it is not.

Beginning with the fifth question from the bottom of page 130 of the transcript.

(Questions read by Mr. Nitschke and answers by Mr. Dedman, as follows:)

"Q. (Mr. Nitschke): I am now returning to what Mr. Day calls my cross-examination, Mr. Dewar. What is the distinction in England between a private company and a public company?

A. A private company does not have to publish its balance sheets publicly, and a public company does. There are other distinctions, but that is the fundamental one.

Q. On Thursday or Friday Mr. Day was questioning you and asking you whether the ideas and methods that you and your people had learned while observing American Timken's practice were to some extent at least adopted by British Timken, and I think you said the answer in general is Yes. I take it then that there were many ideas and methods which either you or the employees of British Timken observed being practiced by American Timken that were not adopted by British Timken?

A. Some, yes.

[fol. 1038] Q. There were some that were not adopted?

A. Yes.

Q. That is, American Timken throughout the period from 1928 to date controlled your managerial discretion in selecting methods of production?

A. No.

Q. In selecting bearing applications?

A. May I ask for a definition of 'control'?

Q. Have they insisted that you follow them?

A. No.

Q. I think I asked you with respect to methods of production and with respect to bearing applications?

A. Yes.

Q. I also asked you with respect to the design of the bearings?

A. No.

Q. That is true for ball and straight roller bearings?

A. Yes.

Q. And tapered roller bearings?

A. Yes.

Q. Was it true with respect to French Timken's methods?

A. Yes.

Q. And applications and designs?

A. Yes.

Q. You look a little quisical. What I am really indi-
[fol. 1039] cating is that certainly they did not insist on you following any of their methods with respect to ball and straight roller bearings?

A. They had not any. They had no methods, so that we could not follow them. That is why I was feeling that I did not understand the question.

Q. Has American Timken throughout the period from 1928 to date regularly inspected British Timken's methods of production—I will make this specific with respect to tapered roller bearings?

A. If by inspected you mean, sent a team of people to make an official inspection, no.

Q. That is what I did mean. Did you want to add something to that?

A. I wanted to add that we have always had the very closest cooperation, and we have sent people over there to inspect what the Timken Roller Bearing Company was doing so that if conditions in this country or in France were suitable, we could follow those methods.

Q. You meant by 'inspect,' observe their methods?

A. I did. We have had many people from Timken Roller Bearing Company who have told us that they have developed some new method for doing something and then suggest that we should send someone over to see it.

[fol. 1040] Q. But they have not, I take it, regularly inspected in the sense of checking?

A. No.

Q. And testing of your methods of production?

A. No.

Q. Nor have they had inspectors regularly allocated in your plant?

A. No.

Q. Or regularly visiting your plant to do that?

A. They used to have our bearings in their Testing De-

partment in America before we had a Testing Department of our own and run them to destruction for our benefit.

Q. How long ago is that? How long has it been since you have had your own Testing Department and have done that yourself, approximately?

A. Ten years.

Q. Throughout the period from 1928 to date. I asked you that question previously with respect to British Timken, that is whether they inspected and inspect. Did American Timken inspect or check regularly the French firm's methods?

A. I think you may take it that the same answers I gave for British Timken apply to French Timken.

Q. You think that is true in every case with respect to [fol. 1041] know-how?

A. I do, yes.

Q. Then I will not ask you anything further on that, unless you think there is any distinction.

A. No, I do not think there is any distinction.

Q. Throughout this period from 1928 to date have you given American Timken samples of each new type of bearing construction which you designed?

A. I think so, yes.

Q. Is that true of ball and straight roller bearings as well as tapered?

A. No.

Q. You think that is true in every case though in respect to tapered roller bearings?

A. Yes, I do.

Q. And throughout this same period from 1928 to date did you submit to American Timken for its advance approval every new engineering application which you developed?

A. No.

Q. And that is true, of course, for ball and straight roller bearings as well as tapered?

A. Certainly, yes.

Q. Throughout this same period from 1928 to date with respect to drawings and details of bearing applications [fol. 1042] which you have received from American Timken, has American Timken insisted that there be no mate-

rial departure from them by British Timken in its practice or in its production?

A. I cannot think of any insistence but——

Q. Well, let me put it this way.

By Mr. Day: I think you want to finish your answer, Mr. Dewar, you said 'but.'

Q. (Mr. Nitschke): I am sorry. I thought my question was not quite clear.

A. Fundamentally we must manufacture identical bearings for the sake of interchangeability.

Q. Then let me ask you the further question: When you have put into production, let us say, a new application which you have designed, have you always obtained American Timken's consent?

A. No.

Q. Before putting such new application into production?

A. No, we have not.

Q. As to the detail of processes and methods for manufacturing bearings which have been changes from your prior practice and which you have developed, have you always obtained American Timken's consent before making those changes?

A. No. We have informed the American Timken Com-[fol. 1043] pany of any methods of manufacture.

Q. But it was your own decision as to whether or not you would put those into effect?

A. Yes.

Q. And that is true of tapered bearings?

A. Tapered bearings.

Q. And, of course, of ball and straight roller bearings?

A. Yes.

Q. Or did you inform them of changes in bearing applications on ball and straight roller bearings?

A. No."

Mr. Day: Is the answer to that "Yes"?

Mr. Nitschke: "No." Here I think he said, "No," he did not inform them of changes in bearing applications.

Mr. Day: All right.

(Reading continued:)

"Q. Have British Timken and French Timken received any drawings or details of bearing application from American Timken on ball bearings?

A. Not to my knowledge.

Q. And straight roller bearings?

A. Again not to my knowledge.

Q. Have you received details of processes and methods from American Timken on ball bearings?

[fol. 1044] A. No.

Q. And straight roller bearings?

A. No.

Q. In other words with respect to ball bearings and straight roller bearings, if I may coin a phrase, you received don't know-how from American Timken?

A. I would not like to say that. There was a time when the American Timken Company, in order to help the war effort, did make a series of ball bearings for a short time.

Q. Some time during this last war?

A. Some time during the war, yes, so that we did have an occasional correspondence regarding ball bearings at that time, but that died a natural death with the end of the emergency.

Q. As a result of that you received no know-how from them on the manufacture of ball and straight roller bearings?

A. No, I should say we have not received any know-how, but I did not want the word 'not know-how' to appear as my considered opinion.

Q. Well, I will concede that.

A. Thank you.

Q. In practice, Mr. Dewar, throughout this period from 1928 to date have you exercised your own discretion in [fol. 1045] determining whether to adopt or reject any know-how communicated to you from American Timken?

A. Yes.

Q. During this period did American Timken communicate to you any secret processes?

A. Not that I am aware of.

Q. Did you ever take any oath of secrecy with respect to any of the information which you received from American Timken?

A. No.

Q. Did you put under an oath of secrecy any of your employees or officers who were aware of or utilising any of the know-how received from American Timken?

A. No.

Q. Has the public throughout this entire period been denied access from all parts of your plant where you have been using any know-how received from American Timken?

A. May I ask for a definition of the word 'public'?

Q. Any person except an employee of British Timken?

A. Oh no—we have had our competitors round.

Q. I believe you testified the other day that British Timken also in return gave its know-how to American Timken?

A. Yes.

[fols. 1046-1048] Q. Did French Timken give its know-how also to American Timken?

A. Yes, when there was any.

Q. In other words there was a mutual interchange of know-how?

A. Yes.

Q. Amongst the three companies?

A. Yes.

Q. Again on Thursday or Friday during Mr. Day's examination I believe you stated that it would have been difficult to conceive that you could have started bearing production without American Timken's know-how, and I take it you are referring to tapered roller bearing production?

A. That is so, yes.

Q. And not to ball bearing and straight roller bearing production?

A. No, that is so.

Q. Mr. Dewar, I refer you to defendant's Exhibit D.26 which you described as your Aide-memoire?

A. Yes."

[fol. 1049] (Continuing reading of deposition of Mr. Dewar:)

"Q. I call your attention to page 2, the sub-paragraph marked 'C'?

A. Yes.

Q. Where you said: 'Bearing makers can now obtain all details of the manufacture of taper roller bearings from machine tool makers'. Was that statement as true in 1938 as it was in 1934?

A. Yes.

Q. And today?

A. Would you mind asking the question again?

Q. I wondered if that statement is also true of 1938. I believe you testified previously that this was presented to the Timken people during your conference with them in 1934?

A. Yes.

Q. Which I think fixes the time when you made that statement. My question is whether or not that statement [fol. 1050] was as true in 1938?

A. Yes.

Q. And today?

A. Yes.

Q. I also call your attention to sub-paragraph 'D' where you said: 'Technical assistance now does not give B.T. the advantage over its competitors which it did in the past, and further manufacturing problems in England and the U.S.A. are different.' I ask you the same question: Was that statement true as of 1938 also?

A. Yes.

Q. And is it true as at today?

A. Yes, although with the resumption of closer technical relations between England and the United States, which were naturally broken during the war, the technical assistance from the United States if of very great assistance.

Q. I have here Government's Exhibit D.51, an agreement between the Timken Roller Bearing Company and the Electric and Ordnance Accessories Company which appears to have been signed on June 16th and July 16th, 1909.

By Mr. Day: Do you offer that in evidence?

By Mr. Nitschke: Yes.

[fol. 1051] Q. (Mr. Nitschke): And Government's Exhibit D.52, an agreement between the Timken Roller Bearing Company and the Electric and Ordnance Accessories Company Limited, also dated June 16th and July 16th, 1909; Government's Exhibit D.53, an agreement between the Timken Roller Bearing Company and Wolseley Motors Limited dated April 6th, 1920; another agreement between the Timken Roller Bearing Company and Wolseley Motors Limited dated April 6th, 1920; Government's Exhibit D.55, an agreement between British Timken Limited and the

Timken Roller Bearing Company dated January 1st, 1925; and Government's Exhibit D.56, an agreement between the Timken Roller Bearing Company and British Timken Limited dated December 31st, 1924. I offer all these in evidence. On Thursday or Friday last, Mr. Dewar, you told Mr. Day that you had examined the agreements between British Timken Limited and the Timken Roller Bearing Company which were in existence prior to 1928 when you first came into the Company. I think you used the word license agreement. I should like to show you these Government's Exhibits D.51 to D.56 inclusive and ask you if this group of agreements is what you are referring to as the agreements with which you are familiar and which were [fol. 1052] in effect prior to 1928?

(Government's Exhibits D.51 to D.56 inclusive handed to witness.)

A. I am afraid I cannot say that I am familiar with them at this time. It is many years since I saw these agreements. I assumed that those are the agreements."

"Q. If there was more than one agreement in effect at that time, you are referring to the whole group of them and not to any one specific license agreement?

A. Yes, quite correct."

Mr. Nitschke: The next part of the transcript I won't re-read, it is the portion we put in on the affirmative case relating to the purpose of the two agreements in 1938.

The Court: That was a matter concerning which there was considerable dispute?

Mr. Nitschke: Yes, your Honor.

I then go to the top of page 138 of the transcript, continuing with the question: (Reading)

"Q. Without finding the specific paragraphs, Mr. Dewar, I believe you stated—or it is true anyhow, is it not—that the Supplemental Business Agreements of 1938 had a clause in them requiring that when the agreements termi- [fol. 1053] nated British Timken gave up the trade mark 'Timken'?

A. Yes."

Mr. Nitschke: The record doesn't show it here but I believe it is true that Mr. Whitney at this point must have offered some objection to the way I was proceeding, and I said:

"I am doing it in this way because it saves time."

(Continuing reading:)

"By Mr. Whitney: How can you ask the witness what is in a written agreement you are holding in your hand?

"By Mr. Nitschke: I think he did testify that before.

"By Mr. Whitney: You can read it to him.

"Q. (Mr. Nitschke): I will refer to sub-paragraph 3C of the supplemental business agreement dated November 29th, 1938, between the Timken Roller Bearing Company, M.B.U. Dewar and British Timken Limited which is defendant's Exhibit D.28 which states: '(C) It is intended that if and when the business agreement shall be terminated so far as regards the British Company or the French Company the British Company in the former case if and so far as it may be requested in writing by the American Company and the French Company in the latter case if and so far as it may be requested in writing by the Ameri-[fol. 1054] can Company or the British Company shall cause the name 'Timken' to be eliminated from its corporate name and from the name of any person firm or company controlled by it and shall refrain and cause any person firm or company controlled by it to refrain from using the name 'Timken' as part of or in connection with his their or its name or as a trade mark or trade name or otherwise and shall refrain from any act calculated to obstruct or delay the requesting company in any steps which it may take with a view to establishing the right of the requesting company to the use exclusively so far as practicable of the said name in the territory of the requested company and so far as practicable shall assign or cause any person firm or company controlled by it to assign to the requesting company or as it may direct any trade mark or other rights in respect of the said name in its ownership or control.'

"In those circumstances, Mr. Dewar, do you know why British Timken registered the mark 'Timken' in England—I believe it was in 1939, was it not?

A. Yes.

Q. Do you know why that was done?

A. Because no one else was able to do it.

[fol. 1055] Q. And do you know why British Timken registered the mark in British Honduras?

A. I regret to say I cannot tell you.

Q. Or in British Guiana?

A. I am sorry; I have no recollection.

Q. (Mr. Nitschke): The only reason I asked about British Guiana was because it is American territory."

Mr. Nitschke: I believe that concludes the portion from my cross examination.

[fol. 1056] (The following questions and answers from the deposition of Michael Dewar read by Mr. Day and Mr. Ketterer:)

"Q. You were asked about certain agreements, Mr. Dewar, which have been marked for identification and introduced in evidence going back as far as the agreements in 1909 between the Timken Roller Bearing Company and the Electric and Ordnance Accessories Company Limited, and covering various agreements from that time up till perhaps 1924 and maybe after that. I think you testified in direct examination the other day that before you talked to Mr. Ely you were familiar with the existing contract between American Timken and British Timken. Do you know whether as a matter of fact before that time you had actually examined all these other agreements—do you remember that?

A. I do not think I ever examined the original E.C.A. [fol. 1057] agreement, but the other agreements—the more recent ones—I certainly had looked at and had explained to me by the Secretary of Wolseley Motors.

Q. And I think you said the other day that you were familiar with the provisions of the existing contract as of 1927 between American Timken and British Timken insofar as it related to territory and royalties and things of that kind?

A. Yes.

Q. You were asked some questions by Mr. Nitschke, concerning what we have been calling the know-how?

A. Yes.

Q. And information imparted to British Timken by American Timken from 1927/28 up to date. What, if any, information generally would youu receive—I mean British Timken when I say 'yon'—and did you receive from American Timken as to designs of tapered roller bearings?

A. In respect of any new bearing that was manufactured or proposed to be manufactured by the American Timken Company we received drawings of in England and France; and any bearing which we wished to make in England or France which was not in production in the United States we sent to Canton because Canton controlled the nomenclature of bearings, what we call the symbol numbers of them, so that all the drawings that were made by the three [fol. 1058] Companies could be interchangeable in every way and also bear the same symbol number.

Q. And is that true from the beginning up to the present time to some extent?

A. Practically to every extent with the exception of possibly a short period during the war when communication was not too easy.

Q. And when you received information and drawings from American Timken as to design of bearings what, if anything, did you do with them for British Timken, or what did British Timken do?

A. Well, we followed those dimensions on the design entirely.

Q. Now you stated something a moment ago to the effect that the method of manufacture had to be identical in order that the bearings might be interchangeable?

A. I did not mean that the methods of manufacture had to be identical because they are not entirely identical. The results of the methods of manufacture has to be identical and is identical.

Q. That is identical having in mind the bearings manufactured by British Timken and the bearings manufactured by American Timken—is that right?

A. Yes, and the French Timken Company.

Q. And French Timken also?

A. Yes.

[fol. 1059] Q. You were asked as to whether or not the inspectors from the American Timken Company actually inspected and checked the bearings manufactured by Brit-

ish Timken. Will you state whether or not—perhaps you have already covered this, but I want to ask you again in the light of Mr. Nitschke's examination—American Timken's representatives and skilled men did visit the plant of British Timken?

A. Yes, they certainly have visited the plant of British Timken.

Q. And I think you said the other day that when they made those visits they stayed for some considerable periods of time?

A. They did, yes.

Q. While they were in British Timken's plant did they examine the methods of manufacture in detail?

A. Yes, in great detail.

Q. Do you know whether or not there were over the years a great number of written communications exchanged between American Timken and British Timken concerning designs of bearings by American Timken?

A. Yes, I should think almost daily.

Q. And is it or is it not a fact that throughout the years in question here American Timken was advised by British Timken as to methods of manufacture and what was going [fol. 1060] on in the plants of British and French Timken with relation to making bearings?

A. Yes.

Q. If I do not include French Timken in my questions please understand that I mean to include French Timken.

A. I understand.

Q. And if I had mentioned French Timken in connection with a few of the questions I have been putting to you your answer would have been the same, would it?

A. It would, yes.

Q. Was there any difference along the lines of what we are talking about now in what was done between American Timken and British Timken and what was done between American Timken and French Timken?

A. Most of the correspondence with French Timken is done by British Timken, not by American Timken direct, but the effect is the same.

Q. You were asked by Mr. Nitschke whether anybody was sworn to secrecy and I think you stated 'No'?

A. I did, yes.

Q. Do you know whether or not the information that British Timken and French Timken received from American Timken as to designs and methods of manufacture and things of that kind was received because of the relationship which existed and the contracts which existed between [fol. 1061] the companies?

A. I am sure yes, quite sure.

Q. I think you stated, either in cross-examination or in answer to the questions I am putting to you now, that there may have been a little difference in the exchange of information during the war. What do you mean by that?

A. We were not permitted to entrust to the ordinary mail our drawings of things like airscrew bearings which might have been of very considerable value to the enemy. They were sent often I am aware by the British Government departments through what we call the 'bag', the official diplomatic channels, so that we did not have the responsibility of avoiding capture by the Germans. But that was the cause of the difficulty in transmission of all information.

Q. There was a period of time during the war, as you have already testified, when you were in America in an official capacity and not in Great Britain at all?

A. That is so, yes.

Q. I will ask you whether or not in your opinion, over the years in question, American Timken did furnish and provide to British Timken and French Timken its information and learning and the results of its research and operations concerning designs and methods of manufacture of bearings?

A. They furnished every conceivable piece of informa-[fol. 1062] tion that you can think of in connection with those points.

Q. I will ask you whether or not the information thus imparted by American Timken to British Timken and French Timken was used by those companies?

A. It certainly was.

Q. Going back now to 1927 I will ask you whether or not, prior to the arrangements that were made between you and American Timken, as you have already described in your evidence, British Timken was in a position to manufacture any bearings?

A. Would you mind repeating the question?

Q. I will make it tapered roller bearings. I will ask you whether or not going back to 1927, at the time that you had your talks with Mr. Ely, British Timken was, in your opinion, in the circumstances which existed then and under the conditions that existed then, in a position to manufacture commercially tapered roller bearings?

A. It was manufacturing tapered roller bearings.

Q. I mean if it had not had the relation with the Timken Company?

A. No, I should say not.

Q. You stated, in answer to a question by Mr. Nitschke this morning, as I understood it, that competitors sometimes were let into your plant. What did they do when they got there?

[fol. 1063] A. They were taken round by me.

Q. Just shown generally through the plant?

A. Yes.

Q. When they came through the plant did you give them any intimate details of designs or methods of manufacture or did you just take them through the plant generally?

A. We took them through the plant generally. I would like to add that the Timken Roller Bearing Company have been kind enough to take some of our English competitors through their plant too.

Q. When these representatives of competitor companies were taken through the plant of British Timken were they shown designs and machines and things of that kind?

A. They certainly were not shown designs. They may have observed machines, but they were walking round the factory fairly quickly, which does not enable one to do more than see how well run it is in general."

Mr. Day: I think we have already read the re-direct on 144 and 145.

Going now to Page 154.

(Reading)

"Q. Going back to another phase of the case, I want to ask you one more question which occurs to me. You were asked by Mr. Nitschke upon the subject of 'know-how' whether American Timken insisted on a carrying out of [fol. 1064] its ideas and so forth and so on. I think you

stated in substance that they did not insist. Did you so state?

A. That is so, yes.

Q. State whether or not it was the attitude and practice of your Company, regardless of insistence by the American Company, to heed and follow out, so far as practicable in England, the suggestions made by American Timken?

A. It certainly has been. Where there have been any differences they have always been argued."

Mr. Day: That concludes our re-direct. Mr. Ketterer thinks I did not offer something the other day, I think I did. If I find I did not I would like to at some time offer it.

Mr. Nitschke: Then there is re-cross of Mr. Day's re-direct, continuing on Page 154.

(Questions read by Mr. Nitschke and Answers by Mr. Dedman from the deposition of Michael Dewar as follows:)

"Q. Do you know when the Michelin Company bought Citroen?

A. I am afraid I cannot tell you the date.

Q. Approximately?

A. I am afraid I have no idea. I daresay Mr. Augis will be able to tell you when he comes to give evidence.

Q. You say that whenever there is any difference of opinion on the use of 'know-how' that had been submitted [fol. 1065] to you by American Timken it was argued. I think you used that expression?

A. Yes

Q. Did you ever decide not to use it?

A. When I said 'argued' I meant that it was a subject of discussion as to whether we should or should not, and in every case that I can call to mind where we have not adopted it, it has been with the knowledge, and I presume the consent (although not necessarily in writing) of the American Company. You will understand there are some cases where Nature will not let us. We have no natural gas in this country. In Canton they use whole processes which employ natural gas. We have not any natural gas so we cannot employ those processes. It is that kind of thing.

Q. You felt that you could make the decision to reject the use of the 'know-how' if in your opinion, as an engi-

neer and as the manager of the company, it was not advisable to use it?

A. Yes, I feel that under our agreements I should be quite entitled to do that, although I should regard it as a very grave decision at which to arrive."

Mr. Day: (Reading);

"Re-Direct Examination by Mr. Day."

[fol. 1066] "Q. I have one more question. You said something a moment ago about arguing, as you expressed it, or discussing differences, if any arose, as to methods of manufacture and things of that kind between you and American Timken. Did any differences in that regard have any effect upon the end products actually turned out?

A. None at all, nor have we ever had any differences of opinion.

Q. Except as you have described?

A. I do not think I described any differences of opinion.

Q. Then you have not had any differences of opinion as to the end product turned out?

A. No, never.

Q. My attention has been called to an Exhibit that has been introduced in evidence here by us, the Defendant, and it consists of that memorandum that you took over with you to America, as I recall it, in 1934 when you and Mr. Pascoe went over there.

A. Yes, I remember.

Q. Will you state whether or not that set forth some of the reasons that you intended to use and did use in presenting your side of the matters discussed with American Timken on that visit?

A. Yes, certainly. You mean it was rather sales talk?

Q. Well, I did not say that.

[fol. 1067] A. You implied it. I am prepared to admit it up to a point."

Mr. Nitschke: (Reading)

"Q. You do not mean those statements were not true?

A. No, I do not. I think Mr. Day was perhaps thinking I stressed them a little more than I should have done."

Mr. Day: (Reading)

"Re-direct examination by Mr. Day.

Q. I do not mean to imply that. All I meant to imply was that these were statements which you took over with you that you had prepared before you went for the purpose of presenting them to American Timken?

A. Yes.

Q. I did not mean to imply they were not true. Everything in them is true, is it not?

A. Perfectly true, yes.

Mr. Nitschke: Just a few more questions in re-cross examination:

(Reading)

"Q. You said there were no differences of opinion as to the end products between you and American Timken.

A. I said the end product is always the same and that no difference of opinion had arisen. I think I was asked, if I remember correctly whether we had ever argued and fought. What I intended to imply was that we had argued [fol. 1068] and come to an agreed decision as to what British Timken should do or should not do.

Q. I take it that you are referring to tapered roller bearings?

A. Yes, certainly.

Q. You perhaps received no opinions at all from American Timken as to the end product, speaking of ball bearings and straight roller bearings?

A. I have never asked them."

Mr. Nitschke: That concludes the deposition of Mr. Dewar.

[fol. 1069] Mr. Ketterer: If the Court please, we want to call Mr. Hess now as a witness.

The Court: All right.

Thereupon the Defendant called as a witness in its behalf

DONALD P. HESS, who, being first duly sworn, was examined and testified as follows:

DIRECT EXAMINATION OF DONALD P. HESS

By Mr. Ketterer:

Q. Will you state your name, please?

A. Donald P. Hess.

Q. Keep your voice up, Mr. Hess, so the Court and everybody can hear what you have to say.

Where do you live, Mr. Hess?

A. Springfield, Massachusetts.

Q. What is your present occupation?

A. I am the President of the American Bosch Corporation.

Q. How long have you been connected with the American Bosch?

A. Since 1938.

Q. Has it always been in the capacity as president of that company?

A. Yes, sir.

Q. Were you ever at any time connected with the Timken Roller Bearing Company in Canton, Ohio?

[fol. 1070] A. Yes, sir.

Q. What was the date of your first connection with that company?

A. In the spring of 1919.

Q. And what was the nature of your first connection with the Timken Roller Bearing Company?

A. I was Assistant Factory Manager.

Q. And you worked at what plant?

A. At the Canton plant.

Q. And then what was the next job that you had with the Timken Roller Bearing Company?

A. In 1921 I went down to Columbus, Ohio, as the General Manager of that plant.

Q. That is, the General Manager of the Columbus plant of the Timken Roller Bearing Company?

A. That is right.

Q. And how long did you stay there as the Manager of the Columbus plant?

A. Until 1927.

Q. And what is or what was being made at that time at the plant of the Timken Roller Bearing Company at Columbus?

A. Small size tapered roller bearings.

Q. You said you had been Assistant Factory Manager in Canton. What was being made in the Canton plant of the Timken Roller Bearing Company when you were there?

A. A complete size of tapered roller bearings as well as [fol. 1071] steel.

Q. Now, you say you left the Columbus plant in 1927 as Manager of it, and where did you go then?

A. I went back to Canton in the capacity of Assistant to the President.

Q. And you remained on the job of Assistant to the President of the Timken Roller Bearing Company for what period?

A. From 1927 to 1936.

Q. At which time you left the employ of the company?

A. That is right.

Q. And there was an interval of two years between the time of your termination of your connection with the Timken Roller Bearing Company and the time you became President of American Bosch. Were you connected, directly or indirectly, during that period with the Timken Roller Bearing Company?

A. No, sir.

Q. Now, I am going to ask you, Mr. Hess, about some things that have occurred a good many years ago, back in 1927, and times of that kind. You have had no connection with the bearing industry since you left the company in 1936?

A. No, sir.

Q. And none with the Timken Roller Bearing Company?

A. No, sir.

[fol 1072] Q. And I take it you will give us your best recollection about facts and dates to the best of your ability?

A. I will.

Q. Now, as Assistant to the President of Timken Roller Bearing Company, Mr. Hess, I will ask you whether you had occasion to make a trip to England, France and Germany in the year 1927?

A. I did.

Q. Do you recall about when in 1927 it was you went to Europe?

A. In June of 1927.

Q. How long were you there?

A. As I recall I was there about two months.

Q. Did you visit the plants of any companies manufacturing anti-friction bearings while you were there?

A. Well, I visited the British plant and the French plant and the German plant.

Q. Now, did you make any report as of that time of what you observed at those plants?

A. I did.

Q. And in general, before referring specifically to the report, I would like to ask you just what was the purpose of your going to those plants in 1927?

A. Well, we had just made these European investments, the one in particular in British Timken, and I was sent [fol. 1073] over there to be of help to them in making tapered roller bearings like we made or as close to it as possible.

Q. Now, you said you had made some investments in the foreign countries, British Timken especially. Are you familiar with the nature of the relationship between the American Timken Company and Mr. Dewar?

A. Yes, sir.

Q. And it was of what nature?

A. Well, we considered ourselves partners in this enterprise. We had a majority of the stock and he had a minority of the stock.

Mr. Ketterer: If the Court please, we have combined here a set of the exhibits we propose to offer for your convenience in following the testimony of Mr. Hess.

The Court: They are increasing in volume.

(Thereupon report was marked by the Clerk, for identification, as Defendant's Exhibit 31.)

Q. Mr. Hess, I hand you some photostat sheets that have been clipped together and bearing for identification the mark Defendant's Exhibit 31. On the outside cover appear the words "Report on British Timken Submitted by D. P.

Hess, August 1st, 1927". I ask you if you can identify [fol. 1074] that?

A. I can, sir.

Q. And it is what?

A. A report I made after my visit to Europe in 1927.

Mr. Ketterer: I would like to offer this as Defendant's Exhibit 31.

Mr. Nitschke: I take it I still have my same objection.

The Court: Yes, it is taken over the objection of the Government.

Q. Now, Mr. Hess, I would like to go over this report and read it and ask you some questions about various parts of it as we go along.

Q. On the first page of this report, under the heading "Manufacturing Plant". "At the present time we are occupying a modern type of one-story building leased from Wolseley Motors at an annual rental of $20,000. This rental covers the use not only of the property but also of [fol. 1075] all the machinery used therein for making our bearings with the exception of that for the manufacture of cages. However, we do own in the British Timken name the following machinery which was purchased during the year 1926: 2 No. 3 Cincinnati centerless grinders; 2 No. 2 Cincinnati centerless grinders and 3 10-inch internal grinders Churchill type."

I would like to ask you, Mr. Hess, whether that was the situation as to the equipment that you observed when you were over there?

A. That is correct.

Q. (Reading) "The Wolseley Motor Company has recently been purchased, in receivership, by Mr. Morris of Morris Motors, who is planning to continue the manufacture of the Wolseley car and who requested that we give up our lease on the building we now occupy. This lease has 19 years to run but we have complied with Mr. Morris' request and are arranging to vacate this property on October 31st of the current year. We have also agreed to purchase from Mr. Morris all of the equipment now covered by the heretofore mentioned yearly rental for the sum of $160,000. We have no written agreement or any definite verbal agreement that we will obtain Mr. Morris' bearing

business as the result of taking this equipment off his hands other than the statement that he would be glad to [fol. 1076] consider us when we can quote prices of bearings more in accord with the prices he is now paying for ball bearings." In respect to that statement, Mr. Hess, I would like to ask you, Mr. Morris was the manufacturer of motor cars in England?

A. That is correct.

Q. When you say in this report that he was willing to consider giving the British Timken business in the event that the price of the British Timken bearings could be made competitive with ball bearings, what did that mean with respect to whether or not tapered roller bearings in competition with ball bearings were to be used to replace the ball bearings?

A. Well, it meant unless we could supply him with tapered roller bearings at a cost comparable to ball bearings he would not use our bearings.

Q. And in so doing replace the ball bearings in the applications in the motor cars where they had been used?

A. That is correct.

Q. Then continuing with this report (reading) "Frankly the purchase of this machinery was a mistake, as, with the exception of 22 Gridley automatics the entire list of [fol. 1077] machinery is obsolete as far as our present practice of manufacturing roller bearings goes. I immediately requested that this deal be held up but was advised by Mr. Dewar and Mr. Dallow, who are the executive managers of our British Timken business, that the deal had gone through and could not be changed."

You have characterized, in the language I have just read, the machinery that was purchased from Morris at that time as being obsolete. Was that in comparison with the machinery and equipment that was being used in the American Timken plant for the production of tapered roller bearings as of 1927?

A. That is correct.

Q. (Reading) "Mr. Dewar stated that it was necessary to purchase the machinery from Mr. Morris in order to keep his good-will and to have a chance for the Morris business, and also that if we did not do this, Mr. Morris might enter the roller bearing business himself. While

there may be some substance to the first statement, we must bear in mind, that, in the second regard, anyone using the present equipment for the manufacture of bearings would be at a great disadvantage in cost, and I explained to Mr. Dewar that we could have purchased at least 50 percent of a complete new bearing plant for the amount [fol. 1078] that was paid for the obsolete equipment from Morris."

Now, did that reflect the opinion that you had as to the possibility of Mr. Morris going into the tapered roller bearing business with that equipment?

A. Yes.

Q. (Reading) "We have just completed transactions covering a lease for 13 years on the plant originally used by the Electric Ordnance Company, and wherein the manufacture of Timken Bearings originally took place."

Now, by that you meant the plant of the Electric and Ordnance Accessories Company Limited, who were originally Aston lessees back as far as 1909?

A. Yes.

Q. (Reading) "This plant is known as the Aston Plant, and is located in the heart of Birmingham. It will give us approximately 100,000 square feet of manufacturing space in a three-story plant 35 years old, and which is not nearly as well suited for our business, but which will give us approximately twice the floor space as the plant we now occupy. This Lease provides for an option to cancel every two years after three years of occupancy, and we are paying an annual rental of $10,000.00. However, we must bear in mind that in our new location we will be forced to carry our own depreciation and other charges, which heretofore [fol. 1079] have been covered in our lease from the Wolseley Motor Company, so that the apparent saving of 50 percent in annual rental does not hold good, as depreciation charges will almost entirely wipe out this difference. This means, in summary, that we shall have obtained for practically the same annual expenditure a building giving us about twice the floor space now occupied, of which we will only need at the present time, one-third of the space available, or, we will use practically all of the entire ground floor. The main drawback to this building is the fact that it must be completely wired for our use, and the estimated

cost on this work is about $30,000.00. We shall incur an additional expense in moving, such as rehanging lineshafts, countershafts and locating machinery, of another $30,000.00 so that at least $30,000.00 will have to be charged into operating expenses, which could have been avoided had we maintained our present quarters."

When you say "maintained the present quarters" did you mean the plant at Wolseley Motors where the machinery and equipment was used?

A. That is correct.

Q. And did you inspect this Aston plant that you have described here having been taken under lease at that [fol. 1080] time?

A. I did, sir.

Q. "The writer also requested that this transaction be held up," by "writer" that's yourself?

A. That's correct.

Q. "and that a strenuous effort should be made to obtain a modern factory building where electric conduits, etc. were installed. I was advised here again by Mr. Dewar and Mr. Dallow, that they had been searching for such a place for the past three months without being able to find it. This statement does not check with that of Mr. Ellis, works engineer, who confidentially advised me that an ideal building about a mile distant from our present plant had been available but which has since been sold."

And when you say "from our present plant" you are referring there, I take it, to the Aston plant, the one that was then under lease?

A. I don't recall whether it was the Aston or the Wolseley plant just from your reading it there.

Q. In any event, you were told there was another plant that might be available?

A. That's correct.

Q. "He flatly states that the move to Aston is not at all desireable, and he opposed it as much as he could. [fol. 1081] It might be well to state here that Mr. Loader, shop superintendent, also stated that, in his opinion, we could have found much better plant facilities, and also that it was a grave mistake to purchase the equipment from Wolseley Motors. This plant at Aston which we have

purchased, was formerly occupied and owned by a subsidiary of Vickers, Limited, known as the Blick Works, who manufactured porcelain insulators, and who used only a small part of this plant. Mr. Dallow, our Director at Birmingham, is also a Director of the Blick Works, and while he is very enthusiastic over the splendid deal that he made in leasing so large a plant for so little money, it is the writer's opinion that he was entirely too conscientious in seeing the Blick Works plant have a tenant. Please bear in mind that both Mr. Dewar and Mr. Dallow are very familiar with the writer's criticism of these two transactions."

You explained that to Mr. Dewar and Mr. Dallow at that time, did you?

A. Yes, sir.

Q. Now, on the third page of the report:

"At the present time our British plant is making both "V" type and "F" type cones, but only approximately [fol. 1082] 15% is changed over to "F" type production."

Now, I would like for you, Mr. Hess, to take this bearing which has been introduced in the record here as Plaintiff's Exhibit 3 and explain to the Court what you mean by "V" type and "F" type cones (handing Plaintiff's Exhibit 3 to witness)?

A. Well, it's rather hard to do in an assembled bearing like that, but it is the shape of the end of the roller and the shape of the rib of the cone, you see, in the "V" type as compared with the "F" type. The "F" type is approximately flat on the top of the roll and the rib is undercut. The "V" type has a slight taper on the end of the roll and the rib is not undercut.

Q. In respect of these two types of bearings, what had been done at American Timken Canton plant in respect of changing from "V" type to "F" type or vice versa?

A. Well, for many years at Canton we had made the "F" type bearing—or the "V" type bearing, and the "F" type bearing was an improvement over the "V" type, and we hadn't at that time, as I recall, completely changed over.

Q. Was that program just finished about 1927, of changing over?

A. I would think so.

Q. Then continuing with the report:

[fol. 1083] "This is due to the fact that they have never been sold on the "F" type bearing, and as a result have been unwilling to adopt it. The writer was successful, however, in showing them the advantages of this type of bearing, and they have agreed to make a complete change-over by January 1st, 1928."

Was that the understanding that you worked out with Mr. Dewar and Mr. Dallow when you were over there, that they would change over to that other type of bearing?

A. Yes, sir, that's correct.

Q. Going on with the report:

"Furthermore, the present design of the "F" type was not satisfactory, in the sense that they had departed from the location of the undercut as we use it, taking this undercut entirely on the rib itself, thus decreasing the rib area very noticeably. This was also changed at the writer's request, and they will follow our method in exact detail."

And that was the understanding you worked out with them?

A. That's correct.

Q. "British Timken have also departed from us in the taper of their rolls, with the corresponding changes in cone tapers, but they have retained the same cup tapers [fol. 1084] that we use."

When you say "cone tapers" and "cup tapers", looking again at this Plaintiff's Exhibit 3, will you point out the area that you refer to when you refer to the cup taper and the cone taper of the bearing?

A. This particular area here (indicating).

Q. On the inside?

A. Of the cup.

Q. The inside of the cup?

A. And you can't see that here in this assembled bearing, but it's the outside diameter of the cone itself.

Q. The outside diameter of the cone, which is also tapered?

A. That's right.

Q. And by "tapered" you mean that there is a slope in layman's language, in it?

A. Yes.

Q. That may be an insult to an engineer.

"The idea in this was to standardize and decrease the variety of rollers from the taper standpoint, and their present practice compares with ours as follows:"

And then follows in the report "British Timken modifications to rollers making constant angle, Existing cups unaltered," and then a series of numbers showing the degree of taper, the various series of bearings, comparing [fol. 1085] American and New British Timken standard for the various series of bearings.

Then going on with the report:

"It was decided that in view of the complications such as would be incurred in changing back to our taper design, and its effect on the "F" type program completion, that British Timken will continue to use the tapers they have set up insofar as possible, and the limiting factor will be the ability of the hardened rolls that we send them, to clean up in the grinding operation. In other words, if our rollers will not clean up with their tapers, they will change over and follow our tapers in every detail."

Now, what do you mean by "cleaning up our rollers to follow their tapers"?

A. That's removing the stock from the hardened roller prior to the grinding operation.

Q. So that it would do what?

A. So that you get a good, clean grinding finish on the roller after they have been ground.

Q. And the taper then of the roller will correspond with what?

A. With the drawings.

Q. And the taper of the cups and cones?

[fol. 1086] A. The same way, with the drawings.

Q. "A rather hurried study of this problem indicates that there is sufficient stock of our rollers to clean up practically all part numbers."

By that, again, you mean the rollers could be ground to useable condition?

A. That's correct.

Q. On the next page appears under the heading "Cages":

"The cages are now purchased complete from Wolseley Motors, and the equipment is owned and operated by Wolseley Motors in their own shops."

Now, am I correct in interpreting that language, that you mean as of 1927 when you were there the British Timken Company was not making its own cages?

A. That is correct.

Q. And it did not own the equipment that was necessary to make the cages?

A. That is correct.

Q. The cage part of the assembly of a tapered roller bearing is this metal component that separates the rolls and holds them in place, is that correct?

A. Yes, sir.

Q. "However, we have since purchased this equipment, but, regardless of this fact, British Timken will purchase all [fol. 1087] cages from us at our cost plus 75%."

Was that the arrangement you worked out with them initially?

A. That is correct.

Q. Why was it desirable to purchase the cages from American Timken rather than have them made with this equipment that had been purchased from Wolseley Motors?

A. We could give them a better cage and more adaptable to the use of their bearings.

Q. And what if anything did that have to do with the matter of cost of producing the cages with that equipment?

A. Well, otherwise they would have had to invest their own money in cage equipment, and that would save them some monetary investment at that time.

Q. "These cages will in all probability carry a 33-1/3% duty, as it was the opinion of British Timken that the spreading operation was not of sufficient importance to have cages lacking this operation, placed in the classification of "Raw and Process Steel."

You mean by that that in buying cages from America there would be a duty of 33-1/3% involved on the cages?

A. That is correct.

Q. Under the heading "Summary of Product" it states:

"Summarizing this individual part situation, we shall [fol. 1088] receive purchase orders from British Timken for approximately eight and one-half million hardened rolls annually, and about eight hundred thousand finished cages annually. This will save British Timken about 30% in their present cost of rolls and cages."

Did you mean by that that American Timken would receive orders like that?

A. Yes, sir.

Q. Under the heading of "Material" it states:

"At the present time British Timken are using four different kinds of steel, namely (a) low carbon chrome alloy, (b) high carbon chrome alloy, direct hardening, (c) low carbon mild steel, (d) stainless steel. The major part of their production is made from the first classification, low carbon chrome alloy, but about 25% of the rollers are made from direct hardening steel. This is due to the fact that several years ago they were having considerable trouble with defective material in rollers, and at that time changed over to direct hardening steel for several of their customers. This practice is still in use. The low carbon mild steel is used for the Ford bearings now manufactured, and the stainless steel is used in a few instances for customers requesting this kind of material. They are paying [fol. 1089] the following prices for their materials."

Then follows in tabular form a comparison of British Timken costs with the costs of American Timken, and for tubing the British cost is 12 cents per pound, and under the heading "Canton Cost" the cost is shown at 6 cents per pound. Bars (cups and cones), 8 cents for Britain and 5-1/2 cents for Canton. Bars for rolls, 9 cents for Britain, and there is no figure in the column for the American Timken cost. Cage stock, 6-1/2 cents per pound for Britain, and the Canton cost is 3-1/10 cents. Gas, 465 B.T.U., 54 cents per 1,000 cubic feet for Britain, and the Canton cost is 45 cents per thousand cubic feet of 1,000 B.T.U.

Now, in respect of tubing, what part of the tapered roller bearing assembly is made from tubing?

A. The cup and the cone.

Q. The cup and the cone are both made from tubing?

A. Yes, sir.

Q. There is a reference here made to the use of bars for cups and cones also. Was British Timken using solids in its manufacturing operation for the production of cups and cones, as well as tubing?

A. Yes, sir.

Q. And what is the fact as to whether or not that is a less [fol. 1090] or more expensive operation than the use of tubing?

A. More expensive.

Q. And what form does steel take for the production of rolls?

A. Well, it can be in bar form or in wire form, as we call it.

Q. If you use bar, is that more expensive than if you use wire?

A. Yes, bars—I would have to qualify that a bit. Bars are used on screw machines and coil stock is used on heading machines.

Q. And the practice at American Timken at that time was what in respect to the production of rolls?

A. To make them on heading machines, using coiled wire.

Q. Instead of bars?

A. Correct.

Q. Now, cage stock, what sort of material, in what form, do you use that for the production of cage?

A. The strip steel.

Q. Now, what do you do with the gas, what is gas used for in the production of tapered roller bearings?

A. Heat treatment.

Q. And by heat treatment you mean what?

A. Carburizing and hardening.

Q. There will be a reference later in this report to the [fol. 1091] carburizing process, and I would like for you to describe to the court what you mean by the carburizing process.

A. That's impregnating into the product itself a case of certain thickness so that when it's quenched in water or oil it becomes hardened.

Q. And the part of it that is so treated, what is that, the outside or inside?

A. The outside.

Q. And this case that you say you want to produce, this hardened area that you want to produce by the carburizing process, that is on the outside area of the cup, cone and rolls?

A. That is correct.

Q. There is nothing done of that kind so far as the cage is concerned?

A. Right.

Q. You say that is by a carburizing process?

A. Yes, sir.

Q. I would like for you to explain in a little more detail, without being too technical, what you mean by the carburizing process.

A. Well, in Canton we used what was called gas carburizing. Now, in some types of furnaces they use it to heat the furnace and place the product in carburizing pots.

[fol. 1092] Q. How is the product packed in those pots?

A. In bone meal.

Q. And the bone meal that the product is packed in in this carburizing process performs what function?

A. That impregnates a higher carbon content to the product itself.

Q. And it's this impregnation of the higher carbon content into the outer area of the part that gives the hardness that you try to get, is that correct?

A. That's correct.

Q. Now, going on with this table that appears on Page 4, it shows electricity in Britain was 1-1/2 cents per kilowatt and in Canton .0075 per kilowatt. Fuel, coal, $5 per ton at British Timken and $3.75 per ton at American Timken. Fuel, oil, 7-1/2 cents per gallon in England and in the United States 5 cents per gallon, at American Timken. Water was 1 cent per thousand gallons in England and 2 cents per thousand gallons in America.

Now, did those differences in the cost of British Timken materially over the cost of American Timken have anything to do with the cost of the product that they ultimately produced in the form of tapered roller bearings?

A. Yes, sir.

[fol. 1093] Q. How did that affect that?

A. It made them more costly.

Q. Going on, on Page 5:

"During the year 1926 the following material was consumed: Bars, for cups and cones, 100 tons; bars, for rollers, 140 tons; tubes, for cups and cones, 300 tons; forgings, 300 tons."

Were those the figures as to production and consumption of steel that were given to you as having been used during the year 1926 by the British Timken Company?

A. Yes, sir.

Q. Is that a large or small quantity in respect of the amount that was being used during the same period by American Timken?

A. Very small.

Q. Have you any idea at the present time how many bearings in millions were being produced by the American Timken at that time? If you don't, why, we will show it otherwise.

A. I don't have the slightest idea.

Q. "In order to facilitate the heat treating problems and the various other problems entailed in the handling of four different grades of steel, it was decided to standardize on one kind of steel, that is, low carbon chrome alloy, and use [fol. 1094] this for everything."

Who reached that decision to standardize on low carbon chrome alloy for the production of tapered roller bearings in England?

A. All of us at British Timken, together with myself.

Q. By "all of us" you mean Mr. Dewar and yourself?

A. Well, and the shop people and the metallurgical staff and the engineering staff.

Q. And that was the decision that was jointly given and jointly arrived at?

A. That's correct.

Q. "It was further decided to purchase all tubing from us, at a price of $.095 F.O.B. Canton, or approximately $.105 at Birmingham."

When you say "purchase the tubing from us" was that from American Timken?

A. That is correct.

Q. Theretofore had there been any sales by American Timken to British Timken of tubing, to your knowledge?

A. Oh, there might have been some small ones. I don't recall.

Q. But not in quantity.

A. No.

Q. "As will be noted, this is a direct saving of approximately 10 percent, but will be a much greater saving, as [fol. 1095] we can supply tubing where forgings are now being used."

Going back again, that was one of the matters that you discussed a few minutes ago when we talked about the advantage of using tubing as against solids in the production of parts?

A. That is correct.

Q. "Details will be given later in this report. So far, they have been unable to purchase or even get prices on our nickel molybdenum steel, for the reason that it is apparently very difficult to obtain molybdenum in England, and also is very costly. The writer explained the qualities of this particular type of steel and its superiority over the chrome alloy in roller bearing use, and this had additional influence on their deciding to purchase all tubing from us."

Was that a factor that was being considered by all of you jointly in the discussion about the type of steel that would be used and the purchase of tubing from American Timken?

A. Yes, sir.

Q. Under the heading "Production" it states:

"At the present time British Timken are manufacturing [fol. 1096] 3,000 bearings a day, with a force of 460 people in the plant and 70 people on their office payroll, including Sales and Engineering Departments."

Could you give us some approximation of the number of people that were then employed by American Timken for the production of bearings?

A. I'm afraid I can't.

Q. Do you know how many were in the Columbus plant when you left there in 1927?

A. Yes, I think we had about 1500 there at that time.

Q. And that was a larger or smaller plant than the Canton plant?

A. Oh, much smaller.

Q. "This production is the highest they have ever attained, and is 50 percent greater than the average 9 months' production from October 1, 1926 to June 30, 1927, amounting to 2,000 pieces daily. This increased production has been warranted almost entirely by increased sales in the commercial vehicle and motorcycle field. Details of these matters will be given under the 'Sales' heading later in this report."

Now, the next heading in the report is on the subject of "Screw Machines", and before reading what appears here in respect of the use of screw machines, will you [fol. 1097] tell the Court briefly what part of the production of tapered roller bearings is handled on screw machines?

A. The cup and the cone, and in a very few circumstances the rollers.

Q. And they are made from tubing?

A. The cup is made from tubing, the cone is made from tubing. The rollers, substantially, from wire as I explained before, and in some few instances from bars. That's the American practice I'm explaining to you.

Q. Yes, and that was the practice that was being followed by American Timken in 1927?

A. That is correct.

Q. For your cups and cones, the size of the tubing, as I understand it, almost approximates the size of the cup or cone in the size you want to produce?

A. That's right.

Q. In contrast with that what other methods are used for the production of cups and cones?

A. Well, they can be made from bars, they can be made from forgings, they can be made in some cases from stampings.

Q. Going on with the report:

"At the present time our British Plant is using Acmes and Gridley automatics for their bar and tube work, and [fol. 1098] Potter & Johnson and Gisholt Chucking Machines for their forging work."

From that is it correct to assume that they were using the forging process for producing cups and cones, as well as the screw machine process?

A. That is correct.

Q. "Production on all of this equipment is very much slower than ours, as evidenced by the following figures." Then under the heading of "Screw Machine Comparisons" you have various part numbers. Canton, on Part No. 14120, Type of Machine Acme No. 56, 60 pieces per hour; British Timken on the same part number on an Acme No. 56, 29 pieces per hour.

Were those figures that you got at that time in your visit to the British Timken plant?

A. Yes, sir.

Q. Then looking at Part No. 419 in the table, it shows Canton produced with a Gridley 3¼" 17 pieces per hour, and on the same part number and with the same machine British Timken produced 12 per hour. On Part No. 09074, production on Acme No. 56 was 67 per hour in Canton, and on the same part number with the same equipment, British Timken was producing 33 per hour. On Part No. 412, on a Gridley 4¼", the American production was 21 per [fol. 1099] hour and British Timken production was 10 per hour.

That reflected information that you had obtained from British Timken in respect to the operation of their screw machines?

A. That is correct.

Q. "The quality of work is about on a par with ours. A large part of the slowness of British production is explained by the fact that they are considerably handicapped, due to inadequate raw material. All part numbers up to and through the 200 series are made from bars, and tubes are used for the larger sizes. However, in order to keep raw material inventories down to the extent of limiting sizes of tubing for different cups and cones, it is the practice to make a large number of cups and cones from the same size of tubing, with the result that in many cases a great deal of excess stock is removed."

Now, is it correct to say that they used tubing to make a great variety of sizes, and in the grinding operation it took to remove a sufficient part of the metal to reduce the large sized tubing to a smaller size that they wanted to achieve?

A. No, not necessarily in the grinding operation. That was done in the screw machine operation.

Q. In the screw machine. But you say here that "it is the practice to make a large number of cups and cones [fol. 1100] from the same size of tubing."

A. Yes. Let me explain that to you. We might have a tube with a 3-inch diameter, and they would try to make probably six or seven sizes from that. Our practice had been that instead of having one tubing we had 3-inch, we might have 2-7/8, another of 2-3/4, and one of 2-1/2, and so on, which was machined to the size of the finished ground piece.

Q. And as a consequence in America it was not necessary to take as much metal off of a tube as it was in England?

A. That is correct.

Q. And, of course, the use of that process of removing more metal increased the cost?

A. That is correct.

Q. "I was further advised that the quality of tubing is very uncertain, and ranges in hardness from 150 Brinnell to 250 Brinnell."

What do you mean by Brinnell 150 to 250?

A. That's the measurement of the hardening of a product, a piece of tubing.

Q. Is that range of 150 to 250 a rather large range to cope with in grinding operations or cutting operations?

[fol. 1101] A. In cutting operations, very large.

Q. "and that, as a result of this condition, they slow down the machines to keep the tools in a fairly satisfactory condition. Mr. Loader, Superintendent, stressed this point very much, and stated that if he were given material similar to the kind we were using, that he could equal our unit production in almost all cases, but that his general overall efficiency in the Screw Machine Department would be lower than ours, on account of the great number of changes he was called upon to make."

What do you mean by the great number of changes he was called upon to make?

A. Well, he could never run as many pieces at one time as we at Canton could run. He would have to change his machine set-up in his operations.

Q. And by machine set-up you mean what?

A. Delay in changing the tools necessary for making the product.

Q. You mean by the tools the cutting tools that are used?

A. That is correct.

Q. So that because of what they call in the production department shorter runs, there were more times when the [fol. 1102] machines were down and not actually producing, because of the necessity of changing the cutting tools on the equipment?

A. That is correct.

Q. "As an indication of this latter problem, the writer made a study of the product sold from October 1st, 1926 to June 30th of the current year, and finds that during this interval 38 percent of the cones sold were in quantities of less than 50 pieces for the entire period."

How did that compare with the product of American Timken in respect of production?

A. Well, that's a rather hard one to answer. I don't recall that we ever at Canton had to make pieces in quantities of 50 at a time. We made them in quantities of thousands at a time.

Q. And that, of course, had a very decided bearing, did it, upon the cost of the product?

A. That is correct.

Q. And eliminates the time lost in tool changes in the equipment?

A. That is correct.

Q. "This of course complicates the manufacturing problem at British Timken, particularly in the Screw Machine Department, and the remedy for this will be dealt with later in this report. All automatic screw machines, both [fol. 1103] multiple and single spindles, are operated on a basis of a man and a helper to 6 machines. The Potter & Johnson chucking machines are operated on a similar basis; the Gisholts are operated one man per machine. At the present time 31 different parts are made from forgings on these chucking machines, and machine times compare with ours as follows."

What do you mean by chucking work?

A. Well, a forging is put on a chucking machine rather than on a bar machine for actual machining purposes.

Q. And what process is done on the chucking machine when you put a forging on it?

A. The same as on a bar machine, it removes metal from the piece too, from the forging.

Q. In comparing this in the tabulation you show in Canton two operations on Part No. 6552, using a Gridley machine, 4 pieces per hour; in British Timken 3 operations on a 6552 cone, using a Potter & Johnson, 2 pieces per hour. At Canton, 2 operations on a 6520 cup on a Gridley machine, 5 pieces, with 4 machines to 1 man; at British Timken 3 operations on the 6520 cup, using a Gisholt, 2 pieces per hour. In Canton for the 5520 cup, on a Cleveland automatic, 10 pieces per hour with 4 machines to one man; [fol. 1104] British Timken, from forgings, on the 5520 cup, using the Gisholt machine, 2 pieces with 1 machine to 1 man per hour.

Those were also figures that you obtained in respect of production at the British Timken plant in 1927?

A. That is correct.

Q. "British Timken has just purchased the following used machinery from Wolseley Motors: "6 Potter & Johnson, automatics at $1500 each; 3 Gisholt lathes at $1,000 each, a total of $12,000. These machines are now being rebuilt at an estimated cost of $200 each. Here again it would have been far more advisable to have purchased modern machinery, such as Gridley Single Spindles with the necessary tooling, and for the amount invested we could have purchased four of this type of machines, which would have handled, with adequate forgings, more production than the heretofore mentioned Potter & Johnson and Gisholt equipment."

In other words, was it your conclusion then that even if these machines they had bought were rebuilt they still would not be in a modern condition by comparison with what was being used at American Timken?

A. Yes, sir.

[fol. 1105] Q. "This was explained to Mr. Dallow, who of course, had no knowledge of this type of equipment, but with which Mr. Loader, Shop Superintendent, was acquainted.

The writer discussed with Mr. Loader the question of speeding up present Acme Automatics, as they were cutting a very thin chip and seemed to be under no handicap due to the material situation heretofore described. Mr.

Loader was quite reluctant to do this, but with the help of Mr. Drissner, of the National Acme Company, we finally persuaded him to try one machine. This was done, and after four days' operating conditions he was satisfied that all of this type of equipment could be speeded up 30 percent, and he further agreed to do this at the earliest possible moment. Mr. Loader is very enthusiastic about using our tubing, and feels confident that he can reach our productive times on various part numbers as soon as he has a complete supply of our material."

Now, this discussion that took place about speeding up the Acmes, did you participate in that?

A. Yes, sir.

Q. And your purpose in persuading the superintendent of British Timken to speed up the Acme Automatics was what?

A. To lower cost and increase production.

[fol. 1106] Q. And did they follow the suggestion that you made in that regard?

A. Yes, sir.

Q. "The methods now used for the machining of forgings are very obsolete, and we can, through the use of tubing, replace forgings now used on 23 part numbers."

That had an effect on cost too, did it not?

A. Yes, sir.

Q. And would also have an effect on increasing production, would it not?

A. That is correct.

Q. "However, in order to do this, at least 2 large, single spindle automatic machines of 6½" to 7" capacity should be purchased. They now have one 6" Cleveland Automatic but in order to take advantage of tubing in place of forgings, they will need two additional machines. Furthermore, two single spindle chucking machines of the Gridley type should be purchased, one for the inside operations and one for the outside operations."

By inside operations and outside operations you refer to the inside and outside of the cups and cones of the roller bearing assembly?

A. That is correct.

[fol. 1107] Q. "The commercial vehicle end of our business is growing very rapidly, and it can be readily seen

from the figures heretofore submitted, that their present method of making these cones and cups on Potter & Johnson and Gisholt lathes is simply throwing money away."

Why did you say that, that they were throwing money away by the use of these two types of equipment?

A. Because the costs were so high and they could make them much cheaper in other ways.

Q. What effect did the high costs have upon the competitive situation of the British Company?

A. Well, they had to charge higher prices constantly.

Q. "Furthermore, one small 2" fast automatic of the Cone or Acme type should be purchased for the manufacture of the smaller bearings, such as the 09070 series and the 1100 series which is used on motorcycle work. We have been unable to obtain the Ford replacement business, due to high costs, and it is the writer's opinion that with adequate screw machines of a modern type we can materially reduce our costs in this operation."

Now, do you know whether or not they did ultimately purchase the type of equipment that you recommended here?

A. I think they did.

[fol. 1108] Q. "Summarizing the general screw machine situation, the following action should be taken:

All Acme Automatics on cups and cones should be speeded up at least 30 percent.

The following equipment should be purchased:

2 Cleveland Single Spindle Automatics, 1 2" Cone or Acme Automatic, 2 4¼" Single Spindle Gridley Automatic Chucking Machines, total investment $16,000.

In the manufacture of rollers they are now using roll automatics similar to ours, but it was decided to purchase all rollers from us, in a hardened condition, and I quoted a price of our cost plus 75 percent F.O.B. Canton. No duty will be incurred, as this class of material will come under the classification of "Raw and Process Materials." However, sufficient material is on hand and on order to cover their roll needs until approximately January 1st, 1928."

Now, when you say "purchase all rolls in a hardened condition", was it necessary to perform any other opera-

tion on them after they arrived at the British Timken plant?

A. Yes, they had to be ground to the various sizes.

Q. And that was the reason they could be classified so that they could be shipped duty free, as raw and process [fol. 1109] materials?

A. I don't know whether they could be brought in duty free or not.

Q. Well, you say here "no duty will be incurred, as this class of material will come under the classification of Raw and Process Materials."

A. Apparently that was correct.

Q. Under the heading "Carburizing", and that was the process you described, the process you discussed a little while ago:

"Our British Plant is using at present eight pot type carburizing furnaces, four of which are fired by gas, and the remaining four by coke. These furnaces are used on cups and cones, with bone-meal as an energizer in the ratio of one part new meal to three parts old meal. The time of product in the furnaces is about the same as ours for this type of work, but there was considerable variation in quality. The writer examined fractures from day to day, in which this variation reached a strone 1/32, and in a few cases reached 3/64."

What do you mean when you say you examined fractures, [fol. 1110] and they reached 1/32 or 3/64?

A. Well, it's a practice in heat treatment to examine the internal condition of the product by breaking it in several pieces.

Q. That's the fracture part, and what is the 1/32 or 3/64 you refer to?

A. That's the depth of case.

Q. That is the depth of this hardened area on the outside of the component that you are trying to harden in the carburizing process?

A. And in the hardening process.

Q. And in the hardening process.

A. Yes, sir.

Q. "This part of their work was not receiving the atten-

tion it deserved, and I requested that this be given better supervision, which was done, and will be described a little later on in this report. Roll carburizing is done with small gas type furnaces, similar in general design to our furnaces, but built very crudely by British Timken many years ago. These furnaces hold 100 pounds each, and the product was being quenched in water from 50 to 75 degrees Fahrenheit. Fractures also showed considerable variation here, and I was told that these small gas furnaces were not [fol. 1111] very satisfactory. At my request, the quenching medium was changed to oil."

Now, you referred above here to the fact that they were quenching the product in water at 50 to 70 degrees Fahrenheit, and you recommended a change in the quenching medium to oil. Will you tell the Court what you mean by the quenching process?

A. Well, when the product comes out of the furnace it's red hot, and it goes into either water or oil to give it its finished hardness, and the practice in the United States at that time——

The Court: Water or oil, did you say?

The Witness: Water or oil.

A. (Continuing) The practice in England at that time was to quench in water, which is a very severe shock to the piece itself, and I suggested that oil be put in in lieu of water, which gives a much better product than they were getting.

Q. "At my request, the quenching medium was changed to oil. Due to the fact that Mr. Morris, when he takes over the present plant, does not wish to give up the carburizing furnaces, it was necessary for us to place orders for new furnaces. As a result, six pot type furnaces were ordered [fol. 1112] and are to be installed at the Aston Plant by October 1st. These furnaces are approximately the same as ours, costing $800, but will be gas-fired and of a modern design. I requested that they be made high enough so that our obsolete nichrome carburizing pots could be used. This was not possible, except by breaking off the legs of our nichrome pots, which will be done if we decide to sell them our pots."

Do you mean by that that American Timken had some carburizing pots that they had used?

A. That's right.

Q. And had they been discarded for any reason?

A. They had been discarded for a change in method.

Q. What was that change in method?

A. We had gone to the gas carburizing process rather than the bone-meal process for rollers.

Q. So that these michrome pots which could be used on the type of process they were going to use in England had been discarded by American Timken?

A. That's right. I don't think they used them. You might read on there.

Q. "Due to the fact that the gas available in Birmingham was a B.T.U. content of 460 to 480, it is impossible to use gas carburizing furnaces."

[fol. 1113] In other words, the furnaces that we were using, gas furnaces, were for natural gas with 1,000 B.T.U. content and couldn't be used there, is that correct?

A. That is correct.

Q. The next heading is "Hardening". Going on:

"Cup and cone hardening is done on a stationary hearth type of furnace, a good deal like the standard heating furnace used in a forge shop. Four of these furnaces are in use, all gas-fired, and with pyrometric control. Quenching is done in exactly the same way we used ten years ago, namely, using a tank with a hand-operated quenching plate, on which are inserted plugs of the cast iron type. They also have two roll-retort furnaces which are used for roll hardening. However, due to the lack of equipment, rolls are receiving only one treatment, and only fair results are being obtained."

Will you explain to the Court the difference between the hardening process as it was used by American Timken and as being used by British Timken at the time you went over there in 1927?

A. Well, on the cups and cones they were using a process that, as I say in that report, we had discarded ten years before, and we had changed over our methods and were [fol. 1114] constantly improving them, and they apparently never knew about that.

Q. And the hardening process that they were using in respect of the cones, was it more costly than the process used in American Timken?

A. Yes, sir.

Q. And did you explain the advantages of changing the hardening method?

A. Yes, sir.

Q. Then following is a comparison of cup and cone hardening times. On Part No. 5720, in Canton, on the Rotary Hearth Furnace, 120 pieces per hour; British Timken, on cup 5720, Stationary Hearth, 27 pieces per hour. In Canton, on 319 cone, on the Rotary Hearth, 185 per hour; and British Timken on the 319 cone on the Stationary Hearth, 40 pieces per hour.

Were those figures that you accumulated at the time of your visit in 1927?

A. Yes, sir.

Q. "The writer was very much disturbed——"

The Court: Where were these figures obtained from?

The Witness: At British Timken's plant, their Statistical [fol. 1115] Department.

Q. Were they obtained for any particular purpose at that time, Mr. Hess?

A. Yes, for comparison purposes, to see what we could do to increase their production and lower their costs.

Q. "The writer was very much disturbed by the inefficiency of the entire Heat Treating Department, and especially of the fact that practically no fractures were being made from the hardening furnaces."

What do you mean by saying practically no fractures were being made?

A. Well, it had been our heat treating practice to make very many fractures, running into hundreds of pieces each hour, and examine the structure of them. I found that British Timken, I think I mention there, made very few per day, very few pieces per day were being fractured.

Q. Going on with the report here you say:

"The first two days I was there, only three fractures had been made, and only one of these fractures showed even a fairly good satisfactory heat treatment. Supervision of this department is not good, and has been handled by the Wolsel-y Motors through their metallurgists. Our superintendent, Mr. Loader, disclaimed all responsibility except that for the past 60 days, and it is very evident he

[fol. 1116] knows practically nothing about this branch of the business, other than the labor element. I explained to both Mr. Dewar and Mr. Dallow that we were in real trouble in this department, and that intelligent supervision must be installed at once. As a result a metallurgist by the name of Evans was hired from Wolseley Motors, and I was pleased to find he is thoroughly familiar with our work, and also he realized our wretched practice in this department. He promised me that if I would obtain permission for him to spend all of his time in the Heat Treating Department, he would materially improve it, even with its present poor equipment, within 30 days time."

Was this change of personnel and the employment of a new metallurgist done at your suggestion?

A. Well, I would say it was done largely through my criticism of the operations there, but I don't recall suggesting Mr. Evans. I don't believe I ever knew him before.

A. But you did suggest that a new man should be put on the job?

A. That is correct.

Q. "I obtained this permission from Mr. Dewar, and, as a result, quality should be somewhat better in the very [fol. 1117] near future. To give an indication of this department, we are heat treating approximately 6,500 cups and cones and 40,000 rolls a day, on a three 8-hour shift basis, using a total of 30 men.

The following equipment should be installed in this department at once, and upon such a basis I am very confident this force can operate one shift, with a minimum number of ten men.

6 Carburizing furnaces, 2 Rotary hearth furnaces, 1 Rotary retort furnace, cup and cone plug type, 1 Rotary retort furnace, cup and cone drop type, and 3 quenching machines at $700 each, a total investment of $14,900."

Were those recommendations as to equipment that you made to replace the obsolete equipment that was in use in the heat treating department when you went there in 1927?

A. Yes, sir.

Q. Do you know whether those recommendations were followed out by the British Company?

A. I think they were.

Q. "This department will be greatly aided in its operation, first by the elimination of four different kinds of steel which are now being used, which will be done at once, and secondly, by the use of our nickel molybdenum steel [fols. 1118-1119] with its resulting heat treating practice, and third, by eliminating any roll hardening due to obtaining hardened rolls from us."

The next heading is "Back Face Grinding." It states:

"Due to the demands of the British trade, our cups and cones are ground on both faces on a vertical type of machine, similar in design to the Heald Grinder used in our tool-room. The quality of the work is very good with regard to the flatness, although the surface finish is inclined to be slightly rougher than ours. Production times compare as follows."

Before looking at that table, will you point out to the Court what part of the component parts of the tapered roller bearing are ground in the back face grinding operation that you have reference to?

A. This is the part here on the cup (indicating).

The Court: That's the outside surface?

The Witness: Yes, that's this surface, it's perpendicular, and the same way on the cone. It's this surface here and here, this face (indicating).

[fol. 1120] By Mr. Ketterer:

Q. Referring again to Page 10 of the report, the table that has to do with production in respect of Back Face Grinding, type 419 cone, made on a machine of Canton's own design, production of 300 each face per hour; and in England, on the same type cone, 200 pieces, each face, per hour. On the part 3320, cup, on a machine of the American Timken design, a production of 300 pieces per hour and on the same part number of cup on a P & W machine in England 143 pieces.

Under the heading "Internal Cone Grinding" it states:

"The present method of grinding cone bores is to use machines similar to our old B & S and Modern types. Quality is very good, as all bores are held to .0006 and my inspection showed that they seem to have very little trouble with either a 'bell mouth' or 'taper' condition. Men are

used to operate these machines, but production is very slow, as will be noted in the following comparative figures."

What did you mean by that a 'bell mouth' or 'taper' condition?

A. Well, that is one of the difficulties of grinding cones internally, you usually develop that unless you are grinding [fols. 1121-1126] them very accurately and very good.

[fol. 1127] Mr. Ketterer: Going on with the reading: "The present method of grinding cone bores is to use machines similar to our old B & S and Modern types. Quality is very good, as all bores are held to .0006 and my inspection [fol. 1128] showed that they seem to have very little trouble with either a 'bell mouth' or 'taper' condition. Men are used to operate these machines, but production is very slow, as will be noted in the following comparative figures."

Then follows a table with respect to pieces produced per hour with respect to cone grinding of the Part 419, on the Canton type Heald machine of 87 pieces per hour; and in the British Timken plant of the same part number on a B & S machine of 7 per hour. Then under the Part 09074 on the Canton Heald machine 95 per hour; and with British Timken on a B & S machine 15 per hour.

Then under the heading "External Cone Grinding" it states:

"This operation is done on machines similar again to our B & S External Grinder, and here again production is very slow, but surface finish is good, and I saw no chatter whatever in this operation."

What do you mean by "chatter"?

A. The roughness in the grinding.

Q. "Comparison of production is as follows: External Cone Grinding, Part No. 419, Canton with machine of own design 124 pieces per hour, British Timken with B & S machine 17 per hour, on Part 09074 with the Canton ma- [fol. 1129] chine of their own design 195 per hour and on the same part number with a B & S machine 40 per hour."

Now, on "Rib Grinding". Will you point out on this bearing marked Plaintiff's Exhibit 3 what part or what area is involved in rib grinding?

A. I will point to it but you cannot see it. That is covered by the end of the rollers. That is called the rib

(indicating) possibly you can see through that thin section there.

Q. "Rib Grinding is done on a very light machine, using a solid non-expanding arbor, and while eccentricity limits are .001, I found approximately 10 percent of the product ran as high as .0015 in eccentricity. Production here is also slow, in accordance with the following comparisons."

Then on Part 419, Canton machine of their own design 150 (F type) per hour; the British Timken Churchill machine 40 (V type) per hour; on Part 09074 on Canton machine of their own design 150 (F type) per hour; and in the British Timken Churchill machine 67 (V type) per hour.

"I advised British Timken that as soon as we had de-
[fol. 1130] veloped a satisfactory external cone and rib machine we would send a machine to them for trial and observation."

Do you remember whether that was later gotten?

A. I don't recall.

Q. (Reading) "Only one inspections is used at British Timken, and this is done after the rib grinding operation. Scrap figures for the month of May, compared with our practice, show the following results: Comparison of Scrap (All Operations). Canton 'To man', 5.4% 'Not to man', 1.7%, a total of 7.0%. On British Timken 'To man' 4.0%, 'Not to man' .3%, total 4.3%."

What do you mean by that expression "To man" and "Not to man"?

A. Well, in some cases in grinding they find the defect is the fault of the man himself, inability to do the job, and in other cases it is the fault of the machine or the arbor in which the thing is made.

Q. The first item shown "To man" is the result of the operator, and the other one "Not to man" of the machine?

A. That is correct.

Q. (Reading) "When I reached Birmingham an order had already been placed for one Internal Heald Cone Grinder, at the price of $5,000. Three more of these ma-
[fol. 1131] chines were optioned at the same figure, which I advised was entirely too much to pay for these machines. The sales representatives for the Heald Company were called in, and after considerable negotiating they reduced

the price of the machines on option, $500 each, but refused to reduce the price of the machine now on order."

Did you participate in those negotiations?

A. Yes, sir.

Q. (Reading) "At my request they called the Heald Machine Company to equip the machine on order with Timken Bearings, and all machines in the future will be so equipped. Delivery of this machine was promised for September 1st-15th, and in order to avoid the dealy which would have been incurred through British Timken experimenting with spindles, etc., the writer cabled the Canton Plant to forward one internal cone machine completely set up, with extra emery wheels and spindles. This made a decidedly good impression on British Timken, and Mr. Dewar in particular was very grateful for our help in this regard.

In the Cone Grinding Department we should order the following machinery at once:

[fol. 1132] 3-Internal cone grinders @ $4,500 each—$13,500. (Now on option)

These three machines for internal cone grinding, will, in conjunction with the two machines available, be sufficient for all of British Timken's present production on one shift, provided they can reach our production figures on this operation. This, in my opinion, is quite possible.

Internal Cup Grinding.

This operation is done on machines similar to our Moderns and B & S, with resulting slow production, as evidenced by the following figures."

Is it correct to say the American Timken at that time was not using that type of machine for internal cup grinding?

A. I don't recall just what was the situation at that time.

Q. Well, then the comparison is found in the table:

"Internal cup grinding comparison". On the Part No. 1730, on the Heald type machine, production at Canton was 90 pieces per hour; on the British Timken B & S machine 24 pieces per hour; On Part 3320, the production by American Timken on the Heald machine was 53 per hour and the British Timken on the B & S machine 9 per [fol. 1133] hour.

A. Do you mean were we using the Heald grinders at Canton?

Q. Yes.

A. Oh, surely.

Q. But you say they were using machines similar to your Moderns and B & S which were not Heald.

A. They used all kinds of grinders. There were the Modern grinders to grind the internal cone, and the Brown & Sharpe, which were the B & S, and the Heald grinder, which were all doing the same operation.

Q. (Reading) "Surface finish is very good, and all cups are held to a stand of .006 high and .000 low.

British Timken were not familiar with our Heald Internal Cup Grinder, and as a result, the writer cabled for one of these machines to be shipped to them."

Was that done?

A. Yes.

Q. (Reading) "This will be put into production as soon as it arrives. For this operation the following equipment should be ordered at once:

4—Heald Sizematic Internal Cup Grinders @ $4,500 each—$18,000.

[fol. 1134] With this quantity of machines it is felt all of British Timken production can be handled on one shift. Reasons for not operating two shifts will be given later in this report."

Under the heading "External Cup Grinding".

"This operation is done on Landis External Grinders at a slow production rate, but with fairly good quality and the surface finish is good, and limits for size and out-of-round are held to .001. At the present time British Timken have one O. D. Centerless Cup Grinder in use, which is operating very satisfactorily. Production time on these 'O.D.' machines is as follows:

External Cup Grinding Comparison. Part No. 1730, on the Cincinnati Centerless 400 (4-pass) pieces per hour; on the British Timken Cincin-atti Centerless 120 (5-pass) pieces per hour."

What do you mean by 4-passes as distinguished from 5-passes?

A. That is the number of times the product itself goes between the emery wheels on the machine. That is purely a question of good practice.

Q. As to whether or not you placed the part in contact with the emery on the grinding machine four times or five [fol. 1135] times in the grinding cycle?

A. That is right.

Q. Now, in Canton, on the production of the 3320 on the Norton machine, 300 pieces per hour and British Timken on the Landis machine 21 pieces per hour.

"They are giving their cups five passes, and the examination of the produc. showed that all of these cups were being held within a .0006 limit, and that the surface finish was fairly satisfactory; the only objection in this latter regard being a slight roughness, which of course was of no great importance. British Timken had ordered an additional external cup grinder from Cincinnati Centerless, at a price of $7,800, compared with our price for a similar machine of $6,500.

This additional machine will give Britsh Timken, so I was advised, sufficient equipment to handle all of their cup production on one shift. The writer does not agree with them on this point, as they will have considerable changes to make, with a resulting decrease in machine efficiency. However, no recommendations for further equipment of this kind will be made, in view of the heretofore mentioned British statement.

At this point it should be stated that the writer was very [fol. 1136] blunt in his criticisms, both to Mr. Dewar and Mr. Dallow, of the British Timken purchasing policy with reference to machine tools. I requested that in the future no purchases should be made of any kind of machinery without first discussing it with us and ascertaining in particular the prices we have for such equipment. It apparently is not the British attitude to be what we term 'close buyers', and I spent a great deal of time getting this idea across to them. In most cases it was not possible to go back over past transactions, but I was assured by Mr. Dallow that he would be very careful in this regard in the future, and both Mr. Dewar and Mr. Dallow agreed to purchase absolutely nothing of a major nature without consulting with us in advance."

You say you were connected with the Timken Roller Bearing Company until in 1936. Did you maintain contact with them from 1927 until 1930 at various times?

A. With the British Company?

Q. Yes.

A. Yes.

Q. Was that procedure followed of consulting with the American Company when any major purchases of equip-
[fol. 1137] ment were made?

A. Yes, sir.

Q. (Reading) "Only one cup inspection is used, and results compare with ours as follows:

Comparison of Scrap (All Operations)."

In Canton 'To man' 3.4%, 'Not to man' 3.5%, total 6.9%; in British Timken 'To man' 4.7%, 'Not to man' .1%, total 4.8%.

"Roll Grinding"

"The present method of grinding rolls is on machines somewhat similar to our old roll grinders, and these machines are of a semi-automatic nature, operated by girls, so that one girl is required for each machine. Production is very slow, and surface quality is about the same as ours. The taper on the rolls I examined was very good, but 'out-of-round' ran from .0002 to .0004. This type of machinery is obsolete with British Timken, as they are now using three Cinc-nnati Centerless Grinders for this operation. All rolls are given two passes at a production rate of 60 and 45 per minute. At present two girls are operating these three machines, with the aid of a lineman. Quality of product is practically identical with ours, to the extent that they are having a difficult time in overcoming a
[fol. 1138] slight chatter."

Is that the same thing you described, slight roughness?

A. Yes, sir.

Q. (Continuing reading) "But 'out-of-round' and taper was very good. I was unable to obtain any definite figures with regard to rejections for taper, as all of the rolls were being mixed with similar rolls ground on both types of machines; but the total taper rejections were .5%. British

Timken have placed orders with the Cincinnati Centerless Grinder Company for the following additional equipment:

3-No. 2 Centerless Grinders for rolls @ $5,375 each—$16,125.

Delivery about September 1st, 1927.

This compares with our price for similar equipment of $4,400 each. This equipment will be sufficient to handle all British roll production on one shift, according to Mr. Loader. I explained to him in this regard that he would probably have to operate two shifts, as the hardened rolls that we would supply him would be made on the headers and have about .025 to remove, whereas his present rolls [fol. 1139] have only .010 to .012. He said he thoroughly understood this, and was prepared to make any necessary changes in his production plan, even to the extent of giving additional passes should he feel the same was necessary. No recommendation will be made for the purchase of any additional roll grinding equipment, as the writer feels the present equipment is ample.

The end grinding of rollers is done on a very small machine, similar to the Woods Grinder we formerly used, where the roll is placed in a collet and fed up to the emery wheel. This applies both to the "V" type and the "F" type roll now in use. British Timken are very desirous of obtaining a Keller Grinder from us, but the writer explained to them that this machine was obsolete with us, and as soon as our new machine had progressed far enough along, we would be glad to forward one to them.

Scrap rejections for rolls are running as follows."

In Canton "To man" 0.0% "Not to man" 0.1% total 0.1%, in British Timken "To man" 2.4% "Not to man" 1.0% total 3.4%.

Then there is under that (a) referring to the Canton, [fol. 1140] "Covers past three months—centerless grinders, 3-pass roll.

Here again it was not possible to separate the rejections for the centerless ground rollers from the other rolls, but I was told that centerless rejections were materially less, and Mr. Loader stated that he would have his total rejections so that they would compare very favorably with ours."

I would like to ask you with respect to the prices of

rolls on so-called centerless grinders, as I understand from what we have read, British Timken was using another method of grinding rolls which did not involve the use of centerless grinders, is that correct?

A. I think some of their rolls were ground on what we call center machines, not centerless machines.

Q. On center machines?

A. Yes.

Q. As to the cost in production, without going into the technical difference between center and centerless, how would that compare?

A. Well, the centerless is very much lower in cost.

Q. (Reading) "Inspection. British Timken inspection methods are quite thorough, but rather badly managed [fol. 1141] as far as organization of the Inspection Department goes. For example, their Inspection Department consists of 38 girls and 19 men. A careful analysis by the writer convinced me that this work could be done with approximately 30 perople, of which 90 percent would be girls. This information and details were given to Mr. Dallow, our director at Birmingham, who assured us that the would take the necessary action to accomplish this end. They do not use any cone hole gauging machines or cup stand machines, nor O.D. cup gauge machines, but sufficient equipment along this line will be built at once. Cones are not size-gauged, but this operation is eliminated due to the very slow external grinding, where uniform cone sizes are obtained. Roll inspection for taper is done on a small hand gauge at the same time the rolls are given visual inspection. Roll gauging for size is done on a home-built machine, with the principle of passing the roll automatically between two hardened and ground plates, reaching an apex. Drawings of this machine are in our hands, and a detailed explanation can be given by the writer.

Production on these gauging machines runs about 600 pieces per hour, and in view of our contemplated changes [fol. 1142] in gauging practice, the writer made no recommendation covering the change in this equipment."

Now, under the heading "Assembly, Testing, Packing".

"British Timken use men on the assembly bench, and at present, assemble 3,000 cones daily with 9 men. Their as-

sembly practice differs from ours, to the extent that the rolls and cages are assembled and immediately closed in on small hand presses by the assembler, who also places the equivalent cup with the assembled cone. The product is then passed through a very crude sound testing machine, which is nothing more than a small drill press operated by a boy. No test pieces were available, and this boy's judgment, backed by Mr. Loader, are the limiting elements for this test."

Will you tell us what you mean by sound testing bearings?

A. That is to determine the degree of quietness the bearing has when it revolves.

Q. (Reading) "Assembled cones are measured for stand in cup by one man, who in turn passes them, still accompanied by the cups, to a girl, who slushes and sends them to the Shipping Department."

[fol. 1143] The slushing operation is what?

A. Putting oil on them.

Q. For what purpose?

A. Shipping purposes.

Q. That is to prevent them from rusting?

A. Yes.

Q. (Reading) "All product is shipped in individual containers, and in boxes which compare in size with ours, to the extent of being just twice as heavy, and considerably over-built with regard to re-enforcement pieces, etc. It might be well to remark here that there is no reason in the world why this assembly cannot be done by girls, as well as the succeeding inspection operation, and I was assured by Mr. Dewar that this change would be made when we move to the new plant at Aston. Furthermore, the earnings of these assemblers are out of all proportion to the rest of the plant, as will be noted later on in this report, under the heading of 'Payroll and wages'. Stocks of finished non-assembled cones and assembled cones are handled in exactly the same manner as ours, with the exceptions heretofore mentioned, that all single cones are packed individually with the corresponding cups."

[fol. 1144] "Payroll and Wages."

"At the present time British Timken shop payroll is running $40,000 monthly, and shows an average hourly earning rate of $.36. The general office and departmental payroll, including the Sales Department, but excluding the salaries of Mr. Dewar, Managing Director, and Mr. Nallow, Dircetor at Birmingham, runs $6,700 monthly. All major departments are operating three shifts. The day shifts operate on a 47-hour a week basis, at the rate of 8 to 9 hours per day. The Heat Treating Department operates three 8-hour shifts six days per week. All major operations are on piece-work, and payroll figures show that approximately 65 percent of the shop force is on a wage incentive basis of some kind, and develop an average hourly rate of $.40 per hour.

The wage situation in England is controlled by the unions to the extent that hourly rates are set up for each occupation, and to which all manufacturers agree. The unions also set and control conditions of employment along the line that 47 hours is the normal working week, and any time over this is considered extra time and paid on a varying scale, such as time and a half and double timm, which [fol. 1145] in turn is controlled as follows:

All time after 5:45 P.M. must be paid at the rate of time and one-half, and all Saturday afternoon or Sunday time is considered overtime and is paid at the rate of double time. All night shift operators are paid at the rate of time and one-third. (This makes night shift operation very expensive and to be avoided.)

Piece-work is permitted and used in England, under the condition that all piece-work rates shall develop earnings not least 33-1/3 per cent higher than the union hourly rate for such occupation or work in which the piece-work is used. Furthermore, no changes in the piece-work rates can be made unless there is a definite change in the method of manufacture. As an example, to change the camming and the tooling on an automatic to speed up the work is not considered a definite change in method, and no change in a piece-work price is permitted. However, if the product was originally made, for example, on a No. 56 Acme and changed over and manufactured on a 2-inch Acme, this would be considered a change in method, and the resulting

decrease in piece-work rates could be made. There is still [fol. 1146] standing in British union labor agreements a clause to the effect that men will not earn over a certain amount, but this is no longer in force, and everyone earns all he can.

There is now in use in England a plan of wage payment which is an outgrowth of the war, known as the National Wage Advance, hereinafter referred to as N.W.A. It appears that during the war these N.W.A.'s were made periodically by the government in the form of a certain amount to be added to the weekly wages of each employee. No varying amount was given, based on a 47-hour week for day workers (and amounts to approximately $3.15 per week to night workers), regardless of the amount of earnings made in their regular routine work. As a result, for the lower-paid workers this so-called bonus amounts to approximately 30 percent of their wages, and drops down for the higher-paid workers to about 20 percent. Please understand that the employer has no control over this particular feature of wage payment. Just before the writer left England, the engineering unions, which we would call in our country machinists unions, had succeeded in obtaining an increase amounting to $.50 per week. They had originally asked for a $5.00 per week increase, but were vig- [fol. 1147] orously fought by the manufacturers, who finally compromised on the 50-cent rate increase. This takes effect August 1st.

Labor unions are accepting the use of production machinery, and while they still cling in principle to the old theory of limited production per man, I was advised everywhere in England that this had been abandoned, but had not been officially abandoned in any published statements up to this time. However, the situation in Birmingham, not only in our plant, but in two others that the writer visited, viz., the Hardy-Spicer Universal Joint people and the Wol-sely Motors people, all stated that production machinery was accepted by the unions in every regard. This same statement was made at the Gillette plant, which is located 20 miles south of London, and in which plant all American machinery and American methods are now in use.

However, in our British Timken plant the method used

when installing new machinery, is to place the new machines in a separate room away from the general production routine, where all tests are conducted and piece-rates figured. After an interval of from three to six months the [fol. 1148] machines are then transferred to the production line and immediately accepted by the employees, regardless of the fact of how many are dropped from the payroll as a result of the higher rate of production per machine.

One of the outstanding labor situations in England is the wide employment of boys and young girls. Anyone reaching 14 years of age can go to work, but it was my observation that enforcement of this regulation was very lax, and it seemed to me that boys of 10 and 12 years of age working in plants was very common. It is a very distressing sight to see little, slight, slender lads trying to lift heavy pans, etc., and our plant at Birmingham is no exception to the rule. Of course, this has a very decided advantage in low labor costs, as evidenced by figures set forth a little later on in this report. All of these boys, incidentally, are used for secondary operations, such as chamfering, etc., whereas girls are used both on roll surface and roll end grinding, and in the usual inspection departments, etc."

He then shows a comparison of wage rates between British Timken rates and the Canton rates. I don't think I shall take the time to read that. I don't think that is [fols. 1149-1150] necessary or particularly pertinent to the matter we are interested in here.

[fol. 1151] Under the heading of "Comparison of Wage Rates" there appears on page 18 a comparison of British rates and earnings with rates paid in the Canton plant, and the average earned rate on different types of operations. Under the heading "Automatic operator" the hourly rate shown for British Timken is 24 cents, and the average earned rate is 59 cents, to which is keyed a footnote (a) which says: "Earnings per hour include day rate plus N.W.A. award plus piece-work earnings."

At Canton the hourly rate for automatic operator is 47 cents and the earned rate is 91 cents, to which is keyed [fol. 1152] a footnote under (b) which says, "Earnings per hour represent departmental average." Under the

heading "Automatic helper" the British rate is shown as 18 cents and the earned rate 45 cents; in Canton the hourly rate is 42 cents with an earned rate of 55 cents. Under the heading "Chamfering, etc. (boys)" the hourly rate as shown in England is 12 cents, the earned rate 16 cents; the hourly rate in Canton is 40 cents with an average earned rate of 52 cents. Under the heading "Heat treating (fireman)", the hourly rate in England is shown as 22 cents and no earned rate; the hourly rate in Canton is shown as 55 cents and no earned rate. Under the heading "Heat treating (operator)" the hourly rate in England is shown as 20 cents and no earned rate; and in Canton the hourly rate is shown as 45 cents and no earned rate. Under the heading "Cone grinders (lineman)" the hourly rate in England is shown as 24 cents, with an earned rate of 52 cents; in Canton the hourly rate is 65 cents, and 78 cents is the average earned rate. Under "Cone grinders (operator)" the hourly rate in England is 19 cents and the average earned rate is 51 cents; the hourly rate in Canton is 50 cents with an average earned rate of 76 cents. Under the heading "Cup grinders (lineman)", in England the average hourly rate is 24 cents and the earned rate is 52 cents; in Canton the hourly rate is 65 cents and the average [fol. 1153] earned rate is 78 cents. Under the heading of "Cup grinders (operator)" the hourly rate in England is 24 cents with an earned rate of 52 cents; in Canton the hourly rate is 50 cents and the earned rate is 76 cents. Under the heading "Roll grinders (lineman)" the hourly rate in England is 24 cents, the earned rate 52 cents; in Canton the hourly rate is 65 cents with an earned average of 77 cents. Under "Roll grinders (female operator)" in England the hourly rate is 14 cents with an average earned rate of 21 cents; in Canton the hourly rate is 50 cents and the earned rate 77 cents, and to that is keyed a footnote under (e) which says: "Represents male operator."

Under the heading "Inspectors (male)", in England the hourly rate is 21 cents with no earned rate; in Canton it is 44 cents, with no earned rate. "Inspectors (female)", in England the hourly rate is 14 cents with no earned rate; in Canton the hourly rate is 29 cents with no earned rate. "Assemblers (male)", in England the hourly rate is shown

as 20 cents with an average earned rate of 65 cents; in Canton the hourly rate is 25 cents and the average earned rate 40 cents, with the word "female". "Assemblers (male)," in England the hourly rate is 20 cents with an earned rate of 65 cents; and in Canton 25 cents and 40 cents.

[fol. 1154] "Storekeepers, stockmen," the hourly rate is 18 cents in England, and no earned rate; in Canton the hourly rate is 50 cents with no earned rate. "Toolmakers," in England the hourly rate is 24 cents with an earned average rate of 50 cents; in Canton the hourly rate is 65 cents and the average earned rate $1.05. "Laborers," in England the hourly rate is 16 cents with no earned rate; in Canton the hourly rate is 40 cents. "Millwrights," in England the hourly rate is 24 cents with no earned rate; in Canton, 50 cents hourly rate, with no earned rate. "Electricians," in England the hourly rate is 24 cents with no earned rate; in Canton the hourly rate is 55 cents with no earned rate.

"Office clerks (male)," in England $65 per month, and in Canton, $115 per month. "Office clerks (female)," $35 per month in England, and $60 per month in Canton. "Stenographers (female)," in England $40 per month, and in Canton $85 per month.

Q. Now, going on to page 19 of your report, Mr. Hess, it states:

"There is no question but that we can reduce British Timken costs 20 percent, and the writer is convinced that if they will use just a little American aggressiveness in the handling of indirect labor, they can increase this figure to 25 percent. During my visit with them we made a very [fol. 1155] thorough study of this factor, and made detail costs of the following part numbers."

Then there is a list of part numbers that I will omit. I don't think there would be any purpose served in reading those.

"In setting up these costs we used revised manufacturing practices in the following manner:

"Our screw machine times were used, but discounted 25 percent to make up for the various changes necessary in British Timken production. This condition can be aided

materially by British Timken purchasing from us, if we care to sell, cones, made in the green, in the sizes where they have only small requirements."

Will you tell us what you mean by cones in the green?

A. Cones after the first machining operation on the screw machine.

Q. And before any carburizing or hardening operation?

A. That's correct.

Q. "This will be done by British Timken if we so decide.

"Carburizing and hardening times used were those of present British Timken practice, which as heretofore stated, can be materially reduced at least 33-1/3 percent. In the grinding operations our productive times were again used, less 25 percent for all internal operations on both cups and cones; and the present British productive times [fol. 1156] for centerless cup grinding were used, but no change was made in the present British productive time on the O.D. and rib grinding operations of cones. The prices quoted by the writer for both cages and hardened rolls were used, and the centerless roll grinding times used, were predicated on the 3-pass principle, but with productive time 25 percent slower than ours. The saving incurred by using our raw material to the extent of 10 percent lower price per pound was taken into consideration, but we did not take into consideration the fact that the screw machines can be materially speeded up using our material, and further, no consideration was made of the fact heretofore mentioned, that tubing can be used for 23 parts now manufactured from forgings.

"The part numbers set up herewith, represent over a nine months period, 20 percent of the total production, and are fairly indicative by size, so that the writer feels that, when we say we can reduce British costs by 20 percent, I am very conservative, and that this figure can be increased to between 25 and 30 percent by making machinery investments heretofore recommended, but which will be summarized a little later on.

"British Timken methods of computing costs are done on the usual shop order basis, that is, the cost of these [fol. 1157] shop orders is figured individually. Mr. Dallow

is a very keen cost man, and keeps well-posted on any variation, etc., up or down, in their costs. Overhead charges are now runnning around 130 percent, and administrative, including sales overhead, runs 20 percent, but include our royalty, which will run from 10 to 12 percent of the administrative charges. Details with reference to the computation of British costs are in the writer's possession, but are too voluminous to set up in this report."

Then under the heading "Personnel" it states:

"Mr. Dewar, as Managing Director of the British Timken Company, has his headquarters in London, and spends, so far as I was able to determine, one day each week at Birmingham. He advised me that in the very near future he will have terminated all his other connections and will be in a position to spend all of his time in the development of the Timken business. There is no question but that Mr. Dewar is tied up with a very powerful industrial group in England, headed by Mr. Dudley Docker. This group controls and manages a great variety of industries, ranging from street railway companies to paint works, and is also connected all over the world through the export sales of the Metropolitan Carriage, Wagon & Finance Company, builders of railroad cars. It is my impression that Mr. [fol. 1158] Dewar is Mr. Docker's right-hand man, and I know positively that Mr. Docker will be interested financially in the Timken Company, and may even ultimately be on the Board of Directors. Mr. Dewar is trying to arrange this at the present time. Naturally, the influence in our behalf which can be expended by Mr. Docker, should prove very beneficial to us. The writer's impressions of Mr. Dewar were that he is very capaole along the sales lines, and has considerable more aggressiveness than the average Britisher. He is a keen thinker, and his only drawback in my opinion is that his judgment is not of the best, especially in the expenditure of money. All the time I spent with him, he endeavored to impress me with the fact that he wanted to go very slow in the expenditure of funds, but at the same time, as heretofore outlined in this report, his past actions do not bear out these statements. He is exceedingly optomistic as to our prospects, and states that there should be no question but that we can sell

2,000,000 bearings in England, with a decrease of 15 to 20 percent in our selling price. Generally summarizing Mr. Dewar's capabilities, I would say that we are very well represented, and our British Timken interests will be more capably managed than at any time in its history. However, we must be prepared to watch this very closely and keep thoroughly in touch, particularly with its finan- [fol. 1159] cial and purchasing divisions.

"Mr. Dallow, who Mr. Dewar has appointed as a director at Birmingha-, was formerly an accountant, and is very capable along lines of cost work and general detailed expenditures. He knows very little about the bearing business and as a result, is considerably handicapped. He does not have the vision or aggressiveness of Mr. Dewar and, in the writer's opinion, is not capable of handling the management of our business if Mr. Dewar should die or become seriously ill. Upon inquiry I gave this same statement to Mr. Dewar, and he assured me that I was in error, but that, to give us a feeling of protection, he would agree to have Mr. Docker take over the active management temporarily of our affairs if anything should happen to him. While I was still in England, Mr. Docker agreed to do this.

"Mr. Loader, Shop Superintendent, is of course well-known to us, and is a good mechanic, but he is typically British, slow-moving and of egotistical nature. He feels he has a severe grievance against the British Timken Company, to the extent that none of his recommendations were ever followed, and that from the remuneration point of view he has been sadly neglected. I was quite successful during the time I was with him, in changing his attitude in these respects, and before I left he assured me that he felt very much better and would start anew to put Timken [fol. 1160] bearings as far as he was concerned, to the point of meeting American practice in every regard, and exceeding it in many cases.

"Mr. Wood, Automotive Engineer, has been with the British Timken Company for 14 years, and is fairly capable as far as the writer could judge, but at the same time I feel that we would be greatly benefitted by having a considerably higher grade type of man in this particu-

lar place. Mr. Dewar does not agree with me in this respect, and feels Mr. Wood is quite capable.

"Mr. Ellis, Works Engineer, has been with the British Timken Company for nine years, and has charge of all shop engineering, as well as industrial work. While he is very slow-moving and positive in his actions, I feel he is a good man as far as the shop is concerned, but that he is entirely unsuited to handle the industrial engineering from any other standpoint than from that of merely checking and approving layouts. He has no sales ability whatsoever.

"Mr. Hobley, Sales Manager, has been with the company approximately ten years, and is thoroughly versed in taper bearing conditions in England. He is not blessed with a very quick or active mind, but at the same time, I feel he has a better knowledge and insight regarding our business than any other man in the organization. I further believe that with the right kind of leadership, Mr [fol. 1161] Hobley will develop very rapidly, and will make us a valuable man.

"Summarizing the general attitude of the entire British Timken staff, I would say that it is rather disorganized, due to the entire lack of leadership during the past two years, but that they all have great confidence in Mr. Dewar, and all like him very much. There still is considerable divergence of opinion in the organization as to policies, etc., but this, I think, is a natural outgrowth of the heretofore mentioned lack of strong leadership, and I believe this condition will be capably corrected by Mr. Dewar.

"Manufacturing Summary:

"Summarizing the entire manufacturing practice at British Timken, we face the following conditions:

"1. British Timken will purchase all hardened rollers and cages from us, starting about January 1st, 1928. The reason for this delay in starting is due to the fact that materials are now on order and in process covering their production for the balance of the year.

"2. British Timken will purchase all tubing from us, at a price of $.095 Canton, which will give them a net saving in raw material costs of at least 10 percent annually

($20,000.00). This will be greater, dependent on the use of tubes replacing bars as heretofore described. Purchase [fol. 1162] orders will start coming through at once for tubing, but only in small quantities, as practically all material needed for the balance of the year is now on order with English manufacturers.

"3. The following equipment should be purchased at the earliest possible moment and put in operation in our British plant:

2-6½" Cleveland Single Spindle Machines at $2500 each;
2-4¼" Gridley Forging Machines at $3,000 each;
1-2" Acme or Cone Automatic Screw Machine;
2-Rotary Hearth Furnaces at $1,000 each;
1-Rotary Retort Furnace (Drop Type);
1-Rotary Retort Furnace (Plug Type);
3-Quenching Machines at $700 each;
4-Internal Heald Cup Grinders at $4500 each;
1-Internal Heald Cup Grinder (coming from Canton);
1-Internal Heald Cone Grinder (coming from Canton);
A total of $53,100.

"Equipment now on order:

2-No. 2 Centerless Roll Grinders at $5375 each;
1-No. 3 Centerless Cup Grinder;
1-No. 72 Heald Internal Cone Grinder;
3-No. 72 Heald Internal Cone Grinders (option only), at $4500 each;
[fol. 1163] 6-Pot Type Carburizing Furnaces at $800 each;
Total $47,225.00."

Now, I would like to ask you, Mr. Hess, in this summary of items that have been described here, were they the result of joint conferences between you and Mr. Dewar and Mr. Dallow in respect to the condition of the British Company?

A. Yes, sir.

Q. And arrived at as a result of joint discussion?

A. That's right.

Q. Under the heading "Financial" the report goes on:

"At the present time our financial situation is fairly satisfactory, but by the end of November we shall be over-

drawn at the bank approximately $136,000. It is the practice in England to overdraw rather than to have credit extended through the use of commercial paper, etc. This large overdraft is developed through unusual charges in October amounting to the following:

"Purchase of roller bearing equipment from Wols-ley Motors, $129,600;

"Machine tool purchases (this also includes motors for the Aston Plant), $60,000;

"Dividends, $60,000;

"Total, $149,600.

[fol. 1164] "Mr. Dewar has made the necessary arrangements at our bank to carry this overdraft as long as necessary, and he expects to pay a rate of 4¾ percent. However, we face an income tax payment in February of 1928 for approximately $77,000. Furthermore, we have made no provision under these circumstances for the purchasing of any machine tools other than those on order and on option. As explained previously in this report, an investment of $53,000 is badly needed along this line, to aid in the reduction of our costs.

"The entire financial situation was discussed at length with Mr. Dewar and Mr. Dallow, and I explained to them our attitude of incurring overdraft obligations without discussing the matter with us, and that we were not at all in favor of having overdrafts at any time.

"Summarizing the financial situation, it is recommended that we pass payment of the dividend due in October, amounting to $60,000 on the condition that this entire fund be reinvested in machinery for the plant. Mr. Dewar is entirely satisfied with such an arrangement, and the matter is up to us for consideration at this time."

Do you recall now whether or not that step was taken?

A. I don't.

The Court: I didn't hear the answer.

[fol. 1165] The Witness: I don't.

Q. "With the investment for this equipment, we shall be in a position to start aggressively at once, widening our market in England, details of which will be given under 'sales'."

Under the heading of "Sales" the report goes on:

"Automotive Production:

"At the present time there are being built in England annually about 200,000 pleasure cars and about 25,000 commercial vehicles, and 500,000 motorcycles. Total registration in the United Kingdom is approximately 1,000,000 automotive vehicles. Like in our country, production of cars is gradually being centralized in strong hands, so that at the present time the three largest builders in England are as follows:

"Morris and allied interests (Wolsel-y) 78,000 annually;

"Austin, 50,000 annually;

"Clyne, 10,000 annually.

"These three manufacturers represent approximately 65 percent of the total production of pleasure and commercial vehicles, and unfortunately our bearings are used in only 8,000 of this total, being in the Wolsel-y car, which has just been purchased by Morris.

"Our sales problem in obtaining this volume business [fol. 1166] is dependent first on reduced costs, and, second, the consideration of Mr. Morris to abandon the use of ball bearings in his cars regardless of the fact that he is an active director in Ransom & Marels, ball bearing manufacturers.

"With reference to the first condition, it has been our practice in the main to quote bearings at 70 percent off list, as compared with ball bearing manufacturers quoting 85 per cent off list. I was advised that these list prices are practically identical in the popular sizes. We do have taper competition in England, both from SKF and Bock. Up to six months ago Mr. Dewar had a price agreement with SKF to the effect that we would both quote the same prices on bearings; but this was cancelled by Mr. Dewar. In the writer's judgment this was a very wise cancellation, as SKF in England make both ball and roller bearings, and while on the one hand they would maintain prices on the taper bearings, they would quote ball bearings at such prices as to prohibit the use of taper bearings. They have since tried to renew this agreement twice with Mr. Dewar, but have been unsuccessful. Bock competition is

practically dead, and we have not met it for some little time.

"Bearing Application: The British Timken sales and [fol. 1167] engineering policy has not been very aggressive along the lines of laying in small taper bearings to replace ball bearings, and while I was given very many reasons why this was impossible, it is my personal observation that our efforts have not been successful for the main reason that we were laying in entirely too large a type of bearing to replace ball bearings, rather than to sell the manufacturer on the idea of changing his layouts and using smaller taper bearings. This matter was discussed at great length with Mr. Dewar, Mr. Hobley, Sales Manager, and Mr. Wood, Automotive Engineer, and it was decided to start anew in this regard, and the writer forwarded to our Canton Engineering Department full drawing details covering installations in both the Morris and Austin cars for modernized taper bearing installations.

"British Timken are very anxious to have our suggestions in this regard, and Mr. Dewar in particular feels that in the case of the Austin we can surely get this business if we can show them where they can install taper bearings even for the same price as ball bearings. The Morris situation is pretty complicated, due largely to his connection heretofore mentioned, with the ball bearing manufacturer, but we do have some leverage in this respect, in view of the fact that we have purchased all our roller bearing equip- [fol. 1168] ment from him. Just how strong this leverage will prove to be is very uncertain, but Mr. Dewar feels if we can quote the same prices as ball bearings, we shall get this business. The question of obtaining Clyne business is dependent entirely on price, and with lower manufacturing costs with resulting lower sales prices, we should be able to obtain all of this business.

"Sales Analysis: The following figures will give some indication of British Timken sales for 1925 and 1926:

"Analysis of British Timken Sales"

And under the heading "Bearings" it shows 256,568, with a value of $538,305.60, or a per bearing value of $2.40. Under October 1, 1925 to September 30, 1926, it shows 38

per cent, and the corresponding period in 1924-1925, 49 percent.

"Motorcycles, 103,529 bearings," a value of $49,119, or per bearing 54 cents, and under October 1, 1925 to September 30, 1926, 13 percent. Corresponding period 1924-1925, 5 percent.

"Home service, 74,180 bearings," with a value of $141,170.40, or per bearing $2.16. Under the column October 1, 1925 to September 30, 1926, it shows a figure of 11 percent, and the corresponding period in 1924-1925, 17 percent.

[fol. 1169] "Overseas, 216,629 bearings," a value of $380,007.60, or per bearing value $2.01. Under the column October 1, 1925 to September 30, 1926, 33 percent, and the corresponding period in 1924-1925, 25 percent.

"Industrial, 9,308 bearings," value $17,526.60, or per bearing $2.16. Under October 1, 1925 to September 30, 1926, 1-½ percent, and the corresponding period in 1924-1925, 4 percent."

Now, do you remember, Mr. Hess, this heading of "Home service"? What type of sales did that cover?

A. That was sales, as I recall it, directly in England itself.

Q. For service purposes?

A. For service purposes.

Q. As distinguished from bearings for original installation?

A. Yes, sir.

Q. And the overseas item that appears in this list I have just read, what type of sales did that cover?

A. That was sales of bearings for service purposes outside of England proper.

Q. And in the last column appears "Industrial Sales," what type of sales did that cover?

A. Well, that's what we called in those days sales for machine tools and mine cars and various industrial applications, hoists, cranes, and things like that.

[fol. 1170] Q. Now, to your knowledge, what if anything had the American Timken Company done prior to 1927 in regard to developing sales in the industrial field?

A. Well, we had expanded that very largely in this country.

Q. The percentage that is shown here for the period of October 1, 1925, to September 30, 1926 of the number of sales for industrial was 1-½ percent. Would that be high or low by comparison with what American Timken was doing in the same field?

A. Extremely low.

Q. The total number of bearings sold for the period shown for 1925 and 1926 is 660,214 of all classes, with a total value of $1,126,129.20.

"From the analysis given above, it will be noticed that Home Service Sales Service has fallen 6 percent during the year 1926. Our Sales Department was unable to explain this, but it is the writer's opinion that some of this drop in sales can be attributed to the rather long prices we are getting in our service business. Discounts quoted in the past have never exceeded 40 percent, and there is no question but that competition has gotten a foothold, not only in England proper, but in English territory.

"When I arrived in England it was both Mr. Dewar's opinion and Mr. Hobley's that we in Canton were making a [fol. 1171] great mistake in selling service bearings at 50 percent off list, and they were quite resentful of the fact that we had been selling bearings at such prices into British territory. This problem proved quite a serious one, and British Timken were flatly unwilling to make any changes in discounts to their dealers, being entirely satisfied with the present progress of service sales.

"Upon receipt of Mr. Browers' letter, showing that Bock, during 1926 had sold approximately $50,000 worth of products in British territory, the complexion of the situation entirely changed, and it was decided to change discounts to British dealers from 40 percent to 50 percent, and in some cases 55 percent off list."

That was discussed with Mr. Dewar, was it?

A. Yes, sir.

Q. "It was further agreed in this matter that British Timken would revise their list prices to correspond with our list prices. It so happens in this regard that on the smaller popular sizes their list is higher than ours, but on the larger sizes where they have no competition whatsoever, their list is lower than ours. This point was quickly

grasped by Mr. Dewar, and they will follow our practice in every respect along this line.

"A general picture of the use of Timken bearings in [fol. 1172] both pleasure cars and commercial vehicles is set up as follows:

"Total pleasure cars manufactured, 200,000;

"Cars manufactured using Timken bearings in both front wheels, 29,000, or 14 percent;

"Cars manufactured using Timken bearings throughout, 23,000, or 11 percent;

"Cars manufactured using Timken bearings in either front wheels or rear wheels, 19,000, or 9 percent;

"Commercial vehicles manufactured, 25,000;

"Commercial vehicles using Timken bearings in both front and rear wheels, 20,000, or 80 percent;

"Commercial vehicles using Timken bearings throughout, 5,000, or 20 percent.

"The figures set forth herewith cover only wheel and rear drive installations, and do not take any transmission installations into consideration, as we have made no installations in transmissions."

By that you mean that British Timken made no installations in transmissions?

A. That's right.

Q. "Bearing Manufacture: At the present time there are being manufactured in England approximately 7,500,000 bearings of all types, such as ball, straight roller and tapered roller bearings. Of this total we manufac- [fol. 1173] ture 660,000 or 8-½ percent.

"The three largest makers of bearings are as follows:

"Hoffman Manufacturing Co., Ltd., 3,000,000;

"Ransome & Marles Bearing Co., Ltd., 2,000,000;

"Skefko Ball Bearing Co., Ltd., 1,500,000.

"It should be understood that all of the heretofore mentioned figures, not only with relation to bearing manufacture, but to automotive manufacture, are estimates furnished by the British Timken Sales Department. There are no statistics covering the automotive industry in England, other than those showing total registration.

"During 1927 our business in the commercial vehicle

field and the motorcycle field has improved, and at the time I was in England we were having great difficulty in making deliveries for truck bearings. I was advised by Mr. Hobley, Sales Director, that he felt our business in 1927 along this line would be double that of 1926, but he was unable to give me any definite figures in this regard.

"The motorcycle business in England is very large, 500,000 being produced annually, and, if we can lower our selling prices we shall get the bulk of this business, as apparently ball bearings, especially in larger motorcycles, [fol. 1174] do not stand up.

"The Ford replacement business has been largely obtained by SKF, and we recently lost an order for 5,000 sets of bearings due to higher prices. Here again, lower selling prices, which can be made with lower manufacturing costs, should get this business for us.

"British export sales, classed heretofore as overseas sales, will be even greater in 1927 than in 1926, the particular reason for this being that we have considerably broadened our sales in Germany. Details of this will be given later in this report under the heading 'Germany'.

"Industrial: The industrial sales activity in England has been rather negligible up to this time, as evidenced by figures heretofore set forth, showing such sales as one and one-half percent of our total for the year 1926. However, during the past six months interest in this line has greatly increased, and Mr. Ellis, Engineer in charge of this work, is now keeping three men busy making layouts, etc. He is handicapped considerably in this regard, due to lack of industrial bearing experience, and we must supply them with every possible aid, based on our past five years experience in industrial work."

That was the experience you referred to a little while [fol. 1175] ago when I asked you what had been done by American Timken in the industrial bearing field prior to 1927?

A. Correct.

Q. "The entire British Timken organization has an entirely new feeling about industrial work, which, up to the time I arrived, was being considered as a very small sideline. I explained to them our progress along this line, and

our future prospects, with the result that they plan to go aggressively after everything in this respect."

Under the heading "Railway" the report states:

"The railroad field in England has shown practically no interest in our bearings, but great interest has been shown in Germany, and which will be dealt with later on in this report.

"Apparently the limiting factor in the use of our bearings in England is the typical British reluctance to try anything new. The freight cars in England are practically nothing more than wagons, weighing 12 and 18 tons. These cars cost approximately $500 each, and I was advised by Mr. Dewar that they only are in transit about one and one-half percent of the time. All of the other time is used at terminals or as storage vans on side tracks. The passenger coach situation, so I was advised by Mr. Dewar, is complicated by the fact that in all of the larger cities, such as [fol. 1176] London, Birmingham and Manchester, it will be impossible to lengthen the station platforms to use longer trains, and that he did not feel he could at this time show sufficient advantage in savings to obtain any orders. The writer does not agree with Mr. Dewar in this respect, and I believe that he will become more enthusiastic when he sees our progress when he comes to this country in October. We have, however, obtained an order to equip six underground (subway) railway cars in London, with our bearings as soon as we are in position to do so. British Timken are now preparing layouts which they will forward to us for approval and suggestion in the very near future."

Under the heading "Summary" the report states:

"Summarizing the sales situation now existing at British Timken, the following recommendations are made:

"First. Reduce selling prices to automotive manufacturers by quoting discounts of 80 to 85 percent off list, so that we can get volume production, even at a narrower margin of profit. Mr. Dewar concurred in this idea, and it should be understood that with the new manufacturing equipment now on order and to be purchased, we can still

maintain a very good margin of profit, even revising our discounts as herein outlined.

[fol. 1177] "Second. Supply to British Timken at the earliest possible moment, experienced automotive engineering counsel.

"Third. Send to British Timken an experienced man from our sales staff, who is capable of organizing in conjunction with Mr. Hobley, a strong sales staff, not only in England, but on the continent as well, covering both automotive and industrial sales. This may not be necessary if Mr. Hobley will, in his visit in September, assimilate American methods to such an extent that he can train his own staff."

Now, Mr. Hess, in going through this lengthy report of what you observed and discussed at British Timken in 1927, I notice that there were many places, in going through the report, where you used the first person pronoun and the plural possessive first person pronoun in referring to the British Timken plant as "our plant," and saying "we have done so and so." For example, on the first page you say "We have complied with Mr. Morris' request," and you say "We are occupying a modern type of one-story building." Why did you use the first person in referring to the operations over there?

A. Well, we felt we were in this whole operation together, Dewar and ourselves, as partners to try to develop [fol. 1178] the sale of Timken bearings in Europe.

Q. From the examination that you made of the market in England and on the continent at that time, will you tell the Court whether or not that was, in the anti-friction bearing business, predominantly a ball bearing market or was it a tapered roller bearing market, or how was that?

A. Well, through all of Europe in those days it was very predominantly a ball bearing market. Tapered bearings had not been developed to any great extent whatsoever, but they were receiving very large attention at that time.

Q. And the process of developing the market in the anti-friction bearing field for tapered roller bearings involved what in respect of ball bearings, the displacement of them, or what?

A. Almost entirely in Europe it was a matter of displacement, although in new types of equipment that was or-

dered we would offer to lay them in at the same time that the ball bearings were considered, but in those days there wasn't very much new production being built. Our major problem was to displace ball bearings with the use of tapered bearings.

Q. And that was the competitive situation with which you had to deal in the European market?

[fol. 1179] A. That is correct.

Q. Now, I don't know whether I asked you this morning or not whether you went to France, but if I didn't I will ask you now. Did you go to France?

A. Yes, sir.

Q. In 1927?

A. Yes, sir.

Q. And did you make an inspection of the plant over there where Timken bearings were being produced?

A. I did.

Q. Did you prepare a report on the production and what you saw in the plant in France?

A. I did.

Mr. Ketterer: I will have this marked for identification Defendant's Exhibit 32.

(The report referred to was thereupon marked by the Clerk, for identification, Defendant's Exhibit 32.)

Q. Mr. Hess, I hand you some photostatic sheets that have been marked for identification Defendant's Exhibit 32, and ask you if you can identify that document?

A. That's the report I wrote after my visit to France.

Q. In 1927?

A. Correct.

[fols. 1180-1187] Mr. Ketterer: We offer, if the Court please, Defendant's Exhibit 32 in evidence.

[fol. 1188] Mr. Ketterer: Now, referring to this report which has been marked for identification as Defendant's Exhibit 32, under the heading "France" and "representation" it states:

"At the present time our bearings are being manufactured by the SMG Company, who are the second largest ball bearing makers in France, and who, at this time, are making approximately 100 taper bearings daily.

"Their plant is a quite modern four-story affair, and they manufacture wherever possible, cups and cones with the trepanning method from direct hardening steel. Machining times which the writer has available, show that their practice is in many cases 20 percent better than the present British practice, and there is no question in my mind but that they are more aggressive, particularly from a manufacturing standpoint, than British Timken."

The Court: Mr. Ketterer, will you forgive me for interrupting you at this point? I was somewhat puzzled by some figures in the former report, and I want to be sure that the figures are correct. There was a statement made on page 5 with reference to production that at the present time British Timken is manufacturing 3,000 bearings a day with a force of 460 people in the plant and 70 people on the office payroll including sales and engineering departments. Is that correct, the 500 people make 3,000 bear-
[fol. 1189] ings in one day?

Mr. Ketterer: Yes, I think that's correct.

The Court: That would mean approximately six bearings made by one person a day.

Mr. Ketterer: You mean, your Honor, that you think that is high or low?

The Court: I just want to know whether that is the correct figure. I'm not expressing an opinion either one way or the other.

Mr. Ketterer: That is the correct figure on what British Timken was doing at that time.

The Court: That is the correct figure?

The Witness: Yes.

The Court: What type of bearings were they? Are they bearings that are various sizes, including some bearings that run into sizable sums of money, or what kind of bearings are they?

The Witness: Well, they would vary, your Honor, from a bearing as big around as that (indicating), to one about five or six inches in diameter.

The Court: At an average cost of about how much?

The Witness: Well, I can't tell you in cost, but I think it stated the selling prices in there.

[fol. 1190] The Court: There were some figures in here about cost.

The Witness: Yes, the selling price. I think it showed $2.00 a bearing, as I remember it.

The Court: $2.00 a bearing?

The Witness: Something like that, in there.

The Court: That's why I wanted to know if those figures were correct. It seemed to indicate that one person, if you divide it up, if it's capable of such division, is responsible for manufacturing approximately six bearings a day at $2.00 a day, which would be $12.00 total production per day.

Mr. Ketterer: Correct.

The Court: Is that what those figures bear out?

Mr. Ketterer: Well, that would be the average if you average out in that fashion.

The Court: If you can average them out on that basis?

Mr. Ketterer: That's correct.

The Court: I am simply taking the volume of output per day and dividing it by the number of people who are responsible for manufacturing 3,000 bearings a day.

Mr. Ketterer: Well, the figure——

[fol. 1191] The Court: Am I correctly informed that the average cost of those bearings is $2.00?

The Witness: Your Honor, I would have to look up the selling price——

Mr. Ketterer: On page 25, if the Court please, there is the table which shows the average selling prices of the bearings, and in the automotive field it was $2.40; for motorcycles, which are very small sizes, it was 40 cents; for home service bearings, it was $2.16, for overseas bearings, $2.01, and for industrial bearings, $2.16. That was the average.

The Court: Very well.

Mr. Ketterer: Continuing with the report:

"The quality of their bearings seems excellent, with the exception that they do not grind the end of rollers.

"Labor: The labor situation in France is about the same as in England, as far as wages paid are concerned, but there is no union domination in any respect. The general practice in France is to run either one or two 9-hour shifts, and girls are used on all classes of machines in conjunction with men. Usually 10 percent additional wage is paid to night-shift operators.

"Sales: Sales for the past two and one-half years have been as follows:

"(SMG), manufacturing, 1925, $22,150; 1926, $22,000; [fol. 1192] 1927, $25,300.

"For service, 1925, $48,300; 1926, $70,236; 1927, $63,000."

The last figure for 1927, according to the note opposite the numeral "1927" is based on the first six months.

"It will be noted from the foregoing that this year's sales show a slight decrease in the service division, but this was explained by Mr. Winsberg, Sales Manager, as being due to a falling off in service demands from American manufactured trucks.

"The SMG Company have made practically no attempt to develop industrial sales, and they advise me that their reason for this is they have no information from British Timken along this line.

"Costs and Prices: The writer found it very difficult to get any information from them. I spent considerable time with Mr. Almy, the President, Mr. Winsberg, Sales Manager, and Mr. Durignier, Works Manager. Upon asking for their costs, etc., I was given their manufacturing costs by Mr. Durignier, showing a shop overhead of approximately 400 percent on direct labor. I questioned this fact but was told that the same overhead used for ball bearings is used in the computation of tapered bearing [fol. 1193] costs, but in a careful study of their plant I was unable to find wherein any such overhead was developed. Upon asking Mr. Almy for a verification of this figure, he claimed that he did not know what it was. He also declined, upon the same basis, to give me any figures at all as to their sales expenses. I requested this same information from Mr. Winsberg, who told me that they did not care to give us this information at the present time, but would be glad to discuss it with us at the time the contract was renewed. I questioned Mr. Winsberg particularly as to the prices quoted for tapered bearings, as compared with ball bearings, and was given the following figures:

"319-313 Tapered Bearings, price each $1.32;
Ball bearing price each 76 cents;
"339-333 Tapered bearing price each $1.52;
Ball bearing price each 88 cents;

"357-353 Tapered bearing price each $1.60;
Ball bearing price each 84 cents;
"344-333 Tapered bearing price each $1.48;
Ball bearing price each 84 cents.

"At the present time the only French competition we have is supplied by the SKF Company, who have a plant in France, but who are doing very little at this time. I [fol. 1194] was unable to obtain any figures with reference to their production.

"The French situation as regards British Timken is in bad shape. The feeling toward British Timken is very bitter, and one must understand the French nature to be able to find any ground for such a feeling. The SMG Company blame their lack of development in tapered bearing sales entirely onto the fact that British Timken has failed to supply them with information relative to the latest and newest methods of manufacture, and that they deliberately withhold from them every possible amount of data relative to sales development work. While the writer does admit that British Timken have been very lax in their transactions with the SMG Company, I also feel that the present French feeling is largely uncalled for.

"The French Company have never received any drawings or data relative to the 'F' type of bearing, nor any information with reference to the use of centerless roll grinders, Heald internal grinders, etc. All of this information has come to them from machine tool representatives, and of course they resent this fact considerably. At the present time in their plant they are using a few 'Terromatic' internal grinders on ball bearings, and also have one internal Heald cone grinder on which they started to grind cone bores a few days before I reached there. They [fol. 1195] also have one centerless cup grinder which they are using on ball bearing cups at the present time. They plan to try this machine on tapered cups at the earliest possible moment.

"They are very anxious to obtain all possible data with relation to our methods of manufacture, but the writer was forced in every way possible to avoid giving any detailed information. This is due to the fact that our contract ex-

pires next year, and Mr. Dewar feels it will be very unwise to renew it with SMG."

Q. Now, the contract that you refer to there, Mr. Hess, is that, or was that a contract between British Timken Ltd. and Societie Mecanique d'Genevilliers?

A. Yes, sir.

Q. That was a contract to which American Timken was not a party in any respect, is that correct?

A. That's right.

Q. And in the discussion that you had with the SMG people in 1927, as I understand it, you and Mr. Dewar had talked about the advisability of extending the contract with SMG after that expiration date?

A. Yes, sir.

Q. In this report you state: "The writer is inclined to [fol. 1196] agree with him in this regard, as the manufacture and sale of tapered bearings and ball bearings do not mix; and the only successful way to handle this situation is, in my opinion, to manufacture our own bearings in France."

Now, is it correct that SMG in 1927 was a large ball bearing manufacturer?

A. Yes, sir.

Q. Did you visit their plant?

A. Yes, sir.

Q. Have you any recollection as to its approximate size?

A. No, I haven't.

Q. As to the number of people employed?

A. No, I don't recall.

Q. How did it compare in size with the British Timken plant that you visited?

A. I can't even tell you that.

Mr. Ketterer: Proceeding further with the report as to the situation in France as developed by Mr. Hess on his visit there in 1927, on page 3.

(Reading:)

[fol. 1197] "Whether this will be feasible or not, must be thoroughly studied, as considerable depends on the French tariff situation, which changes almost daily. To give an example of this condition, while I was in Paris I

was given three different tariff rates by the SMG Company, and received still a different rate in England.

"At the present time Mr. Dewar is investigating the possibilities of cancelling the French agreement at once, so that we shall not lose an entire year's time in getting started making our own bearings in France. As is probably known, the SMG Company have written a letter asking for a renewal of the contract on their own terms, which incorporate a much smaller royalty, etc. They also expressed the opinion that they might undertake the manufacture of tapered bearings themselves, and of course this is a possibility.

"The writer wishes to recommend the following:

"First: That the present French contract with British Timken be not renewed, and

"Second: That we be prepared to invest, through British Timken, whatever may be necessary to at least perform finishing operations in France, should the present tariff situation be in effect at the time the contract expires. Or, [fol. 1198] if a contrary tariff is in effect, to prepare to manufacture completely in France at least the popular sizes in bearings."

Q. Now, Mr. Hess, in connection with the recommendations that appear at the end of that report, first as to the renewal of the contract between French SMG Company and the British Timken Company, was that or was it not renewed?

A. It was not.

Q. In other words, the recommendation that you made here, the first one, was carried out?

A. That is right.

Q. And that, again, was by agreement between you and Mr. Dewar?

A. Well, at that time I don't believe we made the decision to cancel it, at the time when I was there.

Q. But ultimately that was done?

A. That is right.

Q. Now, the second recommendation involved the possibility of an investment in the establishment of an entirely new plant in France. Tell the Court whether or not that was done.

A. That was done, but I can't recall offhand just when it was done. I don't believe it was in 1927.

Q. Regardless of the date, for the moment, it is a fact, [fol. 1199] however, that Mr. Dewar and American Timken joined in financing the establishment of a new plant in France?

A. That is right.

Q. Do you remember the name of the French Company under which the plant was established?

A. French Timken.

Q. Well, the French name, to refresh your recollection, was Societe Anonyme Francaise Timken?

A. That is right.

Q. That was an entirely new corporation?

A. Yes, sir.

Q. Now, was it disassociated completely from the SMG Company?

A. Yes, sir.

Q. Was it established in the same plant as the SMG Company?

A. No, sir.

Q. And what if any equipment from SMG Company was taken over by the new French Timken Company?

A. I don't recall that any was taken.

Q. Now, who provided the funds for the establishment of this new French Timken Company?

A. I think Mr. Dewar supplied some and we supplied some.

Q. By "we" you mean American Timken?

A. That is right.

Q. Did I ask you whether or not the plant that was established by the new French Timken Company was at [fol. 1200] the same location as the SMG plant?

A. It was not.

Q. What is the fact as to whether or not a plant was rented or purchased for this new company?

A. I don't recall whether we rented or purchased at the time, I think we rented.

Q. Where did the equipment come from that went into the new plant, was it purchased?

A. I think some was purchased in France, I think we

sent some from America, and I think British Timken sent some.

Q. So that it was an entirely new operation regardless of whether it was in 1927 or 1928, it was an entirely new operation from and after the time it commenced?

A. That is correct.

Q. Do you know what happened to the SMG plant in which this manufacturing operation you described in this report was taking place, do you know what happened to that plant?

A. No, I don't.

Q. As to whether or not it was later purchased by any other company?

A. No, I don't know that.

Q. I will ask you, Mr. Hess, whether or not in 1927 you also visited Germany?

[fol. 1201] A. Yes, sir.

Q. And as a result of the visit that you made to Germany did you make a report of what you learned there in respect of the situation involving anti-friction bearings and Timken bearings?

A. I did.

(Report marked by the Clerk, for identification, Defendant's Exhibit 33.)

Q. I will hand you, Mr. Hess, some photostatic sheets that have been clipped together and marked for identification Defendant's Exhibit 33, and ask you if you can identify them?

A. That is the report made by me with reference to my visit to Germany in 1927.

Mr. Ketterer: I will offer Defendant's Exhibit 33.

The Court: It may be received.

Q. Now, referring to the report of your visit to Germany in 1927, under the heading "Sales Representation", you stated:

"At the present time, all business done in Germany is handled by Deutsche Timken Gesellschaft, which is located in Berlin, and which is exclusively a sales organization operating under the direction of a certain Mr. Prausnit-

[fol. 1202] zer."

Now, I want to ask you, Mr. Hess, whether up to 1927, at the time you visited there, there were any manufacturing operations being conducted in Germany by any company making Timken bearings?

A. No, sir.

Q. And the operation that was under the direction of Mr. Prausnitzer, was that exclusively a selling operation?

A. That is correct.

Q. (Continuing reading:) "All bearings sold in Germany are made in England and quoted F.O.B. Birmingham to Mr. Prausnitzer, who in turn adds on the usual charges for freight and tariff, which, as he explains, amounts to 15 percent. He then further stated that he adds 15 percent for his profit. Unfortunately, the writer found upon investigation that this is not always done, and in one instance I checked and found the profit ran as high as 25 percent, and in still another instance only 10 percent had been added for freight and tariff. It should be understood that British Timken exercises no supervision over and have no knowledge of the prices quoted by Mr. Prausnitzer to our German customers. He makes no reports as to the sales he loses, and he has no records along this line.

[fol. 1203] "This gentleman is about 55 years old, and his experience has been of rather a varied nature along the following lines:

"He formerly sold machine tools for the Gridley people, and has the occupation of a consulting engineer. During the war he acted in this capacity for the German government, in the manufacture of all vehicles, airplanes and such allied articles. His ability seems above the average as far as the selling of Timken bearings is concerned, as he was very anxious to advise me, and there is no question but that he has done so far a splendid job, as will be shown later on in this report.

"He is very well acquainted with a certain Mr. von Gontard, who is the head of the D W F Company, manufacturers of ball and tapered bearings; and he was quite enthusiastic in describing to me a plan he had worked out for the D W F Company to act as selling agents for Timken bearings. His ideas were very visionary, and I believe originated in the mind of Mr. von Gontard. I told

him that we were not very keen about such an arrangement, but that the entire matter would be handled by Mr. Dewar.

"Mr. Prausnitzer was very anxious to have me look over several sites for establishing manufacturing operations in Berlin, which I accordingly did; but it so happened [fol. 1204] that three of the plants I was taken to, were owned by the D W F Company, and I was quoted rental prices of approximately $2.50 per square foot, which I explained to them was nothing but nonsense. I told them that we would probably consider paying $.25 per square foot, and furthermore, that we would under no consideration manufacture in old, worn-out buildings such as Mr. Prausnitzer and the D W F people had been offering. They further stated that they were convinced that they could get a plant such as we desired for the price we wanted to pay, if I would take the time to spend another day with them, which I declined to do."

Now, at that point I would like to ask you, Mr. Hess, if when you visited Berlin in 1927, you had under consideration the establishment of a manufacturing operation in Germany?

A. That is correct.

Q. Why was it you wanted to establish a plant in Germany?

A. Because we felt that the German market would demand bearings manufactured in that country rather than imported from any other country.

Q. What was the basis of your belief in that regard?

A. Our knowledge of the German market.

Q. Were there any particular facts that come to your mind now that influenced your decision in that re- [fol. 1205] spect?

A. I think one was the railroad business, as I recall it.

Q. Were the railways owned by the German government?

A. Yes, sir.

Q. What was the fact as to whether there was in Germany at that time an extensively developed ball bearing industry?

A. There was a large ball bearing industry at that time.

Q. And how were ball bearings used in Germany in respect of tapered roller bearings?

A. Well, there were many more ball bearings used than tapered roller bearings.

Q. Did any company or had any company to your knowledge up until the time you visited Germany in 1927 made any especial effort to develop the sale of tapered roller bearings as against ball bearings?

A. Well, as I recall, several companies made tapered roller bearings but I frankly don't recall to what extent they had tried to develop their sales.

The Court: I am afraid I don't follow that. They certainly didn't manufacture them just for the fun of it.

The Witness: No, but in a great many cases their big line of activity was ball bearings and they considered tapered bearings more or less of a nuisance.

[fol. 1206] The Court: Oh, I see. You are comparing it to developing a market for ball bearings rather than tapered bearings?

The Witness: That is right.

By the Court:

Q. In other words, as I understand it, they had devoted their efforts to developing ball bearings and the market for ball bearings in the anti-friction field as against tapered roller bearings?

A. I think, if I might, I could give a little picture of Europe. Europe in those days was considered almost entirely a ball bearing market. The tapered bearing was an American type of bearing, originated in America.

By Mr. Ketterer:

Q. (Continuing reading:) "As is probably known, the Timken name is registered in control of Mr. Prausnitzer, and while he has a contract to give up his rights to this name under certain conditions, I was advised by Mr. Dewar that in his opinion this contract cannot be enforced, and he would have to come to some terms with him."

When you say "The Timken name was registered in control of Mr. Prausnitzer," did you mean by that the trademark?

A. Yes.

Q. And that registration had been taken out by Prausnitzer under his individual name?

[fol. 1207] A. Yes, sir.

Q. (Reading continued:) "Mr. Prausnitzer is inclined to be very talkative, and based on the contact I had with him, there is some question in my mind as to his veracity and honesty of character under certain conditions.

"He has made a proposition to Mr. Dewar to relinquish his rights to the Timken name under the following conditions:

"A German Timken Company to be organized, with a capital stock of $50,000.00 of which he is to be given in stock $12,500.00. He is to be the managing director of this company, on an annual salary of $3,000.00 plus a bonus of 3 percent of total sales. It is further agreed that in any increase in capitalization up to $100,000.00 he is to be given his pro-rata share on a 24 percent basis. It is the writer's personal feeling that these terms are entirely too high, and while I feel that we are in a way at the mercy of Mr. Prausnitzer, I also feel very confident that the proposition herewith set forth is merely an asking proposition, and that we can do considerably better. Mr. Dewar is planning to discuss this with us upon his visit to this country."

Now, before you went to Germany had you discussed with Mr. Dewar the situation - respect to the mark "Timken" in [fol. 1208] Germany and the fact Prausnitzer had registered it in his name?

A. Yes, sir.

Q. Did the proposition that you have described here of giving Mr. Prausnitzer approximately 25 per cent of a company to be organized in Germany, was that discussed with Mr. Dewar before you went to Germany?

A. I don't recall that I had that data from Dewar or from Prausnitzer first, I don't remember now.

Q. But did you talk to Mr. Prausnitzer about it, too?

A. Oh, yes.

Q. So that the matter of the organization of a company to clear up the ownership of the trade-mark "Timken," was something that was discussed both with Mr. Dewar and Mr. Prausnitzer when you were in Europe in 1927?

A. That is my recollection.

Q. (Reading continued:) "Mr. Dewar claims that Mr. Prausnitzer is very well regarded in Germany, but from my personal contact with him, I am inclined to think that

he must be watched very carefully, and I so advised Mr. Dewar.

"Automotive: Figures given me by Mr. Prausnitzer show that there are approximately 225,000 cars now being built in Germany annually. From what information I could [fol. 1209] get from other sources, this figure is high, and the production figure is probably nearer 150,000. There are approximately 319,000 cars registered in Germany at this time. The largest builder is Opel, building 60,000 cars annually, and the next largest builder is Damler-Benz, building 30,000 cars annually.

"Both of these concerns are using F & S tapered bearings in the front wheels, and a mixture of straight roller bearings and ball bearings in the rear wheels and rear drive applications."

Do you know what the initials "F & S" stand for?

A. Fichtel & Sachs.

Q. Who were they?

A. They were a bearing manufacturer in Germany.

Q. (Reading continued:) "It was impossible to obtain from Mr. Prausnitzer any idea in detail as to prices that we would have to make to further broaden our sales in Germany. However, I did obtain the list prices quoted by the F & S Company, together with their discounts, which were reputed to be given to manufacturers and service dealers. A rather hasty comparison of their lists with British Timken lists shows them to be low in the popular sizes to an extent of 10 per cent."

[fol. 1210] "Analysis of German Sales

"(Through British Timken)

	1925	1926	1927 (")
Manufacturing	$33,000.00	$12,000.00	$53,000.00
Service	7,300.00	6,000.00	17,300.00
Total	$40,300.00	$18,000.00	$70,300.00

(") Based on first 6 months

"Mr. Prausnitzer made very broad statements as to our possibilities, should we reduce our selling prices 20 per-

cent, but the writer does not feel it advisable to set forth any of these statements, as I am inclined to believe he is over-optomistic and cannot be relied upon along this line.

"The decrease in sales in 1926, I was told, was due to two things. First, the demoralization of German industry, and secondly, Mr. Prausnitzer was seriously ill for six months; and as he has no assistants or sales representative, our sales fell off considerably.

"Competition: It must be borne in mind that we face very severe competition in Germany. At the present time the following manufacturers are making roller bearings exactly similar to ours:

"F & S—production 4,000 daily (Estimated by Mr. Prausnitzer);

[fol. 1211] "S K F—production 3,000 daily (Estimated by Mr. Prausnitzer);

"D W F—production 1,000 daily (Estimated by Mr. Prausnitzer)."

Do you know what "DWF" stands for?

A. Not any more.

Q. (Continuing reading:) "While the above figures look very high, and there is no doubt they can be discounted at least 30 percent, we should understand that this production has been developed with the past two years, and is being aggressively pushed at this time. British Timken has very materially felt the competition of F & S in export sales, and we have heard of some of their sales in our South American territory. All of these manufacturers make ball bearings as well, and I was told are very well fixed financially.

"Mr. Dewar has told me that our severest competition will come from the F & S Company, who are very well equipped to manufacture and sell on a very lost cost basis.

"Labor: It might be well to state that the labor situation is quite different in Germany than anywhere else. Everyone is working and there is no question about how long anyone shall work or any union domination.

[fol. 1212] "Labor rates are approximately 15 percent lower than in England.

"German Manufacture: The writer was very much impressed with the layouts and organization of the DWF

factory, located just outside of Berlin, through which I was taken. I was refused permission to go through the F & S plant in the south of Germany, and neither was I permitted to see the ball or roller manufacturing in the DWF plant. Mr. Prausnitzer stated that the German manufacturers have not the slightest fear of British or French competition, and have set their goal to stop American competition, particularly in exports. This statement the writer believes to be true, because nowhere in England or on the continent did I meet such a very evident feeling of duplicating and copying American practices as in Germany. From my observations there are more American motor cars in Berlin than there are in London and Paris added together, and everywhere you go you receive the most kindly attention from the German people.

"Industrial Sales: The industrial sales field in Germany is developing very rapidly, and British Timken during the time I spent with them, received 10 inquiries from Germany along this line. I was advised by Mr. Prausnitzer that [fol. 1213] our competitors in Germany have not as yet attempted to sell the industrial field with tapered bearings, being entirely content to sell ball bearings. This means that we have an opportunity at present to develop this field, but it cannot be done by one man, and Mr. Dewar has arranged to employ a young German engineer at British Timken for a period of three months training, and then send him back to Germany as a sales representative. While this idea is good, the writer feels an older man with at least some selling experience should be obtained, as time is an important element and three months is not very long for a total stranger to learn our product from the industrial standpoint.

"The railroad field in Germany has a real future, as evidenced by the fact that the SKF Company recently received an order for $500,000.00 worth of bearings to be used on fast freight car service between Berlin and Cologne. We had presented a bearing for test some six months before, but, according to British Timken, this bearing, No. 942-933, failed in test due to defective grease. This information was not given me originally by British Timken, but was developed while I was in Berlin with Mr. Prausnitzer, who in turn was unable to give me any de-

tails whatever as to the length of service, loads, etc. He [fol. 1214] did say, however, that in obtaining the order the SKF Company guaranteed the bearings for two years without lubrication. It was also impossible to ascertain what price was paid for them, although I asked Mr. Prausnitzer, if at all possible, to get this information.

"It might be well to state that in order to obtain this business it would be necessary for us to at least perform the finishing operations on such bearings in Germany."

I would like to stop at that point and ask you why you made that statement in your report, "It would be necessary for us to at least perform the finishing operations on such bearings in Germany," if you were going to get that business?

A. Well, as I recall at that time the Government of Germany, which owned the railroads demanded a certain percentage of German labor content in the manufacture of the bearings. I don't recall now what percent. From that report it could not have been a hundred percent.

Q. It was on that basis you expressed that view?

A. That is right.

Q. (Reading continued:) "Summary: Summarizing the German situation, the writer does not wish to make any [fols. 1215-1223] recommendations other than to straighten out the sales situation to the extent that British Timken will, at the earliest possible moment, quote direct selling prices to German customers through Mr. Prausnitzer, and that they will exercise detailed control and supervision over him.

"The question of manufacturing bearings in Germany is very complicated, due to two things:

"First, our increasing sales seem to show that we can manufacture in England and still pay the prevailing tariff rates with fairly good success.

"Second; should we manufacture in Germany, we will be called upon in all probability to join the association of German ball and roller bearing interests, who have interlocking price agreements, and who pool all patents and methods. Should we refuse to join this association, we of course face the possibility of having to fight very strenuously to maintain our standing which we now have.

"The writer is planning to make a very careful study

of the tariff situation, but it is necessary to obtain considerable further data before this can be done, as the information supplied by Mr. Prausnitzer must be thoroughly checked."

[fol. 1224] Mr. Day: We now offer the deposition of Frederick John Pascoe of Broom Hill, Spratton, Northamptonshire, England, Managing Director of British Timken, Ltd., aged 54 years, being duly and publicly sworn and examined on the part of the Defendant, doth depose and say as follows:

Direct examination by Mr. Ketterer. This is on Page 157.

(The following questions read by Mr. Day and answers by Mr. Ketterer from the deposition of Frederick John Pascoe.)

"Q. Will you state your full name, please?

A. Frederick John Pascoe.

Q. Where do you live?

A. Broom Hill, Spratton, Northamptonshire.

[fol. 1225] Q. Will you give us a description of your education and early business connections?

A. I was educated at Exeter School and Cambridge University, where I took an Engineering Degree—Mechanical Sciences Tripos, to be exact. At the end of the war—

Q. You mean the first World War?

A. Yes, in 1919 I first went into industry by joining the Leeds Forge Company. My job there was in the nature of an apprenticeship. I spent some few years with the Leeds Forge Company in Leeds. I afterwards came to London and spent a little time in their London office. Following that I joined the Electric & Railway Finance Corporation in the capacity of Personal Assistant to the Chairman. There I was mostly engaged in financial business, new issues, underwriting, investment work, and a certain amount of technical work. I afterwards became Secretary of the Electric & Railway Finance Corporation. While with them I was associated with one or two other Companies. In 1930-1931 I first became interested in British Timken and French Timken, being invited by Mr. Dewar to join the Boards of those Companies. During the period from 1930 up to 1938, a year before the war, I became progressively more interested in and progressively spending more time in the service of British Timken, until in 1938 I severed my connection, [fol. 1226] which by that time had grown rather thin, with

the Electric & Railway Finance Corporation and became a full-time Director of the Timken Companies, British Timkin and Francaise Timken.

Q. Have you continued since 1938 to devote your full time to the business of British Timken and French Timken?

A. Yes, and during the war, from 1940 to 1943, Mr. Dewar was in America for the British Government and I was for that period the chief executive Director of the Timken organization in this country. On Mr. Dewar's return I was appointed Managing Director, when my duties were general supervision and direction of the Company's affairs, subject to the instructions of Mr. Dewar as the chief executive Director.

Q. You started the description of your business career in 1919 following the end of the first World War. Did you participate in the first World War?

A. Yes, I was a soldier from August, 1914, until March, 1919.

Q. During the period from 1930 or 1931 when you say you first became a Director of British Timken and devoted part of your time to its affairs, with increasing attention to its affairs, until 1938, what is the fact as to whether or not you have kept in touch with the anti-friction bearing industry in England and on the Continent?

A. During that period?

[fol. 1227] Q. Yes.

A. Yes, I travelled on the Continent for Timken in that period. I went to Russia; I went many times to France; I went three times to the United States of America in that period upon Timken affairs.

Q. So that it is correct to say that you have kept abreast of the situation in respect of the anti-friction bearing industry in England and on the Continent during the period of from 1930 or 1931 down to the present time?

A. Certainly.

Q. In the course of the testimony that has been given up to the present time there has been a reference to a phrase 'bearings for original installation'. I wish you would define for us what is meant in the anti-friction bearing industry by that phrase?

A. Bearings for original installation are when any manufacturing Company is manufacturing a machine tool or rolling mill or a motor car, and we sell them Timken bear-

ings—sell their drawing office the idea of Timken bearings—and that equipment is then put on the market. We should describe that as original installations as opposed to service sales.

Q. And by 'service sales' you mean what?

A. Bearing might wear out and you would need a replacement. To get into the vehicle field, take a tractor [fol. 1228] bearing. A tractor bearing after being hammered about in a tractor needs replacement. The bearing takes all the work in a tractor, and, therefore, the bearing can wear out and has to be replaced. That is a replacement sale, which is carried out, of course, in a different manner from original equipment sales.

Q. During the period of 1930 till the present time who has maintained the sales organization for the sale of Timken tapered roller bearings in England and on the Continent of Europe and in the British Empire?

A. British Timken; in France, Francaise Timken.

Q. I would like you to describe for us what sort of sales effort is necessary to effect the sale of anti-friction bearings for original installations?

A. The effort required is an effort by a technical engineer, or, as we call them, sales engineers, who maintain a very close contact with every Company manufacturing any equipment whatsoever in which we think a tapered roller bearing can be engineered or fitted, and that contact is maintained with the design departments, the drawing offices of the Companies manufacturing equipment.

Q. Has British Timken, to your knowledge, maintained that sort of contact in England with the design offices of manufacturers of machine tools, automobiles and tractors?

A. Most certainly; I do not think there is a drawing of- [fol. 1229] fice, a design office, of any manufacuring Company in the country that has not been visited by our sales engineers.

Q. And has any service of that kind been performed in England or on the Continent or in the British Empire by the American Timken Company, to your knowledge, from 1930 down to the present time?

A. No. There might be one exception when we might be following American advice or when we are going into some new application and we were looking to America for guidance. We may on one or two occasions while the American

engineer was instructing us have taken the American engineer to visit people so as to bring out quite clearly that the American technical experience was behind us.

Q. In such cases has the sales engineer of British Timken accompanied the sales engineer from the American Company?

A. Always.

Q. Based upon your experience in the anti-friction bearing industry, how essential do you regard it that the sales effort for original bearing installations be handled in the countries in which the manufacturing work is being done?

A. I regard that as essential, because one of the first questions you are asked when you are trying to persuade someone to adopt a design embodying an anti-friction bear- [fol. 1230] ing is: 'Where are these bearings manufactured? Where do we go for advice? Where do we look for service?'

Q. Has that been your experience in the anti-friction bearing industry from 1930 down to the present time?

A. Invariably.

Q. You said something a while ago about having gone to Russia at one time?

A. Yes.

Q. In connection with possible sales of anti-friction bearings. What, if anything, did you observe while you were there in respect of the activities of the Russians?

A. The first thing I saw, or the first thing I suffered was a disappointment. I hoped to get large orders out of Russia; instead of that I found them building a factory.

Q. And for what reason?

A. They were building a factory to make their own bearings.

Q. Do you remember when it was that you made that trip to Russia?

A. I think 1931. It was 1930 to 1932, anyhow, and I am pretty certain it was in 1931.

Q. Will you state whether or not the view you have expressed as to the necessity of having bearings manufactured in the country in which the ultimate manufacturing operation is being performed influenced the establishment of a plant in France by the American Company and Mr. Dewar?"

Mr. Nitschke: I'm going to object.

[fol. 1231] The Court: Read that question again.

(Question reread by Mr. Day.)

Mr. Nitschke: I would like to note for the record I have my continuing objection to this type of testimony. I would like to also point out that the agreement dividing territeach other's territories as well as selling in each other territories.

The Court: I will receive this testimony, as well as the other testimony that has been received, over the objection of the Government, and will, of course, take care of it when the question is passed on with respect to the law that was urged in support of your position.

(Answer read by Mr. Ketterer.)

"A. I say it has always been our experience that when a country becomes industrialized there is a great desire, a great pressure, to establish a bearing plant in that particular country. I have seen that over the whole of my experience even down to the present day. That is due to the natural desire of every country to manufacture as much as possible to become self-supporting in manufacture, and it is due to the fact that if you want to sell a bearings, to persuade people to adopt it, a customer likes to think that [fols. 1232-1233] that bearing is being manufactured somewhere nearby so that he has ready and quick attention in the matter of technical advise or service of the bearing."

[fol. 1234] (Reading of deposition of Frederick John Pascoe continued):

"Q. You have just indicated that that has been your experience even recently. Can you give any example of any recent experience that you have had in respect of the establishment of bearing plants in other countries on the Conti-

[fol. 1235] nent or elsewhere?

A. Yes, there is a very recent one. I had a letter which I saw on Saturday from a group in Holland, and they want to establish now a bearing factory in Holland which will supply Holland and the Benelux countries. They asked us whether we would be interested in assisting in the establishment of that factory, whether we would be interested financially, and told us that the group behind it were a pow-

erful manufacturing group who had received indications of full support from the Government. That was the latest one.

Q. Have you had any other inquiries in respect of the establishment of factories in any other countries on the Continent within the last several years?

A. We have been asked whether we would be interested in assisting in the establishment of a factory in Spain. We have been asked about Australia. We have been asked about South Africa. We were actually asked about Brazil.

Q. Going back to the replacement business, what has been your experience as to sales for replacement purposes going back to the Company who provided the bearing originally that was placed in the equipment when it was first manufactured?

A. What usually happens with a service sale is this. Take a service sale to a tractor, for instance. If a bearing breaks [fol. 1236] down the man will take it into the nearest garage, and they will take out the broken bearing, clean it up and see whose name is on it. They will see 'Timken,' and will say: 'Right, we had better get another one from them.'

Q. Has that been your experience in connection with the sale of replacement bearings in England, on the Continent and in the British Empire generally?

A. Yes, it is easier to get the sale if you provide the original equipment.

Q. What sort of sales organization has British Timken maintained in England and on the Continent, outside of France, and in the British Empire generally, to handle the subject of replacement sales?

A. You are referring to replacement sales only?

Q. That is right.

A. We have an organization which we know as the Service Sales Department, and that Service Sales Department has a considerable staff who go round visiting our distributors. We sell those replacement bearings through distributors. We have several distributors, and they in turn have branch offices or sub distributors throughout the country, our idea being to see that there shall be no place where a replacement bearing is wanted where there is not a rapid and quick connection with British [fol. 1237] Timken. We maintain stocks of bearings for that purpose so that if anyone wants a particular bearing

we can supply it quickly. It is rapidity of sales which helps considerably. These people go round making quite sure that people know where to apply when they want a Timken bearing. That is the organization in England.

Q. Prior to the war Germany was one of the most highly industrialized nations in Europe?

A. It was.

Q. Was there a considerable market for anti-friction bearings in Germany?

A. There was.

Q. What is the fact as to whether after 1934 when the operations of the German Company were suspended British Timken was able to make any substantial volume of sales for original installations in Germany?

A. It did not do a large business. We sold one or two large bearings, we got one or two orders for large rolling mill bearings from Germany, but we did not do any large volume of business in Germany.

Q. To what extent was that failure to do any substantial amount of business in Germany the reflection of the absence of a bearing manufacturing plant in Germany?

[fol. 1238] To try to do any sales in Germany we were up against the Skefko and Fischer Companies in Germany who had very large manufacturing plants. We found it very difficult to sell bearings in Germany.

Q. Based upon the opinion that you have expressed here as to the necessity of a bearing manufacturing plant in the country in which the manufacturing of equipment is performed, have you an opinion as to whether or not an American bearing manufacturing company could have come over to England or to a country on the Continent and on a substantial scale sold bearings for original installations in England or any Continental country from 1930 down to the present time?

A. I think some companies have tried, but they have not got very far. I think there were several reasons why they did not get very far, or would not get very far.

Q. Will you give us those reasons?

A. One reason is that anybody trying to sell bearings against us now from any other country would be subject to, say, our talking and supporting the 'Buy British' campaign, and the 'Buy British' campaign even before the war was very important. People used to advertise and say:

'The All-British Motor Car,' and we certainly supported that. Another reason in the special case of tapered roller [fol. 1239] bearings why any American Company could not sell very many here was the fact that we were in such close touch with all the manufacturers, with our sales engineers up and down the country. We could not just say: 'Would you like a bearing from us?', we had to engineer the bearings into the equipment, which we did.

Q. Now I would like to ask you this question: were you familiar with the types of anti-friction bearing which were used in Europe and in England in 1930 and immediately prior to 1930?

A. Will you say that again?

Q. Were you familiar with the types of anti-friction bearing that were used in Europe and in England in 1930 and prior to 1930?

A. I think I had the general familiarity with bearings that any man trained as an engineer might be expected to have, but prior to 1930 I was not in the Timken business so I had nothing like the detailed knowledge I have acquired since.

Q. Beginning in 1930, what is the fact as to whether there were more ball bearings used than any other type of anti-friction bearing, or were there less ball bearings used than any other type of anti-friction bearing?

[fol. 1240] A. There were far more ball bearings used. The ball bearing companies in England then were very well known. The Hoffman Company was a very well known company, and Ransome & Marles was a very well known company. This is in England I am talking about at the moment."

The Court: Pardon me, that answer was "There were more ball bearings"?

Mr. Ketterer: That is correct, your Honor. As a matter of fact, the witness said far more ball bearings used.

(Continuing reading from deposition.)

"Q. What about the situation on the Continent?

A. In Germany not many tapered roller bearings were used. I say that with some confidence, because even in recent years, years that came within my experience, the

tapered roller bearing had not made the progress in Germany that it had made in this country.

Q. To what, Mr. Pascoe, do you attribute the fact that there was not the same amount of progress made in Germany in respect of the development of sales of tapered roller bearings as was made in England or in France?

A. Because we came out of Germany. We started there, but we were unable to continue.

[fol. 1241] Q. And in respect of England and France, what had happened in respect of the development of the sales of tapered roller bearings?

A. In England and in France the establishment of British Timken in England and Francaise Timken in France has meant that the percentage of tapered roller bearings manufactured and used, the percentage of the total number of anti-friction bearings, has increased progressively. More particularly has it increased since British Timken was under the Chairmanship of Mr. Dewar.

Q. State whether or not the operations of the British Timken Company and of the French Timken Company in the markets in which they have sold bearings can properly be characterized as pioneering operations in the form of tapered roller bearings in those markets?

A. We certainly have, because our task has been the whole time to persuade users of anti-friction bearings, or users of any bearings, whether anti-friction or not, to use a tapered roller bearing, in many instances throwing out the ball bearing and in many instances putting in an anti-friction bearing where none existed before.

Q. What is the fact as to whether there has been compe-
[fol. 1242] tion with the ball bearing industry in connection with this development of a market for tapered roller bearings on the part of the British Timken Company and the French Timken Company?

A. Whether there has been competition?

Q. With the ball bearing industry.

A. The tapered roller bearing is, to a very large extent, a competitor of the ball bearing. In fact, we are all the time seeking to influence the design department of people manufacturing equipment using anti-friction bearings to reject the ball bearing in favour of the tapered roller bearing.

Q. Has that been going on constantly over the years?

A. Yes. In my experience, it definitely has.

Q. To what extent has the growth and the development of the British Timken Company been reflected in your success in competing with the ball bearing industry in this replacement program that you have described? To what extent has the success of the development of the British Timken Company and the French Timken Company been reflected in the extent to which you have replaced ball bearings in some measure?

A. Our success as a Company, of course, has been mostly due to the fact that we have replaced ball bearings by tapered roller bearings. In other words, the application [fol. 1243] in which tapered roller bearings are used now, where previously ball bearings were used, greatly exceed the number of applications where no anti-friction bearing is used. We are constantly forcing out the ball bearing.

Q. At our request, have you had prepared from the files and records of British Timken some figures showing the amounts of capital expenditure made by the British Timken Company from varying dates during various years since 1927?

A. Yes.

Q. The turnover of tapered roller and ball bearings since 1921?

A. Yes.

Q. And the employees of the British Timken Company since 1928 down to the present time?

A. Yes.

Q. I will hand you three sheets of paper that have been clipped together and marked for identification Defendant's Exhibit D.31 and ask you if you can identify those. (Exhibit handed to the witness).

A. Yes. These were prepared on my instructions and under my supervision during the past week. They are the figures.

Q. Were they compiled from the records of the British Timken?

[fol. 1244] A. They were compiled from the Company's books.

Q. The first sheet has the heading on it 'Capital Expenditure'. What do the figures in the right-hand column, under the heading 'Totals' represent?

A. This is the total capital expenditure incurred by us each year. It represents the amount we capitalized as capital as opposed to any expenditure on revenue. It represents money which we had spent in new machine tools and equipment and, to a certain extent, alteration of buildings, but mostly the figure is machine tools.

Q. Are those totals in dollars or in pounds?

A. Pounds.

Q. The second sheet has the heading. 'Turnover of Tapered Roller and Ball Bearings' and the figures in the right-hand column, under the heading of 'Totals', represent what?

A. They are our actual turnover of tapered roller and ball bearings, by British Timken. The ball bearings come in to a very small extent, as British Timken did not manufacture many ball bearings and after 1940, of course, there are no ball bearings in at all. These are our total sales values."

[fol. 1245] (Continuing reading from deposition.)

"Q. I was just going to ask you whether the phrase 'Turnover' is the equivalent of 'Sales'.

A. Sales. It is the sales value, with the exception of 1947, which is shown as estimated because we have not quite finished our records for December, but the final figure will not vary from that by more than perhaps £1,000 or so in £2,000,000.

Q. Have you excluded the sales that originated from the Fischer plant in those totals?

A. There are no Fischer sales in those totals at all. They are British Timken.

Q. Exclusively?

A. Exclusive of Fischer.

Q. The third sheet on this Exhibit marked Defendant's Exhibit D.31 has the heading 'Employees, works and Staff'. [fols. 1246-1248] They show what?

A. They show the total number of employees of British Timken, excluding Fischer Bearings, of course, and are divided into the employees and staff, the staff meaning, generally speaking, the office staff, which would include draftsmen, sales engineers, accountants, etc."

Mr. Day: We would now like to offer in evidence as our next exhibit, which would be Defendant's Exhibit 34, the three sheets which were marked Defendant's Exhibit D-31 in the deposition.

The Court: It may be received.

(Thereupon the document above referred to was marked by the Clerk, for identification, Defendant's Exhibit 34.)

[fol. 1249] (Continuing reading from deposition.)

"Q. Now I am going to ask you to what extent have sales of tapered roller bearings been made by American Timken in the territory of the British Timken Company from 1930 down to the beginning of the last World War, to your knowledge?

A. During those years the sales of American Timken Company in our territory would be sales to us.

Q. In respect of sales for original installations, under [fol. 1250] what circumstances did you ask American Timken to supply bearings for original installations in your territory?

A. Our practice in an original installation was that when our sales engineers visit and go round to the designers of other Companies and they were designing any equipment, we should advocate the inclusion of a tapered roller bearing. There are tapered roller bearings—and there still are—manufactured in America that are not manufactured by us, but that would not prevent us in any way, would not have any influence on our anxiety to get that particular bearing which was not manufactured by us incorporated in a design if it was the best bearing. Once it had been incorporated in a design and we received orders for it, we very often then asked America to supply the first few bearings, so that there would be no hold-up in the production of the equipment, and they supply the first few bearings. That would give us time to tool up and to make the bearings ourselves if the market showed signs of warranting our making them. It may have been, of course, that there were just one or two bearings required which were never required again. Then we would not make them. We would buy them from America.

Q. If there was a repeat order, so to speak, on a bearing [fol. 1251] for which you got an order in the fashion that

you have just described of any size, what was your practice thereafter in respect of such repeat orders?

A. We would tool up to make them, if the orders appeared to us to warrant it. If the orders were small, we should buy them from America and then sell them ourselves over here.

Q. Will you state whether or not that was your practice during the period I have indicated, from 1930 to 1938?

A. It was and is, to the best of my knowledge.

Q. Were there any other sales made by the American Company in the territory that was set aside for the British Timken Company during that period for original installation, aside from the ones that you have described, that you can recall?

A. There was during the war.

Q. I am excluding the war period for the time being.

A. Then I do not recollect any sales of American bearings into our territory other than bearings that we should have purchased ourselves.

Q. How about Ford? Were there any sales made to Ford during that period from 1930 to 1938?

A. The Ford practice was then to buy bearings from their parent Company in Detroit and, whereas Timken bearings may have come in via Detroit, I do not remember [fol. 1252] the Ford Company in England ever placing a direct order with American Timken.

Q. Immediately after the war started in 1939, was that practice altered in any respect?

A. After the war started?

Q. Yes. Was the practice of buying bearings from the American Timken for original installation altered in any respect?

A. I do not remember that it was, except, of course, the British Government placed orders for bearings.

Q. Were the instances in which you asked American Timken to supply bearings greater or less after the war started in 1939?

A. After the war started we placed very large orders in America for components, very large orders for steel, and we placed orders for bearings with America, very substantial orders.

Q. That was after the war started?

A. After the war started, during the war; and machine tools.

Q. Prior to the time that the war started in 1939, did you follow any importations of bearings by any other American bearing manufacturing companies, whether they were ball bearing companies or whether they were tapered bearing manufacturers, into England or on to the Continent, as to whether they were large or small, or what did you observe [fol. 1253] about them?

A. I know that American manufacturers of bearings other than Timken had agencies in this country, but I did not run up against many American bearings in this country at all from any company.

Q. Did you receive reports from time to time by your salesmen of the competition that they had on orders in this country or on the Continent for original installations?

A. Yes. I used to read the salesmen's reports.

Q. Did you follow those reports?

A. Yes.

Q. And from that or any other source did you ever observe that any American bearing company sold any substantial number of bearings prior to the war for original installation either in England, in the Empire, or on the Continent of Europe?

A. I certainly did not run up against any serious importations of bearings into England before the war. I am not aware of any large importations into the Continent, although I do not speak with quite so much confidence about what happened on the Continent as I do about what happened in England. As regards British territory, other than, say, Australia and South Africa, I should like to say there were not any importations."

[fol. 1254] Mr. Nitschke: That isn't the way it reads here.

Mr. Day: It should be "I should not like to say."

Mr. Ketterer: I beg your pardon.

(Continuing reading.)

"I should not like to say there were not any importations. The best thing to do is to go back to instances. Take South Africa, for instance. When we were fighting for bearings where, very often most of the competition came from the Skefko Company. That was a competition which we had to

face mostly. I am quite content with my previous answer. I am not aware of any large importations, although it is quite possible there may have been importations into those countries.

Q. For the replacement business in England or on the Continent, did you have any reports from salesmen or did you otherwise learn of any substantial importations of bearings into England or to the Continent by any American bearing manufacturers?

A. I never heard of any large importations into England by any American manufacturers, although, as I said before, I must speak with more confidence about England than I do about the world generally.

Q. Now I would like to direct your attention to the situa-
[fol. 1255] tion that has prevailed since the war. Since the war, what procedure is it necessary to follow before there can be importation of bearings into England?

A. If any company wanted to import bearings into England now, the first thing they have got to do is go to the Ministry of Supply and get permission, get what is known as an import license, which in effect is a license to enable them to spend the dollars. When that happens now, when you apply for an import license from America, whether it covers a machine tool or a bearing or anything else, it is extremely difficult to get these licenses, owing to the dollar position.

Q. What showing has to be made by any person applying for a license to import bearings since the war?

A. If any users of bearings go to the Ministry of Supply now and say 'We want to buy some bearings from America', the first thing they will be asked is: 'Cannot you get them from British sources?' It may be they would say: 'No, we cannot get them'. If they were tapered bearings, they may say: 'No; we cannot get them from British Timken, because British Timken now cannot give us delivery, because their capacity is not enough'. Then, after saying that, the next thing that would happen would be that the officials of the Bearing Division of the Ministry of Supply would refer to us and say 'We have a request for an import license from
[fol. 1256] Company AB of so many thousand tapered roller bearings and they claim that you cannot promise them any delivery of these bearings within some very long period. Is that the case?' If we say 'Yes, that is the case', then

they might get the import license. They probably would get it. We should be asked our opinion about it, of course, and we are frequently in contact with this Department. Our general attitude has always been, if we cannot supply from our factories—and we cannot meet the demand from our factories now; our capacity is not big enough to meet the demand—we say: 'Yes; we cannot meet that demand, but we are increasing our capacity as rapidly as possible'. We are doing so, as the Ministry well know, with their encouragement, even more than their encouragement, and we say: 'Of course, we shall one day be in a position, when our capacity has increased, to meet this demand'. So we welcome the importation under those conditions, because by the time the next order comes along, our capacity will be large enough to meet it.

Q. What, if any, effort do you make in connection with the request for import licenses to direct sales of that kind to American Timken?

A. Very often when the import license is applied for, the [fol. 1257] user will apply for the import license and make the case to the Ministry and then we should import bearings from American Timken. There has been very little direct importation. It has usually been guided that way. Sometimes we might apply for the license.

Q. What, if any, effect, in your opinion, has that procedure had upon the volume of imports from American Timken into this territory? Has it resulted in their making more sales or less sales than otherwise would have been made?

A. More sales, because naturally we have directed all our orders for tapered roller bearings and directed as many orders as we could direct to the Timken Roller Bearing Company. There is only one real instance to my knowledge where the orders have not gone direct to the Timken Roller Bearing Company.

Q. Will you tell us what that is?

A. That is the Ford Motor Company, Dagenham. We have imported—and, indeed, we are importing ourselves from the Timken Roller Bearing Company at this moment—bearings for the Ford Company at Dagenham. Also, they themselves have placed, naturally to our full knowledge, through the procedure I have previously described, substantial orders for bearings with the Ford Company of Detroit. That is the only instance I know of any quantity of tapered

[fol. 1258] roller bearings coming into this country other than through ourselves.

Q. Are you acquainted with a motor car manufacturer in this country named Vauxhall?

A. Yes.

Q. They are connected with what American Company, if any?

A. General Motors.

Q. Do you know whether or not the Vauxhall Company imports any anti-friction bearings from any General Motors subsidiary, such as New Departure or Hyatt, in the United States, or do they use British-made parts?

A. To a very large extent, anyhow, I know they use bearings made by the Skefko Company. I particularly know that, because during the war we supplied components—and, indeed, bearings—to the Skefko Company which were destined for the Vauxhall Company; and we know, of course, that the Vauxhall cars and the vans that go about this country are full of bearings made by the Skefko Company.

Q. Now, in the figures that you have compiled here and which we have submitted in this Exhibit marked Defendant's Exhibit D.31, you show the sales of bearings from 1921 down through 1946 and 1947 estimated. Can you tell me what percentage of the anti-friction bearing business the British Timken Company does in them?

[fol. 1259] A. Today?

Q. Yes.

A. It is a question of an estimate, but my estimate would be that we must be doing now something of the order of 90 per cent of the total business.

Q. That is the tapered roller bearing business?

A. The tapered roller bearing business.

Q. How about the anti-friction bearing business?

A. You have got to estimate on figures here which are not available to us, but I should say it certainly exceeds an eighth of the total business. I am putting that low down, because I am quite confident it exceeds an eighth. That is the minimum I would listen to. On the other hand, it is quite possible that it goes up higher, quite considerably higher. It is only an estimate we can make on that.

Q. What would be your maximum estimate?

A. At the moment?

Q. Yes.

A. Of tapered roller bearings to the total? I would put my maximum at 20 per cent.

Q. Have you kept yourself informed about the exchange of data and information that came from the American Timken Company to the British Timken Company?

A. Yes, and more particularly since 1938/39.

[fol. 1260] Q. In questioning you about this data business, I would like to break down the exchange of data between that that relates to bearing applications, sizes and dimensions, as distinguished from data that has to do with manufacturing methods and practices. As to the matter of the first classification, bearing dimensions and bearing sizes and bearing applications, will you tell us generally what exchange of information and data has taken place between the American Timken Company and the British Timken?

A. On the design of bearings as distinct from the method of making them?

Q. That is right.

A. On the design of bearings, we follow American Timken extremely closely. A bearing, to give it a number, 3984/3920, which is a cone and a cup, manufactured in America and the bearing 3984/3920 manufactured in England are the same bearing."

Mr. Ketterer: Mr. Day, at this point it seems to me we ought to point out to the Court that the bearings that have been introduced here in evidence by the plaintiff, one being marked Plaintiff's Exhibit 3, and the bearings that were brought here from England manufactured by British Tim-[fol. 1261] ken, and one from France manufactured by French Timken, the latter being Plaintiff's Exhibit 136, and the English bearing being Plaintiff's Exhibit 135, are all bearings having the numbers that are referred to in the testimony of Mr. Pascoe.

Mr. Day: Yes.

(Continuing reading from deposition.)

"Q. To achieve that end, do you receive any drawings from American Timken showing the dimensions and tapers and sizes of these various numbers of bearing that are manufactured?

A. Yes; we receive the fullest information. If a new bearing is developed in America, a new size, they immediately send all particulars of the design and in what way the design departs from another bearing, in case they are

altering a design, but our Bearing Design Department follows the designs as they originated in America. If, on the other hand, we are designing a bearing for some particular application ourselves—that is to say, a bearing which we do not find the American Timken Company would make—we should forward that design in an early stage to America, so that they can see it, and we should say to them 'Give this a symbol number'. That is to say, although the bearing [fol. 1262] is designed by us, they would give it a symbol number and we should sell it under that symbol number.

Q. Is the symbol number the number under which the bearing is sold in the anti-friction trade thereafter?

A. Yes.

Q. Is the same number employed on the bearing whether it is sold by American Timken or whether it is sold by British Timken or whether it is sold by French Timken to the extent that the three Companies or any two of them manufacture the same bearing number?

A. A bearing of the same dimensions is sold under the same symbol number.

Q. I will ask you to state whether or not those bearings bearing the same symbol numbers are interchangeable whether they are made by the American Company or whether they are made by the British Company or made by the French Company.

A. They are certainly interchangeable. At this moment the Ford Company is importing and we are importing bearings to make up our lack of capacity now. We might have an order for delivery of 50,000 of a particular size. We still make 25,000 of them, import the other 25,000 from America, and that 25,000 bearings would go down to the user and he would fit them. It does not matter where they [fol. 1263] are made. He probably would not notice where they were made when he was fitting them then.

Q. To what extent have you adhered to that practice of making the various numbers interchangeable whether they were made by one Company or the other in the years that you have been connected with the British Timken Company?

A. We have always adhered to it. I have never known any other practice.

Q. On the question of manufacturing methods, have you received from time to time information from American

Timken as to manufacturing methods and machines and tolls?

A. All the time we are constantly receiving this information. We get it, whether we ask for it or not, and when we particularly require it, we ask for it. Again and again when we are up against some technical problem here, the answer is: 'Well, let us find out what America do about this'. That is on a manufacturing process, you are talking about.

Q. Is that a matter of occasional enquiry, or is it a matter of constant enquiry?

A. The stream of information backwards and forwards is constant and very considerable, although it suffered some [fol. 1264] diminution during the war.

Q. That was by reason of what?

A. By reason of the fact that we were told to be very careful indeed what we entrusted to the post; but, on the other hand, arrangements were made by us by what was known as the Bearing Control that if we wanted to send anything to America, they would take the documents and drawings and they would arrange for it to be sent to America.

Q. Was this relationship between the American Timken Company and the British Timken Company of any especial advantage to the British Timken Company in respect of the war effort during the war?

A. It was invaluable, for many reasons. My first recollection of the war effort was when our capacity had to be expanded. We expanded more particularly in one department than another, so we were able to buy partly-finished components from America and complete them into bearings. During the war, when we were bombed, we were bombed once and lost millions of rollers, partly finished rollers, and it looked as if our production was going to be very seriously curtailed. So then, all we had to do was say to America 'Send in half a million 302 rollers, three-quarters of a million 502' and some other figure of some other roller, without bothering to tell them dimensions or anything else. [fol. 1265] We simply said 'Send a 302 roller of this particular grade' and they came in. Our association with America during the war also was that when we were required to establish a dispersal factory, which we were told to do, and told to do it as quickly as we possibly could, we

got some machine tools from America. We not only got machine tools sometimes direct from the American Timken Company, sometimes machine tools which they obtained for us from manufacturers, but those machine tools came in tolled up in many instances, tooled ready to produce a new size, so that when they arrived we put them down in the line and they could start producing without having to wait for the delay for us to measure them up and go into all the drawings and tooling jigs, which we should have done in ordinary circumstances. Our association with American Timken was very valuable in the matter of steel when Sweden was cut off, because, with our association with the American Timken and our close relation and the fact that we talked the same language, at all times we were asked to collect the orders from all the other bearing manufacturers for steel which were placed in America. When it came to placing orders for our own steel in America, of course, it was extremely simple, because our methods were so similar and the components we manufactured were so similar that [fol. 1266] we used to say very often to them: 'Send in some tube to make a certain bearings, so much tube.' We might give the dimensions, but the most important point was: 'This tube is required to make a 3984 bearing'. One of the greatest advantages, in my opinion, was because we in this country, under American guidance, had developed the manufacture and sales of exactly similar bearings. The American Timken Company, of course, were the second source of supply for those bearings for British Timken and very often when we had a bearing to make which was, we will say, a very vital bearing and we were the only source of supply, we and the British Government placed orders in America for that bearing. We made some ourselves and we placed another order in America. If I went on, I could think of lots more directions in which they were of the very greatest assistance during the war.

Q. The S.K.F. Company in their ball bearing sizes used what system of measurement in England and on the Continent—inch or metric?

A. Ball bearings, metric dimensions.

Q. What would have happened if the American Company, acting in conjunction with Mr. Dewar, had not commenced the development of tapered roller bearings in England and in the European market in respect of bearing sizes?

[fol. 1267] A. In tapered roller bearings the Skefko policy all the time has been to develop the sale and manufacture of what is known as the I.S.A. range of bearings. They are bearings made to metric sizes, to metric tolerances, and are of different internal dimensions to the bearings that we manufacture and America manufacture, which we know as the inch sizes, and, of course, these bearings were not largely made in America. Perhaps a few sizes were. One reason why the Skefko Company did not get the greater portion of the British trade even before the war and particularly now was that they relied so much on importations from Sweden and did not follow the policy that we did of manufacturing as soon as the demand became large enough. If we had not developed the manufacture of these inch sizes and Skefko had obtained a large portion of the market, which they undoubtedly would in I.S.A. sizes, when emergency arose, as it did during the war, very often through a bomb on our factory, bearings could not have been quickly obtained from America. There would have been a long delay before American Companies could have tooled up to make them.

Q. The second sheet in this Exhibit that has been marked Defendant's Exhibit D.31, shows a constantly increasing sale of bearings by British Timken. I want to ask you [fol. 1268] what has been the effort, if any, of the British Timken Company in respect of reducing production cost since you have been with the company?

A. After all, that is one of the main tasks of the management of the company, to keep on reducing costs as far as we possibly can and improving methods of manufacture to do that.

Q. To what extent has the know-how that has come from the American Company in respect of production methods and machines and practices been effective in assisting you in reducing cost and increasing production?

A. We have got very considerable assistance from the American Company in that matter, particularly in regard to their development of tooling and machine tools generally to manufacture. It was the American Company that first developed the centerless grinding of rollers as opposed to grinding between centers, which made an enormous difference to our cost of production, and the whole time the question of improvement of methods to reduce cost of production is the subject of constant discussion and indeed corre-

spondence between the American Company and ourselves.

Q. Have you undertaken to compare from time to time during the period of your connection with the British [fol. 1269] Timken Company the cost of production in America with the cost of production in British Timken plants here?

A. Yes.

Q. That comparison has shown what, generally, in respect of the production of bearings?

A. Generally speaking, it has shown that the American Timken Company can manufacture more cheaply than we can.

Q. The reason for that is what?

A. One of the reasons is that the American Timken Company have larger orders of particular size than we have. For instance, they very often have got orders for tens of thousands of bearings of one size per week, produced every week. They can keep machines tooled up and they can generally, through having these long runs of particular sizes, make more detailed investigations into the best methods of manufacturing those bearings than we could do when we have such a large number of changeovers, as we call them. Where we are manufacturing in tens of thousands of a size, the American Company are manufacturing in 50 thousands of size.

Q. What has been the effect upon the general price level of the bearings that you have manufactured in comparison with the price level of the bearings that American Timken has manufactured during this period? Has your level been [fol. 1270] higher or lower than the price level of American Timken?

A. Our price level is higher than that of the American Timken Company.

Q. I would like to ask you this question: since you became connected with the British Timken Company in 1930 has there ever been a time to your knowledge when you could have sold in America in competition with the American Timken Company?

A. Never—never had a hope.

Q. Was there any other factor involved in respect of selling in America in competition with the American Timken Company aside from the price factor, such as tariffs?

A. You mean to sell against the American Company?

Q. Yes.

A. There are tariff walls you have to leap to begin with, and of course I do not think we could ever possibly have sold the bearing in America, apart from the cost of production, if we were in competition with American Timken. They were manufacturing in the country, and it has always been our belief that to build up a really big sale in a country you have to manufacture in that country.

[fol. 1271] Q. Now in respect of importation into England, have there been any tariffs, Customs Duties, imposed upon the importation of anti-friction bearings into England?

A. There have been, yes.

Q. And have they been a factor in connection with the possible importation of any bearings into England from American sources?

A. Yes, they have been a factor. I mean tariff walls are a factor; if they were not a factor they probably would not be there. In other words, tariffs have made it more difficult for manufacturers in one country to sell bearings in another country.

Q. I am not sure whether I asked you this question or not, but if I did you can answer it. To your knowledge have any other American bearing manufacturers other than American Timken made any substantial sales in England since you have been connected with the British Timken Company, either for original installations or for replacement purposes?

A. Any other Company than American Timken?

Q. That is right.

A. I think I answered that by saying No.

Q. Now I have asked you about the sales effort that the British Timken Company has expended in England and on [fol. 1272] the Continent in respect of the sales of tapered roller bearings. I want to direct your attention now to the sales of bearings by British Timken in various parts of the Empire, especially Australia. Who has been the representative of the British Timken Company in Australia?

A. In Australia we have had an agent, Kemsley & Co., and we have had distributors in Australia. We have also maintained technical engineers in Australia and have also sent people from this country from time to time to Australia I think that covers it.

Q. How long have you maintained that sales force, engineering force, in Australia?

A. For some years. I do not think I can remember when we first started. I think my first memory of Australian business was sending two engineers from here, two representatives. That would be in the very early days. Then we appointed technical representatives on the spot in Australia. We have maintained two there for a long time, many years. At the moment we have one, because we have the other one back at our factory training him."

[fol. 1273] (Continuing reading.)

"Q. Do you expect to return him to Australia?

A. When he has been trained technically he goes back to Australia.

Q. Who has borne the expense of the sales effort in Australia that you have described?

A. We have at our end.

Q. Has any other sales effort been expended to obtain business for Timken bearings in Australia aside from what you have exerted?

A. No, we have done it all.

Q. Has the business in Australia been replacement business or sales for original installations?

A. It has been both.

Q. Percentagewise, can you give us an estimate as to what the greater part of it is: original installations or replacement business?

A. I think possibly we would have the information, but I do not remember, except that I can say a good deal of it is original installations. I know that by the work of our technical representatives out there whose reports I read, but I do not remember in my head the division.

Q. What, if anything, happened after the war started in [fol. 1274] respect of Australia?

A. Australia needed a great many more bearings; they started a great deal of manufacture themselves. The orders originally all came to us. We could not meet the whole of the demand, and an arrangement was made then whereby the Timken Roller Bearing Company received orders direct from our distributors in Australia. That was for two reasons: first of all, our capacity then was almost entirely occupied, and also it was safer to send bearings from Amer-

ica to Australia than it was from England to Australia. Generally speaking, the main question, in my opinion, was one of capacity. We had not got the capacity to meet the demand, more particularly for original equipment, that arose in Australia, so this arrangement was made whereby American Timken supplied bearings direct, and they were serviced by our engineers out there; we maintained our engineers out there.

Q. The obtaining of business during that period in Australia was the result of whose effort?

A. It was ours, British Timken's.

Q. Are you familiar with a Company called Bearings Service Company?

A. Yes.

[fol. 1275]) Q. What position have they occupied in respect of British Timken in Australia?

A. They have been distributors in Australia and they have been handling all our bearings. All bearings that we send there are sent to those distributors, to one or other of their offices, in as far as they cover Australia. I think we have one distributor who is not under the control of Bearings Service, but generally speaking they collected the orders and forwarded them to us, and we sent the bearings out to their instructions, and they acted as distributors.

Q. To your knowledge did Bearings Service ever approach American Timken with a request that the contract between American Timken and British Timken be broken at any time during the war?

A. To my knowledge they certainly did not, and I should be astonished that they had even without my knowledge; it would be an unheard of thing.

Q. And is Bearings Service still the distributor for British Timken in Australia?

A. Yes, in a great part of Australia.

Q. To what extent, if at all, have orders for tapered roller bearings bearing the name 'Timken' been placed with American Timken since the war has been over?

[fol. 1276] A. Direct from Australia?

Q. Either through British Timken or direct from Australia, if you know?

A. Since the war, of course, we have largely resumed our place as the manufacturer for Timken bearings which have been used in Australia and in Africa, although orders have

still been placed by Bearings Service with American Timken since the war ended.

Q. And the reason for that has been what?

A. Because when the war ended we had quite large orders from America, and then again our capacity in this country was not great enough to meet the total demand, the demand at home and the demand from Australia. We could not give the delivery, so we made an arrangement whereby Bearings Service placed an order with the Timken Roller Bearing Company for bearings.

Q. To what extent has that practice followed the principle about which Mr. Dewar testified a day or two ago, that in the administration of the contract between American Timken and British Timken you have generally adhered to the principle that you were always anxious to get Timken bearings in wherever it was possible to do so?

A. We have certainly followed that principle, because the Australians are saying to us: 'We want so many bearings, [fol. 1277] and we want them quickly.' We say: 'Our delivery is prolonged.' They say: 'What can we do?' We say: 'Well, you must get them from America.'

Q. Has that been done in any territory or in any part of the territory in which the British Timken Company have operated, other than Australia, since the war, to your knowledge?

A. I should think it probably has. It is a principle which we should unhesitatingly follow should we be unable to give the delivery required. I do not remember at this moment whether from Africa, for instance, an order was placed direct with America, but I can quite imagine it would have been by arrangement with us. We should unhesitatingly follow the principle.

Q. Is it correct that the British Timken Company commenced the manufacture of ball bearings some time after 1930?

A. Yes.

Q. Do you recall when the decision was reached?

A. I do not think I remember when that was decided; I think it might have been 1933, but I do not think I remember accurately the date.

Q. Irrespective of the date when it was started, do you know the reasons that dictated the reaching of that decision?

A. Well, to strengthen our position in the market generally.

[fol. 1278] Q. How would that strengthen your position in the market?

A. Sometimes someone would want to buy taper bearings and ball bearings and we would say: 'We will supply all the bearings for this particular motor car, because we can supply the ball bearings as well'. Another reason why the manufacture of ball bearings even today strengthens our position is this: we are primarily taper roller bearing manufacturers, but we manufacture ball bearings now, and as we see orders for ball bearings we go and get them, which can easily be replaced by taper roller bearings. We have a much greater influence in replacing them if we have got the order for the ball bearings than if somebody else had got the order for the ball bearings.

Q. What percentage approximately of the British Timken business has been ball bearing business?

A. Are you including Fischer bearings now?''

Q. Before you had any connection with the Fischer plant to what extent was the ball bearing business a factor in the anti-friction business of the British Timken Company?

A. We were very small in ball bearings.

Q. The product of the Fischer plant represents approximately what percentage of your business today?

A. I should say we were nearly three to one. Our turn-[fol. 1279] over given here for the last year is £2,750,000. I think the Fischer business was somewhere under a million pounds.

Q. Now I want to go back to the sales of bearings that are made in the territory that is set aside for operations of British Timken in the 1938 contract. When bearings are sold by American Timken in that territory what, if any, commission is paid to the British Timken Company in respect of those sales?

A. Sales by American Timken into our territory?

Q. That is right.

A. The only payments of any size were payments on Australian business. They were the only payments of any real size that I remember.

Q. And that was payment for what purpose?

A. They did not pay us a commission when they sent bearings out there. They supplied the bearings at a price

which we indicated to them as being the price level. Then we asked the American Company to invoice the bearings at that price and give us the difference between that price and the price which they would have invoiced to us had they supplied the bearings to us. We were very anxious to get that price difference, because we had to maintain our technical force in Australia, although were not getting the business. The business was going to America and we were [fol. 1280] maintaining the technical engineers in Australia. Therefore, we said: 'This is Australian business and we want a contribution to the cost of maintaining those engineers'. I think that was the arrangement.

Q. Were those payments in any sense penalty payments?

A. No, they were what we demanded to meet our costs in Australia. We did not see why we should maintain the engineers and indeed why we should, as we expected to have to do and indeed did towards the end of the period, have to make payments to our agents to compensate them for the fact that they did not get any commission on bearings supplied from this country. So we had a considerable expense in Australia and we made that arrangement with America.

Q. Has that same procedure been followed in any other territories outside Australia where sales have been made in circumstances where you have, for one reason or another, not been able to make delivery?

A. I cannot think of one. I can only say I should certainly follow that principle. I cannot think of one at the moment—I cannot think of any.

Q. Now I want to direct your attention to the situation in respect to French Timken. You recall when the French Company was established?

[fol. 1281] A. Yes, I think it was established a year or two before I joined it.

Q. That is before you joined British or French Timken?

A. Before I joined French Timken. I joined French Timken about 1930 or 1931. I have forgotten which came first of my Directorships, French or British.

Q. Do you know upon what order or orders the French Timken organization was originally predicated?

A. I remember the situation as it existed when I joined the Board, because at Mr. Dewar's request I spent some

little time in my very early years as a Director in France investigating the position and forming my opinion as to the state of affairs of the Company at that time.

Q. Will you describe the state of the French Timken affairs when you made that investigation?

A. In those very early days I remember that French Timken was certainly passing through a very critical phase. I remember investigating, not only the financial position as it existed when I joined, but also what the probable financial position would be. I remember we lost a lot of money.

Q. Can you tell us approximately what that was?

A. Yes, the figure was—I heard it given by Mr. Dewar this morning—a figure of 7 million francs or 8 million [fol. 1282] francs. That was the loss.

Q. Out of a share capital of what?

A. About 20 million francs—yes, we had lost getting on for half our capital.

Q. That was the situation you found as the result of your investigation?

A. May I alter my last answer slightly? When I say I am certain we had lost nearly half our capital, I am not quite sure, thinking it over, whether our capital was as much as 20 million francs at that time. If I had to modify my answer by looking at the facts, I think the 20 million francs would be modified downwards rather than upwards.

Q. As a Director of the Company, after you had made that investigation, what, if any, recommendation did you make in respect of the situation of the French Timken Company?

A. I remember thinking we were up against it in France, and I thought we had better do something about it. At that time the question arose as to some sort of an arrangement with SKF who had just given us a pretty knock through their taking over control of our best customer and taking all the orders away from us. That meant to say we lost a great proportion of our orders and we were looking in a pretty rocky position then. I am not going to say that I made a suggestion of that sort, but what I want to say [fol. 1283] is that I certainly supported wholeheartedly the suggestion that was made and that was acted on, that we should have some form of truce (as I think it was described) with the CAM.

Q. Is there any agreement as to price or territory, or

anything of that sort, in effect, with CAM at the present time?

A. No.

Q. And there has not been, I understand, since the beginning of the war?

A. Since the beginning of the war.

Q. Now I asked you, Mr. Pascoe, about the know-how that had been made available from time to time to the British Timken Company. I want to ask you whether similar know-how was made available to the French Timken Company by American Timken?

A. It was available but it mainly came through British Timken as far as I remember.

Q. That is in the administration of the Company, that was handled through the British Timken Company?

A. I should say it mainly came through, though there is an exchange of views or correspondence between France and America.

Q. Would that information which has been made avail- [fol. 1284] able involve machine tools, methods and practices and also information as to bearing applications?

A. Yes, the information that is made available to France is essentially the same as is made available to England, whether it comes direct from England or whether it comes direct from the Timken Roller Bearing Company.

Q. To what extent has there been any exchange of personnel between the French Timken Company and American Timken or between French Timken and British Timken?

A. You mean visits from personnel?

Q. Yes.

A. There have been frequent visits between the Companies.

Q. And have technical representatives from the American Company visited French Timken as well as British Timken?

A. Yes.

Q. What is your opinion as to whether or not the success of the French Timken Company in designing the development of tapered roller bearings in France was the result of the know-how that came from American Timken directly or indirectly through British Timken?

A. The development of the tapered roller bearing in France owed tremendously to the association with the

Timken Roller Bearing Company and the interchange of technical details as to methods of manufacture, machine [fol. 1285] tools, applications—in fact everything else.

Q. I should like to ask you one further question, Mr. Pascoe. What is your belief as to whether or not the development of tapered roller bearings in England, France and on the Continent and in the Empire has been the result of the efforts of Mr. Dewar and the American Timken Company together to prosecute the development of the tapered roller bearings in that territory?

A. Well, the development of the tapered roller bearing has been the result of the efforts of Mr. Dewar and the Timken Roller Bearing Company. Had that development between Mr. Dewar and the Americans not been associated —if it had not been started, had not been developed—then the development of sales of tapered roller bearings in this country, and indeed in France, would have been very much slower. In fact we had the example of Germany where we know there is not very much tapered roller bearing development because, as I say, we are not there. We started out there but we were driven by force of circumstances out of the country and there is nothing like the same percentage of tapered roller bearings to the total in Germany as there is in this country, and indeed in France. In fact we have seen lists of machine tools that are found in the German plants; and in one particular plant—one of the largest [fol. 1286] manufacturers in Germany—they were going to distribute their machine tools, and I had a good look to see if any of them were of any special use for tapered bearings, and I could not see any in the end.

Q. You described a while ago the process that has to be followed at the present time as to the importation of bearings into England, whether tapered roller bearings or straight roller bearings. Does that same process have to be followed with the importation of machine tools?

A. Yes, that same process has to be followed with the importation of anything. You have to have import permits, and more particularly in my experience is that the case with both machine tools and bearings. If we want to import a machine tool from America we place an order with the agent of the American manufacturer here and he applies for an import license. The next thing we hear is that we have to go up and make some representations. We are then

faced, as I have been on several occasions during this last year or two, with the machine tool experts of the Ministries who try to prove to us that the machine tool we want from America, although it cannot be manufactured here, something nearly as good can be manufactured here, and [fol. 1287] that we should content ourselves with buying a British made machine tool rather than go to America for the American machine tool. It is a matter of great difficulty —very great difficulty—in getting permission to buy from America.

Q. Has the same problem as to currency control in respect to importations of bearings or equipment arisen in France?

A. Yes. We have not got any dollars."

Mr. Day: That is all the direct examination.

Mr. Nitschke: Continuing with the cross-examination.

(Questions read by Mr. Nitschke and answers by Mr. Dedman:)

"Q. Mr. Pascoe, who were the technical representatives of British Timken in Australia in 1939/40?

A. Fall and Gibson—Gibson certainly in 1940. I cannot remember whether Fall had gone out then or not, but certainly Gibson was our representative. Fall went out while Gibson was there. Gibson then left us and we are now training another one.

Q. Do you know when the Michelin Company acquired the interest in Citroen?

A. I can only fix it by saying that that happened, I should have said, either just before or very soon after or about [fol. 1288] the time that I was joining the Company. In other words it was in the early 1930's.

Q. Was it early in 1930—

A. In the early 1930's. I do not remember the exact date.

Q. It was before 1935?

A. Oh, yes.

Q. That S.K.F's control of Citroen was eliminated?

A. S.K.F's control of Citroen was eliminated? I am sorry; I do not follow.

Q. Mr. Dewar testified to the fact that S.K.F. had some financial control or hold over Citroen?

A. Yes.

Q. And that ceased—I am not sure that he said it ceased, but he did say that Michelin took over Citroen; and my question is whether or not at the time Michelin took over Citroen any financial control which S.K.F. had over it ceased?

A. I do not know. I want to make it quite clear that my answer was that I remember the fact of S.K.F's control, great influence, over Citroen. I do not remember when Michelin came in.

Q. Do you know whether or not they exercised their control after Michelin came in?

[fol. 1289] A. I do not remember that.

Q. You do not?

A. No, I do not.

Q. You do not remember whether they did or not?

A. I do not remember whether they did or not.

Q. I hand you Government's Exhibit D.33 which is the letter from Forsythe to Klinedinst that I used in attempting to find out what protective discount of 50 per cent off the American list meant with reference to prices charged by American Timken when it was selling in British Timken's territory."

Mr. Nitschke: Your Honor, this portion I think I put in in my affirmative case. I won't take the time to read it.

Continuing with the second question on Page 201 of the transcript: (Reading)

"Q. I believe you said that you exchanged dimensions with Timken. You received from them the blue prints and dimensions of their bearings, and you gave them the blue prints and dimensions of British Timken and French Timken's bearings—is that correct?

A. It is not correct insofar as it differentiates between the dimensions of a French Timken bearing and a British Timken bearing and an American Timken bearing. These [fol. 1290] tapered roller bearings we manufacture are essentially the same as those manufactured in America. We have built up gradually more and more sizes, and to a very large extent the new sizes which we put into operation are in the American bearings, already being manufactured by the American Company, and therefore they would send us the dimensions of the bearing. There have been instances where we have developed the bearing—there again this was

during the war—which had not been manufactured by the American Company. When we were manufacturing the particular bearing I have in mind, we certainly sent the fullest information to America to enable them to come to our rescue during the war when we were not able to produce all that was required.

Q. Whenever you developed a new bearing—say a metric size bearing—you gave American Timken the blue prints and dimensions of that bearing, is that correct?

A. We should do so if we developed a new bearing, yes.

Q. You did that?

A. Oh, yes.

Q. Was it your practice to give blue prints and dimensions of your bearings to your competitors also in many cases?

A. To give a drawing of our bearing to our competitors?

Q. And the dimensions—yes?

A. No.

[fol. 1291] Q. Did you ever have a case where a customer asked you to give your blue print and dimensions to another manufacturer so that he could produce a bearing of the same size, and so that the customer would have another source of supply?

A. I do not remember having been asked to give particulars of our bearing design to any customer, or to a competitor—although, of course, during the war we did lots of things. We supplied bearings to our competitors during the war.

Q. When a customer like Ford buys a bearing from you, do you not give him a blue print which shows him the dimensions of the bearing he is buying?

A. We should give Ford a blue print, but we should not necessarily give all the internal dimensions of the bearing. Our practice, if we are selling a bearing to Ford, would be that we should send them a drawing. We should say: 'Here is our bearing 3984. That is the bearing we are going to supply'. The Ford Company would take that, make their own copy of it, put 'Ford Motor Company' on it, and send it back to us. There is no secret about the external dimensions of our bearings at all.

Q. There is no secret about the external dimensions?

A. There is no secret about the external dimensions of a

bearing at all. We publish bearings; we publish catalogues which will show the bearing.

[fol. 1292] Q. And what is the difference between internal and external dimensions?

A. Well, we do not publish the included angle of the roller.

Q. Have you ever had it on a blue print which you gave to Ford?

A. Ever have the included angle?

Q. Yes.

A. I do not remember that we did.

Q. Would you refuse to give that to Ford if they asked you for it?

A. If anyone asked us for what I call the internal dimensions of our bearings, I should be very loth to give it to them.

Q. But you would give it to Ford?

A. No, I would not. I would say: 'Here is the bearing with the external dimensions. What do you want to play around with roller angles and everything else? We are making the bearing; you are concerned with external dimensions'."

Mr. Nitschke: I think that concludes the cross-examination.

Mr. Day: There is a little redirect of Mr. Pascoe on Page 213.

(Reading)

"Q. Mr. Pascoe, you were asked yesterday something about the loss that French Timken had sustained and which you examined at the time you made the investigation of the [fol. 1293] affairs of French Timken that you described yesterday. In your answer you indicated that there were some questions in your mind as to whether the share capital of French Timken was 20 million francs and indicated that you thought it might be more than that. Have you made any investigation to determine with more accuracy what the share capital of French Timken was?

A. I have been able to look at a Balance Sheet for 1934, I have not been able yet to look at a Balance Sheet for the earlier years. By 1934 the share capital was 10 million francs, the loan capital was 11,700,000 francs, and on that

our accumulated losses which were shown in the Balance Sheet under two headings, one 'Direct Losses' and the other under the heading of 'Development Account,' amounted to 8,700,000 francs. By far the greater part of that Development Account was a loss. Therefore our answer that our losses were 40 per cent as given yesterday is correct.

By Mr. Day: I would like to have the record show that the details given by Mr. Pascoe upon this question may be considered as also applying to Mr. Dewar's testimony in the same regard.

By Mr. Nitschke: As an amplification of what he said?

By Mr. Day: As an amplification or modification of what [fol. 1294] Mr. Dewar said upon the same subject.

By Mr. Nitschke: Yes.

Q. Can you give us the approximate number of bearing sizes that were being made by British Timken at the time you first became connected with the Company in either 1930 or 1931?

A. As an estimate, I should say we were making somewhere around 500 sizes.

Q. Can you give us similar figures for the number of bearing sizes being made at the present time by British Timken?

A. When you say 'at the present time,' you must cover a month or two, of course, not just to-day.

Q. Of course.

A. To-day we are making and prepared to make and tooled to make 3,000.

Q. Different sizes?

A. 3,000 distinct sizes."

Mr. Day: I think that concludes Mr. Pascoe.

[fol. 1295] Mr. Day: We now offer the deposition of Mr. Llewellyn Milford Ellis of Poppy Lane, Erdington, Birmingham, England, retired, aged 70 years being duly and publicaly sworn and examined on the part of the Defendant, doth depose and say as follows:

(Questions read by Mr. Day and answers by Mr. Ketterer:)

"Direct examination by Mr. Ketterer.

Q. Will you state your name?

A. My name is Llewellyn Milford Ellis.

Q. And you live where?

A. I live in Birmingham, 15 Poppy Lane, Erdington, Birmingham, England.

Q. You are employed by what company?

A. I am employed by British Timken Roller Bearing Company.

Q. Were you ever employed by a company known as The Electric and Ordnance Accessories Company, Limited?

A. Yes, I was for a number of years.

Q. When did you first commence work with The Electric and Ordnance Accessories Company?

A. In the year 1909.

Q. In what capacity were you employed by that company?

A. I was employed as jig and tool designer and plant lay-out draughtsman.

[fol. 1296] Q. You continued with that company for what period of time?

A. I continued with them until they were disbanded, which was somewhere about 1919. That is just after the end of the 1914/1918 war.

Q. With what company did you work after 1919?

A. All the time I was working with Vickers. The Electric and Ordnance Accessories was a subsidiary of Messrs. Vickers. I was simply transferred, after they disbanded Electric and Ordnance Accessories, to the Wolseley Motor Company which also was a subsidiary of Vickers.

Q. Then you went with what company following the Wolseley Motor term of employment?

A. With Wolseley Motors it lasted for a short time, a year, or it might have been a couple, when British Timken was organized and I automatically then became a member of the British Timken staff.

Q. Have you continued on the British Timken staff down to the present time?

A. Yes, that is so.

Q. And have you always worked in the same capacity as you were employed originally by the Electrical and Ordnance Accessories?

A. No. My responsibilities have greatly increased. They [fol. 1297] have been increased from time to time.

Q. What different positions have you held with the Electric and Ordnance Accessories, Wolseley Motors and Brit-

ish Timken over the years from 1919 down to the present time?

A. Well, to the end of the war, I held the position I mentioned, that is chief of the jig and tool design and plant. Afterwards, when the British Timken was formed and we broke away from the Wolseley Company, I still held that same position but in addition I was put in charge of the bearing design department and also the industrial application department.

Q. That continued for how long?

A. That continued to the commencement, or just after the commencement, of this last war; that is, about the end of 1939.

Q. Since 1939 what has been your position?

A. Since 1939 I took a less active part. My health, and so on, would not enable me to carry on as I had been doing. It was really a matter of drifting into the position of adviser to the Directors on the strength of my past experience. But I still took a supervisory position particularly in regard to bearing design.

Q. Now, going back to 1909, I want to ask you whether [fol. 1298] Electric and Ordnance Accessories was manufacturing tapered roller bearings when you commenced working there?

A. No, they were not when I first went there. I think it was just after I went there that they got instructions from Messrs. Vickers, of whom they were a subsidiary, to start the manufacture, that is to equip certain shops and start the manufacture of tapered roller bearings.

Q. What, if anything, did you have to do with that equipment of the shop for the manufacture of tapered roller bearings?

A. I had to lay out the shops; that is, I had the dimensions of the shops to begin with, and I had to lay out the different departments, Technical department, grinding department, inspection, and so on, allocating the space available, as far as possible, so that we could manufacture the whole bearing.

Q. Did Electric and Ordnance Accessories make any other products at that time?

A. Yes. They were doing quite a lot of electrical work, electrical motors, and ordnance work, that is fuse manufacture, Government ordnance work, and a number of lines in

electrical stuff, switch gear and electric motors, heating apparatus, fans, and so on.

[fols. 1299-1300] Q. Where was that plant located?

A. That plant was located at Aston, Birmingham.

Q. Is that the same place as the British Timken plant is located now?

A. Yes, that is the same factory.

Q. How much space was utilized in the Electric and Ordnance Accessories plant at the time you first laid out space for the manufacture of tapered roller bearings in 1909?

A. They started off with one fair sized shop. It would be I should say, about 200 feet by about 40 feet.

Q. That covered the entire operation as far as bearing manufacture was concerned?

A. Yes. The only thing done outside was a certain amount of press work for producing the cage which was made in another shop, in what we called the electric ordnance press shop.

Q. In other words, they made the cages?

A. Yes.

Q. How many people were working at that time on the manufacture of bearings?

A. We started off in the actual Timken shops with not more than about a couple of dozen people. That was rapidly increased.

[fol. 1301] Q. By 1919 or 1920, when Wolsely Motors came into the picture, how many people were involved in the manufacture of bearings, as you can recall?

A. In 1920 I should say it had increased to 350 or 400 people by that time.

Q. How many bearing sizes were being manufactured or assembled?

A. At that time?

Q. Yes.

A. At that time I should say we had got to about 60 or 70 definite sizes that we made.

Q. That is by 1920?

A. Yes, that is by 1920.

Q. Were they largely automotive sizes?

A. Yes, nearly all of them were. I think I can say all of them were automotive bearings.

Q. I believe you said the year or so after 1919 or 1920 British Timken organizatibn came into the picture?

A. Yes.

Q. What was that in respect of the Wosley Motors Company? Was it a subsidiary, or how was it panelled?

A. No. Actually Wolseley had very little to do with it except they did exercise a certain advisory position in regard to Timken just to begin with because that did not last long before Timken was entirely separated.

[fol. 1302] Q. Did you always remain at this Aston plant site?

A. No. We remained at the Aston site until about 1915. It was a little while after the war started when the plant was moved from Aston to what we called the Ward End Works. It was about a couple of miles nearer the outskirts of Birmingham."

[fol. 1303] Mr. Day: We are now resuming the testimony of the witness Ellis, on Page 207.

(Questions read by Mr. Day, answers read by Mr. Ketterer.)

"Q. When Wolseley Motors took over the manufacture in 1920, was anything else manufactured on the premises aside from bearings?

A. Well, taking the factory altogether, yes, because the Ward End factory covered a very considerable area and it was divided into one or two sections. The main factory building was occupied by Wolseley who started there the manufacture of certain types of small cars. Then the Timken plant was in a self-contained building entirely separated from the main Wolseley factory.

Q. And you remained at the Ward End plant until what date?

A. Until 1927 I think it was.

Q. Was that when the separation from Wolseley Motors was completed?

A. Yes. It was completed perhaps a month or two before we actually moved.

Q. Up until 1927 who owned the equipment, if you know, [fol. 1304] that was used in the manufacture of bearings at the Ward End plant?

A. In the first place I believe the equipment belonged to the Wolseley Company.

Q. Did they perform, up until 1927, any manufacturing operations for the bearing business?

A. Yes. They made the cages in the Wolseley press department.

Q. And that continued up until 1927?

A. Yes, approximately 1927.

Q. How many people were employed by 1927, to the best of your recollection, in the manufacture of bearings at the Ward End plant just preceding the removal from the Ward End plant?

A. I think it had increased to probably 500. It might even have been a little bit more than that.

Q. How many bearing sizes were you making by that date, if you can recall?

A. Perhaps 100 sizes by that time.

Q. In respect to their application, were they automotive, or were there any other applications?

A. Mostly automotive, although we had a certain amount of business, which was a growing business, for other applications, such as machine tools and mill equipment, and that [fol. 1305] sort of thing.

Q. From the time that you first were connected with the manufacture of bearings in 1909 first by Electric and Ordnance Accessories, then by Wolseley Motors, then by the British Timken organization down to 1927, what is the fact as to whether the mark 'Timken' was put on the bearings manufactured by that succession of companies?

A. The word 'Timken' was always put on. It was put on right from the very commencement and there never was a time to my knowledge when 'Timken' was not put on.

Q. In 1927 was there a removal of the plant from the Ward End plant?

A. Yes. I believe an arrangement was made whereby the new Timken Company, which had been organized, actually bought the plant that they were using which had been more or less leased to them by the Wolseley Company. So that from that date onwards it became absolutely the Timken property and it was removed from the Ward End Works. Just owing to circumstances, the old Aston factory happened to be empty and available and it was, therefore, taken over for the manufacture of Timken bearings, and the plant brought down there.

Q. That is in 1927?

A. Yes.

[fol. 1306] Q. In connection with the positions that you have described as having held with the British Timken organization from 1927 down to date, have you ever had any occasion to have anything to do with the exchange of manufacturing data from American Timken to British Timken?

A. Yes, quite a lot. I used to be in communication with the American Company almost every week, generally asking for information or for drawings or for something of that sort in connection with work that we had got in hand at the time.

Q. Has that information, or exchange of manufacturing data in respect of machine tools and machines, been considerable in your connection with it or otherwise?

A. Very considerable. In connection with all new sizes as they came along, we invariably got complete information in the form of fully dimensioned prints, and, in certain cases, if they were special bearings, there might be quite a bit of information given us in reference, say, to special limits and other particulars which it was necessary to observe, we will say, in connection with that particular class of bearing.

Q. Can you recall as to whether any representatives of the American Timken Company came to the British Timken plant during the years after 1927?

[fol. 1307] A. Yes, there were two or three. I do not know that I can recall their names. I remember there was a Mr. Shuler. There were two or three.

Q. Do you recall a Mr. Sloan?

A. Yes, definitely Mr. Sloan. We also had at least one representative who was not a member of the Timken Company, but I believe he came over at the instigation of the Timken Company from the New Departure Company, owing to the fact that he was able to give us certain technical information on the manufacturing side, particularly on forging.

Q. When you first moved back to the Aston plant in 1927, was all of the plant occupied with the operations of the British Timken Company?

A. Yes, entirely. There was nothing else handled there but the Timken bearing manufacture.

Q. Did you utilize all the floor space with the plant at that time?

A. Not to begin with. We had got several shops that were not occupied for several years after. As a matter of fact, when we went into the factory, we thought it was too big for us.

Q. Have you since that time filled it?

A. Yes, absolutely filled it and built extensions. We still [fol. 1308] are looking out for somewhere else to enable us to make all the bearings that we want to.

Q. How many storeys are there in that plant?

A. There is the ground floor and two others in the main block of buildings. Then there are one or two blocks which are simply ground floor buildings."

Mr. Derr: Your Honor, the Government would like to offer the cross-examination of the witness Ellis.

The Court: All right.

(Questions read by Mr. Derr, answers by Mr. Dedham.)

"Cross-examination by Mr. Derr:

Q. You made reference to the fact that on one occasion, at least, New Departure Company had sent a representative and given you certain information with respect to forging.

A. Yes.

Q. Do you know why the New Departure Company was called upon to give you that information rather than the Timken Company?

A. Yes. The New Departure Company have a very big forge department and they make practically all their bearing rings by the forging process, whereas Timken have no forge department at all. All their smaller size bearings are [fol. 1309] made from drawn tubing. We were using the forging department to a certain extent and therefore there was no one in Timken who could really give us the same expert advice that a man from the New Departure Company could.

Q. Would you please explain for the purpose of the record the differences in the forging of British Timken and the method used by the American Timken Company?

A. The American Company made their bearing rings from tubes. They were thick section tubes. I am talking about sizes up to about six inches in diameter. Over that

in America they used drop stampings for a certain range of sizes. But up to six inches in diameter, I believe American Timken used only tube which they themselves manufactured. We were not able to buy tube in this country over four-and-a-half inches in diameter. Therefore, there was a big gap which was filled by the use of stampings which we used to buy outside. But it was considered we should get a better ring by installing forging machines. We therefore put in two forging machines and, being new to us, we naturally came up against all sorts of difficulties, and to help us out, I think I am right in saying the Timken Company arranged for a man whose name I have forgotten to come from the New Departure Company where they had 60 to 80 machines of the type we were using.

[fol. 1310] Q. How long did British Timken continue to follow the technique of the forging system?

A. They continued to use the forging machines right up to within a year or two of the war. Then, owing to labour troubles chiefly, and the fact that we had only got three forging machines, it was decided that we should get our requirements made better by buying all our stampings outside instead of making just a few on our own forging machines and buying the rest outside. We had not sufficient capacity to make all we wanted by a long way.

Q. Speaking comparatively of forgings and tubings, is the steel that is used in those two systems identical?

A. Yes. The chemical analysis is identical.

Q. Is the heat treating the same?

A. The heat treating is exactly the same.

Q. During the course of your experience with the British Timken Company since 1928, have you not had occasion in many instances to obtain manufacturing information on production know-how from Bitish machine tool manufacturers?

A. No. If I rightly understand you, we bought various machines from British manufacturers. We invariably gave them either drawings or actual samples of the sort of thing we wanted to produce and asked them for their [fol. 1311] production times on the machine. Generally, also, we asked for general particulars of the type of tooling, and so on, that they would provide. I do not remember a single case where we found it economical to change

over to any suggestions made by British machine tool manufacturers from the methods that we used, which were practically identical with those used by Timken America.

By Mr. Derr: That is all."

Mr. Day: We now offer the deposition of Mr. Hobley, on Page 215.

(Questions read by Mr. Day, answers by Mr. Ketterer.)

"Walter Ernest Hobley of Churchill, Somerset England, retire, aged 58 years, being duly and publicly sworn and examined on the part of the Defendant, doth depose and say as follows:

Direct examination by Mr. Ketterer:

Q. Will you state your name, please?
A. Walter Ernest Hobley.
Q. Where do you live?
A. Churchill, Somerset.
Q. Are you presently employed?
A. Not at present.
Q. Were you formerly employed by British Timken, Ltd.?
[fol. 1312] I was for 32 years.
Q. When did you stop working for British Timken, Ltd.?
A. 1946.
Q. Did you retire at that time?
A. I did.
Q. Did you ever work for a Company known as Electric & Ordnance Accessories, Ltd.?
A. Yes.
Q. When did you start working for that company?
A. Early 1914.
Q. And you continued working for that company for what period?
A. Until British Timken was formed as a company in 1920.
Q. Then you continued working for British Timken for what period?
A. Until 1946.
Q. In what capacity were you employed by Electric & Ordnance Accessories?

A. In the sales office.

Q. Did you continue in the sales department of that company until British Timken came into the picture?

A. Yes.

Q. Did you continue in the sales department with British Timken until the time of your retirement?

A. Yes.

[fol. 1313] Q. I will ask you where the plant was located when you started working for Electric & Ordnance Accessories?

A. It was located at Cheston Road, Aston, Birmingham.

Q. And that is the same place as the British Timken plant is presently located?

A. Exactly the same place.

Q. Was it moved at any time from that location during the term of your employment?

A. It was moved about 1916 or 1917. I cannot say which, but during the first World War it was moved from Aston across to Ward End.

Q. In what plant was it located at Ward End?

A. In the plant of Wolseley Motors.

Q. Was any other manufacturing operation being conducted at the Aston plant aside from the manufacture of bearings?

A. Yes.

Q. What was being made there?

A. Electric motors and fuses, because it was war-time; fuses were made in large quantities there.

Q. What was the size of the operation in respect of the manufacture of bearings as to number of employees when you first started working in 1914 for Electric & Ordnance Accessories?

A. When I started I think there were about between 50 and 100 employees—that is engaged on the bearing business.

[fol. 1314] Q. That is right. By the time the British Timken Company was formed and continued the operation at Ward End, how many employees were there working for the British Timken Company, approximately?

A. It would have increased considerably; I should estimate two or three hundred.

Q. How many bearing sizes were being made when you

first went with the Electric & Ordnance Accessories Company?

A. Probably about 100.

Q. And by 1920 or 1921 when the British Timken Company intervened?

A. It had increased, perhaps to several hundred.

Q. I will ask you whether or not the bearings that were being manufactured first by Electric & Ordnance Accessories and later by British Timken bore the trade mark 'Timken' at all times, to your knowledge?

A. Always.

Q. Where were those bearings sold after the conclusion of the first World War, in what markets generally?

A. Our main business was with motor car manufacturers.

Q. In England or on the Continent, or where?

A. In England and also on the Continent.

Q. What is the fact as to whether there were sales generally made in most Continental countries after 1920?

A. I did not quite get that question.

[fol. 1315] Q. What is the fact as to whether there were sales made after 1920 in most of the Continental countries of Europe?

A. We supplied considerable numbers to the Continental countries through our agencies which had been hitherto fixed.

Q. What was the situation in respect of sales in various parts of the British Empire, such as Australia and New Zealand?

A. We appointed an agent in Australia and began business after 1920 in a small way, but it grew very rapidly.

Q. Now the operation of the British Timken Company until 1927 was under the general direction of what company?

A. Of Wolseley Motors.

Q. After 1927 was there any intervention by Wolseley Motors in respect of the operation of the British Timken Company?

A. None whatever; it was a complete severance.

Q. What, if anything, did you observe as to the development of the British Timken Company after 1927 in comparison with the development prior to that point?

A. We developed a great deal more rapidly after 1927 than before.

Q. Did that development continue until the time of your retirement in 1946?

A. It was developing all the time.

[fol. 1316] To your knowledge was there any technical information either as to bearing applications or manufacturing methods obtained from American Timken during the period from 1927 to 1946?

A. Yes, a considerable amount of technical information came through.

Q. Did you personally have any contact with American Timken during that time?

A. I had considerable correspondence with American Timken.

Q. And that had to do with what subjects?

A. Sales matters and technical matters."

Mr. Derr: Your Honor, the Government's Examination of the witness Hobley was offered as part of the Government's affirmative case.

Mr. Day: Page 220, "Redirect Examination (reading).

Q. In a question that was directed to you by Mr. Derr you were asked whether or not there was any commission paid to American Timken on sales in American Timken territory of ball bearings or straight roller bearings?

A. Yes.

Q. I believe you said you thought there was?

A. To the best of my recollection I think there was.

Q. Was it your job to handle the payment of commission to the American Timken Company on ar[illegible] sales made, or [fol. 1317] was that handled by anybody else?

A. It was handled by the Accounts Department.

Q. So that you might be mistaken about that?

A. Quite."

Mr. Derr: Your Honor, in order to preserve the continuity of this redirect-recross examination, I think the Government already read this as part of the affirmative case. There are only a few questions. Reading from Page 221 of the deposition. I shall read both questions and answers.

"Q. Did you get the consent of the American Timken Company to sell straight roller and ball bearings in Canada and South America?

A. I do not think the consent was necessary, because our agreement only covered tapered roller bearings.

Q. I show you again the Agreement dated 29th December, 1934, between American Timken and British Timken, Ltd. (Government's Exhibit D.29), and refer you to the first part of Paragraph 7. I also show you the preamble to this Agreement and ask that you please read it including the 'Whereas' clause.

(The witness studied the document.)

Q. Clause (b) of the 'Whereas' clause reads: 'The expression 'bearings' for the purposes of this Agreement means anti-friction bearings of all kinds'?

[fol. 1318] A. Yes.

Q. Does that refresh your recollection as to the limitations on the authority of British Timken under the Agreements to sell in American territory?

A. Yes. The arrangement, as I recall it, was that we could supply in the Timken Company's territory, they could equally supply in our territory, and a commission was payable either way."

Mr. Day: "Redirect examination by Mr. Ketterer.

Q. You have been asked about the matter of selling bearings by British Timken in American Timken territory, and a payment of commission on that. Reference has been made to provisions in one of the business Agreements between British Timken and American Timken. I want to ask whether you had anything to do with the making of that contract?

A. No, I had nothing to do with the making of it.

Q. Did you have anything to do with its administration?

A. Yes.

Q. What did you have to do with that?

A. Mainly this question of trading in each other's territory.

Q. And your best recollection about that now is what?

A. The whole object of that arrangement was that if clients in our territory insisted on buying bearings from [fol. 1319] America we would let them do so. If there were clients in the Timken Company's territory who wished to buy from Great Britain we would supply them. A com-

mission would be granted in either case. That was in order to combat competition; that was the whole basis of it.

Q. That is your best recollection of that?

A. That is to the best of my recollection.

Q. What is your best recollections now as to whether the consent of American Timken was asked for in respect of sales by British Timken in American Timken's territory of ball and straight roller bearings as distinguished from tapered roller bearings?

A. Well, I really cannot recollect whether we did make application to the Timken Company to supply ball bearings in South America or not, but we did supply them, I am sure of that."

Mr. Day: We now offer the dopsition of the witness Jean Lemarie of 11, Rue Parmentier, Neuilly sur Seine, near Paris, France, aged 53 years, being duly and publicly sworn and examined on the part of the Defendant, doth despose and say as follows:

[fol. 1320] (Questions read by Mr. Day; the answers read by Mr. Ketterer from the deposition of Jean Lemarie.)

"Q. Will you state your name, please?

A. Lemarie, Jean.

Q. Where do you live?

A. Neuilly sur Seine, near Paris.

Q. Do you have any connection with the French Timken Company?

A. I am Director General of French Timken."

Mr. Ketterer: If the Court please, I think in taking the depositions, counsel agreed that that should be Director General and not Managing Director.

Mr. Day: Director General, yes.

"Q. How long have you been Managing Director of the French Timken Company?

A. Since 1st January, 1946.

Q. Did you have any connection with French Timken before January 1st, 1946?

A. Yes, I was Director from February 1st, 1943.

Q. Were you ever employed by a company known as Societe Mecanique de Gennevilliers?

A. Yes.

Q. When were you employed by that company?

[fol. 1321] A. From the 1st July, 1919 to 1st October, 1920.

Q. In what capacity were you employed by the Societe Mecanique?

A. As Engineer in the works.

Q. At the time you were employed by the Societe Mecanique was that company manufacturing tapered roller bearings?

A. It was beginning.

Q. What kind of tapered roller bearings were they making?

A. What kind exactly.

Q. Were they marked with any trade mark?

A. They were marked 'Timken'.

Q. Have you any recollection as to the sizes, the number of symbols of bearings that were being made by the Societe Mecanique during the time you worked there?

A. I do not remember. I think there were a small number of sizes.

Q. I have here three sheets of paper that have been marked Defendent's Exhibit D.32. I ask you whether or not these were prepared under your directions from the records of the French Timken Company?

A. Yes."

Mr. Day: We would like to offer that in evidence, if the Court please, as Defendant's Exhibit 35.

[fol. 1322] "Q. I now hand you two other sheets of paper which have been marked for identification Defendant's Exhibit .32. I will ask you whether or not they have been prepared under your direction from the records of French Timken?

A. Yes."

Mr. Day: We would like to offer that in evidence also, your Honor.

[fol. 1323] "Q. At the time you were working for the Societe Mecanique in 1919 and 1920 did they make any type of anti-friction bearing, except tapered roller bearings?

A. They were making ball bearings.

Q. Did they continue to make ball bearings after 1920 to your knowledge?

A. Yes, they continued until 1930.

Q. What happened to that plant in 1930?

A. The shares were bought by Skefko.

Q. That was SKF?

A. SKF.

Q. Can you tell us approximately the amount of the total anti-friction bearing business done in France by French Timken today?

A. By French Timken in francs?

A. That is right.

A. 1947, 270 million francs.

Q. What percentage of the total anti-friction bearing business was done by French Timken?

A. Nearly 10 per cent.

Q. Are there any other companies operating in France today that manufacture taper roller bearings aside from [fol. 1324] French Timken?

A. Yes."

The Court: Pardon me. Is there any way by which you can agree as to the rate of exchange of francs in 1947?

Mr. Nitschke: We know what it was in February. It was 1/3 of a cent for a franc, approximately, but that was devaluated in February of this year. I think they're 118.

The Court: That's the reason I was asking, because of the devaluation of it. The figure of 270 million francs may be of some value if we know whether it was on the basis prior to the devaluation, or both prior and subsequent to it.

Mr. Nitschke: Well, the devaluation was in February, 1948, so I suppose this was before that.

Mr. Ketterer: If the Court please, the testimony was that, as a matter of fact, the devaluation was being talked about when we were over in London but had not yet become effective. At that time the rate was 119 francs to the dollar.

The Court: 119 francs to the dollar?

Mr. Ketterer: Yes.

"Q. Will you tell us what they are, please?

A. SKF, Rossi, Renault—I think that is all.

[fol. 1325] Q. Are there any companies in France engaged in the manufacture of other types of anti-friction bearings, such as ball bearings, today?

A. I do not understand the question, because all the other works are manufacturing ball bearings: SKF is manufac-

turing ball bearings, Renault is manufacturing ball bearings and Rossi is manufacturing ball bearings. I think Timken is the only one manufacturing only tapered roller bearings.

Q. As for bearing sizes, can you tell me how many bearing sizes French Timken makes today approximately?

A. 500 sizes.

Q. Are they measured in inches or are they partly in metric sizes?

A. No, a big part in metric sizes.

Q. What is the necessity of making metric sizes in the French anti-friction bearing market?

A. It is a necessity for all the companies who are controlled by the Government.

Q. Will you explain that a little further?

A. For the companies who are controlled by the official organization you have to use, if possible, metric sizes—I say 'if possible'.

Q. That is a requirement of the French Government?

A. Of the French Government.

[fol. 1326] Q. What part of the sizes that are made by French Timken today are metric sizes?

A. I think nearly a third part—not exactly a third; I think the metric sizes are 100, 110.

Q. About 100 to 110 out of 500?

A. Yes.

Q. Since you have been connected with the French Timken Company as Director have you observed any technical assistance that has been given to the French Timken Company by American Timken?

A. Yes.

Q. What kind of technical assistance have you gotten?

A. Last year the Timken Roller Bearing Company sent engineers and service men as regards the question of bearings for railways, for French engines built in the States.

Q. How many men came from American Timken last year to help in connection with that work?

A. Three or four.

Q. And they were in France for what period of time?

A. One was in France for a very long period, four months if I remember.

Q. How long were the others in France?

A. One week, two weeks, three weeks.

Q. As to machine tools have you had any assistance from [fol. 1327] American Timken in respect of machine tools?

A. Yes, we have received 16 machine tools since the end of the war.

Q. What is the fact as to whether those machine tools were essential to the operation of the French Timken Company?

A. They are essential.

Q. Who handles the sales effort of the French Timken Company in France?

A. The Sales Manager under the General Manager.

Q. And is he on the pay roll of the French Timken Company, on the staff of the French Timken Company?

A. Yes, he is on the staff of the French Timken Company.

Q. Do you maintain any distribution service in France for the handling of the sales of service bearings?

A. Yes.

Q. How extensive is that?

A. We have one manager and 25 employees as a sales service.

Q. Would it be possible, in your opinion, for an American Company to handle directly the sale of anti-friction bearings in France?

A. In my own opinion it would be quite difficult.

Q. Will you tell us why you have that opinion?

A. Because the conditions of sale are very difficult and the prices are fixed by the Government. Now since the 1st January the prices are free, but during all the war and [fols. 1328-1336] during all the post-war period the prices were fixed by the Government and you had to keep very close close contact with all the official services.

Q. By 'official services' you mean Government services?

A. Government services—and you know the French Government want to have the control of the bearing works.

Q. Is there any official policy of the French Government in that respect?

A. Yes, their official policy is to control the bearing works.

Q. Is there any policy of the French Government to your knowledge that has to do with the location of bearing plants in France?

A. You know just before the war the French law said that you had to place your bearing works in the south of France and during the war, but now the war is finished and there is no longer a regulation where you have to locate your bearing works.

Q. In respect of having plants located in France in the event of war has the French Government any policy on that?

A. Before the last war, yes, and during the last war but now I do not know."

[fol. 1337] Mr. Derr: Your Honor, the Government's examination of Mr. Lemarie consists of only a few questions, and with your permission I will read those.

(Thereupon the following questions and answers were read by Mr. Derr:)

"Q. Do you know what percentage of the French tapered roller bearing market Francaise Timken has today?

A. I do not know exactly.

Q. Could you make an approximation, as you did for Mr. Ketterer with respect to all anti-friction bearings?

A. I think perhaps it would be 80 per cent.

[fols. 1338-1341] Q. Does French Timken secure from American Timken blue prints and dimensions of the metric size bearings that it produces?

A. Not for the metric bearings, because the sizes and the dimensions of the metric bearings are fixed by ISA.

Q. What is ISA?

A. International Normalization Board—I do not know what the name in English is.

By Mr. Derr: International Standards Association?

A. Yes."

Mr. Day: We have those two exhibits now which we might offer, which were deposition Exhibits D-32, and which now becomes Defendant's Exhibit 35.

The Court: Will you describe that to me, Mr. Day, so that I will know what it is?

Mr. Day: Yes, I will, your Honor.

(Document referred to was thereupon marked by the Clerk, for identification, Defendant's Exhibit 35.)

Mr. Day: We will offer that in evidence, and maybe it should be read.

[fols. 1342-1343] The Court: That exhibit will be received.

Mr. Day: The next exhibit, Defendant's Exhibit 36 was marked D-32 in the deposition, and also relates to Francaise Timken, and it is a tabulation of purchases from the Timken Roller Bearing Company, Canton, from 1933 to 1946, the first page, and the second page—well, that says something there in French that Mr. Ketterer perhaps can explain better than I can because he handled the French witnesses over there in London.

[fol. 1344] The Court: To December 31, 1947, yes. The second exhibit, Defendant's Exhibit 36, will be received.

Mr. Day: We now offer the testimony of Andre Bernard Jules Augis of 179, Avenue Victor Hugo, Paris XVI, France, Companies Director and Private Counsellor, aged 64 years, being duly and publicly sworn and examined on the part of the Defendant, doth despose and say as follows:

(Thereupon the following questions were read by Mr. Day and the answers by Mr. Ketterer:)

"Q. Will you state your name?

A. Andre Augis.

Q. Where do you live?

A. Paris XVIth Arrondissement, 179, Avenue Victor Hugo.

Q. What is your profession?

A. I am a lawyer by profession.

[fol. 1345] Q. Have you any official connection with the French Timken Company at the present time?

A. At the present time I am a Director of the French Timken Company.

Q. How long have you been a Director?

A. I was made a member of the Board at Bordeaux on the 19th June, 1940.

Q. Where was the German Army at that time when you were made a Director?

A. They were just arriving at Bordeaux.

Q. Have you continued to be a Director ever since?

A. Yes, since 1940 have always been a member of the Board of French Timken.

Q. Prior to 1940 had you performed any legal services for the French Timken Company as a lawyer?

A. Yes, since the inception of the company I have been advising Mr. Michael Dewar on legal and fiscal matters mainly, and I have always been associated with the development of the company because Mr. Dewar always kept me au courant with what was done as to French Timken.

Q. Can you tell me in whose name the trade mark 'Timken' was registered in France prior to 1928?

A. Yes, the trade mark 'Timken' was registered in the name of Societe Mecanique de Gennevilliers, a limited company established in France.

[fol. 1346] Q. I have here a Certificate of Registration that has been marked for identification Defendant's Exhibit D.34 and I ask you whether or not you can tell us what that is.

A. This is the official document delivered by the Registrar of Industrial Property and it is the only evidence which can be obtained in France as regards trade marks and what you call names used in the trade.

Q. What does that show in respect of the registration of the mark 'Timken'?

A. That shows, first of all, the identification of the mark and also it applies to certain trades which are specified on the Certificate.

Q. What does it show as to the name of the person or company who is the owner of the mark 'Timken'?

A. It is always the name of the company, of the owner; they do not say anything except to whom it belongs.

Q. But to whom does it belong as shown by the Certificate?

A. It is shown as the Societe Mecanique de Gennevilliers.

Q. Does it show the date on which that registration was obtained in the name of the Societe Mecanique?

A. Yes, it was registered on 17th February, 1921."

Mr. Day: We would like to offer that Certificate in evidence, if your Honor please.

[fol. 1347] (Defendant's Exhibit 37 marked by the Clerk on Government's Exhibit 37, as requested.)

[fol. 1348] Mr. Day: Continuing with the testimony of Mr. Augis. I think the last was we offered the Certificate, did we not?

The Clerk: That wasn't offered, Mr. Day.

Mr. Day: Well, I offer it, then, if it wasn't offered.

(Referring to Defendant's Exhibit 37.)

The Court: It may be received.

(The following questions were read by Mr. Day, and the answers by Mr. Ketterer.)

"Q. Did you have anything to do with a transfer of that trade mark in 1927 or 1928?

A. Yes—in France?

Q. In France, yes.

A. The mark 'Timken' was transferred by the Societe Mecanique de Gennevilliers to French Timken by a notarial deed which was made by the notary of French Timken.

Q. I hand you two documents marked for identification Defendant's Exhibit D.35A and Defendant's Exhibit 35B, and I ask you if you can tell us what they are?

A. D.35A is a deed of cession of the trade mark 'Timken' by Mr. Alby, an engineer who was connected with the Societe Mecanique de Gennevilliers. He received special [fol. 1349] power from the Company to transfer the mark to Societe Francaise Timken.

Q. Did you assist in the preparation of that document?

A. Yes, I did so.

Q. I understood you to say a while ago that it was referred to as a notarial instrument of transfer?

A. Yes, the notarial deed. To make the transfer valid in France you must have a written document. It may be what you call sous seing prives, a writing not before a notary, but generally it is done by the notary of the company for technical reasons to be certain they have the power to transfer the mark. That has been the case with Societe Francaise Timken, because the person who accepted the transfer for Societe Francaise Timken was appointed by a special meeting of the Board of French Timken which had been formed not long before. The document is dated 7th and 10th of August, 1928.

Q. What is the document that has been marked Defendant's Exhibit D.35B?

A. That is what we call a true copy or rather a sworn translation of the notarial document.

Q. Of the one that has been marked D.35A?

A. It is legalized before the American Consul in Paris."

Mr. Day: We would like to offer in evidence now, if the [fol. 1350] Court please, Defendant's Exhibits 38 and 39, marked in the deposition Defendant's Exhibits D-35A and D-35B.

The Court: Will you identify those, please? 38 is what?

The Clerk: Government's Exhibit 35A.

The Court: Disregard the numbers, but identify them.

Mr. Derr: These are already in evidence as Government's Exhibits 35 and 36, respectively.

The Clerk: Government's Exhibit 35 will be Defendant's Exhibit 38 and Government's Exhibit 36 will be Defendant's Exhibit 39.

The Court: They may be received.

(Continuing reading.)

"Q. Do you know what consideration was paid to the Societe Mecanique in 1928 for the transfer of the mark to the new French Timken Company?

A. I think the document shows it was 12,000 francs, something like that."

[fol. 1351] (Reading on top of Page 232.)

"Q. Did you have anything to do with the organization of the company known as Societe Anonyme Francaise Timken?

A. Yes, I did.

Q. What did you have to do with that?

A. We had to prepare first of all what you call 'statuts', or rather, a memorandum and articles of association, in conjunction with Messrs. Sullivan & Cromwell, and they were prepared by me with Messrs. Sullivan & Cromwell.

Q. And the company was incorporated in 1928?

A. In 1928.

Q. Do you know where the plant that was being occupied by the Societe Mecanique was located prior to 1928?

A. Yes, it was at Gennevilliers, which is a suburb of Paris.

Q. Did the company that you incorporated in 1928,

French Timken, occupy the same plant or move to a different location?

[fol. 1352] A. Quite a different location; they went directly to Asnieres, near Paris.

Q. And has the French Timken Company continued at the Asnieres address since that time?

A. Yes, they are still located at the same place, 5 Quai Aulagnier.

Q. I hand you a document which has been marked for identification Defendant's Exhibit D.36 and ask you if you can identify that?

A. D.36 is a Certificate of Identity, which shows that the Societe Anonyme Francaise Timken has made what you call a renewal of the Mark No. 205,223 for another period, which covered about 10 years, and there is no change in the document which established the transfer of the property from Societe Mecanique de Gennevilliers to Societe Francaise Timken, it is exactly the same wording. It is also registered at the Office for Industrial Property under No. 7,550, January 30, 1929."

Mr. Day: We offer that document in evidence as Defendant's Exhibit 40.

(Document above referred to was thereupon marked by the Clerk, for identification, Defendant's Exhibit 40.)

The Court: It may be received.

Mr. Derr: Your Honor, the Government would like to [fol. 1353] offer from the examination of Mr. Augis from the deposition, Page 233, 234 and the first question on 235.

(Questions read by Mr. Derr and answers by Mr. Dedham.)

"Q. There has been introduced in evidence the Certificat d'Identie, the registration of the Timken Trade Mark in France. Mr. Augis, what rights does the registration of the Trade Mark in France give to a Company registering the Mark?

A. Generally, Trade Marks in France are governed by what you call International Rules. You have a Convention which has been modified from time to time and, according to the contracting States, they are, of course, a bit different, but always the Mark belongs to the person who has really

created the Mark. It does not matter whether it is registered or not. The right belongs to the creator of the Mark, the maker of the Mark.

Q. In other words, the registration is not conclusive evidence of ownership?

A. I will not say it is conclusive, but still the anteriority rights always belong to the person who has created the Mark.

Q. What effect does registration have with respect to the ownership of the Mark in French Protectorates and [fol. 1354] Colonies; that is, this registration in France?

A. Legally it remains the property of the Company that has registered the Mark until the rights are over. That is where we may renew the Mark every ten years.

Q. Does the registration of the Mark in France also give rights to that Mark in French Protectorates and Colonies?

A. It is evidence of the anteriority, because you have no right to deposit the Mark when you are not allowed to do it; but supposing somebody is just patenting the rights of the Mark and you can prove there is anteriority, it is up to the Court to decide. When you deposit the Mark, that is a registration of the Mark. Then you are protected, for the classes of business you have got, against any action, but generally the person who has registered the Mark is considered the owner of the Mark, unless somebody who has the anteriority of the Mark, who has priority, can prove you are not the owner. This is the general rule.

Q. In other words, the registration would not be conclusive evidence of ownership?

A. I will not say it is not conclusive, because the action must be proved before the Court to prove that the person who had registered the Mark has no right to do it.

Q. At the time of the registration?

A. At the time of the registration.

[fol. 1355] Q. Perhaps I have not got this clear with respect to territories. Do the rights which you get from registration and which were obtained by this registration, Defendant's Exhibit D.36, also include rights to own and use the Mark in the French Colonies and Protectorates, or does this just signify ownership in France?

A. For what you call the Colonies—that is, the Republic of France—it certainly is sufficient to register the Mark,

but for some of the things like a Protectorate it is not sufficient.

Q. Can you name some Protectorates where this registration is not sufficient?

A. Morocco and Tunisia. Algiers is not a Protectorate. Morocco and Tunisia are the two Protectorates.

Q. Did you know that Timken was the name of the Founder of the Timken Roller Bearing Company?

A. It was a family name; that is all. It was so well known.

Q. Does the registration of a family name or surname as a Mark give you any different rights or any less rights in France?

A. The Trade Mark is the same as the commercial name. Commercial names—trade names—would be registered in about the same way."

Mr. Day: We have here the redirect examination (Page 237) (Read by Mr. Day.)

[fol. 1356] "Q. Mr. Augis, I have one other question that I neglected to ask you on Direct Examination. I would like to ask you whether or not there are any Government controls on the importation of products into France at the present time.

A. No doubt. It is absolutely controlled. You cannot get a license to import without going to the Ministry of Production and getting a special license, indicating practically all the specification of your import, and you must go at least to two or three Bureaux before getting the license.

Q. The obtaining of that license is to control what?

A. It is in a double way. There is import and finance, because when you are granted the license, you must also get the foreign exchange to pay.

Q. Pay in what currency?

A. Any foreign currency.

Q. Is that controlled strictly by the Government at the present time?

A. Yes, very strictly."

Mr. Day: That is all.

Mr. Ketterer: If the Court please, we also offered, without having any witnesses to identify them as such, in France, some additional exhibits which were marked at the

[fol. 1357] time the depositions were taken. Defendant's Exhibits 37 through 43.

Now, Defendant's Exhibit 37 is a table showing the tariff or the French Customs on bearing importations from the United States into France. The black figures are French and the red letters and numerals on here are the translations and there is a certificate certifying as to their correctness. That will be Defendant's Exhibit 41.

(Table last referred to was thereupon marked by the Clerk; for identification, Defendant's Exhibit 41.)

Then we had a series of sheets, numbering seven sheets, that are clipped together and marked at the time the deposition was taken Defendant's Exhibit D-38, which shows the importations of bearings into France and parts for various types of bearings from 1928 to 1946, and it shows the importations of these from the United States of America, Great Britain, Sweden, Germany, Switzerland, Italy, Belgium, Luxembourg and other countries, shows the weight in Kilograms and value in francs.

(Sheets above referred to were thereupon marked by the Clerk, for identification, Defendant's Exhibit 42.)

[fol. 1358] Then there is a third exhibit which was marked for identification at the time the depositions were taken Defendant's Exhibit D-39, of which there are seven large sheets, in a similar tabular form showing the exportations of anti-friction bearings from France of various classes from 1928 through 1946. They show exportations to the United States of America, Great Britain, Sweden, Germany, Switzerland, Belgium, Luxembourg and other countries, and it shows the total weight in kilograms and the value of the exports in francs.

Now to that is attached what is in French and there is an English translation of it, a document that is called "Report of Ascertainment" which describes in detail how these figures were compiled from the French Government records and there is a certificate attached to it signed by a court officer attached to the Civil Tribunal of the Seine sitting in Paris, certifying that he compared the figures shown in the exhibit with the original record of the French Government showing the French imports and exports of bearings, and at the time the deposition was taken there was attached to

it also, Defendant's Exhibit 39-A, which was a statement showing the official name of the French Government records [fol. 1359] from which this information was gathered.

That will be Defendant's Exhibit 43.

(Papers above referred to were thereupon marked by the Clerk, for identification, Defendant's Exhibit 43.)

Now, I won't stop at this point, if the Court please, to comment upon the contents of these exhibits because we have some witnesses who will later testify in detail on this subject of imports and exports to and from France and into the United States, and there is some other data to be put in in that connection. I think it would best be done all at the same time, but I would like to offer those exhibits, 41 to 43, inclusive, at this time.

The Court: They may be received.

Mr. Ketterer: Then we also offered at the time the depositions were taken photostatic copies of documents in connection with the establishment of the German Timken Company, Defendant's Exhibit D.40, which consisted of 21 pages, was a certified translation or certified copy of certified translation of Material Registration 141 in the year 1948, Berlin, May 5, 1928. That had to do with the organization of the German Timken Company.

[fol. 1360] (Document last referred to above was thereupon marked by the Clerk, for identification, Defendant's Exhibit 44.)

Then there was Defendant's Exhibit D-41, consisting of 18 pages, to which there were two annexures, A and B, which cover the distribution of stock and various matters such as the number of supervisors and the employment of Mr. Prausnitzer, of the German Timken Company in 1928. The date is March 13, 1928.

(Documents above referred to were thereupon marked by the Clerk, for identification, Defendant's Exhibit 45.)

Exhibit D-42 offered at the time the deposition was taken is in the form of a certificate, certifying the name of the holders in Deutsche Timken Gesellschaft, which had a capital stock amounting to 400,000 reichmarks, of which Mr. Prausnitzer had common shares in the amount, I am sure, of 65,000 reichmarks. That bears date of September 29, 1928.

(Document above referred to thereupon marked by the Clerk, for identification, Defendant's Exhibit 46.)

And the last was Defendant's Exhibit D.43, which was a photostatic copy of an agreement that bears date Jan-
[fol. 1361] uary 1, 1928, between British Timken Limited, DeutscheTimken Gesellschaft—German Timken—10 pages in length, and that was introduced in the record already and marked Plaintiff's Exhibit 19.

(Document above referred to was thereupon marked by the Clerk, for identification, Defendant's Exhibit 47.)

Mr. Day: I would like to offer at this time Defendant's Exhibits 44, 45, 46 and 47.

The Court: They may be received.

[fol. 1362] The Court: What is the date when Prausnitzer allegedly registered the trademark "Timken" in his own account in Germany? Was that prior to 1928?

Mr. Ketterer: Oh, yes, that was back in either 1916 or 1917. We will have a copy of the registration later to show when that registration took place, but it was during the first World War. Mr. Dewar testified Mr. Prausnitzer
[fol. 1363] registered the mark in his own name when there was no commercial product.

The Court: In 1928 Dewar and the others became stockholders of the company?

Mr. Ketterer: That is correct.

The Court: Formed by Prausnitzer?

Mr. Ketterer: Formed by Mr. Henry Timken, British Timken, Dewar and Prausnitzer, and he was given 65,000, as shown on the certificate, reichsmarks shares in the new company in exchange for the transfer of the trade mark "Timken" and that was in 1928.

[fol. 1364] Mr. Day: Our next witness is Mr. Umstattd.

[fol. 1365] Thereupon the Defendant, to maintain the issues on its part to be maintained, called as a witness

William E. Umstattd,

who, being first duly sworn, was examined and testified as follows:

Direct examination of William E. Umstattd

By Mr. Day:

Q. Will you state your name?

A. William E. Umstattd.

Q. Your age?

A. 53.

Q. Your residence?

A. Canton, Ohio.

Q. What position do you hold now with the defendant, The Timken Roller Bearing Company?

A. President and Director.

Q. You have been in attendance at the trial of this case, have you not, or practically, since it began two weeks ago today?

A. I have.

Q. How long have you been President of the Company, Mr. Umstattd?

A. Since 1934.

Q. When did you first become connected with the Company?

[fol. 1366] A. In 1919.

Q. Where was your home before you became engaged in business?

A. Bristol, Tennessee.

Q. Did you serve in the first World War?

A. I did.

Q. Beginning when?

A. I don't remembe the exact date, early in 1917.

Q. And for how long were you with the Army in the war?

A. About three years.

Q. In what capacity?

A. As a private, corporal, sergeant and first lieutenant.

Q. Connected with what service or what branch of service in the war?

A. With the ambulance service and the motor transport corps.

Q. Will you tell the Court what first called your attention to the Timken Company in Canton?

A. The success of Timken bearings in automotive equipment, particularly in war materiel.

Q. And after the war, Mr. Umstattd, how soon did you come to Canton and get in touch with the Timken Company?

A. Well, a week or ten days after my discharge from the Service.

Q. And as of what time would you fix the date when you first started to work with the Timken Company?

A. The 7th of November, 1919.

[fol. 1367] Q. And have you been with the company ever since?

A. I have.

Q. And that is a period of 29 years, approximately?

A. Approximately.

Q. At what work did you start in with Timken?

A. As an inspector.

Q. In what line?

A. In inspecting bearings and bearing operations throughout the manufacturing plant.

Q. Who was the active head of the Company in those days?

A. H. H. Timken.

Q. And he died when?

A. In 1940.

Q. After you were inspector will you tell the Court what other positions you held with Timken back in the early days?

A. I moved from one department to another in the various operating departments of the bearing factory, and was made assistant foreman, foreman, assistant chief inspector, assistant superintendent, assistant factory manager, factory manager, executive vice-president and president.

Q. When did you become executive vice-president?

A. Early in 1932.

Q. During the years that you were there, I will ask you [fol. 1368] whether or not you were in close contact with Mr. H. H. Timken?

A. I was.

Q. And who was the chief policy making officer of the company during that time?

A. Mr. Timken.

Q. What was the size of the Timken Company when you first became connected with it 29 years ago?

A. Fewer than four thousand employees, between 3500 and 4000.

Q. How many employees does the Timken Roller Bearing Company have now?

A. Approximately 16,500.

Q. And in connection with your work have you learned something about the early history of the Timken Company?

A. I have.

Q. Can you tell us when it was organized?

A. The Timken Company was organized around 1898 or 1899 as The Timken Roller Bearing Axle Company, I believe was the first designation of the corporate structure.

Q. Was it located in Canton at first?

A. No, it was located in St. Louis, Missouri.

Q. And it made what during those early days?

A. It made axles and tapered roller bearings.

Q. Axles for what?

A. In the beginning axles for fine carriages, for heavy [fol. 1369] horse-drawn vehicles and for a few automobiles.

Q. Who was the founder of the company?

A. H. H. Timken and W. R. Timken.

Q. Was their father also in the axle business?

A. He was.

Q. What was his name?

A. Henry Timken.

Q. Did he come to Canton?

A. Not as a resident. He made many visits to Canton during the establishment of the company in Canton but he never resided in Canton.

Q. And when was it that the two Timken brothers, H. H. and W. R. Timken came to Canton?

A. At various times between 1901 and 1903 a plant site was selected and operations connected with building were commenced in late 1901 or early 1902.

Q. How long was W. R. Timken connected actively with the business in Canton and elsewhere?

A. I believe he left the company in 1915 as an active officer.

Q. At the present time what sons of H. H. Timken are still connected or are now connected with the Timken Roller Bearing Company?

A. Henry H. Timken and William Robert Timken.

[fol. 1370] Q. And Henry H. Timken is sitting right there?

A. He is.

Q. And Robert Timken is back in the front row of the spectators part?

A. He is.

Q. And they are the sons of H. H. Timken?

A. They are.

Q. What position does Henry Timken, Jr., now hold with the company?

A. Executive vice-president and chairman of the Board and a Director.

Q. And W. R. Timken?

A. Vice-president and Director.

Q. What plants does the Timken Roller Bearing Company have at the present time?

A. We have a plant in Canton, Ohio, in Gambrinus, Ohio, a suburb of Canton, in Wooster, Ohio, Mount Vernon, Ohio, Columbus, Ohio, Zanesville, Ohio, Bucyrus, Ohio, Colorado Springs, Colorado, and a plant in Canada in St. Thomas, Ontario.

Q. What does the Timken Roller Bearing Company make?

A. Tapered roller bearings, alloy steel, seamless tubing and removable rock bits.

Q. And the rock bits are made where?

A. In Mt. Vernon, Ohio, Colorado Springs, Colorado, and [fol. 1371] some operations are commencing in Wooster, Ohio.

Q. Where is the principal plant, in size and number of employees, of the Timken Roller Bearing Company now located?

A. Canton, Ohio.

Q. About how many persons are employed there?

A. In the Canton plant and the Gambrinus plant, which is close by, there are approximately 11,000 people employed.

Q. How many are employed, in round numbers, at Columbus?

A. Roughly 4,000.

Q. And they are the two principal plants?

A. They are.

Q. You say that in addition to roller bearings, tapered roller bearings, the company also manufactures steel?

A. It does.

Q. How long has the company been engaged in the manufacture of steel?

A. Since 1915 and 1916. The operation commenced in 1915, and production, I believe, commenced in 1916. The plant was being built in the year 1915 and production actually commenced in 1916.

Q. What kind or quality of steel does the company make?

A. Alloy steel, a very high grade alloy steel, made in open hearth furnaces and electric furnaces.

Q. That steel is used for what purpose?

[fols. 1372-1374] A. It is used in the manufacture of anti-friction bearings, in the manufacture of airplane parts such as crankshafts, cylinders, cam shafts, in high pressure tubing, high temperature tubing in the oil industry, and it is used in the jet planes where elevated temperatures are quite common and strength of steel at those elevated temperatures is highly essential to the performance of the plane.

Q. Generally, to what companies is Timken steel sold?

A. To a variety of companies—to the ball bearing companies, the straight roller bearing companies, the spherical roller bearing companies, to the oil refineries, to the manufacturers of automotive gears, to some extent springs, and to a considerable extent to the airplane industry for use in engines and other aviation parts requiring high strength steel.

[fol. 1375] Direct examination of William E. Umstattd (Cont'd):

By Mr. Day:

Q. Mr. Umstattd, something was said this morning about the Timken Roller Bearing Company making steel, and I think you said something to the general effect that that steel was used in making bearings.

A. That is true.

Q. And is some machine work done on it?

A. Yes, the steel must be machined before it is in shape to be used as a bearing.

Q. And when you sell this steel to other companies, bearing companies, do they do the same general kind of machining work that you do?

A. Yes, it follows our practice in general. Sometimes different makes of machines are used, but the general practice is effective in all bearing factories.

Q. Who are the directors now of the Timken Roller Bearing Company?

[fol. 1376] A. H. H. Timken, Jr., W. Robert Timken, J. E. Fick, A. M. Donze, L. M. Klinedinst, R. C. Brower, William E. Umstattd. I believe that's seven.

Q. State whether or not all those directors are connected

with the Company in a capacity, that is, in the production and operative capacities.

A. Yes, all of them actively work for the Company full time.

Q. Do you have any outside directors?

A. None.

Mr. Day: I have a paper here that I would like to have marked as our next exhibit, just the one side of it.

(The paper referred to was thereupon marked by the Clerk, for identification, Defendant's Exhibit No. 48.)

Mr. Day: This is part of a booklet, I understand, your Honor, which was put out by the Company, I think about 1940.

Q. What is that, Mr. Umstattd (handing Defendant's Exhibit 48 to witness)?

A. This was part of an advertising booklet showing the advertisement of designs of the Timken Roller Bearing from the early days up to date, and showing the various places where Timken bearings are presently in use. This [fol. 1377] page goes from airplanes to transmission machinery.

Q. It says up at the top of that, "Timken Experience in Applying Bearings covers every kind of equipment." Then it says, "wherever wheels and shafts turn." Is that substantially true?

A. That is true.

Mr. Day: I would like to offer that in evidence, your Honor.

The Court: It may be received.

Mr. Day: Perhaps your Honor would like to see it (handing Defendant's Exhibit 48 to the Court.)

Q. I think you testified this morning that the Timken Company made tapered roller bearings.

A. That is true.

Q. Does it make any straight roller bearings now?

A. Not at the present moment.

Q. Any ball bearings?

A. No.

Q. Was there a period during the war when it made some ball bearings?

A. There was.

Q. There has been some evidence here that you have heard sitting back in the court room concerning the Fischer Bearing Company. Does the American Timken have any [fol. 1378] connection with that Company?

A. We have a connection through British Timken Ltd. With the Fischer plant in England.

Q. But otherwise do you have any connection with it?

A. None at all.

Q. Will you take a bearing out of the box here, Mr. Umstattd, a Timken roller bearing that is typical?

A. (Witness selects bearing from box.)

[fol. 1379] Mr. Day: Will you mark this piece of paper right there, you can mark the whole box, Defendant's Exhibit 49, this whole big box.

(Box of bearings marked by Clerk, for identification, Defendant's Exhibit No. 49.)

Mr. Day: And will you mark this little box as Defendant's Exhibit 50?

(Smaller box of bearings marked by Clerk, for identifica-
[fol. 1380] tion, Defendant's Exhibit No. 50.)

Mr. Day: Now, will you please mark the place where I took this bearing out as Exhibit 49-A?

The Clerk: Can we just put "A"?

Mr. Day: Yes, that's fine.

(Exhibit marked as requested.)

Q. I have here a bearing which is marked "A" and labeled Timken Tapered Roller Bearing 366-362. What kind of a bearing is that?

A. This is a Timken tapered roller bearing.

Q. Is that one of the kinds that the Company makes now?

A. This is a very popular size.

Q. The Company has been making that for how many years, approximately?

A. Thirty years, at least, and perhaps longer.

Q. Will you tell the Court generally now, just turning to the Court, just how that bearing is made? I know it isn't easy to do, but I wish you would tell the Court just how the different parts of that bearing are made, what they are made out of and generally the process of making them.

A. You mean to start with the steel?

Q. Yes.

A. The heat of steel for this bearing is melted in an [fol. 1381] electric furnace from scrap steel, and the proper chemical constituents, to make what is known in the trade as 4620-SAE steel. That's a nickel molybdenum steel with about 1.75 nickel and about .25 molybdenum. It has low phosphorus content, low sulphur content, and some residual chrome, the chrome to be below about .38. The heat is melted in the electric furnace and poured into a ladle, and from the ladle into what is known as an ingot mold. The ingot is allowed to cool and is taken from the ingot mold and put in what is known as a soaking pit where heat is applied to the ingot to bring it up to the proper heat for rolling. It goes from that point to a 35-inch blooming mill, and from the 35-inch blooming mill to a 28 and a 22-inch merchant mill, where it is made into what is known in the trade as piercing rounds, that is, a solid round piece of steel. That piece of steel is later taken to a tube mill where it is pierced and formed into a piece of seamless tubing. That tubing is finished on a screw machine into a piece that is known as a cup, for the outer part, and a cone for the inner part.

Q. Which is the cone there?

A. The cone is in my left hand.

Q. With the rollers attached to it?

A. Rollers surrounding it. The cup is the outer piece. [fol. 1382] After the piece is formed on the screw machine, it is taken to a machine known as a chamfering machine where a slight chamfer is put on one end of the cup and one end of the cone. It then goes to a stamping operation where the name "Timken" and "Made in U.S.A." and the number 362 in the case of the cup, and 366 in the case of the cone is stamped on the piece. Then it goes to a carburizing operation where it is brought up to about 1700 degrees Fahrenheit, and natural gas is introduced in this operation and which penetrates into the steel. This natural gas precipitates a degree of carbon of about one per cent into the surfaces of the cup and cone. It is then quenched from the carburizing furnace in an oil bath and taken into a hardening department where it is subjected to heat of about 1450 degrees Fahrenheit, that is, under pressure to maintain the roundness of the piece, and again immersed

in oil. After that treatment it is taken to a drawing furnace where it is drawn to about 300 to 350 degrees Fahrenheit to take any hardening strains out of the piece so that it will be able to accommodate considerable jarring and jolting and other rough treatment that it gets in service.

After the drawing operation the piece is cleaned, the scale removed by an operation known as shotblasting, where fine [fol. 1383] particles of steel are driven against the cup and cone to remove the black scale.

The next operation is back face grinding, where the back face and front face of the piece are ground. From there it goes, in the case of the cup, to an external grinding operation where the piece is ground on the outside on a centerless grinder, from there it goes to an internal grinding machine where the inside tapered portion of the cup is ground. The cone, after reaching the back face grinding goes to an internal grinding machine where the bore of the cone is ground. It then goes to an outside diameter grinding operation where the outside race is ground, and from there to a rib grinding machine where the rib or the thrust member of the cone is ground. It then goes to inspection operations, in the case of both the cup and cone, where the tapers are gauged, the sizes are gauged, and any imperfections in grinding, or any inclusions in the metal, or any seams in the metal, any pieces which have serious defects are thrown out into the scrap pile and go back to the furnaces as a piece of scrap.

After getting visual inspection the pieces are sound-tested so that a degree of quietness is maintained. It is then slushed in a heavy oil to prevent any rust from taking place in shipment, wrapped in wax paper, in some cases it's placed [fol. 1384] into a tube, in others in a box, and shipped back—packed in a shipping box for shipment to our customers.

Q. What you have just testified to, is that based upon what you have actually seen through the years that you have been connected with this Company in one capacity or another, starting back some twenty some years ago?

A. Yes. There is part of that operation that hasn't yet been explained, the rollers and the cage.

Q. Will you now tell us about that—before that, you stated after you got out of the Army you went to see the

Timken folks about getting a position. Did you just go on your own, or did they know you were coming?

A. No, they didn't know I was coming.

Q. You just went there on your own?

A. I did.

Q. You have been there ever since?

A. I have.

Q. I didn't want to interrupt you in explaining what other parts of that bearing you had not explained. I am sorry if I did.

A. The rollers surrounding the cone are made from steel in much the same manner as described in the case of cup and cone, except that the roller is not pierced, it comes out [fol. 1385] in a piece of wire or rod stock, and is upset or shaped into a tapered piece on what is known as a cold upsetter. It then goes to carburizing, hardening and grinding, where the operations are much the same as in the case of the cup and cone. The cage steel is not made by Timken ordinarily, that is purchased from the outside, from outside sources. Today, with the inability to purchase flat steel, we sometimes have to make the steel for the cages and have it rolled by outside rolling mills. When it comes to the plant it is flat, either in the form of a flat straight piece or a flat coildd piece of steel, and that is put into punch presses where the piece is formed, the bottom pushed out, and later the pockets or windows that these rollers protrude from are formed in what is known as a multiple perforating operation, where each of the windows or pockets is formed with one stroke of the punch press. There is then a swedging operation on the back part of the cage that gives the radius from the radius of the roller so that the radius of this pocket or window conforms with that of the roller, and the cone is assembled with a certain number of rollers, and one cage, and the cage is then put on a press and closed in so that the rollers will not fall out from the cage.

Q. Does that complete the description pretty well?

[fol. 1386] A. It does.

Q. These are called tapered roller bearings. Why are they called that?

A. The roller is smaller at one end than at the other. The degree of taper varies, depending upon the type of application the bearing is subjected to. In some cases the taper is rather slight, perhaps three to four degrees in-

cluding angle, in other instances it runs up to 45 or 60 degrees including angle where thrust is of paramount importance.

Q. What if anything did the Timken Company have to do with the origin of the idea of tapered roller bearings, or who did conceive that, if you know?

A. The tapered roller bearing was conceived by the joint efforts of two men, Mr. Heinzelman and Mr. Henry Timken.

Q. Henry Timken, do you mean H. H. Timken, Jr.?

A. No, his father.

Q. The father?

A. Yes.

Q. The grandfather of these two Timken gentlemen who are here now?

A. Yes.

Q. And then there were patents on the various phases of the Timken Roller Bearing

A. There were many patents at different times throughout [fol. 1387] the evolution of the present bearing.

Q. Can you tell us how a bearing of this kind is used in connection with a shaft?

A. The bearing, the cone or inner part is placed on a shaft and the outer part or cup is placed in a housing. Two of these bearings are usually mounted on a shaft and two of the cups are housed. The thrust is taken by the bearing shoulder or rib and the radial load is taken by direct downward pressure on the cup.

Q. Now, a bearing like that that I have in my hand, which is this Exhibit 42-A, where does the shaft go with relation to that?

A. The shaft goes through the center hole.

Q. I think we talked the other day, or some questions were asked the other day, about various kinds of thrusts. What are the two principal kinds of thrust?

A. In general, there is only one kind of thrust. It can be to a greater or lesser degree, but thrust is in an axial direction, or through the center of the axle of a shaft in this direction (indicating). The radial load is a downward load from this position (indicating) or an upward load from the inner position.

Q. Then it's correct to say that there is a radial load from the top, generally?

[fol. 1388] A. From the top.

Q. And there is a thrust load from the side, generally?

A. From the side, that's true.

Q. And it is not correct to say, as I perhaps implied a moment ago, that there is a radial and side thrust?

A. There is what we call a resultant load in many cases where the load is both radial and thrust.

Q. Is there another typical tapered roller bearing, Timken tapered roller bearing, in this box here marked Exhibit 49?

A. I believe so.

Q. Would you step around here and let us see one?

A. (Witness selects bearing.)

Mr. Day: I will mark that "B", if I may, your Honor. I suppose the Clerk should do it, but there it is.

The Court: That's all right.

Mr. Day: Thank you.

Q. What is the difference between that one and the "A" that you testified about before?

A. This bearing is a Timken bearing, No. 3920 cup and 3984 cone. This bearing is a little bit larger bearing than the first one, and I believe it has a little steeper tapering than the 366-320.

[fol. 1389] Q. But otherwise it's of the same general nature?

A. That should be 366-362. Yes, it's the same general nature.

Q. Here is a bag that is marked "Component Part of Timken Tapered Roller Bearings." Will you see what is in that, please, and tell us about it (handing bag to witness)?

A. This is a bare cone without any rollers (handing to Court). This is a roller.

Q. I would like to have you—

Mr. Day: May I put them up on the bench, if your Honor would like to look at them?

The Court: Yes.

Q. That's the cone, and this is the roller?

A. And this is the cage.

Q. And that's the cage. There are some more rollers in there, is that right?

A. There are more rollers, yes.

Mr. Day: We'll mark that "C".

(Marking exhibit as indicated.)

Q. Now, in addition to tapered roller bearings, what other kind of roller bearings are there in general use?

A. Straight roller bearings or parallel roller bearings, the terms are interchangeable, and what is known as a spherangular bearing, an hour-glass tapered bearing.

[fol. 1390] Q. Those are all roller bearings?

A. Those are all roller bearings.

Q. While we are on that subject, in addition to the roller bearings which are anti-friction bearings, of course, what other kinds of anti-friction bearings are there?

A. There are ball bearings and floating wedge bearings known as Kingsbury bearings. The ball bearings are of many types for many different purposes.

Q. Have we a sample or a model—I guess there isn't a model, but have we an actual straight tapered bearing here?

A. Well, there is no straight tapered—

Q. I mean straight roller bearing.

A. A straight roller bearing, yes, we have one.

Q. Will you point that out, please?

A. (Witness selects bearing.)

Mr. Day: I will mark that "D".

Q. What kind of a bearing is that?

A. This is a Hyatt roller bearing, straight roller bearing, with parallel rollers.

Q. Will you get out one of those rollers, if you can, so the Court can see it?

A. This cannot be disassembled. This bearing has a cage that doesn't allow of disassembly.

Q. But the difference between the construction of that [fol. 1391] straight roller bearing and the tapered roller bearing is what?

A. There are no tapered components in this bearing. The inner part of the cone has a straight bore and a straight outside surface, the rollers are parallel or straight. The outside member or cup has a straight race, no taper.

Q. And the rollers themselves are not wider at one end than the other, are they?

A. No.

Q. Bottom and top?

A. They are parallel from one end to the other.

Q. Now, you have shown the Court a tapered roller bearing and a straight roller bearing. Are there any other kinds

of straight roller bearings shown on either of these boxes other than the Exhibit D, the Hyatt bearing?

A. I don't believe so. There is a needle bearing with a straight roller.

Mr. Day: We'll mark that "E".

Q. You call that a needle bearing?

A. Yes.

Q. Can you step up here so that the Court can see you, and explain that?

A. The reason for the name needle is that because these rollers that are parallel or straight rollers, are so small [fol. 1392] that in the trade they got the name of needles because they resemble knitting needles.

Q. What company makes those?

A. Several companies. Torrington Company is one of the larger manufacturers of that. The Hyatt Company made them at one time, perhaps they still make them. Orange, and several other bearing companies in the United States.

Q. Are there any other roller bearings in the box?

A. There is another type of straight roller bearing that is made by Hyatt, quite popular at one time, and which still has some applications. This is known as—

Mr. Day: I'll mark that "F".

A. (Continuing) This is known as a spiral straight roller bearing.

Q. Why do they call it that?

A. The roller is formed—

Q. Just a moment.

Mr. Day: Would it be all right for the witness to step up here, your Honor, so that you can see?

The Court: Yes.

(Witness steps to the bench.)

A. The roller on this type of bearing is formed from a flat piece of steel and is wound around a mandrel, and it gets that spiral effect due to the fact that the roller is [fol. 1393] not solid. It has some degree of elasticity and can take care of deflection because of the fact that the roller is hollow and wound in a spiral, used somewhere on line

shafts and places of that sort where a deflection might take place.

Q. Are there any other types of roller bearings there in the box?

A. Yes, there are several other types.

Q. Will you turn to one, please?

A. (Witness selects bearing.)

Mr. Day: I will mark that "G."

Q. What is that you are holding in your hand?

A. This is a Hyatt tapered roller bearing.

Q. Will you step up here so the Court can see you, please?

A. This is a Hyatt tapered roller bearing with two cones and two sets of rollers, one double cup and one spacing ring to allow for adjustment of the parts. This spacing ring touches the outer edges, or the small edges of the cone. This type of bearing is quite popular in pinions in trucks and passenger cars, automobiles.

Q. The Hyatt Company is connected with what other large company?

A. The Hyatt Company is a division of General Motors Corporation.

[fol. 1394] Q. Are there any other roller bearings in that box?

A. Yes, there are.

Q. Will you turn to another one, please?

A. (Witness selects bearing.)

Q. What is that?

A. This is what we call an hour-glass type of roller bearing. The rollers are set at an angle on the cone, and each roller is formed in the general form of an hour-glass. The cup is ground with a taper and a curvature combined so that the cup and the cone fits the hour-glass form of the roller, that in turn allows a certain amount of deflection to take place without hurting the parts. It's quite common in line shafts and pillow blocks, and applications of that sort.

Q. What company makes that type of bearing?

A. The two principal ones are the Schaefer Company in Chicago and the Link Belt Company, I believe, in Indianapolis.

Mr. Day: I will mark that "H".

Q. Are there still any other types of tapered roller bearings in this box marked Exhibit 49?

A. Yes, here is what is known as a spherangular bearing which is made by the Hyatt Company.

Mr. Day: I will mark that "I".

[fol. 1395] A. The Spherangular bearing is a tapered roller bearing with a spherical roller. The roller is set at an angle or a taper, and in itself is in the form of a sphere with a cut-out section in the center of the sphere. The cup has a taper and a curvature combined. That bearing, again, has some self-aligning features which make it useful in certain applications.

Q. What companies make that bearing?

A. This is made by the Hyatt Company, by the SKF Company, by the Kay-Don Company, and perhaps other companies. I believe the Torrington Company at present is making this type of bearing in quite considerable quantities.

Q. Are there any other different types, or a different type of roller bearing in that exhibit 49?

A. The SKF is a variation of the Hyatt bearing. This is a spherical bearing which can turn in any direction. That, you will notice, can take a load from almost any direction and accommodate itself to quite a considerable amount of deflection. The rollers are generated in such a manner that they are spherical and confined into the inside of the cup which is ground in a spherical form.

Mr. Day: I will mark that "J".

Q. Does that pretty well cover the different types of roller bearings in the box?

[fol. 1396] A. That covers the majority. There are variations of all of those types; the straight roller bearings, some are grooved and some are not grooved, the spherical bearings are both double and single, some of the spherical bearings take thrust on the rib and some take it only on the surfaces of the rollers, the cups and cones.

Q. To what extent in this country, first, are those various types of roller bearings competitive?

A. They are highly competitive. Those bearings can be used in almost any type of work where an anti-friction bearing can be used, and we place any friction bearing in actual use.

Q. For about how long have those various types of bearings been on the market in this country?

A. The hour-glass type of bearing has been on the market for at least 25 to 30 years, to my knowledge. The spherical bearing as made by SKF has had a life of at least 25 years. The Hyatt type came on the market about 15 years ago, as I recall. The needle bearing was developed in Germany and came to this country in about 1930, or thereabouts.

Q. And over the years have those various types of roller bearings been in competition each with the other?

A. Yes, and one I forgot to mention there, the Hyatt [fol. 1397] bearing, particularly the spiral type, was in use back in the 1890's, around 1890, and has continued in use up to the present time, although in most instances it has been replaced by the solid roller type which is made by Hyatt and many other American anti-friction bearing manufacturers.

Q. When were the Timken tapered roller bearings first put on the market?

A. I couldn't say definitely. They were used in carriages and buggies in the '90's—I don't know just what date in the '90's, but some time prior to 1899.

Q. And then they became used in automobiles when?

A. Around the turn of the century, 1901, '02, '03.

Q. Since that date, state whether or not they have been in direct competition with these other types, some or all of them, depending upon when they came on the market, of roller bearings that you are testifying about?

A. Yes, they have been in direct competition with those bearings.

Q. And in what kind of applications have they been in competition generally?

A. Automobiles of all sorts, railroad applications, locomotives, passenger cars, freight cars, mine cars, machine tools of all sorts, milling machines, grinders, shapers, [fol. 1398] planers, things of that sort, in mining equipment, in cranes, in pulleys, swivels, oilwell equipment, and in almost every place where there is any mechanical movement.

Q. That is, you are telling now about the competition among and between the various types of roller bearings?

A. Yes, sir. Those bearings compete with each other. Sometimes an application will use a spherical roller, sometimes an hour-glass type of roller, sometimes a tapered roller, sometimes a straight roller.

Q. Now, in addition to the roller bearings, you said something about ball bearings, but before coming to that, can

you tell us approximately how many companies in the United States make roller bearings? Mr. Klinedinst gave us a list of them, I think.

A. I don't know definitely. I would judge, I believe I could name about 15. Perhaps there are more.

Q. Was the list that Mr. Klinedinst gave the other day substantially correct in that regard?

A. It was.

Q. Now, have you some ball bearings in this box?

A. Yes.

Q. Will you take down a typical one, or a well known one for us?

[fol. 1399] A. (Witness selects bearing.)

This one is a typical one, although I notice the name is misspelled on the card. This is a Fafnir bearing made in New Britain, Connecticut, quite well known in the anti-friction bearing trade.

Q. It's spelled there F-a-f-n-e-r, and it should be -n-i-r?

A. Yes, sir.

Mr. Day: That becomes "J", does it, Mr. Clerk?

The Clerk: "K".

Mr. Day: I will mark that "K".

Q. That's a ball bearing, is it, Mr. Umstatdtt?

A. Yes, sir. The inner race has balls interposed between the outer race with a radius substantially the same as that of the ball. The radius is a little bit greater than the radius of the balls.

Q. Are ball bearings older than roller bearings?

A. That would be difficult to say definitely, because straight roller bearings may have been used quite some considerable time ago. The ball bearing is definitely older than the tapered roller bearing.

Q. So that when the Timken tapered roller bearing reached the market the ball bearing had already been there?

A. It had.

[fol. 1400] Q. And approximately can you give us any notion how many years?

A. 25 years, at least.

Q. And did the ball bearing have a wide and general acceptance in the trade before the Timken tapered roller bearing came on the market?

A. It did.

Q. Is there another ball bearing in general use shown in this box, Exhibit 49?

A. (Witness selects bearing.)

Mr. Day: I'll mark that "L."

Q. What is that one?

A. This is—

Mr. Day: Will you step up and explain that to His Honor, please?

A. This is a three-piece ball bearing that is designed to take both thrust and radial load. It is in quite common use in General Motors automobiles, such as the Cadillac, Buick, Pontiac, and Oldsmobile. The inner part, the cone, has a radius set at an angle. The outer cup has a radius set at an angle. The rollers are contained in a soft steel cage and the bearing is put in operation by adjusting a nut on the front axle of an automobile so that the load that is imposed directly downward in straight travel is carried by the radial [fol. 1401] part of the bearing, and the thrust in going around a curve is carried by the thrust portion of the bearing.

Q. Is there another type of ball bearing in that box?

A. (Witness selects bearing.)

Mr. Day: I'll mark that "M".

Q. What is that?

A. This is a bearing manufactured by the Fafnir Company and is known as a thrust ball bearing. It can carry no radial load at all, but can carry a thrust load which can be imposed from this direction if the bearing is mounted in that plane (indicating), or from either of these directions (indicating), if it's mounted in this plane. It consists of three parts, two races and the ball assembly.

Q. Are the tapered roller bearings in competition with the ball bearings?

A. Yes, sir, they are in direct competition.

Q. Have they been in competition with the ball bearings ever since they came on the market, the tapered roller bearings?

A. Yes, sir.

Q. What is the general nature and extent of that competition?

A. It's ordinarily a very bitter and active type of competition.

[fol. 1402] Q. You have already stated about the competition for various applications among and between the various types of roller bearings. Is there also the same kind of competition, or more or less competition, between roller bearings and ball bearings?

A. Yes, there is the same sort of competition, and perhaps even a little keener, between tapered roller bearing manufacturers and ball bearing manufacturers than between the roller bearing manufacturers themselves.

Q. Have you been familiar, since the time you became connected with the Timken Company, and perhaps before that due to your study and knowledge of the industry, with the general nature of that competition between tapered roller bearings among themselves and the various types of them, and with ball bearings and all types of ball bearings with all types of roller bearings over the years?

A. I am familiar with it, and it has been a very keen competition.

Q. Have you an opinion as to whether it is any less keen now than it was some years ago?

A. I believe that, if anything, it gets keener as the years go on.

Q. And has that existed ever since, let us say, the Timken bearing came on the market?

[fol. 1403] A. I couldn't say that with first-hand knowledge. I have talked the matter over many times—

Q. I mean as a result of your own study.

A. As a result of my studies and my talks with Mr. Timken, the competition was quite keen in the '90's and up until 1919 when I came with the Company.

Q. You spoke of your talks with Mr. Timken. You mean H. H. Timken, Jr., who died in 1940?

A. Yes, sir.

Q. And he was the head of the Company, was he not?

A. He was.

Q. I will ask you what the practice was from the time you came to the Company, say, back in 1919—was that it?

A. That's right.

Q. —as to talking over or hearing discussions of Company policy by Mr. Timken and others?

A. I was fortunate in being in on many of the conversa-

tions regarding competition and establishment of manufacturing facilities for the manufacture of tapered roller bearings and the expansion of the steel operations of our company.

Q. You testified a while ago that the directors of the Timken Company were all persons who worked for the Company every day full time.

A. That is right.

[fol. 1404] Q. State whether or not in that situation there were frequently discussions of policy and plans and things of that kind at meetings that weren't necessarily formal meetings of the Board of Directors?

A. That is true. The lack of an organizational chart in our Company has been more or less a joke in the industry. There is no such thing as an organizational chart and never has been in the operation of the Timken Company.

Q. Well, now, what do you mean by "organizational chart"? I am not sure that I understand exactly what that means.

A. In most companies there is what is known as an organization chart, where the Chairman of the Board directs the President, the President directs the Vice Presidents, the Vice Presidents direct the Managers of the various departments, and communications go up or go down through more or less military organizational lines. Our Company——

The Court: That's one of those charts you see so often displayed with the President up at the top and the various Vice Presidents who have various functions to perform, below?

Mr. Day: Oh, yes.

A. (Continuing) That has never been prevalent in our Company. Our President is likely to be down in the shop or up in the office about at equal intervals, I would say.

[fol. 1405] Q. How much time do you spend in the shop now? Do you spend some time there?

A. Yes, quite a bit, when I'm in Canton, and I make frequent visits to the outlying plants and spend considerable time in those.

Q. And over the years have you spent many hours in the shop?

A. Yes.

Mr. Day: We have here a shaft. Will you mark that as our next exhibit, please?

(Shaft above referred to was thereupon marked by the Clerk, for identification, Defendant's Exhibit 51.)

Q. Here is a shaft marked Defendant's Exhibit 51. State whether or not you have had that prepared in connection with your testimony here?

A. Yes, I did.

Q. For the purpose of illustrating certain things?

A. Of showing certain types of bearings that are not anti-friction bearings but are friction bearings which compete with tapered roller bearings.

Q. And this shaft and the various mechanical constructions in connection with it relate to friction bearings?

A. Except in the two on the farthest hand. There is one tapered roller bearing and one ball bearing.

[fol. 1406] Q. What is a friction bearing? We have been talking so far about anti-friction bearings?

A. A friction bearing, in general, is a sleeve of approximately the same inside diameter as the shaft has an outside diameter, and the load, which, in general, is a radial load, is imposed upon the sleeve and transmitted to the shaft or turning member with oil or grease of some sort interposed between the surfaces.

Q. It doesn't have any balls or rollers or things of that kind, does it?

A. It has no rolling elements.

Q. I think we have covered the box marked Exhibit 49 pretty well. Here is another box that is marked as our Exhibit 50. What is there in that that you would like to call to the Court's attention?

A. These are different types of tapered roller bearings. This is one made by the Hoover Company (indicating).

Mr. Day: I'll mark that 50-A.

Q. Without taking that out, is there any distinguishing characteristic of that bearing?

A. They are very much the same design as used by Timken. There may be some slight modification, but it is interchangeable with a Timken bearing.

Q. And where is that made?

[fol. 1407] A. That is made in Ann Arbor, Michigan.

Q. Is that the company right back of the stadium?

A. Yes, sir.

Q. Here is one that I will mark "B". What kind of a bearing is that?

A. That's a Bower roller bearing.

Q. Is there a distinguishing mark or distinguishing characteristic with relation to that?

A. It is interchangeable with our bearing, although some of the internal dimensions of the rollers or cups and cones may be slightly different. But the bearing is interchangeable with a Timken bearing.

Q. Here is one that I will mark "C".

The Court: I didn't get that last. You say the bearing is interchangeable?

The Witness: It is, your Honor.

The Court: Is that a tapered roller bearing?

The Witness: Yes, sir.

Mr. Day: Take it out and show it to the Court.

The Witness: This is a tapered roller bearing. This looks exactly like the Timken roller bearing, and from all ordinary viewpoints it is identical, because this assem- [fol. 1408] bly is interchangeable with this assembly of Timken. There may be some minute differences, but it is interchangeable.

The Court: Who do you say makes that?

The Witness: The Bower Company of Detroit, Michigan. [fol. 1409] Q. Before asking you further about the bearings in the box 50, we said something, and you said something a while ago about a radial load and a thrust load. The Timken bearing is constructed and devised to take which load, to take care of which load, either or both?

A. The orthodox Timken bearing is designed to take both radial and thrust loads in the same bearing, but some 20 or 25 years ago we commenced to make a bearing designed to take only a thrust. That is known as the Timken Thrust Bearing, which still embodies the tapered roller bearing principle.

Q. Are there on the market and have there been for some years ball bearings constructed so as to take a thrust load also?

A. Yes.

Q. And what are those types generally of ball bearings?

A. That is known as ball thrust bearings, such as the one made by Fafnir, that I showed the Court a few minutes ago. The people who make the straight roller bearings also make thrust bearings with parallel rollers.

Q. So that there are various types of bearings, such as you have described, that are constructed so as to take a radial load and also a thrust load?

A. Yes, that is true.

Q. Now, here is bearing in this box 50 I will mark D. It [fol. 1410] says "Orange tapered roller bearing". What is that?

A. That is made by the Orange Roller Bearing Company. It is a tapered roller bearing with the same general dimensions as used in the Timken roller bearings, and is interchangeable with the Timken roller bearing.

Q. Here is one marked "Pratt tapered roller bearing". That is 50-E. Where is that made?

A. That is made in Joliet, Illinois.

Q. By what company?

A. I don't know the corporate name. We call it the "Pratt" bearing. I think it is the Pratt Mfg. Company.

Q. Now, 50-F is the "Marlin-Rockwell Corporation angular contact front wheel bearing". What is that?

A. That is a ball bearing made by the Marlin Manufacturing Company, Jamestown, New York, a ball bearing that carries both radial and thrust loads.

Q. 50-G is a Hoover tapered roller bearing.

A. That is manufactured by the Hoover Company at Ann Arbor, Michigan.

Q. And the Tyson bearing, 50-H?

A. The Tyson bearing is a roller bearing but it is quite different in its dimensions from the Timken roller bearing, internally, although it is interchangeable, I believe, with Timken bearings to some extent. I am not positive about whether or not it always is. The bearing is quite different [fol. 1411] from the Timken bearing as it has no cage separating the rollers. The rollers are put in without the benefit of a cage.

Q. Is that made at Massillon?

A. This is made by the Tyson Company at Massillon, Ohio.

Q. Is that Frank Tyson's Company?

A. Frank Tyson invented the bearing, and was connected with the company for many years; he is now dead.

Q. Here is a New Departure angular contact bearing marked I. What is that?

A. That is the same general type of bearing manufactured by New Departure that was shown earlier today. It is used largely on the front wheels of General Motors automobiles.

Q. Now are all of these types of bearings manufactured by these various companies competitive with the Timken bearing?

A. They are.

Q. And they are competitive with the other ball bearings and roller bearings I have asked you about?

A. They are all competitive with each other.

Q. I have here a bearing that I want to have marked for identification Defendant's Exhibit 52.

(Bearing above referred to was thereupon marked by the Clerk, for identification, Defendant's Exhibit 52.)

What is this?

[fol. 1412] A. This is a type of ball bearing that is used for radial loads largely on such things as crankshafts of an internal combustion engine. The bearing is broken in two so that it can be slid around the crankshaft and then is joined together with four set screws and functions as a radial type ball bearing.

Mr. Day: Your Honor will observe that is split right in two. (Showing to Court.)

Q. What company makes that bearing?

A. I am not sure of the corporate name of the company, it is the—well, I am not certain about that. We sell them steel but I don't remember the name of the company.

Mr. Day: I would like to offer in evidence Defendant's Exhibit 49 and the various lettered exhibits, and Defendant's Exhibit 50 and the various lettered exhibits, Defendant's Exhibits 51 and 52.

The Court: They may be received. 49 was what?

Mr. Day: 49 is the first box. 50 is the second box. 51 is a shaft, and 52 is that split bearing. Will you mark this our next exhibit, please?

(Thereupon the Clerk marked photograph, for identifi-
[fol. 1413] cation, Defendant's Exhibit 53.)

Q. I hand you a photograph marked Defendant's Exhibit 53 of a man standing alongside of a big bearing. What kind of a bearing is that?

A. The man has in his hands a small bearing manufactured by the Timken Roller Bearing Company weighing approximately 4 ounces. The larger bearing in the picture is a bearing that is used on the roll necks of four-high mills for rolling aluminum and steel. The larger bearing weighs in the neighborhood of 10,000 pounds.

Mr. Day: I want to offer that in evidence, and show it to the Court.

The Court: It may be received.

Q. Is that bearing shown in the photograph the largest that the Timken bearings reach, approximately so?

A. It is a little difficult to answer that directly. It is one of the heaviest ones but we have made them up to about 100 inches in diameter. I judge by looking at that one it is in the neighborhood of 60 inches in diameter. We have made them up to about 100 inches in diameter but not quite so heavy as that one.

Q. Are there also large ball bearings?

A. Yes, we had to make some of those during the war.

Q. While you are on that subject will you tell us under what circumstances you made ball bearings during the war? [fol. 1414] A. Some of the applications for ball bearings, particularly in the aircraft field, were of such size that the ball bearing companies in this country did not have the facilities for making them. The War Department called on us to make the ball bearings of the larger sizes and we did that.

Q. During the war?

A. During the war, yes.

Q. We have been speaking now of large bearings. I will have this next exhibit marked Defendant's Exhibit 54.

(The physical exhibit above referred to was thereupon marked by the Clerk, for identification, Defendant's Exhibit No. 54.)

Q. I will now hand you a little round something we have here, which is going to be put in an envelope and marked Defendant's Exhibit 54. What is that?

A. This is what is known as an instrument bearing, a ball bearing of very small size, commonly designated by the

manufacturers as a miniature bearing. The second disk has one of the smaller balls that is used in this type of bearing.

Q. Have you a magnifying glass with you?

A. Yes, I believe there is one on the table.

Mr. Day: Would your Honor look at this bearing?

[fol. 1415] The Court: I hope my eyes are good enough.

(Thereupon, the Court examines bearing with magnifying glass.).

The Witness: That, your Honor, is the ball. Here are the component parts of the bearing around the outer periphery, the components are around the outer periphery of a piece of plastic, and the assembled bearing is in the center. This went in such things as the Norden bomb sight and range detecting instruments, and things of that sort where a very small bearing was essential for the operation of the mechanism.

Q. That is a sample of a very small bearing?

A. I believe that is one of the smallest ball bearings that has been made.

Q. We have been speaking so far of anti-friction bearings. I want to direct your attention now to friction bearings, if that is the proper term. Is that the proper name for them?

A. Yes, sir.

Q. Well, what is a friction bearing?

A. A friction bearing is, in general, a sleeve that surrounds the shaft or rotating member, and oil or grease is introduced between the moving parts, in some cases water [fol. 1416] is introduced, in the case of rubber bearings for marine work, a stream of water acts as a lubricant.

Q. Is the friction type of bearing older than the anti-friction type of bearing?

A. Yes.

Q. Do we have here some samples of the friction type bearing?

A. Yes.

Q. Will you turn to one of them, please?

A. I will turn to the type——

Q. In taking the shaft which has been marked Defendant's Exhibit 51, we will get it so the Court can see it some way.

(Exhibit 51 placed on Court's desk.)

Now, you are going to talk about Defendant's Exhibit 51.

A. This is the sleeve or friction type bearing made of wood. This particular one is a piece of cypress wood impregnated with oil. It is used on line shafts and slow moving shafts.

Q. The sleeve there, the wooden part, is the bearing part, is that right?

A. That is right.

Q. And it is here constructed so as to fit on a shaft, isn't it?

A. Yes.

[fol. 1417] Q. Now, it says here, "Wood bearing, the Arguto Oilless Bearing Company, Wayne Junction, Philadelphia, Pa. Shaft bearing, cypress impregnated wood."

Now, that piece of wood itself is a bearing, is that right?

A. That is right.

Q. How does that cut down friction or react to friction?

A. The friction is minimized by the introduction of oil. In the case of this particular sleeve it has been impregnated with oil under pressure which gives some degree of smoothness to the operation of the shaft. However, the amount of friction created is much greater than would be found by the use of anti-friction bearings.

Q. Is that bearing in actual use now?

A. Yes, that is taken from our store room. We use them in a few places in our shop.

Q. Going down, the next one says, "Cast iron, Brown & Sharpe, Providence, Rhode Island, hanger bearing." Is that a friction bearing?

A. It is.

Q. That runs from the wooden one down to the brass one?

A. That is bronze.

Q. All right. How does that Brown & Sharpe bearing work?

A. The two pieces of cast iron are separable here, they are held together with a heavy rubber band, and the cut-[fol. 1418] away section is shown so you can see the inside. It is essentially a sleeve divided in two parts and they are joined together and put around the shaft and act as a hanger bearing. The hanger is a thing that is used in combination with grinding machines and belt driven machines.

Q. Is that kind of bearing in use now?

A. It is.

Q. On what kind of applications?

A. On belt-driven machinery, built in this instance by the Brown & Sharpe Company. I believe they are in Providence, Rhode Island.

Q. Is that a good sized company?

A. Yes, it is.

Q. How is that lubricated?

A. This is lubricated ordinarily through these holes. This is filled with, in some cases, grease, in other cases oil. If it is oil a drip pan must be put below to allow the oil to collect, it drips through as the shaft revolves.

Q. The bronze bearing, "Allis-Chalmers Manufacturing Company, Milwaukee, Wisconsin, electric motor bearing." How does that work?

A. This is essentially a sleeve form of bronze with oil holes for the introduction of oil or grease to the shaft of [fol. 1419] the motor. The rotor shaft revolves in this bronze sleeve. The load is almost 100 per cent radial and almost no thrust.

Q. Are those bearings made now by Allis-Chalmers?

A. Yes, they are, currenely.

Q. And in what kind of applications are they used?

A. That particular one is used on one of their motors.

Q. Now, the next is the Rabbit bearing?

A. Well, that is misspelled. That should be "b-a-b-b-i-t".

Q. It ought to be a babbit bearing. "General Electric, Schenectady, New York." Now, what do they use that babbit bearing for?

A. That bearing is also used in electric motors and in other applications where a shaft revolves. It is a steel backed bearing lined with babbit. Babbit is a soft, white metal made of lead and antimony and in some cases a slight amount of tin or a slight amount of copper is introduced. There are many trade secrets used in the making of babbit; everybody seems to have his own way of making it.

Q. And that is made by the General Electric?

A. Yes.

Q. Now, down here are "Ball bearing, New Departure Manufacturing, Division of General Motors Corporation, Bristol," and next to it, down at the end, "Tapered Roller [fol. 1420] Bearing, Timken Roller Bearing Company, Canton, Ohio." What are these two bearings?

A. The first is an anti-friction ball bearing, the second

is an anti-friction tapered roller bearing. There are many other types of bearings that could be used. For instance, this stand was made of a piece of plastic that is also used in the manufacture of friction type bearings. Rubber is used, all sorts of material, lignum vitae is one of the principal bearing woods. All forms of bronze, steel, in some cases silver is used as a bearing. The Cleveland Graphite Bronze Company in Cleveland uses immense amounts of silver for friction type bearings.

Q. Are the friction type bearings competitive with anti-friction bearings?

A. In general they are much cheaper than anti-friction bearings.

Q. And are they in competition with anti-friction bearings?

A. They are.

Q. Upon what kind or character of applications, generally?

A. Line shafts, wheelbarrows, automobiles, internal combustion engines, compressors, pumps, drilling equipment, and almost every instance where a piece of mechanism moves the friction bearing is in competition with the anti-friction bearing.

Q. Can you give us any idea of the number of companies [fol. 1421] in the United States now that are engaged in manufacturing friction bearings?

A. I couldn't say with any degree of accuracy. I know that there are well over a thousand and perhaps it runs up into many, many thousands.

Q. And do you have any information or knowledge as to whether there are more friction bearings sold than anti-friction bearings?

A. There are many more friction bearings sold than anti-friction bearings, either sold or produced. For instance, in the case of General Electric, Allis-Chalmers, Brown & Sharpe, all of those people are manufacturers of equipment and make their own friction type bearings.

Q. Well, do they put their own bearings in their own equipment that they sell?

A. In some instances they do, in other instances they buy from companies who specialize in making friction bearings.

Q. And are there manufacturers of friction bearings that

sell them out generally on the market and don't put them only in other equipment they make themselves?

A. There are some companies that specialize in the manufacture of friction type bearings only.

Q. Now, what kind of a bearing is that (handing same to witness)?

[fol. 1422] A. That is a friction type bearing, a replica of a mine car wheel.

(Bearing above referred to was thereupon marked by the Clerk, for identification, Defendant's Exhibit No. 55.)

Q. Well, where is the bearing on that? Just explain that to the Court, will you, please?

A. The shaft or knurled portion is in my right hand, and this cut-away section shows the bearing surrounding the shaft, being inside the hub of the wheel.

Q. Now, there are no balls or rollers in there, are there?

A. There are no rolling members in there other than the bearing itself which revolves around the shaft; no rolling elements interposed between the shaft and the bearing.

Mr. Day: I want to offer Defendant's Exhibit 55.

The Court: The Defendant's Exhibit 55 may be received.

Q. Here is one marked Defendant's Exhibit 56. What kind of a bearing is that?

A. This is a cut-away section of a mine car wheel, or miniature of the car wheel, with two Timken tapered roller bearings and a dust collar and lock-washer shown in the [fol. 1423] application.

(The bearing last above referred to was thereupon marked by the Clerk, for identification, Defendant's Exhibit No. 56.)

Q. Is it correct to say that 55 is a friction type bearing used on mine cars?

A. It is a small model of the same application that you would find in the full sized car.

Q. Of a friction type bearing?

A. Of a friction type bearing in a full sized mine car wheel.

Q. And 56 is a model also?

A. Is a model of an anti-friction bearing, of a Timken application.

By Mr. Day: I want to offer our Exhibit 56.

The Court: It may be received.

Mr. Day: I offer 54, if I haven't offered it.

The Court: 54, 55 and 56?

Mr. Day: Yes, your Honor.

Q. Now, I have here a piece of steel that we will mark our next Exhibit 57.

(Piece of steel above referred to was thereupon marked by the Clerk, for identification, Defendant's Exhibit 57.)

[fol. 1424] Q. While this is being done, it has been suggested to me I ask you, and I do ask you which one of these mine car-wheel types of bearings was in use first, the friction or anti-friction type?

A. The friction type was in use first.

Q. On mine cars?

A. Yes.

Q. State whether or not it was, therefore, necessary in order to obtain the adoption of the Timken type of mine car bearing to displace this with the trade or try to?

A. Yes.

Q. And for how many years, approximately, if you have any idea upon that subject, was this mine car friction bearing in use before the Exhibit 56, the anti-friction mine car bearing?

A. I couldn't say with any degree of certainty. Certainly used a hundred years.

Q. That is long enough.

Now, what is this Exhibit 57?

A. This is what we call an etched section of a Timken cone.

Q. And it shows what?

A. It shows the depth of penetration of the carburized case and the core adjacent at the top penetration of carbon that is shown in the case.

[fol. 1425] Q. Will you step up to the bench and see if you can show his Honor that?

(Witness complies.)

The steel which is used in the manufacture of Timken roller bearings is what is known as low carbon steel, the carbon being about .20. And after the piece has been machined it is subjected to a carburizing operation and carbon is driven into the outer surfaces, here and here and here (indicating), which gives it about one per cent, as con-

trasted with one-fifth of one per cent in the center. That gives a very hard surface and a very tough core so the bearing will stand considerable impact without cracking The wearing qualities of the outside are protected by this carbon case which allows a very high degree of hardness and the inside remains relatively soft and very tough. You can see the difference in the outer section and inner section. That piece has been polished so it is possible to see penetration of carbon.

Mr. Day: We offer Defendant's Exhibit 57 in evidence.

The Court: It may be received.

Q. I notice several pieces of steel here. Will you step down here and tell us whether they are illustrative of something you haven't told us about?

[fols. 1426-1427] A. These are generally the same type with the exception that there is one cup here which has been broken and not polished, but this is a fresh break which was just made last evening, at least, or early this morning, so you can faintly see around the outer surfaces the carbon penetration even though the piece has not been polished. These pieces are broken from time to time during the heat treating operation to be certain we get the right penetration of carbon and the right condition of carburizing.

Q. There was some talk here the other day about fractures. Are those examples of fractures?

A. They are.

Q. And they are made for the purpose of what?

A. Inspecting to be certain that the pieces are receiving the proper heat treatment.

Mr. Day: I would like to tie these together and offer them as our next exhibit.

(Pieces of steel above referred to were thereupon marked by the Clerk, for identification, Defendant's Exhibit 58.)

The Court: They may be received.

[fol. 1428] Further direct examination of William Umstattd.

By Mr. Day:

Q. We were asking yesterday about competition as between tapered roller bearings and other kinds of roller bearings and ball bearings, they being anti-friction bearings,

and friction bearings. In railroad cars what kind of bearings are used?

A. Lately in the more modern passenger cars, pullmans, streamlined cars, diners, and things of that sort, anti-friction bearings are used, roller bearings of some type, some cylindrical rollers, parallel rollers, some barrel type rollers and some tapered rollers. In the freight cars of which there are about a million eight hundred thousand in current use in the United States, all of those freight cars with the exception of about ten thousand which are equipped with anti-friction bearings are operating on what is known as a wedge type bearing, a friction bearing that is composed of bronze and various analyses, and covers about one-half of the axle, the top half of the axle. The bottom part of the box or retainer for the bearing is filled with a [fol. 1429] type of waste, cotton waste impregnated with oil. So that means that essentially all of the freight cars of the United States are running on friction type bearings.

Q. You stated yesterday, as I understood you, that you thought perhaps there were a thousand or more companies making friction bearings. Did you mean to say by that that they were making bearings either for themselves or as component parts of other things they made?

A. That is true. Many manufacturers who make motors make their own bearings. Many who make lawn mowers and things of that sort make their own bearings. A friction bearing can be made by anyone who has a lathe, and I have no doubt that there are many thousands of companies throughout the United States making their own friction type bearings.

Q. Are there some applications where ball bearings can be used more readily than roller bearings?

A. Yes, there are some places where ball bearings can be used almost to the exclusion of roller bearings. For instance, the miniature types of bearings that are used on bomb sights and range finding equipment on airplanes and for antiaircraft guns are equipped almost entirely with ball bearings. The roller bearing possibly could be made to those minute dimensions but it certainly would not be practicable.

Q. Is there a field of bearing applications where either roller bearings or ball bearings might be used, is there a [fol. 1430] large field in that respect?

A. That is by far the greatest field for anti-friction bearings, where either a ball or a roller bearing could be used. It just depends upon the salesmanship or the economy of the bearing. There are probably at least 90 per cent of the places where anti-friction bearings are used that could accommodate a ball bearing or a roller bearing.

The Court: You are now referring to railroad cars particularly?

The Witness: Not to railroad cars. I am talking about the entire field. In the case of railroad cars the severity of the service almost necessitates the use of a roller bearing. Ball bearings can be used, they have been used in Germany to some extent on railroad cars but the balls become so large and the bearings become so large that it is an impractical thing, it just doesn't pan out from the standpoint of economy.

The Court: I am sorry, Mr. Day, to interrupt.

Mr. Day: That is all right. I am very glad your Honor did ask the question.

Q. Now, in this large field that you describe, is that a field that includes also friction bearings of certain types?

A. That is true.

[fol. 1431] Q. In some of the large applications such as you have just told his Honor about, can you use friction bearings in those applications?

A. Yes. One application in particular that I have in mind is the roll-necks on steel mill rolls. We developed, back in the early 20's, a tapered roller bearing for use on four-high continuous mills, and it worked out very satisfactorily. As a matter of fact it helped produce sheet in wide widths and close tolerances for many years; but the friction bearing people developed a bearing that suited that purpose better and have almost taken all that business away from us. We are gradually losing out in that field because a friction bearing serves the purpose better.

Q. I think Mr. Klinedinst testified the other day, perhaps you did yesterday, as to the number of tapered roller bearings manufacturers in this country. Did you testify to that?

A. I don't believe so.

Q. Can you tell us generally about how many there are and what the principal ones are?

A. Yes, I think I can tell you the principal ones. The principal ones are the Timken Roller Bearing Company, the Bower Bearing Company, the Orange Bearing Company, the Pratt Bearing Company, the Bantam Bearing Company, the Torrington Company, the Kay-Don Company, [fol. 1432] the International Harvester Company, the Messenger Company, the Loewly Bearing Company, I believe is the correct spelling, the Tyson Roller Bearing Company, the Hoover Roller Bearing Company. No, I believe the name of the Hoover is the Hoover Ball Bearing Company but they do make tapered roller bearings. There may be others but those are the principal ones.

Q. And how many companies are there in the United States that make straight roller bearings as distinguished from tapered roller bearings?

A. I don't know the exact number. I know some of the principal manufacturers.

Q. Would you name just some of them, please?

A. The Hyatt Bearing Division of the General Motors Corporation, the Rollway Company, the American Roller Bearing Company, the Roller Bearing Company of America, the Bower Roller Bearing Company, the International Harvester Company, the Gwilliam Company, the Bantam Company, the Torrington Company, the Kay-Don Company, Marlin-Rockwell Corporation. There may be others but those are the principal ones.

Q. They all make straight roller bearings?

A. Yes, sir.

Q. And is there a difference between the hour-glass bear- [fol. 1433] ing and the spherangular bearing and the barrel shaped bearings?

A. Yes, there is.

Q. Well, are they considered generally straight roller bearings or are they in a class by themselves?

A. No, they are considered a modification of a tapered roller bearing. They are essentially tapered roller bearings with curved surfaces.

Q. Now, the SKF Company. Where is the home plant of that company?

A. Gothenburg, Sweden.

Q. What is the size of that company as a maker of bearings

A. That company is the largest manufacturer of anti-friction bearings in the world.

Q. And outside of or in addition to the plant they have in Gothenburg, Sweden, can you give us an idea where else they have plants?

A. They have plants in Germany, in France, in England and perhaps other places around the world, but I know of those plants.

Q. Do they have a plant in this country?

A. In Philadelphia.

Q. And what kind of bearings do they make in that plant they have in Philadelphia?

[fol. 1434] A. They make a barrel shaped roller bearing, ball bearings, straight roller bearings, needle bearings, and, on occasion, tapered roller bearings. I am not certain that they are making them today; I know they have made them.

Q. Are they in competition with the Timken Roller Bearing Company and these other bearing companies I have been asking you about?

A. Yes, they are.

Q. Something has been said in the evidence here offered in behalf of the Government concerning certain trade arrangements made between British Timken and SKF and other companies relating to Great Britain and France, back around 1930, '31, whatever the date may be. At that time what was your position with the Timken Roller Bearing Company?

A. In 1930 and '31 I was factory manager.

Q. And were you closely connected with H. H. Timken and some of the other officers in connection with the affairs of the company as of that time?

A. I was.

Q. And you became president, I think you said, in 1934?

A. Yes, in 1934.

Q. What knowledge did you have as to the existence of those trade arrangements in England and France?

A. I am not certain about the date. I know that our British partner, Mr. Dewar, informed us that he had made [fol. 1435] arrangements with SKF in both England and France, but it strikes me the date was a little later than 1930.

Q. Well, whatever the dates were, and the record shows

what they were, you say you knew about some arrangements having been made by Mr. Dewar?

A. Yes.

Q. Did you also hear something from Mr. Hess in that regard, or from communications that Mr. Hess sent to the Timken Roller Bearing Company?

A. Yes, and reports of it that Mr. Hess made regarding his occasional visits to England and France.

Q. Outside of that knowledge did you have anything to do or did you have anything to do at all with the making of those agreements?

A. I had nothing to do with making the agreements.

Q. And was American Timken party to any of those agreements?

A. No.

Q. It is in evidence here that the British agreements, whenever they were made—what was the year when they were made——

Mr. Ketterer: 1934.

Mr. Day: I want to correct that.

Mr. Umstattd was right. 1934.

Q. It is in evidence here that those agreements or arrangements, whatever they were, ran out or expired in 1939 with [fol. 1436] the coming of the war and they never were renewed?

A. They were not.

Q. And it is in evidence here, I think also, whatever arrangements were made in France between British Timken and SFK or any other companies——

Mr. Ketterer: French Timken.

Q. (Continued) and SKF and any other companies, ran out in 1940 when the Germans invaded France, and they have never been renewed?

A. They have not.

The Court: You are now referring to trade arrangements made with SKF?

Mr. Day: That is right, concerning which the Government offered some testimony.

Q. As president of the Timken Company, are you able to state what the policy of that company is now as to any trade arrangements of that kind?

A. The policy of the Timken Roller Bearing Company is that we do not believe in any sort of trade arrangement that would restrict sales.

Q. And state whether or not that has always been your policy.

A. Personally, yes, and I believe that it has been the policy of the Timken Roller Bearing Company as far as I know.

Q. And state whether or not on occasions you have [fol. 1437] declared that policy as being your policy and the policy of the company as far as you are concerned.

A. I have many times.

Q. I have asked you about the different kinds of bearings and about the competition between and among the various kinds of bearings. I will ask you whether the competition such as you have described existed to your knowledge, let's say in 1927?

A. It did.

Q. And state whether or not it has existed ever since that time?

A. It has.

Q. And does it exist today?

A. It does.

Q. You became connected with the company in 1919?

A. I did.

Q. Did you acquire knowledge before 1927 as to these competitive conditions you have described?

A. I did.

Q. And when would you say you first acquired that knowledge?

A. I commenced to acquire it immediately after being employed by the company, and as time went on I learned more of the competitive situation.

Q. And in those days did you have to do with the finances [fol. 1438] of the company or the production of the company?

A. I think the two are inter-leaved. I had more to do with the production but of course that in turn did have to do with the finances of the company.

Q. And if I asked you yesterday I beg the Court's pardon for asking you again, has the character of the competition, the keenness of the competition between these various types

of bearing manufacturers abated or lessened during these years?

A. I think it has become keener as the years have gone on.

Q. Can you give us an opinion as to the percentage of tapered roller bearings that are produced now in this country by the Timken Roller Bearing Company?

A. The percentage of tapered roller bearings?

Q. Yes, sir.

A. The first knowledge I have had of any accurate figures concerning our percentage occurred a few days ago when the Government introduced some testimony that they had obtained from the Anti-friction Bearing Manufacturers Association. That information has never been available to us up until that time.

Q. And that showed about what percentage for the Timken Roller Bearing Company?

A. As I recall it, it showed in the neighborhood of a [fol. 1439] range of about 78 to 80 or 81 per cent. I believe currently less than 80 per cent.

Q. And do those figures involve the production of all of the tapered roller bearing manufacturers in this country?

A. I think not.

Q. Well, did it involve the production of all of those who belong to the Association?

A. That statement was made by Government counsel.

Q. Are there some tapered roller bearing manufacturers who do not belong to the Association?

A. I believe there are.

Q. But do most of the larger manufacturers belong to the Association?

A. With the exception of International Harvester I believe most of the larger producers do belong to the Anti-friction Bearing Manufacturers Association.

The Court: Most or all?

The Witness: Most.

Q. And that Anti-friction Bearing Association is a trade association having to do with the anti-friction bearing industry, similar to trade associations generally in other lines of business?

A. I am not familiar with the activities of trade associations in other lines of activity. The Anti-friction Bearing [fol. 1440] Manufacturers Association was formed to

enable the industry to conform with the laws regarding the National Recovery Act back about 1933 or early '34.

Q. Are you able to give any opinion or judgment as to the percentage of tapered roller bearings manufactured by the Timken Roller Bearing Company in this country in 1927, let's say?

A. I have no knowledge of what the figure would be. In 1927 no figures were available at that time, so far as I know.

Q. You would rather not hazard a guess about it?

A. I would prefer not to.

Q. Can you give us any notion as to the percentage of roller bearings that are now produced by the Timken Roller Bearing Company in this country?

The Court: Now, you are wanting it for all roller bearings?

Mr. Day: All roller bearings, not merely tapered roller bearings.

A. Figures submitted to us by the Anti-friction Bearing Manufacturers Association indicate that we are making approximately 50 per cent of the roller bearings made in the United States. And that, again, is based upon the figures submitted by members of the Association. I am not certain that includes the entire industry. As a matter of [fol. 1441] fact I know definitely that it does not in the case of International Harvester, who make tapered roller bearings, straight roller bearings and ball bearings.

Q. Does the International Harvester Company make those bearings in substantial quantities?

A. Yes, they do.

Q. Are you able to give an opinion as to the percentage of anti-friction bearings produced at the present time by the Timken Roller Bearing Company in the United States?

A. It varies from month to month but it hovers around the 25 per cent mark.

Q. Do you know whether that percentage of production of anti-friction bearings at the present time is larger or smaller than it was, say in 1927? Have you any judgment on that?

A. I really have no basis for judgment in that matter. I should like to qualify the statement I just made before this question, and that was that we produced roughly 25 per cent of the anti-friction bearings. Again, that is predicated on the figure submitted by the Anti-friction Bearing

Manufacturers Association. And in turn they got their figures from the members of that organization.

The Court: Let me get that straight. Did those figures include all anti-friction bearings?

[fol. 1442] The Witness: No, sir, they do not. Some people manufacture anti-friction bearings and are not members of the Anti-friction Bearing Manufacturers Association.

The Court: I understood that. But the 25 per cent figure is a figure which covers all anti-friction bearings with the exception of those that you are excluding because of their non-membership in the Association.

The Witness: That's right.

The Court: Are there any anti-friction bearings which are not roller bearings?

The Witness: Yes, there are. There is a bearing known as the Kingsbury bearing that is an anti-friction bearing. Although it does not have rollers or balls, it has what is known as wedges. Those wedges float around in the periphery of the bearing in a bath of oil and do produce a bearing with a very slight friction. That bearing is used largely in marine installations, shafts, propeller shafts on ships, and things of that sort.

The Court: The reason for my inquiry is because of your statement that Timken makes approximately 50 per cent of the roller bearings in the United States as reported to [fol. 1443] you by the Association. Now then, when you were asked the percentage of anti-friction bearings you said it's 25 per cent.

Mr. Day: Anti-friction includes the ball bearings, you see.

The Witness: Your Honor, the Anti-friction Bearing Manufacturers Association reports the manufacture of ball bearings, straight roller bearings, tapered roller bearings, and all variations of tapered roller bearings. That's the 100 per cent.

The Court: I see.

The Witness: But the roller bearings are 50 per cent of the 100 per cent. In other words, tapered roller bearings, straight roller bearings, spherangular bearings and barrel shaped bearings constitute approximately 50 per cent of the anti-friction bearing total in this country. Timken makes 50 per cent of that 50 per cent, which brings us to 25 per cent of the total.

Q. Well, ball bearings are anti-friction bearings, aren't they?

A. They are.

Q. And in the figures that have to do with anti-friction bearings ball bearing figures are included, aren't they?

[fol. 1444] A. They are.

Q. I want to ask you something about the manner in which Timken Roller Bearing Company carries on its sales of bearings. Do you have a main office, first, to begin with?

A. The sales department is located in Canton, Ohio, and a vice-president of our company is in charge of that activity. Under him is a director of sales, and under the director of sales are our various sales offices throughout the United States, where we have a corps of sales engineers. Those sales engineers are graduate engineers in the different branches of engineering who are trained in our factory for a period of a year to 18 months and then transferred to the drafting department where they spend an apprenticeship on the drawing board laying bearings into various applications, and then the ones who show the greatest aptitude for sales are transferred to the sales offices throughout the United States, and they constitute our field or sales force.

Q. There have been various names brought out in the evidence here and the Court perhaps knows the officers, but I think it perhaps all right to ask you a question along that line in connection with this particular testimony. The vice-president in charge of sales now is who?

[fol. 1445] A. L. M. Klinedinst.

Q. Who is the—you made it very clear yesterday there wasn't any president giving orders to this man and this man and the other man, on down the line, but who is the next person to Mr. Klinedinst in sales end of it?

A. W. B. Moore.

Q. What is his position?

A. Director of sales.

Q. Who are some others holding responsible or high positions in the sales branch of the business?

A. E. W. Austin is head of our automotive sales division; S. C. Partridge is head of the industrial sales division; W. C. Sanders is head of our railroad sales division; H. C. McCollum is head of our steel sales division; G. W. Curtiss

is head of the farm equipment sales division. Those are the principal divisions.

Q. Do you have branch offices or branch sales offices in [fol. 1446] connection with the sales of bearings, your product?

A. Yes, we do. We have many offices scattered throughout the United States.

Q. Can you tell us about how many of those there are?

A. I believe at the moment there are about 20.

Q. Can you tell us some of the principal cities where they are located, without naming them all, unless you want to tell them all?

A. Yes. New York, San Francisco, Los Angeles, Seattle, Denver, Dallas, Houston, Atlanta, Boston, Philadelphia, Cleveland, Buffalo, Kansas City, St. Louis, and other places that I can't recall right at the moment.

Q. With relation to taking orders for bearings and supplying bearings to the trade, how do these sales offices operate generally?

A. They keep a complete file of present customers and call on those customers at regular intervals to see if any new designs are being considered, and if a customer comes out with a new machine or a piece of farm equipment, tractor, or automobile, our sales engineers confer with the design engineers in the customer's offices and attempt to put Timken bearings in places where any movement occurs, such as shafts or gear trains, things of that sort. In addition to calling on our present customers, our men read the [fol. 1447] trade journals and through contacts with other salesmen learn of prospective customers and call on them for design applications and attempt to engineer Timken bearings into pieces of equipment made by those people who are not presently customers of ours. Occasionally some very weird applications turn up, as evidenced by the use of Timken bearings in knee joints of artificial legs.

Q. Does the company furnish bearings for that purpose now?

A. Yes.

Q. In connection with obtaining orders for bearings in the manner you have described, does your company have competition with other companies and makers of ball bearings, for instance, and things of that kind?

A. We have competition with the manufacturers of ball

bearings and straight roller bearings and friction bearings of all types.

Q. And does the sale of bearings, therefore, involve the acceptance by the purchaser of your particular kind of bearing in the particular application which they have in mind?

A. It does.

Q. And these blue prints which are submitted by the purchaser to your engineers, and which you look over to see where you can put the bearings in the place where the blue print seeks to have them put, are those blue prints also [fol. 1448] shown to the manufacturers of other bearings, ball bearings, and matters of that kind?

A. Yes, in almost all instances several companies compete for the same position in a piece of machinery or equipment that is being built.

Q. And back in the earlier days when the tapered roller bearing was more or less in a pioneering stage, as has been described by all the witnesses, state whether or not the marketing of tapered roller bearings involved the acceptance by the engineers of the purchasing public of tapered roller bearings as contrasted with, say, ball bearings?

A. Yes, that is true. The tapered roller bearing was an American invention and was not widely publicized in engineering text books. The engineering text books specialized on friction bearings of various types and ball bearings, and in some instances straight roller bearings. But the ball bearing was really the bearing featured most and was most readily understood by graduate engineers in the 1900-1910 decade, and even in the decade through 1920. The tapered roller bearing commenced to get on solid ground really in the 1920's.

Q. I think you testified yesterday that the ball bearing preceded the roller bearing, tapered roller bearing in this [fol. 1449] country. Way back years ago, where did most of the ball bearings come from?

A. Most of them came from Germany.

Q. And they were made by what companies, do you know, then?

A. In the early days, I'm not certain. I know in the 1920's Fichtel & Sachs and Fischer were the two largest manufacturers of ball bearings in Germany.

Q. Then there was a time when most of the ball bearings sold in this country came from Germany, is that right?

A. The bulk of them came from Germany, although some came from Italy, some came from Sweden, and some, I believe, in rare instances came from Switzerland, particularly some of the smaller sizes.

Q. Something has been said in the evidence here about bearings for original installation. What does that mean?

A. That is the bearing that is first placed in a machine when it is built, whether it's a punch press or lathe or screw machine or automobile, or tractor.

Q. That is, if a company builds an automobile, let's say Ford builds a new automobile, or a great number of them, and he wants to sell them to the public, he puts bearings in as part of the original equipment, doesn't he?

A. He does.

Q. And those bearings are then supplied for original equipment or original installation, is that right?

[fol. 1450] A. They are.

Q. Something has been said here also about bearings for replacement purposes or service bearings. What does that mean?

A. That means that if a bearing gets out in an original installation, such as an automobile or a punch press, and through neglect or through mechanical defect a failure occurs the bearing must be replaced with a good one, and that is considered a replacement bearing.

Q. And what steps does the Timken Roller Bearing Company take, and has it taken over the years, to provide a source of replacement, service bearings?

A. We have warehouses throughout the United States and Canada where bearings can be obtained on short notice. Those warehouses serve jobbers and dealers throughout the United States so that bearings are readily available at almost any point in the country.

Q. So that if a jobber or dealer had a replacement job to perform he would get it from the warehouse instead of coming to one of the home plants of Timken to get it, is that right?

A. That's true.

Q. And what is the comparative proportion of replacement business as against original equipment installation business?

[fol. 1451] A. That varies. At the moment I would say it's in the neighborhood of 5 per cent.

Q. 5 per cent replacement or service business and 95 per cent original installation?

A. Yes, sir.

Q. Or original equipment?

A. Original equipment.

Q. Mr. Umstattd, you have been president of the company since 1934 and connected with the company since 1919. I will ask you whether or not you have given attention to the transaction of the bearing business by the Timken Roller Bearing Company abroad in foreign countries during those years?

A. I have.

Q. Have you given some study and attention to it?

A. I have.

Q. In its various phases?

A. Yes.

Q. And have you done that in connection with the performance of your duties as an officer of the Timken Roller Bearing Company?

A. Yes.

Q. And have you in that connection considered the situation, let us say, in the United Kingdom and in France and on the Continent?

[fol. 1452] A. I have.

Q. What is meant when it is said that a country or a nation has a domestic economy?

A. I think that is understood to mean that as many things are made internally, inside the country's boundaries, as is practicable.

Q. That is, in plain words, when you say a country has a domestic economy you mean the country is having products manufactured within its borders, is that right?

A. I think that's the commonly accepted understanding, that a country tries, as far as possible, to be self-contained, at least some countries do.

Q. Are there some countries that do not have a domestic economy?

A. I don't think you could say there is any country that does not have a domestic economy. I think you would have to differentiate as to whether it's an agricultural economy or a manufacturing economy or a trading economy.

Q. Well, are there some countries that do not have developed a manufacturing domestic economy?

A. Yes, there are many countries that depend upon imports for taking care of their needs for manufactured articles.

Q. That is, the country with a domestic economy seeks to make the products that its people use, and so on, within [fols. 1453-1461] its own boundaries, is that right?

A. Again I think there must be some——

Q. I mean a manufacturing economy.

A. —some difference made. Obviously Iraq and Iran have an economy but they manufacture very little.

Q. I am talking——

A. England has an economy and manufactures a great many things.

Q. I'm talking about a manufacturing economy.

A. A manufacturing economy, of necessity, tries to manufacture as many things as possible within its own boundaries.

Q. When you have a country in that shape that makes its own products, to some extent, what is the nature of the opportunity afforded to somebody outside to sell in that country?

Mr. Nitschke: Your Honor, I think the Government ought to object to this sort of general discussion of economics.

[fols. 1462-1463] The Court: Rather than my permitting the testimony to go in, as I said at the outset of the objection, when it was made by Mr. Nitschke, I will receive it over the objection of the Government, and, as I said, the matter in its final analysis may be one legal question and upon the resolving of that legal question the matter of the objection can very well be answered.

[fol. 1464] The Court: Pardon me, so that I understand the nature of the objection of the Government. The objection is not made on the basis of his inability to give expert testimony, as one who is schooled in the field of economics?

Mr. Nitschke: Well, I do think that I would make my objection also on that ground, because this testimony is on the general subject of economics, and I don't think there is any showing that this witness has studied economics. He is the president of the company engaged in selling Timken roller bearings.

The Court: Do you wish to have him qualified, so that the record is clear on that subject?

Mr. Day: I'll be glad to do that, your Honor.

[fol. 1465] Q. Mr. Umstattd, what if any study have you made of conditions, economic conditions in foreign countries, say the United Kingdom and France and the Continent, with relation to the manner in which trade is carried on there?

A. I have made quite considerable studies by conferring with companies that do business in countries in Europe, in particular, with lawyers regarding the trade laws in the countries in Europe, particularly France and England, and by reading literature pertaining to trade policies indulged in by countries such as France and England. The standard papers, business papers, of those countries come to my desk regularly and I keep in touch with the attorneys for both French and British Timken for laws pertaining to trade in these two countries.

Q. To what extent have you made it an object of yours, if you have, to read books and periodicals dealing with this question?

A. I subscribe to British magazines, business magazines, daily newspapers delivered by plane, and our attorney in France sends me copies of the Herald Tribune marked by him in conjunction with any new laws pertaining to business transactions in France or its dependencies.

[fol. 1466] Q. And in connection with your business have you visited the United Kingdom?

A. I have.

Q. How many times over the last few years, would you say?

A. In 1945, in 1946, in 1947.

Q. And did you pay attention to the conditions you saw there?

A. I did.

Q. And what other countries have you visited in connection with your work as president of Timken Roller Bearing Company?

A. France, Belgium, Russia.

Q. And in the carrying out of your work, and in the discharge of your responsibilities as president of the Timken Company, have you felt it a part of your job to become

acquainted with the economic conditions over there and the economic restrictions, things of that kind?

A. I have.

Q. So that from your study and your experience and your travels in the performance of your duties, do you feel you are qualified to give an opinion upon the subjects such as this?

A. I believe I am.

[fol. 1467] Q. You made a study of the situation concerning bearings, didn't you?

A. I did.

Mr. Nitschke: I'm not raising any question with respect to his business expefience. I'm sure it's very vast. I was concerned, your Honor, with this general discussion of economic terminology, things like that. I have no objection to his testifying and giving his opinion on matters he is qualified in, and I think he is certainly qualified to tesify regarding business conditions in the bearing industry. My objection wasn't directed to that particular feature of it.

The Court: He may answer subject to the limitations that I have outlined in receiving all this testimony over the objection of the Government.

Q. What if anything have you learned and discovered as to the attitude, let us say of the United Kingdom, as to having bearings manufactured in the United Kingdom?

A. The pressure exerted by his Majesty's Government has made it almost impossible for bearings to be imported into England, as the Government is very active in promoting the manufacture of bearings in Great Britain for use internally, as well as for export purposes.

[fol. 1468] use internally, as well as for export purposes.

Q. And how long has that attitude been in evidence?

A. It has been in evidence to some extent since the end of World War I, in 1918, but it has become more pronounced since September, 1939.

Q. And did that attitude exist in 1927 and 1928?

A. It did.

Q. Now, what effect does that attitude have as to bearings, for instance, if we are to talk about bearings directly, used in Great Britain or in the United Kingdom, made in Great Britain or the United Kingdom?

A. The attitude of the present Government and preceding governments since 1939, has greatly favored the

manufacture of bearings in the United Kingdom for use in England and throughout the United Kingdom.

Q. And what relation if any, if you have discovered it, does the manufacture of bearings, and things of that kind, within the borders of the United Kingdom have to do with the national economy that the United Kingdom is seeking to build up?

A. From discussions with people in England representing banks, accounting firms, manufacturing concerns, it is quite apparent that England is determined to manufacture more goods today than she ever manufactured at any time [fol. 1469] in the past, and generally for export trade. The targets for exports have been set very high in order to attract what is known as hard money to the coffers of the United Kingdom.

Q. And if a company, say an American company sought to sell bearings now in Great Britain, what if any program would it have to go through?

A. An import license would have to be obtained from proper governmental agencies in the United Kingdom before bearings could be exported from any outside country and imported into the United Kingdom.

Q. And have you made any study or inquiry as to the conditions surrounding an application for that kind of a license?

A. I have.

Q. And what have you discovered in that regard?

A. I have found that it is almost impossible to get bearings into England unless a bearing company in England says that they are unable to produce bearings for the British trade.

Q. I will ask you whether or not, having regard for what you have just testified to, it would be a practical, feasible thing now for an American company to sell bearings in the United Kingdom coming from itself?

A. I think it would be practically impossible.

Q. And in order for American capital to sell American [fol. 1470] bearings in the United Kingdom under the conditions you have described, what if anything, in your opinion, would it be necessary for that American capital to arrange, what kind of a setup would they have?

A. I think it would be almost impossible to sell bearings

in the United Kingdom unless a bearing plant were established there for the manufacture of those bearings.

Q. Have you heard of the slogan, if that's the right word, "Buy British"?

A. I have, for the past 25 years or more.

Q. And what does that indicate or mean to you?

A. It indicates that the British Government and the British Board of Trade, which is a governmental agency in England, commenced a campaign back in the early '20's to impress upon people in England and the United Kingdom that they should buy British made products. The packing cases with British goods in are stencilled in large letters "Buy British." Billboards throughout London and the midlands, towns such as Birmingham, and places of that sort, have enormous billboards with the slogan "Buy British." They have had those billboards for many years.

Q. What if anything would you say about the advisability, if perhaps not sheer necessity, of having British workmen and British supervisors in the producing plant of the [fol. 1471] United Kingdom?

A. I think it is highly essential for smooth operation to have British personnel both at the benches and in supervisory positions.

Q. And is that based on your own consideration of that subject?

A. That's based on my own analysis after consulting with many people in England who have had plants established there by American or Swedish or other interests.

Q. What if anything would you say about the proper nationality as to being British or otherwise of those who sell bearings in the United Kingdom?

A. I think it's highly essential that British born personnel be employed in the sales departments of bearing plants or bearing concerns in the United Kingdom.

Q. And why do you think that?

A. The British business man is ordinarily very hard to approach. Engagements have to be set up days, or in some instances weeks in advance. For an American to try to make appointments and to make a sale is a most difficult matter. The British people seem to resent outside influences.

Q. Something has been said about metric sizes of bearings. What does that mean?

[fol. 1472] Mr. Day: If the Court please, I think at the adjournment we were talking about metric sizes.

Q. What does that mean?

A. The metric system of measurement depends upon meters, millimeters, as contrasted with our inches, feet, yards in the English and American system of measurement.

Q. And in what countries abroad do the metric sizes of bearings prevail?

A. I believe that the metric sizes prevail in almost all countries throughout the world with the exception of within the United Kingdom and the United States of America and Canada.

Q. Do the metric sizes apply in France?

A. They do.

Q. What if any bearing or effect, if any, in your opinion, does the fact that in certain countries bearings are meas-[fol. 1473] ured in metric sizes have to do upon the question of the difficulty of an American company doing business abroad?

A. It presents quite an obstacle to an American company. The metric countries in general use bearings that conform to what is known as the I.S.A., I believe the full name of that is the International Standards Association, and metric sizes are used almost exclusively in those countries wherever possible. Of course some inch sizes are used on occasion.

Q. Well, what effect does that have on the manner of transacting business by an American company as to whether it has a plant abroad or an agency abroad or something of that kind?

A. From a standpoint of practicability it is much better to have a plant in a metric country where sales are to be made in such countries.

Q. That is a plant producing inch bearings?

A. A plant producing inch bearings is not entirely out of the competition but it is easier to place metric sizes in a metric country than it is inch sizes in a metric country. Some bearings can be made to internal inch dimensions and external metric dimensions. In such cases the

inch bearing can be sold with slight alteration in the [fol. 1474] outside and inside diameters.

Q. What do you understand by the expression "the Sterling Bloc": what does that mean?

A. The Sterling Bloc is a system of currency exchange that is under the control of the British Government. The pound sterling is the unit of currency in usage throughout the United Kingdom with the exception possibly of Canada. The pound sterling is maintained presently at a price of about $4.03 to 1 British pound. That is a fictitious value, as pounds in the world market can be readily bought for about $2.50, in American money for one British pound.

Q. Well, what effect does the Sterling Bloc have upon the question of transacting business and the manner of transacting business in the United Kingdom?

A. I think perhaps it accelerates the exchange of goods between England and other members of the Sterling Bloc but it stultifies the importation of goods from outside the Sterling Bloc, particularly from hard money countries like the United States.

Q. Will you tell the Court how it has that effect?

A. The British Government must pay for goods obtained from the United States in dollars and dollars cannot be readily purchased by pounds. Few people wish to exchange dollars for pounds. Therefore, it is almost incum- [fol. 1475] bent upon England to trade within its own economy, within the Sterling Bloc.

Q. You testified a while ago that in your opinion it would not be commercially practical for an American company to sell bearings in the United Kingdom, and at that time you had given one reason for it, for the attitude of the British Government. I will ask you whether or not your opinion is reenforced by these other considerations you have been testifying to?

A. Those are great deterrents to free trade between the United States and England.

Q. What would the situation in that regard be as to the British Colonies outside of the United Kingdom?

A. The Colonies are within the Sterling Bloc and it is very difficult to sell American goods in the Colonies because the dollars are not available for payment.

Q. You have testified so far about the general situation as you understand it in the United Kingdom, Great Britain,

and its Colonies. What is the situation that you have discovered in France?

A. The condition in France is somewhat similar to that in England. France has tried to maintain the franc at artificially high levels. Just recently, I believe in January or February of this year, the franc was officially devalued, but, even so, black market francs are still plentiful, and [fol. 1476] you can obtain more francs for a dollar than the standard rate of exchange would justify.

Q. What is your opinion as to the advisability, if not the necessity, of an American company or of any company selling bearings in France having its plant located in France?

A. It has been advantageous to manufacture bearings in France for many years and that is particularly true today. The French Government wants bearings manufactured in France and makes it very difficult for bearings to be imported into France.

Q. Can you state some of the respects in which the French Government makes it difficult to import bearings into France?

A. They have a tariff and it becomes necessary to get governmental permission before bearings can be taken into France, and that permission is extremely difficult to obtain.

Q. So, what would you say as to whether or not it would be commercially practical for American Timken, without having a plant or an arrangement for a plant in France to sell bearings over there now?

A. I think it would be practically impossible.

Q. How long would you say that condition has existed? [fol. 1477] A. I would say that condition has existed clearly for the past 20 years or more.

Q. And would you say in your opinion that that condition existed, say in 1927 and 1928?

A. I believe it did.

Q. As to French dependencies, what would the situation be?

A. The situation is pretty much the same in the Dependencies; they prefer to deal with the mother country.

Q. British Timken had a plant in Great Britain, did it not?

A. It did.

Q. And Great Britain is how far from France, across the Channel?

A. I believe there is one point that is roughly 30 miles.

Q. And state whether or not British Timken found from a business standpoint it essential to have a plant in France, that is French Timken?

A. Yes, they felt that it was essential.

Q. Does the Timken Roller Bearing Company have a plant in Canada?

A. It does.

Q. Will you state the circumstances under which that was established there?

A. The Canadian Government had difficulty in securing an adequate supply of anti-friction bearings during the [fol. 1478] course of World War II, and on many occasions the Office of Defense, headed up by Mr. Howe told representatives of the Timken Company and of other anti-friction bearing companies in the United States that Canada was going to insist upon having anti-friction bearings built in Canada. Mr. Howe told H. H. Timken, Jr., and me that if we did not choose to establish a plant in Canada that they would prevail upon someone else to manufacture tapered roller bearings in Canada, and as a last resort the Government might be forced to manufacture the bearings as a governmental project.

Q. And state whether or not in your opinion that was due to the position and attitude of Canada with relation to its domestic economy?

A. The Canadian Government, according to Mr. Howe decided that capital goods must be made in Canada for consumption in Canada, and since anti-friction bearings, particularly tapered roller bearings, were incorporated in many of the capital goods being manufactured in Canada or contemplated for manufacture in Canada, it would be highly essential to establish a plant for the manufacture of tapered roller bearings in Canada.

Q. What if anything have you discovered as to the bearing situation in Germany?

[fol. 1479] A. Presently?

Q. No, over the years.

A. The manufacture of anti-friction bearings in Germany was confined largely to ball bearings and straight

roller bearings, very few tapered roller bearings were made in Germany, very few were used in German equipment. We were literally astounded during the course of World War II to see the scarcity of tapered roller bearings in use in German war materiel which was captured and brought back to this country for inspection and examination. The use of ball bearings and straight roller bearings was very high; the use of tapered roller bearings was extremely low.

Q. Well, was Germany a nation that had a domestic economy?

A. Germany was a nation that had a highly developed capital goods industry before World War I and after World War I and during the first part of World War II. Of course that manufacturing economy was upset considerably by bombing attacks and artillery fire.

Q. So that from your experience and your study, having in mind the territory which is described in, let's say the 1934 contract as the territory of British Timken, and the territory that is described in that contract as the territory of French Timken, what would you say as to whether or [fol. 1480] not in your opinion it would be a practical or sensible thing from a commercial standpoint for American Timken to sell its bearings in those territories?

A. I do not believe it would be practical or sensible.

Q. I want to ask you now something about the carrying on of the service and replacement bearing business in the foreign countries, that is, let's say the British United Kingdom. How does American Timken carry on its servicing and replacement business in Great Britain, for example?

A. You mean on American made capital goods such as automobiles?

Q. Yes.

A. The servicing is done by dealers and jobbers who are licensed or who are sold bearings by British Timken Limited. Those bearings are made to the identical dimensions of American bearings and are replaceable without any machining or other alterations of the original piece of capital equipment.

Q. Well, what kind of manufactured goods have original American bearings that reach into or go into the territory, say, of Great Britain—automobiles?

A. Passenger cars, trucks, in some instances railway equipment, in some instances heavy machine tools such as punch presses, screw machines, lathes, grinders, milling machines.

Q. If a bearing in one of those mechanical constructions [fol. 1481] wears out over in Great Britain, what is the ordinary method and process of having it replaced?

A. The user of the piece of equipment ordinarily tears down the wheel, if it is a wheel bearing that has failed, and examines the bearing and finds that it has a certain number, and the name "Timken." He orders from a dealer or a jobber a bearing of the same number and replaces it in the piece of equipment. That bearing can be obtained in numerous places throughout England or the United Kingdom, through dealers appointed by British Timken Limited.

Q. And is that replacement service business that we are talking about a large proportion or otherwise of the total bearing business, say, of British Timken in Great Britain?

A. I don't know what percentage it is in Great Britain. I don't have those figures available, but Mr. Austin or Mr. Sauer, of our company, have those figures available.

Q. And state whether or not you believe that is an advantageous method of carrying on the replacement and service business for automobiles and other constructions?

A. I think it is advantageous. I think it is very displeasing to a person who buys a piece of equipment, whether it is a passenger car or truck or punch press, and has a bearing failure and has to wait any considerable length of time [fol. 1482] for replacement.

Q. That is, if a man has an automobile over in, let's say England, that has as a part of its equipment American bearings you think it would be rather difficult for him to write home instead of getting the bearings at some supply point or dealer in Great Britain?

A. Even with cable communication and airplane delivery the car or piece of equipment would be out of commission for a matter of a week or more, with the best possible communication, I would think.

Q. I think something has been said in the complaint in this case, perhaps in the evidence already adduced, as to what was done by American Timken and British Timken and French Timken during the war by way of bearings.

Can you give the Court some idea of what was done by American Timken in that regard?

A. When the war commenced in September, 1939, Great Britain commenced to manufacture war materiel in great quantities, and almost everything that is used in modern warfare is dependent upon anti-friction bearings, either ball bearings, straight roller bearings, tapered roller bearings, or variations of those bearings. It was impossible for England and France to get sufficient bearings from the British and French plants, therefore cables and telephone [fol. 1483] communications were received from both Great Britain and France asking for large quantities of bearings from our company and for component parts of bearings, and our plant turned those parts and completed bearings out in great quantities during the entire course of the war and shipped them to England and France. Of course, in France the shipments were cut off around May 1940 and not resumed until our troops had landed in France in 1944. In England the deliveries were made throughout the entire course of the war. Of course some shipments were lost by submarine action and bombing but, in general, the deliveries reached their destination.

Q. Now, you have been asked some questions concerning the selling of bearings in British and French territories by the American Timken. Have you an opinion, based on your study and your experience and your research, as to whether or not it would be commercially practical and feasible and sensible for British Timken to sell bearings in the United States of America? Have you an opinion on that subject?

A. Yes, I have.

Q. What is your opinion in that regard?

A. My opinion is that it would be impossible for British Timken to sell bearings in the United States today, anti-friction bearings.

[fol. 1484] Q. Will you tell the Court the basis of that opinion?

A. The cost of manufacture in England is greater than it is in the United States. In addition to the cost barrier there is a tariff barrier of 35 per cent ad valorem, and 8 cents per pound specific, which weighs against imported anti-friction bearings into this country. In addition to that,

I think that the British sales approach would not be readily acceptable in this country, and the delivery from a point some 3000 or 3500 miles away would be another obstacle in sales of anti-friction bearings from England to the United States.

Q. And is your opinion the same with relation to the sale of bearings from France into the United States?

A. I think it would be more pronounced in the case of France to the United States than it would in the case of England.

Q. I want to ask you something I would have forgotten, perhaps, or omitted if Mr. Ketterer hadn't suggested it to me, about the situation in Russia. Now, Russia, as I understand it, under the contracts, was a part of the territory of British Timken; is that right?

A. Russia was a country where either British Timken or American Timken could make sales.

Q. In the original contract, I think, am I not correct, Russia was a part of Europe?

[fol. 1485] A. The original contract, that is true. I thought you were speaking of the latest contract.

Q. No, you misunderstood me. Originally.

A. The original contract had Russia as part of Europe.

Q. I believe there was a change made in the 1934 contract, is that right?

A. There was.

Q. Will you state to the Court the circumstances which preceded or surrounded the making of that change?

A. The Russian Purchasing Commission in this country and in England and in other countries throughout the world got at different times goods from different countries depending upon the exchange situation prevailing at the time, and the state of Russian balances in certain countries. Many times goods would be bought from Germany for a period of six months or more, then the puchases would switch to Sweden or to England or to the United States or to Italy, and with that in mind it was felt that Russia might be better served by having sales avenues open from Great Britain and the United States.

Q. Was that the purpose of the change in the 1934 contract?

A. It was.

Q. And that same provision was carried on in the 1938 contract?

A. It is in effect today.

[fol. 1486] Q. You say you visited Russia. Now, when was that?

A. In June and July of 1945.

Q. What was the occasion of that visit?

A. The Russians had made a trade arrangement with Italy back about 1929 or '30, and one of the provisions of that arrangement was that Italy would engineer and establish a plant for manufacturing a considerable number of types of anti-friction bearings in Russia. That plant was built in 1931-32 in Moscow by the RIV, a subsidiary of Fiat of Italy. The bearings produced in the Moscow plant were never of very good quality and the quantities were not impressive, and when the war had progressed to the point of where Russia became an ally of the United States immense numbers of anti-friction bearings were purchased by the Treasury Department of the United States for shipment to Russia under the Lend Lease arrangement. It got to the point of where the American bearing companies were having such a burden imposed upon them by delivering bearings not only to our own armed forces but in quantities of millions to the Russians that considerable complaint was made to the Treasury Department and to the Armed Forces about the situation. The Russians were asked to manufacture more of their own bearings, and they plead inability to produce more.

[fol. 1487] Q. This was all during the war, of course?

A. This was during the war. And they suggested that if the American bearing companies would engineer and help build a plant in Russia for the Russian Government the situation might be eased, and that Russia could produce more of her own requirements. They investigated, the Russian authorities investigated several American plants and finally decided that Timken would be best fitted for engineering such a project, and they asked us if we would agree to draw up plans for the bearing plant and lay in the equipment and train the Russian workmen in the manufacture of anti-friction bearings. We agreed to this, with the acquiescence of the Department of State and of the Armed Forces, and in 1945 I visited Moscow with Mr. Bergstrom,

vice-president in charge of engineering of our company, and Dr. Horger, who were in charge of the railway engineering division of our company. The discussions with the Russians convinced us that they were interested in getting immense amounts of American machine tools under the pretense of establishing a bearing manufacturing establishment, and we turned down the proposal. In the meantime the war with Japan had ended and the participation of Russia was no longer sought by our Department of State or our Armed Forces.

[fol. 1488] Q. Do you know what the attitude of Russia is now as to having bearing plants within its own borders?

A. Yes, they have gone ahead and established new bearing manufacturing facilities, partly by purchase of equipment from Sweden and partly by possession of bearing plant equipment in Germany. I saw immense quantities of German machine tools in Moscow that had been brought up from different points in Germany, where bearing plants had been moved, or at least the machinery had been moved to Russia by the Russian army.

Q. How long were you in Russia?

A. About two weeks.

Q. And was that the only visit you made there?

A. Yes.

Q. There has been something said in this case about the subject of know-how. What do you understand that to mean?

A. I understand it to mean the knowledge of how to interpret blue prints and specifications and apply that knowledge to the manufacture of product, the catylist between the theory and the practice.

Q. Back in 1919 when you became connected with the Timken Roller Bearing Company did you become advised of the fact that there was a British Timken or that there was a relation between the Timken Roller Bearing Com-

[fol. 1489] pany and the Electric & Ordnance Accessories Company?

A. Yes, we shipped bearings and component parts on occasion to our British manufacturing affiliate. They weren't at that time partners of ours, they were working under a royalty arrangement.

Q. And at that time, from 1919—of course this case goes back to 1909, 10 years before you came to Canton—but from

1919 to 1927 what did you have to do with the manufacture and production operations of the Timken Company?

A. I was in the production end of the business in all of those years.

Q. And did you learn also that the Wolseley Motors Company came into the picture in England?

A. Yes, sir.

Q. And afterwards that British Timken did?

A. Yes.

Q. And being interested in or engaged in the production end of the business in Canton, did you acquire some knowledge as to the nature of the work and the progress that was being accomplished, say, from 1919 up until 1927?

A. I did.

Q. What did you learn in that regard?

A. I learned that the British methods were distinctly inferior to American methods as far as manufacturing was concerned.

[fol. 1490] Q. Can you give any details in that regard?

A. Yes. The British manufacturer made bearings largely from bar stock or from forgings, whereas in the United States we made bearings from seamless tubing. The British costs were higher and in general their quality at that time was quite inferior to the quality of bearings being made in the United States by the Timken Company.

Q. And when was it that you began to sit in on talks or meetings with H. H. Timken and others down in the Timken plant in Canton having to do with policy and general business of the company?

A. In about 1922.

Q. And what would you say as to what you learned about the progress being made in Great Britain by E&OA Company and Wolseley and British Timken as to whether it was satisfactory or otherwise?

A. The concensus of opinion expressed in the meetings was that British Timken was not advancing nearly as fast as American Timken was in new fields of endeavor. They were distnctly slower in getting new applications for bearings than the American Company was.

Q. Do you remember what the practice was, say prior to 1927, as to American Timken imparting information to, let's say British Timken, as to manufacturing methods and [fol. 1491] applications and things of that kind?

A. We imparted some information and prints to them but we had a feeling that full advantage was not taken of the knowledge we were sending to them.

Q. And did you acquire a general knowledge of the reports that were made to the Canton Timken Company in that regard prior to 1927 as to the progress of the British Company?

A. Yes.

[fol. 1492] Tuesday, April 6, 1948, 2 o'clock P. M.

Direct examination of William E. Umstattd (Continued).

By Mr. Day:

Q. Mr. Umstattd, this morning you said something about a French tariff having some effect on the sale of bearings by an American company in France.

A. Yes.

Q. During the noon hour have you had some conversation in relation to that?

A. I have learned that the tariff was suspended by the Vichy Government in 1943 and has not been reinstated.

Q. And you wish to add that to your testimony?

A. I do.

Q. You testified this morning that the SKF principal factory was in Gothenburg, Sweden.

A. It is.

Q. And do you know generally about the costs of labor in Sweden, whether they are high or low?

A. The wages paid per hour in Sweden are considerably lower than those paid in the United States.

[fol. 1493] Q. Well, do you know, what is the fact as to whether or not the SKF Company, the Gothenburg, Sweden, big SKF Company, has made it a practice of exporting bearings into France and Great Britain from Sweden, or whether they have constructed plants of their own in those countries?

A. They have constructed plants in countries such as Germany, France, England, the United States.

Q. Have you learned anything concerning the buying of bearings by the governments themselves in Continental countries of Europe?

A. I have.

Q. What have you learned in that regard?

A. Many industries are owned by governments in Europe and the United Kingdom, and the purchase of bearings is made through governmental departments.

The Court: You are now referring to the present time?

The Witness: The present time, as well as the past, your Honor. In Germany the railroad systems were owned by government for many years. The same condition prevailed [fol. 1494] in France, and many other industries were owned by the government in those countries.

Q. And along the line of the question suggested by the Court, your testimony this morning concerning the impracticality of American companies selling bearings in the foreign countries, does that cover the present time and also as far back as 1927?

A. It does.

Q. And throughout the years from that time?

A. It does.

Q. And before 1927 to some extent?

A. Yes.

Q. Something has been said in this case, as we have found out, about original installation of bearings and installation for service or replacement purposes. Now, take a country that has what we know as a domestic economy, that has plants of its own, is there an opportunity there, in your opinion, for someone from the outside to send bearings into that country for original installation?

A. Very little.

The Court: Mr. Day, what do you mean by "domestic economy"?

Mr. Day: I mean a country, so far as bearings are concerned, that produces bearings in plants located in the [fol. 1495] country. I think if I stated it that way it probably would be more expressive of what I have in mind, because I realized this morning when we talked about the phrase "domestic economy" it might mean manufacturing, it might mean agricultural, and a lot of things.

The Court: That's the reason I asked.

Mr. Day: What was the last answer?

(Last answer read by reporter.)

Q. Why is that?

A. The manufacturing concerns in countries where anti-friction bearings are produced are more likely to buy from local sources than from foreign sources.

Q. And is that true also of countries which make products that require the use of anti-friction bearings?

A. That is true.

Q. Take a country that has no factories of its own within its borders, are they interested in importing bearings?

A. In some instances for replacements on such things as automobiles or pumps or windmills, things of that sort, that are used even in agricultural countries.

Q. That is, for replacement purposes?

A. For replacement purposes.

Q. Now, in your experience to what extent have you found [fol. 1496] that the sale of replacement bearings, let's say in an automobile, follows the automobile itself?

A. In the case of American automobiles exported to foreign countries certain spare parts are exported to dealers who handle the original sale of the automobile in those countries. Those are many parts that are likely to wear out or become damaged in use, and replacements are necessary for the functioning of the vehicle.

Q. And ordinarily where do those replacements come from?

The Court: I don't quite understand that. Will you read the last question and answer, please?

(Last question and answer read by reporter.)

The Court: By exporting, you mean exporting from the United States with the original vehicle?

The Witness: Either with it or shortly after the original vehicle has been exported.

Q. From whence, or from where, are those replacement parts obtained?

A. Generally they are obtained from the manufacturer of the vehicle who, in turn, obtains them from his various sources of supply.

Q. And if you have in England, for instance, an automobile that has bearings, an English automobile with bearings in it, or in any other country an automobile with bearings [fol. 1497] in it made in that country, from whence comes the replacement parts for that vehicle ordinarily?

A. Ordinarily they come from the point of origin of the

vehicle. If it's a British car the spare parts come from England, if it's made in England.

Q. And is the result of that fact or series of facts to restrict considerably the replacement market in foreign countries for American bearings?

A. It does in countries where cars built outside the United States predominate.

Q. I think you testified this morning that replacement parts for cars, let's say made in America and shipped over to Great Britain, are obtained in many instances from British Timken.

A. Yes, they are. In some instances they are obtained from a dealer, in other instances from British Timken.

Q. That is, they might get them from British Timken, and they might also get them from some dealer in that particular country who is carrying a supply of the bearings, is that right?

A. That is true.

Q. What has been the practice of American Timken in selling bearings in British Timken's territory where British [fol. 1498] Timken is unable to make deliveries?

A. If American Timken can make deliveries the business has always been obtained by American Timken of bearings shipped to those countries.

Q. And is it true the other way around, that if British Timken can make deliveries it supplies the bearing?

A. It does.

Q. And why is that?

A. There are a number of reasons. Sometimes it's a matter of credit, as to where the money lies, whether it is in pounds or in dollars. In other instances it depends upon the production facilities of either the American Company or the British Company.

Q. Is it dependent to some extent upon the desire of both companies to get a Timken bearing installed or in use rather than some other bearing?

A. The motive behind the sales forces in American Timken, British Timken and French Timken are identical, that is, always to sell a Timken bearing.

Q. Whenever that can be done?

A. Whenever it can be done.

Q. Rather than some other bearing?

A. Yes.

Q. Or rather than have some other bearing used?

[fol. 1499] A. Yes.

Q. Going back now to 1927 for a few minutes, at that time your position with Timken Roller Bearing Company was what?

A. As I recall it, it was as assistant factory manager in 1927.

Q. Do you remember when Mr. Dewar came over to the United States in 1926?

A. I do.

Q. Did you meet him at that time?

A. I did.

Q. What was the extent of your meeting him, and what did he do that you observed there?

A. I conducted him through our plant and explained the various operations we used in manufacturing tapered roller bearings, and through our steel mills and showed him our facilities for manufacturing steel of solid bars, seamless tubing, wire, and the various types and analyses of steel that we made, and the testing laboratories, and things of general interest to him as a manufacturer.

Q. How long was he here upon that occasion?

A. I don't recall the exact number of days. I believe he was at our plant for about four days, as I recall.

Q. Do you remember that at that time he was in Canton as a member of some British Commission?

A. He told us he was sent over by some governmental [fol. 1500] agency to observe the technology used in manufacturing in the United States, not just bearings but many other types of manufacturing.

Q. Do you recall that Mr. Ely went to London in 1927?

A. Yes.

Q. And were you informed, in a general way, or perhaps in a more specific way, as to what was going on over there by the reports he made and the letters he sent and the cables he sent back home to the plant in Canton?

A. I was.

Q. Were you present at any meetings or conferences attended by H. H. Timken and others in the plant at Canton concerning Mr. Ely's visit to London?

A. I was.

Q. And were you aware of the fact that negotiations be-

gan in 1927 having in view the purchase of British Timken by American Timken and Mr. Dewar?

A. I was.

Q. Did you hear some discussion at that time as to territory divisions as between American Timken and British Timken?

A. I did.

Q. What did you hear in that regard, so far as you can remember it after all these years?

A. The matter of selling was discussed and considered at [fol. 1501] several meetings with Mr. Timken, Mr. Strough, who was secretary-treasurer of the company at that time, Mr. Lothrop, Mr. Overmeyer, and with Mr. Ely, who was not at that time employed by the Timken Company regularly. He was employed for this particular mission. The matter of sales was discussed, as to whether or not sales could be better carried on by an American sales force or British or French sales forces.

Q. And what was the—you say they were discussed. What was said in those discussions, what was the point of the discussion?

A. The pros and cons of selling were brought out at those meetings, and the consensus of opinion was that bearings could be sold more readily by British forces in British territory and by French forces in France or possessions of France.

Q. Now, at that time did you know that there was—did you have general knowledge of the fact that there was a contract between American Timken and British Timken?

A. In 1927?

Q. Yes.

A. I don't believe there was a contract between American Timken and British Timken at that time. I don't recall the exact name of British Timken at that time. It may [fol. 1502] have been British Timken Limited. Bearings were being manufactured in England at that time, but I'm not certain that the name was British Timken Limited at that time.

Q. You haven't any definite recollection about that?

A. I don't recall definitely the corporate name of the British Company.

Q. Would it refresh your recollection to say that first there was an arrangement between American Timken and the Electric & Ordnance Accessories Company?

A. I know that definitely.

Q. And then there was the Wolseley Company came into the picture a very short time?

A. The Wolseley Company was the parent company of Ordnance.

Q. And do you recall now that about 1920 the British Timken came into the picture?

A. I don't remember that that was the name. I know that bearings were manufactured there, and they were called British Timken bearings, but I'm not certain that the name was British Timken at that time.

[fol. 1503] Q. Starting in 1927, did you have—or back in 1927 and 1928, do you remember that a contract was drawn up between American Timken and British Timken?

A. Yes, I recall that. That was when Mr. Dewar became our partner in the British venture.

Q. And that was dated as of January 1, 1928?

A. I don't remember the exact date of it. I know it was approximately that time.

Q. And when was it that, if at all, American Timken started to send its men, its skilled men over to London to British Timken?

A. That was after Mr. Dewar had visited us in 1926, and after the new contract had been signed. As I recall, it was sometime around 1928.

Q. Do you remember there were some men went over even before that time?

A. I am not certain of the date. I know that at various times we sent men over there, but I am not sure of the date. I believe we did send them before 1928, but I am not certain of those dates.

Q. In 1927, when Mr. Ely went over there to London, state whether or not you learned that for some time prior to that time British Timken had been carrying on a bearing business?

[fol. 1504] A. Yes, bearings had been—Timken bearings had been made, as I told you earlier, but I am not sure that the name of the Company at that time was British Timken. I know it was after the arrangement was made with Mr. Dewar.

Q. Did you learn anything at that time, or before that time, as to whether or not British Timken had sales agencies on the continent in various countries?

A. They did.

Q. And at various points of the United Kingdom?

A. They did.

Q. Did you hear, without going into the details, later of the situation as to French Timken?

A. The bearings, as I recall, in France at that time were built by a concern that didn't carry the name of Timken.

Q. By SMG?

A. I believe it was the Societe Mecanique.

Q. In 1926 and 1927, where was American Timken selling bearings?

A. In what years?

Q. Say in 1926 and 1927.

A. American Timken was selling bearings in the United States, in Canada, in Mexico, and in some South American countries, and in rare instances in Europe.

Q. Any other countries?

[fol. 1505] A. Perhaps other countries. I don't recall. I think we perhaps sold small quantities in China, Japan. I know we had agents in both China and Japan and sold some bearings there, and I don't recall any great sales other than to Russia. We had sold some bearings to Russia at that time.

Q. Now, I asked you a while ago about sending Timken men over to London after the arrangement with Mr. Dewar was made. What if anything did you have to do with that?

A. I selected those men.

Q. As a part of the duties that you were performing for Timken Roller Bearing Company?

A. Yes.

Q. Can you give the Court some idea when you started first to send men over there and who you sent? Have you any recollection of that?

A. Yes, we sent men after 1928 at fairly steady intervals. I would say we had someone in England almost every year after 1928 at some time during the year, usually linemen or skilled machine operators who were capable of setting up jobs on machines and instructing workers as to the proper operation of the machines.

Q. And what was the purpose of sending those men over to London, or England?

A. To enable the British Company to cut costs and manu-

[fol. 1506] facture bearings more cheaply and to a better standard of quality.

Q. Do you know whether or not, after French Timken was organized, any men visited French Timken that came from American Timken?

A. Yes, they did.

Q. And to what extent did that take place?

A. Some of the same men who went to England also went to France. I don't know that each of them went to both countries, but in general they covered both England and France on their visits.

Q. I think that subject will be covered by other witnesses, Mr. Umstattd, and I don't want to ask you in detail about it, but is it a fact or not that starting back in 1927 American Timken did send men from time from the American Timken plant over to British Timken?

A. We sent men over back around 1927 and 1928, and right on up to the present date.

Q. When did any of the Timken men go over last, do you know?

A. Mr. Eastberg was over there about 18 months ago, as I recall. Mr. Murray was in both France and England within the past two years, and one of our railway men—his name escapes me at the moment—spent some time in France about a year ago going over railway bearing installations.

Q. And how continuous has been this flow of know-how, if [fol. 1507] I can so express it, from American Timken to British and French Timken since 1927?

A. By way of personal appearances on the scene?

Q. Yes, we will have that first.

A. I think there have been representatives in the two countries, England and France, every year with the exception of the war years. I believe between 1939 and 1945 no representatives were sent.

Q. In addition to personal visits of individuals, what if any means of transmitting know-how have been carried out by American Timken with relation to British Timken and French Timken?

A. Engineering data has been supplied in the form of blueprints, written specifications, moving picture films, still portraits and photographs of operations, and by cablegram, and in some instances Trans-Atlantic telephone.

Q. How continuous has that been since 1927 and 1928?

A. That has been almost daily or, at least weekly, since that time. That information has been flowing from this country to England, and to a considerable extent to France, either through England or directly to France.

Q. Has any know-how come from British Timken or French Timken to American Timken to any great extent?

A. Very slightly. We have had one or two bearings sent [fol. 1508] to us that were invented and perfected in England within the war years but, as far as I know, nothing from France.

Q. Then the designs of bearings have originated where?

A. Largely in our Engineering Department in Canton, Ohio.

Q. Is that true also of the methods of manufacture?

A. It is.

Q. And the manner or methods of application?

A. It is.

Q. Do you have a Research Department in connection with the Timken Roller Bearing Company?

A. We do.

Q. Will you tell the Court generally the size and extent of it?

A. The Research Department is actively involved in testing out new methods of manufacture of bearings, new designs of bearings, new steels for use in the production of bearings, new types of heat treatment for the production of bearings, and the Company spends in the neighborhood of $250,000 to $300,000 per year on this venture.

Q. To what extent is the knowledge obtained by that method, as to bearings, transmitted by American Timken to British Timken?

A. It is transmitted to British Timken as soon as it becomes feasible for use in the manufacturing of bearings. [fol. 1509] Q. And either directly or through British Timken to French Timken in many instances?

A. Yes.

Q. Do you remember Mr. Pascoe and Mr. Dewar coming over from England to this country in 1934 in connection with a project including, among other things, the sale of stock to the British public?

A. I do.

Q. And you recall that thereafter a contract was drawn up dated, I think, the last of December 1934?

A. I don't recall the exact date. I know that it was in approximately 1934.

Q. Did you attend conferences at which Mr. Dewar and Mr. Pascoe were present at that time?

A. I did.

Q. Do you recall some discussion about the Russian territory in connection with those conferences?

A. I do.

Q. I think you told us about that this morning.

A. I did.

Q. Do you recall how much stock, additional stock, was sold at that time?

A. I do not.

Q. Do you recall some discussion concerning the attitude [fol. 1510] of brokers in Great Britain who were connected with the sale of that stock?

A. I do.

Q. What was said on that subject?

A. Both Mr. Pascoe and Mr. Dewar said that the brokers felt that the British Timken Company was a thriving company and that there would be no difficulty in selling stock provided some protection were given to the venture, and they suggested that the contract be extended for some considerable period of years.

Q. And it was exte-ded until 1965, as I remember?

A. As I recall, it was extended for a period of approximately 30 years.

Q. We have a document here that is marked—well, it's a memorandum from Mr. Umstattd to various persons dated at Canton, Ohio, February 20, 1941.

[fol. 1511] Mr. Day: Yes, Government's Exhibit 118.

Q. There are perhaps some other exhibits that relate to the same subject matter, but I want to call your attention to this part of this exhibit, or memorandum, marked Exhibit 118, and before asking about it do you remember a Mr. Gutteridge and a Mr. Chamberlain?

A. I remember them.

Q. Do you remember them coming to America?

A. I remember them coming to Canton, yes.

Q. Have you examined that memorandum?

A. Not recently.

Q. Will you read it, please? (Handing Government's Exhibit 118 to witness.)

A. Aloud?

Q. No, read it to yourself, please.

A. (Witness reads exhibit.)

Q. Do you recall it now?

A. I do.

[fol. 1512] Q. Calling your attention to the third paragraph:

"I explained to Gutteridge and Chamberlain that Australia was controlled by British Timken and that under no circumstances would we consider building a plant in Australia. I pointed out to them that it would be almost impossible to get delivery on any machine tools suitable for the manufacture of anti-friction bearings, and that no bearing manufacturer in this country had excess machinery that could be shipped to Australia. Mr. Gutteridge wanted to know if we would be interested in establishing a plant in Australia if he could secure priorities for the necessary equipment. I told him that I did not think he could secure such priorities, but if he did we would not be interested as I had previously pointed out that British Timken controlled the sale of Timken bearings in Australia."

What did you mean by that?

[fol. 1513] A. I meant that that was British Timken territory.

Q. Under the arrangements that American Timken had with British Timken?

A. Yes.

Q. And when you say, "I pointed out to them it would be almost impossible to get delivery of any machine tools suitable for the manufacture of anti-friction bearings and that no bearing manufacturer in this country had excess machinery which could be shipped to Australia," was that the fact?

A. That was the fact. We were having extreme difficulty in getting machines enough to take care of our production.

Mr. Day: I think that's all now.

Cross examination of William E. Umstattd

By Mr. Nitschke:

Q. Mr. Umstattd, I want to add another bearing to this collection we have got here. Do you recognize what this is (handing bearing to witness)?

A. This is a Bower tapered roller bearing marked 3920 Cup, and 3984 Cone.

Q. And that's the same size as the—bears the same numbers as Timken bearing marked Plaintiff's Exhibit 3 (handing Government's Exhibit 3 to witness)?

A. Yes.

[fol. 1514] Q. Is that right?

A. Yes.

Mr. Nitschke: I would like to have this bearing marked for identification at this time as Government's Exhibit 161.

(Carton containing bearing was thereupon marked by the Clerk, for identification, Government's Exhibit No. 161.)

Mr. Nitschke: This box contains a Bower roller bearing, Cup No. 3920, Cone No. 3984.

Q. During your direct examination, Mr. Umstattd, you said something about the interchangeability of bearings, and I would like to ask you if the Timken bearing No. 3984-3920 is interchangeable with this Bower bearing bearing the same numbers?

A. It is generally interchangeable. I wouldn't say that the dimensions are identical, but from the standpoint of practical application the bearings can be interchanged.

Q. In other words, if—well, let me ask you first, what is a bearing of this size used for?

A. I don't know what this particular bearing is used for. It could be used for a rear wheel on a truck or a bus, or it could be used for a differential, it could be used for gear boxes in the manufacture of machine tools, could be used for [fol. 1515] a line shaft bearing, could be used for a hanger bearing in installations made by Meadeart or Dodge Company.

Q. You say it could be used for a truck. Would that be, for example, a Ford truck, a one-ton or one and a half ton?

A. I would say it could be used for the rear wheel application for that truck.

Q. Do you know whether or not both the Bower bearing of this number and the Timken bearing of that number are used in Ford trucks?

A. I am not positive about Ford at the moment, but I do know that in Ford trucks certain Timken bearings are used and certain identical numbered Bower bearings are used.

Q. In the same position?

A. In the same position.

Q. As the Timken bearing?

A. Yes.

Q. Well, can you explain to the Court a little more accurately what you mean by interchangeability? This Bower bearing, Government's Exhibit 161, and this Timken bearing, Government's Exhibit 3, either one could be put in the wheel or the axle of a Ford truck without any change in the axle?

A. That is true, it could be put in the axle, but the internal dimensions of the bearings might vary to some slight degree.

Q. As a matter of fact, Ford does use these bearings in- [fol. 1516] terchangeably on his trucks, does he not?

A. I am not certain whether he does or not. We try to get Ford or anybody else who uses our bearings to use our cup and cone assembly rather than to use a cup of one manufacture and a cone of another manufacture.

Q. Yes, but with respect to both the cone and cup—

A. The complete assembly will go into the outside and inside dimensions of a Ford truck or any other truck, either Bower or Timken, where Bower and Timken bearings are used, but we prefer to have them use our cups with our cones rather than mixing Bower cups with Timken cones, or vice versa.

Q. Yes, I understand that. In other words, then, if a Ford truck which has a Timken bearing in it were to break down, and a new bearing was needed in the hole or space where the broken bearing was, you could replace it with this Bower bearing which has the same part number?

A. If you would buy both elements of the Bower bearing, the cup and the cone. Sometimes the failure involves only one element, and in that case it is always wise to replace the broken element with the same type manufactured by the same Company. In other words, if a cup breaks, buy a

new Bower cup to replace a Bower cup, or buy a new Timken cup to replace a broken or worn-out Timken cup.

Q. That's the commercial policy of your company and [fol. 1517] the Bower Company?

A. It is not commercial necessarily—it is commercial, but it is based upon the dimensions of the bearings. We have taper gauging machines that are, I believe, more accurate than any taper gauging machines built in the world, and we believe that our tapers are held to closer tolerances than any other tapers manufactured by other tapered roller bearing manufacturers.

Q. And Bower thinks probably his are held to closer tolerances than yours?

A. I don't believe he could prove it, because I don't believe he has the type of taper gauging machines that we have. We have gauging machines built by Warner & Swasey at a cost of around $25,000 for a machine that's not much bigger than this chair, and it's built by the same precision builders who build the astronomical instruments that Warner & Swasey build.

Q. Well, Bower probably doesn't admit his bearings are any less accurate than yours.

A. I don't know whether they would admit it, but I think we could prove it.

Q. Is it possible to—although you said you don't like to have it done, is it possible for us to take this Bower cone which bears the same number as yours, 3984, and place it [fol. 1518] with the Timken cup, 3920?

A. Yes, that is possible.

Q. And would you say that you will get a satisfactory performance if that interchange is made?

A. I don't believe you would get as satisfactory a result as you would if the units were combined with the proper cup. In other words, I think you get better performance if a Bower cone and Bower cup go together and a Timken cone and a Timken cup, than you would by mixing the two elements.

Mr. Nitschke: Your Honor, I would just like to show you these two. I have reversed the cups and cones (handing bearings to the Court.)

Q. Speaking about the assembled bearings again—

The Court: May I ask a question before you proceed with another question?

Mr. Nitschke: Certainly, your Honor.

The Court: What is the reason these numbers are alike? The Bower numbers are identical with the Timken numbers. Is that just by accident, or how does it happen?

The Witness: No, that's just by copying the Timken bearing. They just copy our bearing dimensionally and the numbering system too.

Q. As a matter of fact, in connection with part numbers, [fol. 1519] almost all tapered bearing manufacturers use the same part numbers, do they not?

A. We put the part numbers on the bearing and other manufacturers adopt our part numbers.

Q. And customers like that, don't they, so that they can buy—

A. I believe they do, and I believe the Government likes it, that is, the purchasing agents of the Government.

Q. And the bearing with the number 3984 made by your Company, or by Bower, or by Tyson, has the same external dimensions, they are all the same size?

A. They fit the same opening in an application, whether it's a hub of a wheel or a shaft of a wheel.

Q. Yes, and in that connection you have, do you not, Mr. Umstattd, several common customers with Bower for the same type of bearing, that is, for the same application on a wheel or an axle, you both sell the same bearing to the customer?

A. I know of a great number of customers that use both Bower and Timken bearings.

Q. On the same application?—

A. On the same application.

Q. The same sized bearing on the same application?

A. The same sized bearing on the same application, but my experience has been that those people like to put Bower [fol. 1520] cones and Bower cups and Timken cones and Timken cups on.

Q. I was speaking about the completed assembly.

A. The completed assembly is interchangeable.

Q. Who are some of those companies?

A. The Ford Motor Company, the Chrysler Motor Company, the Hudson Motor Company, the Packard Motor

Company, the Nash Motor Company, and perhaps many others.

Q. There are some that are not in the automotive field, such as tractor people such as J. I. Case?

A. I believe there are some tractor accounts, yes, like J. I. Case, John Deere, Oliver. There is also the Spicer Axle Company that use both Timken and Bower bearings in their axles.

Q. Do they buy both the cup and cone or just the cone?

A. They buy the complete assembly.

Q. They buy the complete assembly?

A. Yes.

Q. Are there any common customers of Bower and Timken who buy just the cup or the cone?

A. The wheel companies buy only cups, people like Motor Wheel Company and other people who make wheels buy the cups.

Q. That's the outer ring?

A. The outer element, yes.

Q. And you were going to say they do what?

[fol. 1521] A. They place this in the hub of the wheel at the wheel plants and ship the completed wheel to the automobile manufacturer.

Q. So when they sell a wheel it contains the outer race of the bearing in the wheel?

A. That is true.

Q. And when that gets to the automotive manufacturer he puts the cone on the axle, is that right?

A. That is true.

Q. And assembles the wheel together?

A. That is true.

Q. Is it possible sometimes that in doing that you might get a cup made by Bower on a Timken cone, or vice versa?

A. That does happen on occasion.

Q. It does happen on occasion?

A. Yes.

Q. Mr. Umstattd, do you recognize this volume I have in my hand (handing volume to witness)?

A. Yes, I do.

Q. What is that?

A. Timken Engineering Journal.

Mr. Nitschke: I would like to have that marked for identification as Government's Exhibit 162.

(Timken Engineering Journal above referred to was thereupon marked by the Clerk, for identification, Govern-[fol. 1522] ment's Exhibit 162.)

Q. I would like to call your attention to page 211 of that Engineering Journal—is this the same as a catalog?

A. In general, I would say that it would correspond with a catalog put out by some other types of business. There is a series of black and white drawings of Timken bearings giving the roller characteristics and the dimensions, and so on.

Q. I call your attention to page 211. Is that a drawing of the bearing which we have just shown the Court with the numbers 3984 and 3920?

A. Yes, this is a drawing of the outside dimensions of the bearing recently submitted by you as a Government's exhibit.

Q. I would like to show you this other volume, Mr. Umstattd. Do you recognize what this is (handing volume to witness).

A. This is a Bower Roller Bearing Company booklet entitled, "1947 Engineering Data."

Mr. Nitschke: I would like to have this Bower catalog marked as Government's Exhibit 163.

(Bower catalog above referred to was thereupon marked by the Clerk, for identification, Government's Exhibit No. 163.)

Q. Mr. Umstattd, I would like to call your attention to page 75 of the Bower catalog. Is that a drawing of the same [fol. 1523] size bearing, numbered 3984-3920?

A. Yes.

Q. And both in the Timken catalog and the Bower catalog the same part numbers are given, is that right?

A. That is true.

Q. And, although I have called your attention to this particular bearing which is on his Honor's desk, is that true with respect to the other sizes of bearings, that they bear the same part numbers in both catalogs?

A. So far as I know.

Q. That's the general practice, is it, with respect to both the Bower Company and the Timken Company using the same part numbers?

A. The Timken uses a part number and Bower copies it.

Mr. Nitschke: I would like to have your Honor see these two books or catalogs (handing Government's Exhibits 162 and 163 to the Court.)

Q. Incidentally, Mr. Umstattd, you mentioned on your direct examination that during the war the British could not get enough tapered roller bearings and that you shipped them considerable quantities of bearings. Is that right?

A. Yes, we did.

Q. Isn't it true that the Bower Company also sent bearings to England during the war?

[fol. 1524] A. I don't know.

Q. You don't know that?

A. No.

Q. As a matter of fact, you do know that you were not the only bearing company that assisted in the war effort by sending bearings over to England and France?

A. I have heard from friends of mine in the bearing industry that many millions of bearings were sent by companies other than Timken to England.

Q. On your direct examination, Mr. Umstattd, you also described for the Court a process of manufacturing a bearing. It occurred to me as I listened to you that you left out one of the processes that is involved in finishing the bearing. I believe you mentioned the fact that the bearings are ground, and then you said the next step is inspection. Isn't there a finishing process in there that you omitted?

A. That applies to some bearings used for particular purposes. That's a thing known as super finishing. That is essentially a honing operation. That is used on bearings that revolve at extremely high speeds or bearings that are made to extremely close tolerances.

Q. What is that process?

A. That's a process of reciprocating a stone made of carborundum or alundum against the surface of a cup or [fol. 1525] cone or roller as it is revolving around its own axis. The accomplishment is ironing out of the hills and valleys—or, rather, leveling off the hills to the level of the

valleys so that you obtain essentially a plane surface, in other words, you get down to a smooth, flat surface.

Q. How is that flatness measured?

A. It's measured by several methods. A profilometer, which is pulling a sapphire or diamond point across the roller surface, registers the height of the hills and depth of the valleys of the piece which has been finished.

Q. And it measures them in micro inches, does it?

A. It measures them in micro inches.

Q. That's a millionth of an inch?

A. That's right.

Q. I suppose when you talk about tolerances of the surface you mean the distance between the bottom of the valleys and the top of the hills, if you are looking at it through a microscope?

A. That is right.

Q. What is the difference in the tolerance in micro inches between a ground surface and a honed surface?

A. There can be different types of grinding. Some ground surfaces are rather rough, others are given a finish grinding operation and are rather fine. I would say that in the case [fol. 1526] of a good ground surface you might get 15 to 20 micro inches, and in the case of an extremely well finished, super-finished piece, you might get down to a level of four to six micro inches.

Q. Is that the normal range between your ground bearings and your honed bearings, that is, are the ground bearings around 20 micro inches and honed bearings three micro inches?

A. I would say somewhere around five or six in the case of super-finished bearings.

Q. Do you super-finish or hone automotive bearings?

A. Some automotive bearings are and some are not.

Q. Is this Timken bearing 3920, which is marked as Government's Exhibit 3, honed (handing Government's Exhibit 3 to witness)?

A. The cup is. I can't tell you about the cone. The rollers are not.

Q. How about this Bower bearing? Is that also honed (handing bearing to witness)?

A. It has the appearance of being honed.

Q. Can you tell the difference between a honed bearing and a ground bearing just by looking at it?

A. I believe so.

Q. Incidentally, looking at this, you were looking at the inner surface of the cup, is that right?

A. The inner surface is the honed surface. The outer [fol. 1527] surface of the cup is never honed.

Q. I show you this British Timken bearing. Can you tell us if that is honed (handing bearing to witness)?

A. That has not been honed. That is a ground surface.

Q. That is a ground surface?

A. Yes, sir.

Q. How do you tell the difference between these two, Mr. Umstattd?

A. The ground surface has a marking going around the periphery of the piece, as you see there, following around the periphery, whereas the honing is interrupted with a diagonal mark, as the hone goes up and down in the piece and the piece revolves it makes a diagonal or diamond-shaped mark.

Q. These little scratches?

A. We don't like to call them scratches. Those are those little pieces that reflect light in that part of the surface.

Q. Generally a honed bearing looks shinier, does it not?

A. It does.

Q. You might as well look at this French bearing also. Is that French Timken bearing, of the same number, ground or honed?

A. That is ground. It has not been honed.

Q. It has not been honed?

A. No.

[fol. 1528] Mr. Nitschke: Your Honor, perhaps you would like to look at these.

(Court looks at bearings.)

[fol. 1529] Further cross examination of William E. Umstattd.

By Mr. Nitschke:

Q. Mr. Umstattd, I would also like to call your attention, in the catalog, on Page 2, to the sentence that says: "Precision of manufacture came hand in hand with the improvement of the working surfaces of the bearings. In order to measure surface finish the Profilograph was developed.

This instrument, the finest developed up to that time, measured surface irregularities to the millionth of an inch. By studying the readings made on this machine it was possible to improve the finish until the Timken bearing of today embodies the finest commercial finish known to modern science."

I take it you are talking about the honing process there?

A. It is known by various names,—super-finishing, honing, micro-finishing, and ma-y other terms used by the trade, but it is essentially a honing operation.

Q. And cross-hatching is another word?

[fol. 1530] A. Cross-hatching is another term.

Q. Do some of your customers insist upon having honed bearings?

A. Yes.

Q. Some of the automotive customers?

A. Yes.

Q. Which ones, for example, of automobiles?

A. That is not a question that can be answered by saying which customers. Some customers require honed bearings in certain positions, such as the pinion and do not require them for wheels, so it is a little difficult to answer that as you put the question.

Q. Are there some customers that buy, some automotive customers that buy honed bearings for all applications?

A. I believe that the Chrysler Company specifies the honed bearings for all applications at the moment. I am not positive of that, but I believe that is true.

Q. That has been the case sometimes?

A. Sometimes it is.

Q. Yesterday Mr. Day asked you about the origin of the tapered roller bearing. I believe you stated Mr. Heintzelman and Mr. Henry Timken, Sr., had conceived the tapered roller bearing?

A. Yes, that is my understanding. I believe the patent [fol. 1531] was taken out in the name of Mr. Heintzelman. I am not positive about that; I believe that is true, and later he sold his patents rights to Mr. Timken.

Q. I would like to read something to you from the testimony of W. R. Timken, which perhaps might refresh your memory on this subject. I am reading from the transcript of testimony taken in the case of the Timken Roller Bear-

ing Company vs. Leterstone Sales Company. You probably recall that lawsuit?

A. I do.

Q. I believe you testified?

A. I did.

Q. Reading from the examination of W. R. Timken—I believe you stated he was one of the brothers who owned the Timken Company?

A. He was.

Q. The question was: "You have mentioned the existence of other tapered roller bearings which were on the market at the same time.

Can you name any of those?

A. Well, the original one was Grant. That was the earliest.

Q. Who?

A. Grant. Grant Roller Bearing.

Q. Can you state whether or not the Grant roller bearing was before the existence of the bearing that you developed?"

[fol. 1532] A. It was."

And then also, to refresh your recollection I would like to read a portion of the testimony of Mr. Klinedinst at that trial.

This is a statement by Mr. Klinedinst:

"When I came with the Timken Roller Bearing Company we had one competitor in the tapered roller bearing field. That was Grant. Grant later sold out their business to Standard Roller Bearing Company in about 1910. Standard Roller Bearing Company in 1917 sold it to the Marlin-Rockwell Company; and Timken Roller Bearing Company acquired the tapered roller bearing end of the Marlin-Rockwell business in 1924."

Does that refresh your recollection on this question of who was the first manufacturer of tapered roller bearings?

A. It does not change my thoughts in the matter.

Q. You testified on the basis of what someone else had told you?

A. What someone had told me and the histories concern-

[fol. 1533] ing bearings that I have read.

Q. Also during Mr. Day's examination you testified to the fact that the statistics compiled by the Anti-friction Bearing Manufacturers Association did not include all the tapered roller bearings manufactured, and I believe you stated that

International Harvester was a large producer that was not included in that list.

A. I said I thought they were not included. If I recall, I wasn't positive on that point.

Q. Is it your understanding they were not included?

A. That is my understanding.

Q. You looked over that table the other day?

A. I beg pardon?

Q. You looked over the table the other day and you testified you didn't think they were included.

A. I do not believe they are included.

Q. Well, I think the table shows they are not. Does International Harvester make any tapered roller bearings to sell commercially?

A. Yes. That is, I don't just know what you mean "sell commercially". They make tapered roller bearings that are sold for use. I don't know that they sell them for original installation uses but they sell them for replacement in International trucks and tractors and farm equipment of all sorts.

[fol 1534] Q. They manufacture them for original application only for their own equipment?

A. As far as I know. I am not positive on that point. I know they manufacture many tapered roller bearings. I have been through their plant and we sell them steel but I don't know whether they sell to builders or not.

Q. As a matter of fact, Mr. Umstattd, aren't they under license from you to manufacture only for use in their own equipment?

A. I am not positive about that. We have a contract with them that we will supply them information regarding the manufacture of bearings, and blue prints, and give them technical information, but as to whether or not the contract covers the point you raise I am not certain at the moment.

Q. I will call your attention to Government's Exhibit 13, which is in evidence as being an agreement between the Timken Roller Bearing Company and the International Harvester, referred to in your agreement with British Timken and French Timken dated December 31, 1927, and which states in the first paragraph:

"The Timken Roller Bearing hereby licenses and empowers said International Harvester Company to make taper roller bearings and parts thereof under the Miller [fol. 1535] Patent No. 1,392,019, dated September 27, 1921,

for taper roller bearings now owned by the Timken Roller Bearing Company for use only in machines made and sold by the International Harvester Company and for sale as complete bearings only for replacement of bearings on machines sold by said International Harvester Company, it being understood and agreed that said International Harvester Company shall have no right to sell such bearings or parts thereof separately except for replacement of bearings in machines sold by it."

Does that refresh your recollection?

A. It does. I think that is probably right, although I think an agreement was made with International Harvester Company after that agreement there was signed, and I believe we could produce that if you would like to have it.

Q. I wonder if it is not the one already in evidence, an agreement dated May 14, 1936, a letter agreement which states modifies the agreement of December, 1927 (handing exhibit to witness)?

A. Yes, this is the one I referred to.

Q. Mr. Umstattd, do you know what the total tapered roller bearing sales were of Timken in 1947, approximately?

A. In dollars.

Q. Yes.

[fol. 1536] A. Yes, I know approximately.

Q. What were they?

A. In the neighborhood of $70,000,000.

Q. And your Company also makes steel and rock bits, does it not?

A. It does.

Q. What were the total sales of the Company in 1947, approximately?

A. In excess of a hundred million dollars. I am not certain of the exact figure.

Q. When Mr. Day was questioning you you testified in some respects regarding your agreements made in France and England. I would like to fix a little more precisely the particular agreements you were testifying about and the dates. Do you know, do you recall, Mr. Umstattd, what your position was with the Timken Roller Bearing Company in December of 1933?

A. I was Executive Vice President and Director of the Company in December, 1933.

Q. And were you still that in January of '34?

A. Yes.

Q. Do you recall what month you became President of the Company?

A. I believe it was some time around July or August of 1934.

Q. You held this executive position just prior to that, though?

[fol. 1537] A. I did.

Q. December '33 and the early part of '34?

A. I did.

Q. I believe you testified that you had heard of these agreements that you said Mr. Dewar had entered into regarding the French market?

A. I had.

Q. I would like to call your attention specifically to Government's Exhibit D-15, which is a letter from Mr. Dewar to Mr. Hess, enclosing a copy of an agreement which is in evidence as Exhibit D-15-A.

I am sorry, I mentioned the deposition numbers. It is Government's Exhibits 65 and 65-A.

Is the agreement attached thereto the one you are talking about that you knew of?

A. (After witness examines same.) Yes, this is the one I knew about.

Q. I call your attention to the fact in handwriting at the top of the top right hand corner of the letter it says: "Seen by W. E. U.—Chas. Br., J.N.S., A.C.E. & H.H.T., Jr." Do you know whose initials those are?

A. I believe I can identify those. "W.E.U." is William E. Umstattd, the next one is Charles Brower, the next is Judd Spray, the next one A. C. Ernst, the next one Henry H. [fol. 1538] Timken, Jr.

Q. And the handwriting also says further: "No suggestions except by A.C.E. to do nothing for the present. D.P.H." Do you know whose initials those are?

A. Yes, those are the initials of Donald P. Hess.

Q. Now, in your function as the Executive Vice President of the Timken Company did you disapprove of this agreement?

A. Do you mean did I try to upset it?

Q. Yes, did you attempt to keep it from being entered into?

A. No, I did not.

Q. And it is true, is it not, that the Timken Roller Bearing Company told Mr. Dewar that he could go ahead with the agreement?

A. I think through Mr. Hess Mr. Dewar was given permission to do what he thought was necessary under the circumstances.

Q. And that was done at a meeting that the executives of the Company attended?

A. Yes. Most of the men mentioned in that memorandum there were executives of the Company. I believe all of them except Mr. Ernst.

Q. Going into another subject, I believe you testified on direct, it was, has been, and is practically impossible to sell tapered roller bearings in the United Kingdom or Germany or France. Is that correct?

[fol. 1539] A. In my opinion, yes.

Mr. Day: You mean for an American company or some outsider to do it?

Mr. Nitschke: Yes.

The Witness: I presumed that is what you meant.

Q. That it is impossible, as a practical matter, for Timken Roller Bearing to sell?

A. In my opinion, it would be practically impossible.

Q. How about the rest of the territory that is dedicated to British Timken and French Timken under the various agreements, currently under the 1938 agreement, do you think it is impossible for Timken to sell now in all those countries?

A. I believe it would be impossible to sell at a profit. Perhaps bearings could be sold if the sales were subsidized by some means.

Q. You mean you would have to sell them at a loss?

A. I believe so.

Q. In order to sell in those countries?

A. I believe so.

Q. You are talking now about tapered roller bearings?

A. I am talking about tapered roller bearings with an independent sales organization, engineer organization and service organization, and all the things that would be neces-

[fol. 1540] sary to conduct a sales effort in those countries.

Q. Well, would it be possible to sell bearings there with-

out having a sales agency there, and these other things you mentioned?

A. I think it would be impossible from a practical standpoint. Bearings are rarely sold by correspondence or by mail order methods.

Q. You say without a sales agency. Do you mean without having a Timken owned company, or are you referring to having any distributor in that country?

A. Either a Timken owned company or a distributor who would demand such high charges for his services that it would make the venture impractical.

Q. And that is true in all these countries assigned to British Timken under the contract?

A. In my opinion that is right.

Q. That would be true of Burma?

A. I believe so.

Q. Switzerland?

A. I believe so.

Q. Spain?

A. I believe so.

Q. All the countries—I won't bother to read them.

A. I believe that is true.

[fol. 1541] Q. And is it your statement it would be practically impossible, that it was practically impossible to sell there in 1928 as well as today?

A. At a profit I think it would have been impossible.

Q. And in 1934 or 1935?

A. I believe the same answer would prevail in 1934 and 1935, that it would have been impractical and a costly venture.

Q. And is it your view that it will be impossible to sell during all the future years from now until 1965 in those territories?

A. I would hate to speculate on what will happen in the coming years. The world is in such a state of flux and chaos that whatever prediction I would make would seem to be poorly founded.

Q. But your contract with British Timken prohibits you from selling in those territories until 1965, does it not?

A. Except under certain circumstances.

Q. Yes, those are enumerated in the contract.

A. Yes.

Q. I believe you said you are also certain that British Timken and French Timken could not possibly sell in the United States today tapered roller bearings?

A. I think that is true.

Q. And was that true also in 1928?

[fol. 1542] A. I believe it was.

Q. And in 1934 and 1935?

A. I believe it was.

Q. Right on through up until the present?

A. I believe so.

Q. And is it also your opinion that during any year from now until 1965 that they will be unable to sell in this country?

A. Again I would hate to venture a prediction as to what might happen in the intervening years.

Q. And, again, the agreements prohibit them from selling in this country, do they not, until 1965?

A. Except under certain circumstances.

Q. As a matter of fact, Timken hasn't attempted to get any business in this territory allocated to British Timken since 1928, has it?

A. I don't believe any direct attempt has been made. I think perhaps there might have been some advertising literature sent to those countries on occasion, but we sent no salesmen to sell from Timken direct to those countries. We just sent salesmen to aid French Timken and British Timken on the sales of bearings in their respective territory.

Q. You haven't attempted to sell your bearings there the way you have been, say, in South America?

A. We have not.

[fol. 1543] Q. And under the contract you are obligated not to try to do so, isn't that correct?

A. That is true.

Q. But the contract did permit you in certain circumstances in connection with replacement sales to make sales in the territory allocated to British Timken and French Timken, did it not?

A. It did.

Q. I believe that in that current agreement it states that that is permissible as long as the prices are agreeable to the British Company or the French Company, isn't that correct?

A. I believe that is what the agreement calls for; I am not positive on that point.

Q. Now, as a matter of fact, it is true, is it not, Mr.

Umstattd, that even despite the fact you haven't tried to sell bearings in those countries, you have from 1928 to date sold considerable quantities of bearings in those territories, on unsolicited orders for bearings, isn't that correct?

A. We have sold considerable quantities of bearings where British or French Timken couldn't make deliveries.

Q. And we have here in evidence as Plaintiff's Exhibit 160 some statistics which were prepared by your Company of sales by Timken Roller Bearing Company in British [fol. 1544] Timken Ltd. territory on which commissions were paid, and it shows a total of $2,980,679 for the years 1928 to 1947. That is correct, is it not?

A. I can't vouch for the authenticity of the figures. I presume if one of our people compiled them for you it is correct.

Q. Are you sure that in every one of those instances that was business which British Timken or French Timken could not supply?

A. No, I am not sure.

Q. In any event, it was business which you did not seek?

A. I wouldn't answer that yes because we seek business all over the world. If it cannot be obtained by British Timken or French Timken, naturally we try to get it for American Timken.

Q. And if it cannot be obtained by British or French Timken in the case of these replacement sales, you will handle it at prices agreeable to British and French Timken?

A. Yes.

Q. Now, bearing in mind your testimony that it is practically impossible from 1928 to date to sell bearings made by Timken here in Canada and in England, do you have any recollection of the fact that there was a time in 1928 when you could sell bearings in England and in Ireland?

[fol. 1545] A. In any considerable quantities, do you mean?

Q. Yes, in large quantities.

A. I don't know other than an occasion when the Ford Motor Company was building tractors, I believe, in Cork, and later in Daggenham in England, they bought some bearings from American Timken for Ford tractors built in those two plants.

Q. So that was a situation where it was possible to sell bearings in England?

A. It was because the engineering design used in this country was transferred to Cork and later to Daggenham where the tractors were produced.

Q. It is true, is it not, at that time in 1928 Ford would have bought anywhere in the world where he could have bought the bearings the cheapest?

A. I am not certain of that. I think Ford has always had a high regard for quality products. They do not always buy the cheapest article.

Q. Assuming that Ford had said they would buy anywhere they could get the lowest price?

A. I don't know that definitely. I would have to speculate as to what Ford would do.

Q. I would like to read you a cablegram.

Mr. Day: Is that something new?

[fol. 1546] Mr. Nitschke: I have had marked as Plaintiff's Exhibit 164 a cablegram from Hess to Britimken dated October 20, 1928.

(Cablegram above referred to was thereupon marked by the Clerk, for identification, Government's Exhibit No. 164.)

Mr. Nitschke: I would like to read you a portion of this cablegram:

"Production being planned Cork Ireland five hundred to eight hundred daily stop Can you quote better prices for tractor wheel bearings on above production than our prices we sent you recently stop All bearings go into Ireland no duty and they will purchase anywhere in world at best prices stop"

Q. Does that refresh your recollection as to the situation?

A. I don't recall that particular cablegram and I don't know who sent the cablegram.

Q. Mr. Hess.

A. Hess sent it?

Q. Yes, he did.

A. I don't know where he got the information concerning Ford's purchasing policy. I don't believe I could answer for Mr. Hess in this instance.

Q. Well, would you agree or disagree with that statement. [fol. 1547] of Mr. Hess?

A. That Ford would purchase anywhere in the world that they could get the cheapest price?

Q. At the best price.

A. I am afraid that I would have to disagree with it be-

cause in my experience in dealing with Ford there have been many instances where he has paid a higher price for a product, even our own product, than he could have bought it for from another source.

Q. You aren't speaking of this particular transaction?

A. Not of this particular transaction. I am speaking of my association with the Ford Company over 29 years.

Q. During this period from 1928 to date, Mr. Umstattd, it has even been possible, hasn't it, for distributors of bearings in this country to sell them abroad in competition with other bearings?

A. What sort of bearings?

Q. Tapered roller bearings.

A. You mean Timken distributors?

Q. Yes.

A. I presume it would be difficult for a Timken distributor to sell abroad in competition with other bearings. I doubt if distributors have sales outlets in foreign countries for the sale of tapered roller bearings.

[fol. 1548] Q. I want to call your attention to the fact that you sell bearings for replacement purposes to the Timken-Detroit Axle Company, isn't that right?

A. We sell them for installation in their original equipment and I presume they use some of those bearings for replacement. I am not familiar with the details of that.

Q. Do you know whether or not Timken-Detroit Axle has been able to ship those bearings abroad into the territory of British Timken and sell them in competition with bearings made by British Timken over there?

A. I don't know that definitely. I presume they send bearings as spare parts, just like they would send gears or housings or other parts of an axle.

Q. Well, I would like to call your attention to a letter which is in evidence as Government's Exhibit 42, written by W. E. Hobley—you know who he is?

A. Yes.

Q. Sales Manager of British Timken?

A. He was. I believe he has retired.

Q. He was Sales Manager for British Timken, however, in 1928 and for several years thereafter?

A. Yes.

Q. He wrote, on March 22, 1928:

"In your letter of the 17th February you mentioned that [fol. 1549] arrangements had been concluded with the Timken-Detroit Axle Co. apropos the sale of their service bearings throughout Europe."

Mr. Hobley is writing to Mr. Hess.

"We have not had an opportunity up till now of seeing the Automotive Products Co. in London, who are the British representatives for the T. D. A. Co., but hope to do so very shortly."

"Our reason for writing now is to ask if this arrangement which you have made with Detroit will embrace Australia also. Col. Murray—White, who is touring Australia and investigating our distributing arrangements very closely, reports that the firm of Messrs. Motor Traders are the agents for the T.D.A. Co. in Australia, but whether their agreement is with the T.D.A. Co. direct or through their London house, we cannot say."

This is what I would like to call your attention to, bearing in mind your previous testimony:

"The fact is that they are importing bearings from Detroit and distributing them throughout the trade at lower prices than our own authorized distributors can. As you know, we have established list prices identical with your own, and it is unfair for the Timken-Detroit Axle Co. to service their bearings throughout our territory at lower [fol. 1550] prices just because they are in a position to do so."

Now, bearing in mind what I have just read you, is it still your opinion that bearings could not be sold by Timken-Detroit Axle distributors in competition with British Timken in British Timken territory?

A. I am not certain about that. Judging from what you have read in that letter, they did sell at a lower price. I don't know what they can do currently.

Q. I believe, Mr. Umstattd, in your direct examination you stated, I am just giving you the nature of your testimony, I think you stated it was your opinion it was not possible to sell bearings in Europe and the British Empire unless you established a plant there for manfacturing. Is that the nature of your testimony?

A. I believe I confined that to the principal manufacturing countries in Europe that must have capital goods. I wouldn't say that would be all-inclusive. There are some

countries in Europe that have a very meager manufacturing economy.

Q. In those countries where they do manufacture capital goods, is it your testimony that in order to do business in those countries you have to put up a plant there and manufacture there?

A. I believe that from a standpoint of good business relations that would be necessary.

[fol. 1551] Q. Well, the question I have asked you is this, your agreements prohibit you from establishing manufacturing plants in countries allocated to British Timken and French Timken, do they not?

A. You mean countries such as French Morrocco and Australia, South Africa?

Q. I mean in countries in British Timken territory which I believe is all of Europe,—British Timken, French Timken territory, all of Europe, all of the British Isles, all of the possessions of the countries of Europe.

A. I believe there would only be one or two countries in Europe where it would be profitable to establish a bearing plant. One would be England, one would be France, one would be Germany, and one, conceivably, might be Italy.

Q. But you have agreed not to establish a plant in Italy, haven't you?

A. We have agreed to not establish a wholly owned American plant in Italy. We could participate in the establishment of a plant in Italy, I believe, under the agreement. I am not positive, but I believe we could.

Q. Well, I call your attention to Paragraph 6 of the current agreement, the tripartite agreement:

"Each of the Companies parties hereto as a convenantor Company hereby covenants with each of the other Com-

[fol. 1552] panies parties hereto as a covenantee Company that during the life of this Agreement the covenantor Company will not directly or indirectly make or sell or authorise others to make or sell bearings in the territory of the covenantee Company or in the territory of the covenantor Company knowing them to be for shipment into the territory of the covenantee Company save and except as follows to wit:"

A. I think, with that paragraph being read to me, I would say it would be impossible for us to establish a plant in Italy as long as the present agreement is in force.

[fol. 1553] Further cross examination of William E. Umstattd.

By Mr. Nitschke:

Q. Mr. Umstattd, yesterday you mentioned that you had received some know-how from British Timken. Your engineers and other people, when they have gone to England to visit British Timken have had complete access to their plants and facilities, have they not?

A. So far as I know they have had.

Q. And they were permitted to see any methods and processes that were in operation there?

A. That was my understanding from the people who visited the plants as well as from Mr. Dewar and Mr. Pascoe.

Q. British Timken has a research department also, has it not?

A. It has.

Q. Smaller than yours, I believe Mr. Dewar testified to that?

A. Yes, considerably smaller.

Q. Are the results of their research made available to [fol. 1554] American Timken?

A. Yes.

Q. In other words, there has never been any question, has there, about there being a free exchange of know-how between American Timken, British Timken and French Timken?

A. No, there has never been any question about that.

Q. Also yesterday you mentioned the SKF Company and that it was the largest manufacturer of anti-friction bearings in the world. It is not the largest manufacturer of tapered roller bearings, is it?

A. I do not believe so. I believe Timken is the largest manufacturer of tapered roller bearings.

Q. How do you know SKF is the largest manufacturer of anti-friction bearings in the world?

A. From the statements that they publish from time to time and from reports we get from our salesmen in our office, and the reports we get from British Timken salesmen in Europe.

Q. Showing the sales of SKF?

A. Showing the probable sales and the reported sales are

printed and are accessible to the public at various times.

Q. And when you speak of SKF, were you speaking of the Svenska Kullager Fabriken of Gothenburg, Sweden?

A. That is the parent company.

[fol. 1555] Q. When you say it is the largest manufacturer—

A. I was speaking of the parent company and its subsidiaries throughout the world.

Q. You were speaking of production of both parent and subsidiaries?

A. Yes.

Q. Do you know whether as a matter of fact these other companies are subsidiaries?

A. No, I do not know as a matter of fact. All I know is the published statements of SKF that indicate that they are subsidiaries.

Q. They do make bearings marked "SKF", these various plants you mentioned?

A. I think some of them mark them SKF and probably the ones in Germany are presently marked VKF.

Q. Now, I would like to ask you a question about an answer which you made yesterday.

Q. (Continued) Mr. Day had asked you about the change in the 1934 contract with respect to Russia. The question was:

"Q. Will you state to the Court the circumstances which preceded or surrounded the making of that change?" And [fol. 1556] your answer was:

"A. The Russian Purchasing Commission in this country and in England and in other countries throughout the world got at different times goods from different countries depending upon the exchange situation prevailing at the time, and the state of Russian balances in certain countries. Many times goods would be bought from Germany for a period of six months or more, then the purchases would switch to Sweden or to England or to the United States or to Italy, and with that in mind it was felt that Russia might be better served by having sales avenues open from Great Britain and the United States."

Now, during the past 20 years hasn't the exchange situation fluctuated in other countries besides Russia, viz., Great Britain and the United States?

A. The exchange situation has fluctuated greatly in the past 20 years.

Q. But was it only in Russia that you felt the country could be better served by having the sales avenues open to both British Timken and American Timken?

A. So far as I know Russia was the only totalitarian state at that time in control of all the industry within its boundaries, purchasing through one central agency. I know of no other country that was a totalitarian state 20 [fol. 1557] years ago.

Q. I am not quite sure that answers my question.

Will the reporter read the question?

(Previous question read by reporter.)

A. Yes. I will answer yes.

Q. And did you feel that Russia would be better served by both you and British Timken if you sold at agreed upon prices?

A. We gave our prices to British Timken. British Timken in turn gave their prices to us.

Q. And your contract required that you not undercut them, isn't that right?

A. I am not familiar with every detail of the contract, in general, I think that is true.

Q. I believe you mentioned yesterday with reference to the United Kingdom that it was practically impossible for American Timken to sell there, and then I think later on in your testimony you broadened that statement to include all the territories that were allocated to British and French Timken; is that right?

A. It was our opinion that it would have been unprofitable to have sold through agencies established by the American Company and controlled directly from the United States.

Q. That is, unprofitable except to British Timken?

A. That they could have done it more economically.

[fol. 1558] Q. Do you think that would be true of Spain, for example, in the Continent of Europe?

A. I believe British Timken could serve Spain more economically than Spain could be served from the United States.

Q. Now, there is no different tariff in Spain?

A. I am not familiar with the tariff laws in Spain.

Q. Spain isn't in the Sterling Bloc, is it?

A. I don't believe it is in the Sterling Bloc 100 per cent

but their exchange of commodities with England ties them very closely to England.

Q. How about import restrictions: are there any different import restrictions regarding shipments from England rather than America?

A. I am not familiar with the import situation in Spain today.

Q. There is not any "Buy British", "Buy French" policy in Spain, is there?

A. Not that I know of as a policy other than the fact that Spain does sell considerable iron ore and other commodities to England.

Q. There aren't any local manufacturers of bearings in Spain, are there?

A. Not to my knowledge.

Q. And, Mr. Umstattd, isn't it true you today could lay down a bearing in Spain at a lower cost than British Timken?

[fol. 1559] A. I don't know. I don't know what the restrictions are. As I mentioned earlier I don't know whether there is a preferential tariff or preferential import license existing in Spain. I am not familiar with that situation.

Q. But it is still your opinion you couldn't sell there as economically as British Timken?

A. I believe British Timken could sell there more economically than we could.

The Court: Well, what do you base that on?

The Witness: I base that on conversations I have had with people who have done business in Spain, both from France and from England. There seems to be a considerable amount of common interest between Spain and France and Spain and England as regards the exchange of commodities. I could give you the names of some of those people.

The Court: I just wanted to find out the basis of your conclusion.

Q. I believe you also stated yesterday it would be practically impossible for British Timken or French Timken to sell in the United States?

A. I believe it would be practically impossible for them to sell at a profit in the United States.

Q. And I think you said it would be even more impossible [fol. 1560] for French Timken than British Timken?

A. Under existing circumstances I believe that is true.

Q. Do you also think it would be practically impossible for French Timken to sell any product in the United States?

A. I believe French Timken could sell some products any place in the world but I am not certain they could sell them at a profit.

Q. Do you think it would be impossible for them to sell any product in the United States at a profit?

A. French Timken?

Q. Yes.

A. I believe that would be impossible for them to sell any product in the United States of French Timken at a profit.

Q. Products they make now?

A. Products they make now.

Q. How about any product that might be made by French Timken?

A. You mean if they could make perfume, for instance?

Q. Yes.

A. I think perhaps they could sell a high grade perfume in the United States more cheaply than we could make it and sell it. We haven't learned how to make high grade perfumes in this country.

Q. As a matter of fact your agreement prohibits them from selling any product in the United States?

[fol. 1561] A. I am not familiar with each detail, but as I recall they are prohibited from selling here unless the parties agree in the matter.

Q. Unless you give them your consent they cannot sell any other product?

A. I think that is true, according to the terms of the agreement.

Q. I would also like to ask you some questions about some other testimony you gave yesterday. You mentioned the fact that conferences were held in the United States in 1927 about the time that these arrangements with British Timken were entered into, and that you attended those conferences.

Q. You mentioned the matter of selling was discussed and considered at several meetings with Mr. Timken, Mr. Strough, who was secretary-treasurer of the company at that time, Mr. Lothrop, Mr. Overmeyer, and Mr. Ely. You recall that testimony?

A. I do.

Q. And you were asked:

"What was said in those discussions, what was the point of the discussions?"

[fol. 1562] And your answer was:

"The pros and cons of selling were brought out at those meetings, and the consensus of opinion was that bearings could be sold more readily by British forces in British territory and by French forces in France or possessions of France."

And is it your recollection that it was discussed at that meeting whether or not American Timken could sell bearings for replacement purposes in British Timken's territory?

A. I don't recall any conversation being directed particularly at that point, although that well may have come up at that time, because the whole situation of selling was discussed. There were three other people at most of those meetings I failed to mention yesterday, Mr. Strough, Mr. Klinedinst, and Mr. Porter, all of those men were connected with the sales department of the Timken Roller Bearing Company.

Q. Well, did you discuss the fact at that meeting that American companies could sell replacement bearings more readily in British Timken's territory than British Timken could?

A. That is a little involved for a direct answer. If you would like to have me explain some of the things that were [fol. 1563] said, I could perhaps answer it. I cannot answer the question directly, I think.

Q. I will make it a little more specific. Is it your recollection at that time as a matter of fact that American Timken could sell for replacement purposes in British Timken's territory at a profit?

A. Not directly. We could sell through manufacturers who exported goods to British territory and carried bearings as spare parts, and that was quite common then and is today.

Q. And did you solicit that sort of business after these arrangements were entered into?

A. I don't know that we ever directly solicited it. The people who build automobiles and machine tools purchased

bearings in excess of their building requirements and they shipped those around the world to their dealers for replacement parts when a bearing wears out in the particular type of equipment that is shipped abroad.

Q. And you could handle that business better than British Timken could handle it in its territory in 1927?

A. I think that it could be better handled by the dealers who imported the machinery into the British Timken territory. Those dealers were supplied by the manufacturers in this country who exported the machinery. They were sup- [fol. 1564] plied with bearings as extra parts or replacement parts.

Q. And whether the sales were made by American Timken or some other bearing company at that time, the American companies could sell in British territory at a profit in connection with those sales?

A. No, sir, we did not sell those in British Timken's territory. We sold them in the United States and they were exported to British Timken territory. The sale was consummated in the United States.

Q. You did not sell or solicit the business of the dealers in British Timken's territory?

A. We did not.

Q. And is it your statement you could not have gotten that business?

A. I don't think I made a statement we couldn't have gotten it. I said I thought it was not practical.

Q. Not practical to get it?

A. Yes.

Q. Well, bearing that testimony in mind, I would like to call your attention to a letter which I would like to have marked for identification Government's Exhibit 165, which appears to be a letter from R. C. Brower to Mr. Strough, dated April 1, 1927.

[fol. 1565] (Letter above referred to was thereupon marked by the Clerk, for identification, Government's Exhibit 165.)

I would like to read to you from Government's Exhibit 165, which appears to be a letter from R. C. Brower to Mr. Strough, it has the heading "Subject: British Timken Territory—Service" dated April 1st, 1927, and is on the letter-

head of The Timken Roller Bearing Company. Is that the Mr. Strough you have just mentioned who was at these meetings?

A. He is the only Strough employed by our company as far as I know.

Q. Is R. C. Brower the Charles Brower you mentioned yesterday?

A. Yes, he is secretary-treasurer of the Timken Company at the present time.

Q. Do you know what his position was in 1927?

A. I believe he was the head of the sales and service division of the company. I am not certain. I know he was at one time, and I believe he was in 1927.

Q. I would like to read to you from this letter of Mr. Brower.

[fol. 1566] "In view of pending negotiations with British Timken, Limited, I believe arrangements should be made whereby the Service & Sales Company should be permitted to solicit without restrictions, Timken bearing replacement business in all territories controlled by British Timken, Limited, with the possible exception of the British Isles.

We are now permitted to ship unsolicited orders into British Timken territory with the exception of France and French Colonial Possessions and Protectorates on which we give British Timken, a 10% of the net amount of the invoice commission. This arrangement results in some business, but in that we do not solicit from representatives handling American made motor vehicles, our competitors who do solicit this business secure a sizable volume.

We would not wish to appoint Authorized Distributors in British Timken territory. Neither would we wish to make a general solicitation of the entire trade. Our suggested solicitation would be confined to representatives handling American made motor vehicles who naturally look [fol. 1567] to the American market for replacement parts and supplies. In the particular case of Hudson and Dodge, we handle all of their service. Bearings are not carried by the respective factories. On numerous occasions, Hudson and Dodge foreign agencies have complained because of the poor service they secure thru British Timken agencies. Most importers of American made motor vehicles are sizable houses and contend they are as much an importer as

the concerns representing British Timken, Limited. Our experience has been that due to this fact and other jealousies, they wish to purchase direct. If we were permitted to solicit the business and handle the orders, it would keep for Timken, the bulk of the business now going to competitors.

With such an arrangement, we would be in equal competition with British Timken, Limited, for all business in their territory. Between the two Companies, we could satisfy all potential buyers of bearings for service replacement purposes. Many of these buyers in the world market would favor purchasing thru the British market, while some prefer purchasing thru the American market.

One of the principal things to bear in mind is that in [fol.1568] countries such as Australia, South Africa, India, New Zealand and many others, the car registration is largely American. It is only natural that the agencies selling these American made cars should look to the American market for their source of supply on replacement parts. With our encouragement to purchase from us, the business would not go to competitive makes of bearings.

In case of open and free solicitation of the world market, we would not of course wish to continue extending a 10% commission to British Timken, Limited, but if for any reason, it should be deemed advisable to continue the commission arrangement, it would be satisfactory to us."

What I would like to ask you is with reference to Mr. Brower's statement where he said "Our experience has been due to this fact and other jealousies they wish to purchase direct," speaking about the foreign agencies of these automotive companies. "If we were permitted to solicit the business and handle the orders it would keep for Timken the bulk of the business now going to competitors." Do you agree with that statement of Mr. Brower's?

A. No, I do not.

[fol. 1569] Q. Do you agree with it as stating conditions in 1927?

A. I think perhaps that's his opinion of conditions in 1927. So far as I know, Mr. Brower never visited any foreign market.

Q. That was his opinion made in 1927?

A. I presume so, if he wrote it at that time. I presume that was his opinion.

Q. Do you agree with his opinion as stating the conditions in 1927?

A. No, I do not.

Q. I also have another letter of Mr. Brower's that I would like to ask you a question about.

Mr. Nitschke: I will have that marked as Government's Exhibit 166. This is from Brower to British Timken and it is dated July 2, 1927, and has written on the top in handwriting "J. F. Strough."

(Letter above referred to was thereupon marked by the Clerk, for identification, Government's Exhibit 166.)

[fol. 1570] Q. I would like to read you a portion of Mr. Brower's letter to British Timken Limited. Would you like to look at that first, and then I'll read the portion I'm interested in and ask you a question about it (handing Government's Exhibit 166 to witness)?

A. All right.

Q. Mr. Brower writes:

"Gentlemen: With reference to your cable dated June 10th and your confirming letter of the same date regarding discounts extended to the service trade in your territory, we would first ask that you discuss this thing with Mr. Hess of our company who is now in England because he familiarized himself with all conditions just prior to his departure from the States.

In explanation of our change in discount, we found it necessary to increase the discount from 35 to 50 per cent in order to meet competition. We, of course, have not made direct quotations in your territory although it has developed in some few cases local export houses who have purchased material for shipment into countries controlled by [fol. 1571] us have also secured bearings for shipment into your territory at the same discount."

Now, this is the part I am particularly interested in calling your attention to:

"Another thing to consider is that while Gilliam and Bock were in the picture discounts of 50% and 50 and 10% were regularly extended. To show how far reaching the

effects of this were, we can tell you that for the 12 months in 1926 Bock shipments into your territory were as follows:

Australia, $11,000.

Continental Europe $34,000.

Colonial Possessions $5,000, or a total of $50,000 in the territory controlled by us."

Now, do you agree or disagree with Mr. Brower's statement regarding the sales made by Bock in British Timken territory?

A. I have no knowledge of those other than what you have read.

Q. And Bock was a small tapered roller bearing manufacturer in the United States?

A. Yes, I believe they also had a plant in England. I'm not certain that they had one at exactly that date, but they had at one time, as I recall, in Scotland, or somewhere [fol. 1572] in the British Isles.

Q. And you bought them out in 1926?

A. The American Timken, as I recall it, it was somewhere around 1926, yes.

Q. And that's how these figures got to Timken as to such sales?

A. Perhaps so. I'm not familiar with that.

Q. Now, I want to ask you some other questions, about some other questions and answers in your direct testimony.

Q. Do you remember being asked this question:

"Q. As president of the Timken Company, are you able to state what the policy of that company is now as to any trade arrangements of that kind?"

A. Yes, I remember answering that.

Q. And your answer was:

"A. The policy of the Timken Roller Bearing Company is that we do not believe in any sort of trade arrangement that would restrict sales."

Do you remember that answer?

A. I remember that.

Q. And then the further question was asked:

"Q. And state whether or not that has always been [fol. 1573] your policy."

And your answer was:

"A. Personally, yes, and I believe that it has been the policy of the Timken Roller Bearing Company as far as I know.

Q. And state whether or not on occasions you have declared that policy as being your policy and the policy of the company as far as you are concerned.

A. I have many times."

In your answer about company policy, Mr. Umstattd, were you talking about, when you talked about trade arrangements, were you talking about oral arrangements or written arrangements?

A. I was talking about any sort of arrangements that would obstruct the sale of bearings or curtail the sale of bearings.

Q. Whether they were oral or written?

A. Whether they were oral or written.

Q. Were the sales that you were talking about your own sales or anybody else's sales, or what sales were you talking about?

A. I'm talking about the sales of Timken Roller Bearing.

Q. Of the Timken Roller Bearing Company's products?

[fol. 1574] A. Yes.

Q. You are not including in those arrangements to restrict the sales of somebody else, some other bearing manufacturer?

A. To restrict the sales of somebody else?

Q. Yes.

A. I think if we increase our sales it would probably be to the detriment of some other anti-friction bearing manufacturer or friction bearing manufacturer.

Q. I'm talking about your statement that you do not believe in any sort of trade arrangement that would restrict sales.

A. That would restrict the sales of Timken roller bearings, steel or rock bits.

Q. But you do believe in trade arrangements with other bearing manufacturers that would restrict the sales of a competitor?

A. No, I do not.

Q. So you mean you do not believe in any sort of trade

arrangement that would restrict either your sales or any other bearing manufacturer's sales?

A. I don't believe in any sort of an arrangement that will stultify the sale of Timken bearings. I will admit that if we take business away from Hyatt or New Departure or Fafnir, it probably stultifies their sales, but it helps our sales.

[fol. 1575] Q. I'm not talking about individual action to take business away from someone, and that's not what you stated your policy was. You said your policy was you did not believe in any sort of trade arrangement. I'm assuming by that you mean arrangements with some other manufacturers?

A. I do not believe in making any arrangements with any manufacturers outside of the Timken group regarding restriction of sales or division of sales territories, if that answers your question.

Q. You mean by "Timken group" American Timken, British Timken and French Timken?

A. And French Timken, yes.

Q. You said "arrangements to restrict or curtail sales." Do you include in that arrangements to fix prices?

A. I do not believe in fixing prices.

Q. By agreement with your competitors?

A. By agreement with competitors.

Q. And when you say you don't believe in it and that's the policy of your company not to believe in it, do you mean it has always been your intent, and you have so acted, not to enter into arrangements to curtail sales or to fix prices with other bearing manufacturers?

A. So far as I know, there is no arrangement for fixing prices with any other bearing manufacturer, and I certainly [fol. 1576] do not believe in it.

Q. And that's your statement, when you say you don't believe in it, that it's your intent and purpose not to enter into arrangements to fix prices?

A. It is my intent not to enter into such an arrangement.

Q. I would like to call your attention to another set of questions and answers which you made on direct examination.

Q. You were asked the following question:

"Q. Are the tapered roller bearings in competition with the ball bearings?"

And your answer was:

"Yes, sir, they are in direct competition.

Q. Have they been in competition with the ball bearings ever since they came on the market, the tapered roller bearings?

A. Yes, sir.

Q. What is the general nature and extent of that competition?

A. It's ordinarily a very bitter and active type of com- [fol. 1577] petition."

Do you remember making that answer?

A. I do.

Q. I would like to ask you if you have ever seen this document before (handing document to witness)?

(Witness reads document.)

A. Yes, that was signed by me on April 5, 1933.

Mr. Nitschke: I would like to have that marked for identification as Government's Exhibit 167. It is a letter addressed to H. H. Timken dated April 5, 1933, from Mr. Umstattd.

(Letter above referred to was thereupon marked by the Clerk, for identification, Government's Exhibit 167.)

Q. Now, you note you say in the first paragraph of this letter which you wrote to Mr. H. H. Timken on April 5, 1933:

> "Louie Klinedinst and I were in New York last week and had a long talk with Fred Hughes and Lester Sigourney of New Departure and arrived at a mutually satisfactory selling price for flanged type bearings [fol. 1578] both ball and tapered roller. We held the price on these bearings at a point where a nice profit will be made for both companies, and I feel that we did a pretty good job as New Departure might have been out of line if we had not told them our prices, and in that event we should have had to cut our prices."

Is that the kind of bitter and active competition with ball bearing manufacturers that you were talking about?

A. That was a particular type of bearing that had been brought out by Timken with a flanged cup for machine tool manufacturers, and New Departure brought out a flanged type bearing and attempted to sell it in the mine car field, and they sold it at a price that admittedly was below cost in order to get into the mine car field. They didn't know our prices, or at least they said they didn't know our prices. We told them the prices we were selling the bearing at in the mine car field.

Q. Bearing in mind your previous testimony about your intent not to enter into arrangements to fix prices or to restrain trade, I would like to ask you if you have ever seen that document before (handing document to witness)?

A. It has my name typed in. I presume I wrote that, apparently the 26th of January, 1934. I am not familiar [fol. 1579] with the entire text of the letter at the moment. Would you like to have me read it, or do you want to read it to me?

Q. I will ask you a question about it.

(Document referred to was thereupon marked by the Clerk, for identification, Government's Exhibit 168.)

Q. I would like to read you a paragraph from this letter. You referred in here to a meeting, which you mentioned in the preceding paragraph, between Ingersoll-Rand, Crucible Steel and Timken Roller Bearing Company. You state as follows:

> "All three of the principals involved agreed that the patent was not valid and that if any license was taken out it would be merely a move for legalizing the fixing of prices so that we would not be threatened by either [fols. 1580-1581] the Clayton or Sherman laws."

Do you still maintain it has been your intent not to enter into arrangements to fix prices and curtail sales?

A. I do.

Q. As a matter of fact, Mr. Umstattd, the Timken Roller Bearing Company has been convicted recently for fixing prices in violation of antitrust laws, has it not?

A. I believe——

Mr. Dey: Well, I object to that.

[fol. 1582] The Court: The objection will be overruled. You may answer the question.

Q. Did the Timken Roller Bearing Company, while you were president, plead nolo contendere to an indictment for violation of the Sherman Act by fixing prices?

A. I believe that such a plea was entered in a stainless steel suit brought by the Government. I am not certain of the date, some two years or so ago.

Q. In 1944?

[fol. 1583] A. That was while the war was going on.

Q. And Timken was sentenced to pay a fine of $5,000 on both counts?

A. I think that is correct.

Mr. Nitschke: Your Honor, I think perhaps since I read the phrase in my question from the certified copy of the docket I ought to have it marked for identification.

(Document referred to was thereupon marked by the Clerk, for identification, Government's Exhibit 169.)

[fol. 1584] Mr. Nitschke: I will offer Government's Exhibits 161 to 169, inclusive.

The Court: They may be received.

Mr. Nitschke: That's all.

Redirect examination of William E. Umstattd

By Mr. Day:

Q. Calling your attention now to some of these exhibits marked by the Government as their exhibits 165, 166, 167 and 168, and referring first to Exhibit 165, it's a memorandum, obviously, from Mr. Brower to Mr. Strough. Mr. Brower at that time held what position with any of the Timken companies?

A. I am not positive. I believe he was the head of the Sales & Service Department, and I believe that he carried the title of vice-president of that organization which at that time was a subsidiary of Timken Roller Bearing Company.

Q. What has become of that company?

A. That company was consolidated with the Timken Roller Bearing Company a number of years ago. It is now a division of the company.

Q. Of the Timken Roller Bearing Company?

A. Yes.

Q. The date is April 1, 1927. Do you recall that there was a contract, the first contract between British Timken [fol. 1585] and American Timken dated as of January 1, 1928?

A. I'm not positive of the date. I know it was about that time.

Q. And have you had your attention called in connection with this case and the affairs of American Timken and British Timken to a document marked "Heads of Agreement"?

A. I have.

Q. Are you aware that the date of that is May 16th, I think, of 1927?

A. I'm not positive about the date. I know it was before the final agreement was signed.

Q. Then looking at the date April 1, 1927, on this document, that was before the contract, obviously, of January 1, 1928, and also before the Heads of Agreement of May 16, 1927, wasn't it?

A. It is if those dates you mentioned are correct. I'm not familiar with the exact dates.

Q. Did you have any knowledge at all at the time that this memorandum was prepared and submitted to Mr. Strough by Mr. Brower of its contents? Do you recall anything of that?

A. I never saw it before and never heard that particular letter discussed, before today.

Q. I understood you to say on cross-examination that [fol. 1586] there are some statements in the letter by Mr. Brower that you do not agree with. Is that right?

A. That is true.

Q. I want to call your attention to one statement in the middle of the third paragraph:

> "On numerous occasions, Hudson and Dodge foreign agencies have complained because of the poor service they secure through British Timken agencies."

Do you understand that's what Mr. Brower said they were complaining about?

A. I presume so. That's what his letter states.

Q. As of April 1, 1927?

A. I presume that's what he meant.

Q. Now, calling your attention——

The Court: That letter antedates the charges that are contained in this indictment.

Mr. Day: Yes, it does, your Honor.

Q. I call your attention to Government's Exhibit 166, a memorandum of July 2, 1927, to British Timken Limited, Attention Mr. William Dallow from R. C. Brower. First, did you ever have any knowledge of that memorandum at the time it was sent, so far as you can remember now?

A. This is the first time I have seen that letter.

Q. Something was said here about the Bock Company. [fol. 1587] What was the Bock Company, B-o-c-k?

A. The Bock Company in the United States operated a plant in Toledo, Ohio, and made tapered roller bearings of a rather unusual design with a head on the large end of the tapered roller.

Q. Was that company acquired by the Timken Roller Bearing Company?

A. It was.

Q. About when?

A. As I recall, sometime around 1926. I'm not positive of the date, but in that general time.

Q. And the Gilliam Company, what company was that?

A. The Gilliam Company was a company manufacturing tapered roller bearings and other products, malleable castings and tire covers, in Canton, about in the early 1920's. I don't know just when they were formed.

Q. Was that the company in Canton that for many, many years, either by itself or its predecessor, made harness and things of that kind?

A. They did, and harness hardware. They made malleable castings for use in harness.

Q. You say the Timken Company acquired that company also?

A. Yes.

Q. And there was a Bock Company figuring in the evi- [fol. 1588] dence also that had a plant in Scotland.

A. I believe it was in Scotland.

Q. Do you recall the testimony, I think it was of Mr.

Dewar, that the company machinery was purchased by British Timken?

A. I think that was read in Mr. Dewar's deposition, as I recall.

Q. That's the same company?

A. Presumably.

Q. Here is Government's Exhibit 168 headed "Thurston Patents." Have you anything to add to what you have already stated in answer to the question by Mr. Nitschke in reference to that?

A. The patent agreement was never entered into regarding this patent proposition. The Timken Roller Bearing Company refused to form a partnership with the other parties and purchase the patent.

Q. Is there anything in any of these exhibits that Mr. Nitschke has called your attention to that changes or affects the statement you made on direct examination and repeated on cross-examination as to the policy of the Timken Roller Bearing Company as to making any agreement with a competitor as to prices or competition or markets or allocation of customers, anything of that kind?

[fol. 1589] A. The Timken Roller Bearing Company will not make an agreement with a competitor regarding prices or allocation of territory. We do on occasion supply technical knowledge to many of our competitors, we show them operations in our plant, we send service men to their plants to show them how to machine, heat treat and finish bearings. But we do not enter into price arrangements with those people. On occasion we have told our prices, and our prices are published in some industries, so there is no secret about any of our prices.

Q. When you were asked something by Mr. Nitschke as to the agreement that exists between American Timken and British Timken and French Timken that's in evidence here, do you regard that as an agreement as to prices or allocation of territory with competitors?

A. British Timken and French Timken are not competitors of American Timken. They are partners in a bearing manufacturing and sales venture.

Q. And do you so regard them?

A. Yes.

Q. Now, you were asked yesterday something about the

process of honing, and one of these bearings was shown [fol. 1590] you.

Q. I hand you this round piece of steel, this circle of steel. What is that?

A. This is a Timken cup made in the United States of America, No. 3920.

Q. By looking at that can you tell whether or not it has been subjected to the process of honing?

A. It has been subjected to a certain type of honing that is commonly called in our plant cross-hatching or superfinishing.

Q. Are there numerous finishes to which bearings of that kind, or parts of bearings of that kind, are subjected?

A. Yes.

Q. What are some of the different finishes?

A. The most common finish is grinding. After that the piece can be honed or cross-hatched, or subjected to a treatment called in our plant mirror finishing, which gives a very high polish to the piece, a much higher polish than is present in this piece.

Q. And is there a lapped finish?

[fol. 1591] A. Yes, there is a lapped finish.

Q. What is that?

A. A lapped finish is ordinarily accomplished by impregnating a piece of copper or lead with diamond dust or carborundum or alundum dust and rotating the piece with the lap held tightly against the rotating cup or cone.

Q. I have a list of these finishes here, and there is one—— is that hypro finish?

A. There is a hypro finish.

Q. What is that?

A. That is done on a machine developed by the Norton Company of Worcester, Massachusetts. That gives a very fine type of finish and is used in many cases where seals are necessary to seal the escape of gas, from a refrigerator, compressor, things of that sort. The micro inches in some of those instances are held down to under one micro inch. The surface is remarkably flat and without any evidence of hills or valleys, that is, I mean any that could be detected by ordinary instruments.

Q. How does the Timken Roller Bearing Company determine when and to what type of finish a cone or cup will be subjected?

A. We are dependent upon the engineers, the information we get from our sales engineers, and in some instances from visits of engineers from purchaser plants.

[fol. 1592] Q. Do the customers' engineers sometimes request a certain type of finish?

A. They do.

Q. What is the fact as to subjecting bearings or parts of bearings to different kinds of finishes in the operations by British Timken?

A. British Timken use a type of finish that is known as cross-hatching or superfinishing. They also manufacture bearings with mirror finish, and I believe in some instances they finish with a hypro lap or a ladder counterlap, where seals for gases are necessary.

Q. Does British Timken have the modern finishing machines?

A. They have the most modern type that has been perfected by us. They have the very latest type of machine that we use in our own operations in this country.

Q. What is the situation in that regard in French Timken?

A. In French Timken they have the intermediate design of machine which is still in operation in this country, and in England, and produces the same type of finish but does not do it as economically or as fast. In other words, the newest type produces more pieces per man per hour.

Q. You were asked yesterday by Mr. Nitschke something about sales by American Timken in British Timken and [fol. 1593] French Timken territory of quantities of bearings, and it was suggested that those sales were not induced by any sales efforts upon the part of American Timken. Do you recall that?

A. Of American Timken directly.

Q. Yes. Well now, those sales were made as a result of whose efforts, sales efforts, as you understand it?

A. The direct efforts of British Timken or French Timken augmented by our sales assistance in sending men to England and France and sending advertising literature to those countries, and advertising in American technical magazines which are read by French and British engineers and government executives.

Q. And those efforts that were made by British Timken and by American Timken in that regard were the result of

what, the existing arrangement between British Timken and American Timken and French Timken?

A. Yes, they were the result of the agreements and arrangements between the companies.

Q. You were asked this morning about selling in Spain, selling bearings in Spain, and I think you said it would be more practical and more profitable for that kind of sales in that territory to be carried on by British Timken than [fol. 1594] American Timken?

A. That is my opinion.

Q. What is that based on?

A. It's based on conversations I have had with people who are familiar with trade relations in France, Spain, and England. The flow of certain commodities from Spain to England and France is quite high and quite logical. France and England import immense amounts of citrus fruits from Spain, olives, olive oil, both of which are in very short supply in both France and England, all fats, and those can be procured from Spain and, in turn, manufactured products are exported to Spain in payment for the agricultural and mineral products imported into England and France.

Q. You were asked yesterday by Mr. Nitschke something about the establishment of plants in English territory and French territory. Do you recall that something is said in the Heads of Agreement to the effect that all practical steps will be taken for the manufacture and sale of bearing by the formation of Continental companies?

A. I remember that in the Heads of Agreement, and as far as I know that has been done.

Q. We talked yesterday about metric sizes and inch sizes. Ball bearings are produced in what sizes, generally?

A. Metric sizes.

[fol. 1595] Q. I asked you questions, and Mr. Nieschke questioned you also, as to whether certain things would be possible or practically possible, especially with regard to sales of bearings by American Timken in the territory of the foreign companies, and by them in American territory. Now, when you say "impossible" do you mean from a practical standpoint?

A. I mean from the standpoint of doing it at a reasonable profit.

Q. And from a business, commercial standpoint?

A. And from a business or commercial standpoint.

Q. You did not mean to imply—this might be a leading question—that it would be physically impossible to do it?

A. I believe a bearing could probably be sold any place in the world.

[fol. 1596] Recross examination of
William E. Umstattd

By Mr. Nitschke:

Q. You stated, Mr. Umstattd, that these sales of some $3,000,000 that you made abroad during the period of these agreements were the results of the agreements and arrangements you had with British Timken?

A. I believe so.

Q. And do you mean that it's the result of this particular clause in the agreement, reading from Paragraph 6 of the current agreement:

> "Each of the Companies parties hereto as a covenantor Company hereby covenants with each of the other Companies parties hereto as a covenantee Company that during the life of this Agreement the covenantor Company will not directly or indirectly make or sell or authorize others to make or sell bearings in the territory of the covenantee Company or in the territory of the covenantor Company knowing them to be for shipment into the territory of the covenantee Company."

A. I don't know that it grew out of that particular paragraph of the agreement. I said it grew out of the agreement.

Q. I believe you stated, Mr. Umstattd, that you did not enter into this license agreement, that you wouldn't go into it. But, as a matter of fact, you did make an offer of h[illegible] [fol. 1597] a cent royalty to this gentleman in that arrangement, didn't you?

A. As I recall, the half cent offer was made by Mr. Hufnagel of the Crucible Company.

Q. Let me read you the last paragraph:

> "After some half hour of discussion it was agreed that Mr. Hufnagel would inform Mr. Kilborn that we would be willing to pay a flat one-half cent per bit royalty and that it would be useless to discuss anything

beyond this price. Mr. Hufnagel will get in touch with Mr. Kilborn sometime Monday and the writer will call Mr. Kilborn later in the week and substantiate the above statement."

So that you did know the facts, didn't you?

A. The offer was made by Mr. Hufnagel with the acquiescence, I believe, of the other parties.

Q. Including Timken?

A. Including Timken.

Mr. Nitschke: That's all.

The Court: Mr. Umstattd, did I understand you correctly that all ball bearings are made on the metric standard?

The Witness: No, your Honor. I think probably 99 per cent of them are. I dare say there would be 1 per cent [fol. 1598] that might be made on the inch standard, but the practice in the ball bearing industry has been to make almost 100 per cent to the metric sizes. There are very, very few exceptions.

The Court: That's true of ball bearings made here, as well as on the Continent?

The Witness: Yes, sir, here and on the Continent.

[fol. 1599] Thereupon the Defendant, to maintain the issues on its part, called as a witness Joseph Gravely, who, being first duly sworn, testified as follows:

Direct examination of Joseph Gravely

By Mr. Ketterer:

Q. What is your name?

A. Joseph J. Gravely.

Q. Where do you live?

A. St. Louis, Missouri.

Q. What is your profession?

A. I am a patent lawyer, patent and trade marks.

Q. How long have you practiced patent and trade mark law?

A. Since 1916, officially, but, actually, since January, 1919.

Q. And are you connected with any firm engaged in that practice?

A. Yes, the firm name is Carr, Carr & Gravely.

Q. Where is your office?

A. 705 Olive Street, St. Louis.

Q. And have you any connection with the Timken Roller Bearing Company?

A. My firm has been patent and trade mark counsel for the Timken Roller Bearing Company throughout all the time I have been practicing, and the files of my office show that the predecessor firm of Carr & Carr represented the [fol. 1600] Timken Company in such matters from its inception.

Q. Your personal knowledge of the patent and trade mark matters involving the Timken Roller Bearing Company goes back to what date?

A. For the most part 1919. At the time I was admitted to practice I was still in law school and I went back to law school for a year after passing the bar examinations, and during that time I was working part time in the office of Carr & Carr. Then of course the war came along and my active practice begins with January, 1919 when I came back from the service.

Q. And does your active connection with patent matters of Timken Roller Bearing Company go back to that date?

A. One of the first things I did after returning to the office was to make a trip over to Canton, not so much to attend to any legal matters as to become familiar with the plant and the operations of the company and the products made by the company so as to be better able to handle its patent matters. At that time it was contemplated that the war being over there would be changes in bearing designs and possibly new products, and that there would be more activity in patent matters than there was during the war period.

Q. And how soon after January 1st, 1919, did you visit [fol. 1601] the Timken plant?

A. My recollection is that it was that very month, perhaps, or in February and that I stayed a couple of weeks.

Q. Now, do you know how soon your firm had something to do or anything to do with the trade mark matters of the Timken Roller Bearing Company?

A. Well, we almost from the beginning began to get more interested in the trade mark matters and we were handling trade mark matters along with the patent matters. Of

course I always understood from Mr. Carr, who is now dead, that from the beginning the trade mark had been considered, and he had represented the Timken Company in trade mark matters as well as patent matters.

Q. Do you know when the trade mark "Timken" was first registered in the United States by the Timken Roller Bearing Company?

A. The trade mark "Timken" was first registered in 1920 after the pasing of the Trade Mark Law of March 19, 1920.

Q. And what change did the 1919 Act do in respect of the prior Act or the 1905 Trade Mark Act?

A. That 1920 law——

[fol. 1602] A. The Trade Mark Law of 1920 made possible the registration of surnames which had previously not been registerable under the 1905 Trade Mark Law.

Mr. Ketterer: If the Court please, I have here a letter that has been marked for identification as Defendant's Exhibit 60, which is a letter from the Timken Roller Bearing Company dated 5/6/11, to Lynch & Day, in Canton, Ohio, which I should like to offer in evidence at this time, and then direct the Court's attention to some part of it.

[fol. 1603] Mr. Nitschke: (After examining letter) Your Honor, I think I will object on the ground it is a self-serving letter, quoting from a document received, and asking for legal advice. I don't see its relevancy.

[fols. 1604-1605] The Court: It may be received.

[fols. 1606-1608] Mr. Ketterer: We offer Defendant's Exhibit 60.

The Court: It may be received.

Mr. Ketterer: I might say, if the Court please, Lynch & Day is the firm with which I am presently connected, who were counsel at that time of the Timken Roller Bearing Company.

I have here a letter which has been marked for identification as Defendant's Exhibit 61, which is dated May 8, 1911, addressed to The Timken Roller Bearing Company, with the initials under the margin on the last page "AL/HLR" which is from Mr. Austin Lynch of our firm. I would like to offer this in evidence, it being the reply to the letter I have just read of Mr. Timken.

[fol. 1609] The Court: All right, if you will offer the first two paragraphs of this letter it will be admitted. I see no objection to that.

Mr. Ketterer: That is satisfactory to us.

The Court: I take it in this instance as well as in the others a copy will be made of the first two paragraphs and those substituted for the entire document?

Mr. Ketterer: That is correct. We will take care of that.

Q. Now, Mr. Gravely, I have here a photostatic sheet that has been marked for identification as Defendant's Exhibit 62, and ask you if you recognize that?

A. Yes, that is a copy of a letter of which I am sure I saw the original when it was received in our office.

Q. Who is Mr. James Carr, to whose attention this letter [fol. 1610] was directed?

A. Mr. James Carr was the head of our firm for many years until his death in 1943, and he personally took complete charge of all of these trade mark matters until about 1924 or '25, or so. He consulted with me,—of course I was the only other man in the office working with him on these particular matters,—but he kept close personal supervision over it and was in full charge until, as I say, 1924 or 1925, or somewhere in there.

Mr. Ketterer: I should like to offer Defendant's Exhibit 62 in evidence at this time and direct the Court's attention to the third full paragraph from the top of the page.

(Reading)

> "I would also like your detailed advice regarding the use of the name 'Timken' as stamped on bearings, by the English and French Companies, just what is involved by this, and whether we can require that bearings should be so stamped. The writer does not clearly remember all the points you made, and therefore wishes in front of him a record of just the rulings on this whole proposition."

Mr. Nitschke: I don't know what the probative value [fols. 1611-1614] is to this letter. I think I will object to it. [fols. 1615-1630] The Court. I will receive it for the sole purpose of showing the desire, I repeat again, of the de-

fendant, Timken Roller Bearing Company, to protect its interest in the trade mark.

[fols. 1631-1632] Mr. Ketterer: Thank you.

We would like to offer the portion of Defendant's Exhibit 63 that I referred to, being the part that begins with the first full paragraph on page 3 and extending to the end of that letter.

The Court: It may be received for the purpose indicated.

[fol. 1633] I would like to have marked as Defendant's Exhibit 64 a letter to Mr. Ely, from Lynch, Day, Fimple & Lynch, dated June 10, 1920.

(The letter above referred to was thereupon marked by the Clerk, for identification, Defendant's Exhibit 64.)

Mr. Ketterer: If the Court please, I have a letter which has been marked here for identification as Defendant's Exhibit 64, dated June 10, 1920, from Lynch, Day, Fimple & Lynch, addressed to Mr. Ely of The Timken Roller Bearing Company, and the portion of that which I should like to offer is the last two paragraphs.

The Court: It may be received.

[fol. 1634] I would like to have marked as Defendant's Exhibit 65 a letter dated September 4, 1920, from Carr & Carr addressed to The Timken Roller Bearing Company.

(The letter above referred to was thereupon marked by the Clerk, for identification, Defendant's Exhibit No. 65.)

Q. Mr. Gravely, I have a letter of three photostatic sheets, a reproduction of a letter, marked for identification as Defendant's Exhibit 65. I will ask you to examine that and tell me whether you can identify it?

[fol. 1635] A. This is a letter addressed to Mr. Ely of the Timken Roller Bearing Company, again signed "Carr & Carr" in the handwriting of James A. Carr.

[fols. 1636-1638] The Court: It may be received.

[fol. 1639] I would like to have marked by Defendant's Exhibit 66 a letter dated October 7, 1920, from Carr & Carr to The Timken Roller Bearing Company.

(The letter above referred to was thereupon marked by the Clerk, for identification, Defendant's Exhibit No. 66.)

Q. I have here, Mr. Gravely, four photostatic sheets that [fol. 1640] have been collectively marked for identification

Defendant's Exhibit 66. I will ask you whether you can identify those?

A. That's a letter dated October 7, 1920, on the letterhead of Carr & Carr to The Timken Roller Bearing Company for the attention of Mr. Ely, and the signature "Carr & Carr" is in the handwriting of James A. Carr, as is indicated by his initials, "J.A.C." in the lower left hand corner of the last page.

Mr. Ketterer: Now, if the Court please, the portion of this letter which I would like to offer begins with the first full paragraph on page 2 of the letter, at the bottom of the page, and runs from there to the conclusion of the letter.
[fol. 1641] Mr. Ketterer: Very well, I will offer the paragraph that begins at the bottom of page 3, beginning with the words, "It would seem advisable," to the end of the letter.
[fol. 1642] The Court: That portion may be admitted.

I would like to have marked as Defendant's Exhibit 67 a letter addressed to The Timken Roller Bearing Company by Lynch, Day, Fimple & Lynch, dated October 16, 1920.

(The letter above referred to was thereupon marked by [fols. 1643-1644] the Clerk, for identification, Defendant's Exhibit 67.)

Mr. Ketterer: I have here a copy of a letter dated October 16, 1920, addressed to The Timken Roller Bearing Company on the stationery of Lynch, Day, Fimple & Lynch, marked for identification Defendant's Exhibit 67. I should like to offer that letter in its entirety.

The Court: It may be received.
[fol. 1645] I would like to have marked for identification, a letter to Carr & Carr from The Timken Roller Bearing Company, dated October 26, 1920, as Defendant's Exhibit No. 68.

(The letter above referred to was thereupon marked by [fol. 1646] the Clerk, for identification, Defendant's Exhibit No. 68.)

Mr. Ketterer: If the Court please, this letter which has been marked for identification as Defendant's Exhibit 68 is a letter addressed by The Timken Roll. Bearing Com-

pany to Carr & Carr, dated October 26, 1920, and I should like to offer the last two paragraphs of that letter.

The Court: The last two paragraphs may be received.

I would like to have marked as Defendant's Exhibit 69, for identification, a letter from Carr & Carr to Timken Roller Bearing Company, dated November 20, 1920. In fact, there are two letters here bearing the same date.

[fol. 1647] (The letters above referred to were thereupon marked by the Clerk, for identification, Defendant's Exhibit No. 69.)

Q. Mr. Gravely, I have some photostatic sheets here that have been marked for identification as Defendant's Exhibit 69. Will you examine those and tell me whether you can identify them?

A. Those are photostats of carbon copies of two letters, each dated November 20, 1920, and addressed to The Timken Roller Bearing Company for the attention of Mr. Ely. The initials "JAC" appear on the last page of each photostat, indicating that the letters were both dictated by Mr. James A. Carr.

Mr. Ketterer: I should like to offer these letters marked Defendant's Exhibit 69.

Mr. Nitschke: Well, I object to portions of those letters, your Honor. There are two letters here of November 20, 1920. The one I have here on that date is to the attention of Mr. Ely—I guess they are both the same way. One is a five-page letter. The first paragraph is lawyer's talk about what the law of trade-marks means, and then beginning in the second paragraph it construes the principal agreement which is in evidence in this case, and that appears to be what the letter is all through. The third page, [fol. 1648] at the bottom of the third page, he says: "The fair inference from these provisions is," so he construes by inference, and that seems to be what the letter does right down to the bottom of the fourth page. I don't have any objection to the first paragraph or the last paragraph. I think they certainly show what was occurring to the Timken Roller Bearing Company in this connection, and the rest of it in the middle seems to me is all a construction of agreements which I object to. The first paragraph and

the last paragraph I think are certainly sufficient to show what the Defendant is claiming he is offering this letter for.

The Court: Well, let's take it paragraph by paragraph. The second paragraph is clearly a construction of the law of trade-marks. I think the objection to the second paragraph will be sustained. The succeeding two paragraphs are again clearly construction by counsel of the terms of an agreement, which is objectionable, and the objection to those two paragraphs will be sustained. The next paragraph is of the same nature, and the objection will be sustained. The concluding paragraph I think may be offered for the purposes indicated by counsel.

Mr. Ketterer: All right.

[fols. 1649-1651] The Court: The second letter of the same date addressed to Timken Roller Bearing Company, attention Mr. Ely—

Mr. Nitschke: I have no objection, your Honor, to the last paragraph of that letter—the last two paragraphs of that letter being offered for the purpose for which they say they are offering it, but the other paragraphs, the first paragraph again construes the contract. The second paragraph construes an Act of Great Britain, the trade-mark act of 1905, and the next paragraph, which is on the third page, again construes the contract.

The Court: The objection to the first paragraph is well taken and will be sustained. The objection to the second paragraph of that letter is well taken and will be sustained, including the quotation of Section 9. The objection to the succeeding paragraph is well taken and that will be sustained. The objection to the paragraph beginning with the words "The next question is whether such application" is well taken and will be sustained. The objection to the last two paragraphs will be overruled.

[fol. 1652] As Defendant's Exhibit 70 I would like to have marked a letter dated November 29, 1920, addressed to Carr & Carr, from Timken Roller Bearing Company.

(The letter above referred to was thereupon marked by the Clerk, for identification, Defendant's Exhibit No. 70.)

Mr. Ketterer: If the Court please, this is a letter dated November 29, 1920, marked for identification Defendant's Exhibit 70, from the Timken Roller Bearing Company to

[fol. 1653] Carr & Carr, and I should like to offer that letter.

The Court: The letter may be received.

Mr. Ketterer: I would like to have marked for identification as Defendant's Exhibit 71 a letter to The Timken Roller Bearing Company from Carr & Carr dated December 8, 1920.

(The letter above referred to was thereupon marked by [fol. 1654] the Clerk, for identification, Defendant's Exhibit No. 71.)

Q. Mr. Gravely, I hand you two photostatic sheets which have been marked for identification as Defendant's Exhibit 71, and ask you whether you can identify them?

A. Those are photostatic copies of the pages of a letter dated December 8, 1920, addressed to The Timken Roller Bearing Company, for the attention of Mr. Ely. The initials "JAC" appear in the lower left hand corner of the second page, indicating that the letter was dictated and signed by Mr. James A. Carr.

Mr. Ketterer: I would like to offer this letter of December 8th marked Defendant's Exhibit 71.

[fols. 1655-1656] The Court: I see no objection, except the formality of it. They may be received. You may as well offer the other one at the same time, and then we won't get into the same discussion again.

(Thereupon, letter of December 15, 1920, from Timken Roller Bearing Company to British Timken was marked by the Clerk, for identification, Defendant's Exhibit No. 72.)

[fol. 1657] And the letter which has been marked Defendant's Exhibit 72, of December 15th, addressed to British Timken, reads as follows:

[fol. 1658] "When we were registering the word 'Timken,' in various countries—"

The Court: Is that identical with the previous letter?

Mr. Ketterer: I think it is, yes. I won't bother to read it, but I would like to offer it to show that the suggestion of counsel was carried out.

The Court: It may be received.

[fol. 1659] Mr. Ketterer: If the Court please, I have here a letter that has been marked for identification as Defendant's Exhibit 73. It is a letter dated January 19th, 1921, to

The Timken Roller Bearing Company from British Timken Limited, which I should like to offer.

Mr. Nitschke: Your Honor, I object to the second last paragraph of that letter. It is written by the Chief Engineer, and the second last paragraph says, "We are of opinion that the new law will" etc.

The Court: The objection to that paragraph will be sustained and the rest of the letter will be admitted.

[fols. 1660-1661] (Letter dated December 28, 1920, from Carr & Carr to Messrs. Abel & Imray, marked by the Clerk as Defendant's Exhibit 74.)

Q. Mr. Gravely, I show you two photostatic sheets here marked for identification Defendant's Exhibit 74, and I will ask you if you can tell me what they are?

A. That is a letter dated December 28, 1920, to Abel & Imray of London written by Carr & Carr and that letter was signed by me, as appears from my initials "JJG".

Q. Who were Messrs. Abel & Imray?

A. Messrs. Abel & Imray were a firm of patent agents in London whom our firm Carr & Carr used in British patent and trade mark matters.

Mr. Ketterer: I should like to offer the first paragraph and the last two paragraphs of this letter.

The Court: They may be received.

[fol. 1662] Mr. Ketterer: That will be satisfactory to us, if you will stipulate that a letter was sent, as stated in Defendant's Exhibit 74 by Carr & Carr to Messrs. Abel and Imray, giving data to be used by Messrs. Abel & Imray in preparation of the application for the trade mark Timken in Great Britain.

[fol. 1663] (Thereupon the Clerk marked as Defendant's Exhibit 76 a letter from Abel & Imray to Carr & Carr dated January 18, 1921, for identification.)

Q. Mr. Gravely, I hand you two sheets that have been marked for identification as Defendant's Exhibit 76. I will ask you what they are?

A. That is a letter dated January 18, 1921, to the firm of Carr & Carr, written by Abel & Imray with reference to the trade mark "Timken" in Great Britain.

Mr. Ketterer: I should like to offer Defendant's Exhibit 76.

Mr. Nitschke: Your Honor, I object to that letter.

[fols. 1664-1665] The Court: It appears to the Court that that portion of the letter around which a line has been drawn is objectionable for the reason stated by Government counsel. With the exception of that one sentence the letter will be admitted.

[fols. 1666-1667] Q. Mr. Gravely, I hand you a sheet of paper that has been marked for identification as Defendant's Exhibit 77, and ask you to tell us what that is, please?

A. That is a letter dated January 20, 1921, to Carr & Carr from Abel & Imray.

Mr. Ketterer: We offer Defendant's Exhibit 77.

The Court: It may be received.

[fol. 1668] (Letter dated May 18, 1921, from Timken Roller Bearing Company, J. F. Strough, Secretary, to Carr & Carr, marked by the Clerk, for identification, Defendant's Exhibit No. 78.)

I have here a letter that ha been marked for identification Defendant's Exhibit No. 78, and I would like to offer the first three paragraphs of the letter.

The Court: It may be received.

[fol. 1669] (Letter dated June 28, 1921, from Carr & Carr to Timken Roller Bearing Company, marked by the Clerk, for identification, Defendant's Exhibit No. 79.)

Q. Mr. Gravely, I have here two sheets that have been marked for identification Defendant's Exhibit 79, and I ask you to examine them and tell me what they are.

A. They constitute a letter dated June 28, 1921, to the Timken Roller Bearing Company, addressed for the at-
[fol. 1670] tention of Mr Ely, and referring to the British Trade-Mark. The letter was signed by Mr. James A. Carr.

Mr. Ketterer: We offer Defendant's Exhibit 79 in evidence.

The Court: It may be received.

[fols. 1671-1672] Q. Mr. Gravely, I hand you a sheet of paper that has been marked for identification Defendant's Exhibit 80, and ask you if you can identify that?

A. That is a letter dated August 22, 1921, and signed by J. F. Strough, Secretary of The Timken Roller Bearing Company, to Messrs. Carr & Carr.

(The letter above referred to was thereupon marked by the Clerk, for identification, Defendant's Exhibit 80.)

Mr. Ketterer: We offer this Defendant's Exhibit 80.

The Court: It may be received.

[fol. 1673] Mr. Ketterer: I have here a letter marked Defendant's Exhibit 81, dated December 9, 1921, addressed to The Timken Roller Bearing Company, from Langner, Parry, Card & Langner, in connection with the mark in France.

(The letter above referred to was thereupon marked by the Clerk, for identification, Defendant's Exhibit No. 81.)

Mr. Ketterer: I should like to offer Exhibit No. 81.

Mr. Nitschke: I object to all of that except the first sentence, as having any purpose.

Mr. Ketterer: Well, that is actually all I want to offer.

The Court: All right, it maybe received.

[fol. 1674] (Letter dated December 12, 1921, thereupon marked by the Clerk, for identification, Defendant's Exhibit 82.)

Q. Mr. Gravely, here is a letter marked for identification Defendant's Exhibit 82. Will you examine it and tell me what it is?

A. It is a letter dated December 12, 1921, addressed to Carr & Carr, and shown as having been written by Mr. Strough, as appears from the initials "JFS."

Mr. Ketterer: We offer Defendant's Exhibit No. 82.

The Court: It may be received.

[fols. 1675-1680] Mr. Ketterer: If the Court please, I have had marked for identification a letter consisting of three pages, Defendant's Exhibit 83, dated March 25, 1924, and it is addressed to Mr. A. J. M. Duncan, by The Timken Roller Bearing Company, and I will offer this in evidence.

The Court: It may be received.

(The letter above referred to was thereupon marked by the Clerk, for identification, Defendant's Exhibit No. 83.)

[fol. 1681] (Thereupon, a letter dated November 6, 1924, from British Timken Ltd. to Timken Roller Bearing Com-
[fols. 1682-1685] pany, was marked by the Clerk, for identification, Defendant's Exhibit No. 84;

Letter dated November 17, 1924, from Timken Roller Bearing Company to British Timken Limited, was marked by the Clerk, for identification, Defendant's Exhibit No. 85;

Letter dated November 27, 1924, from British Timken Ltd. to Timken Roller Bearing Company, was marked by the Clerk, for identification, Defendant's Exhibit No. 86.)

Mr. Ketterer: I have three letters that have been marked for identification Defendant's Exhibits 84, 85 and 86. I had them marked together since they all deal with the same matter. I should like to offer them in evidence.

The Court: They may be received.

[fol. 1686] (At 9:45 A.M., Thursday, April 8, 1948, the trial was resumed.)

Mr. Ketterer: If the Court please, there were offered in the case by the Government marked Government's Exhibit 149 a list of trade mark registrations of the name "Timken" held by the Timken Roller Bearing Company, and registrations of British Timken Limited and the registrations of French Timken of the mark. I should like to have that Government's Exhibit 149 marked first and then offered as an exhibit on behalf of the defendant.

The Court: Is it the same exhibit?

Mr. Ketterer: Exactly the same, using the same exhibit and having the mark put on it.

(Document last above referred to was thereupon marked by the Clerk, for identification, as Defendant's Exhibit 87.)

Mr. Ketterer: There was also offered as part of the Government's case, Government's Exhibit 10, which was a contract dated January 1, 1925, between the Timken Roller Bearing Company and British Timken Limited. I should like to have that marked first as a defendant's exhibit and offered also.

[fol. 1687] (Contract above referred to was thereupon marked by the Clerk, for identification, as Defendant's Exhibit 88.)

The Court: They will both be received.

JOSEPH J. GRAVELY thereupon resumed the stand for further direct examination by Mr. Ketterer.

Further direct examination of Joseph J. Gravely.

By Mr. Ketterer:

Q. Mr. Gravely, while you were on the witness stand yesterday I read Defendant's Exhibit 83 which was offered in evidence, which was the letter addressed by The Timken Roller Bearing Company, through Mr. Ely to Mr. A. J. M. Duncan. Do you recall that?

A. Yes, I do.

Q. Following the writing of that letter to Mr. Duncan did you have any knowledge as to whether there were any negotiations between The Timken Roller Bearing Company and British Timken Limited looking toward the execution of a new contract or a modification of the existing agreement?

A. Yes, I do. That matter came up on trips that I made to Canton, and I think also some that Mr. Carr made, and there was correspondence around and then a representative [fol. 1688] of the Timken Company made a trip to England, as I recall it, which resulted in the making of the agreement.

Q. Now I want to hand you some photostatic papers that have been marked collectively both as Government's Exhibit 10 and Defendant's Exhibit 88. I will ask you whether or not that was the contract that resulted from the instructions that were given by Mr. Ely to Mr. Duncan in the letter that has been marked for identification as Defendant's Exhibit 86?

A. That is the contract.

Q. Now I believe you testified yesterday that you and your firm have been active in respect of the obtaining of trade mark registrations of the mark "Timken" for the Timken Roller Bearing Company since sometime around 1920?

A. That is right.

Q. Now, can you tell us briefly and generally what the program of the company has been in respect of the registration of the mark since 1920 down to the present time?

A. Right about the time of the first war the Timken bearing became known very widely throughout the world, partly by reason of the success of motorized equipment containing Timken bearings. That naturally stimulated in-

terest in world wide registration of the trade mark. Around [fol. 1689] about 1920 it was decided, and we were instructed, that is to say my firm were instructed, to proceed to register the trade mark "Timken" in the important industrial countries.

A. (Continued) The program was then widened to include registration of the trade mark in important countries generally, and finally it was extended to include registration of the mark in any country, large or small, where it could be registered.

Q. Now, there has been offered in evidence in the case a compilation of registrations both by American Timken, British Timken and French Timken of its mark, for identification Government's Exhibit 149, also Defendant's Exhibit [fol. 1690] 87. I want to direct your attention to the portion of the exhibit that has to do with the registrations of the American Company of the trade mark "Timken". I will ask you whether or not that was prepared under your direction?

A. That was prepared under my direction.

Q. Now, have you also examined the portion of this exhibit that has to do with the registration of the mark as held by the British Company and those held by the French Timken?

A. Yes, I have looked at those portions of the exhibit.

Q. Now, will you tell the Court what countries in the world to your knowledge there are in which there is no registration of the mark "Timken" at the present time?

A. Well, I checked that from not only those exhibits last night but from other memoranda as to registrations which have been taken out since that time, and I made a note at the time,—if I might look at it—as of today the only countries in which the mark "Timken" is not registered by one or the other of the three companies are Eritrea, Lebanon, Virgin Islands, Syria, Bahamas, Ceylon, Cyprus, Fiji Islands, Nigeria and Palestine.

Q. Those are the only countries in the world as far as you know in which the mark is not registered at the present [fols. 1691-1693] time?

A. To the best of my present knowledge.

Q. Are there any applications pending in any of those countries at the present time to your knowledge?

A. There is at this time an application pending in the Virgin Islands and I believe, well, I should say that in the

Virgin Islands American Timken has an application pending, and I think that in some of those other countries British Timken has applications.

(Letter dated July 30, 1925, from Carr & Carr to Timken Roller Bearing Company marked by the Clerk, for identification, Defendant's Exhibit 89.)

Q. I will hand you, Mr. Gravely, three photostatic sheets that have been marked for identification Defendant's Exhibit 89, and ask you if you can tell me what they are?

A Those sheets are a letter dated July 30, 1925, written by the firm of Carr & Carr, and I should say written by me.

Mr. Ketterer: I would like to offer, if the Court please, the portion of this letter beginning with the first full paragraph at the bottom of the first page and running from there to the conclusion of the letter.

The Court: It may be received.

[fol. 1694] (Letter dated August 15, 1925, from Carr & Carr to Skerrett & Skerrett, marked by the Clerk, for identification, as Defendant's Exhibit 90.)

Q. I have here three photosatic sheets that have been marked for identification as Defendant's Exhibit 90. Will you identify those, Mr. Gravely?

A. They are a letter dated August 15, 1925, to Messrs. Skerrett & Skerrett written by me on behalf of the firm of Carr & Carr.

Mr. Ketterer: I would like to offer Defendant's Exhibit 90.

Mr. Nitschke: I object to certain paragraphs of that letter on the ground that they are interpretations of the law and also contain statements as to the ownership of the mark. The paragraphs I object to are the three middle paragraphs of the letter, the second, third and fourth paragraphs of the letter. I am not objecting to the first or the last paragraphs.

The Court: The objection to the paragraph on Page 2 beginning "All of these registrations are of course" is well [fols. 1695-1696] taken and will be sustained. The balance may be received.

[fol. 1697] (Letter of September 14, 1925, Stibbard, Gibson & Co. to Timken Roller Bearing Company marked by the

Clerk, for identification, as Defendant's Exhibit 91; and copy of statement of grounds dated blank day of September 1925 marked by the Clerk, for identification, as Defendant's Exhibit 92.)

Mr. Ketterer: If the Court please, I have had marked for identification as Defendant's Exhibit 91 a letter addressed to The Timken Roller Bearing Company by Stibbard, Gibson & Co. of London, dated September 14, 1925, and as Defendant's Exhibit 92 a copy of a Statement of Grounds, dated the blank day of September, 1925, request-
[fols. 1698-1700] ing registration of the trade-mark "Timken" in England by The Timken Roller Bearing Company and British Timken Limited.

I should like to offer them in evidence at this time.

The Court: They may be received.

[fol. 1701] Q. Now, Mr. Gravely, can you tell me whether or not there was an application filed as outlined there?

A. The application was filed in the joint names of the two companies.

[fols. 1702-1703] Q. What is the fact as to whether or not that application was withdrawn at any time after its filing?

A. It was withdrawn.

Q. And on what basis?

A. On the basis that a joint application, as that was, could not be granted registration under the circumstances, that is to say, under the actual business conditions.

Mr. Ketterer: I would like to have marked for identification as Defendant's Exhibit 93 a letter dated September 25, 1925, from Messrs. Skerrett to Carr & Carr.

(Letter above referred to was thereupon marked by the Clerk, for identification, as Defendant's Exhibit 93.)

Q. I have here a sheet that has been marked for identification as Defendant's Exhibit 93, Mr. Gravely. Can you tell us what that is (handing Defendant's Exhibit 93 to witness)?

A. That is a letter dated September 25, 1925, from Messrs. Skerrett to the firm of Carr & Carr.

Mr. Ketterer: We offer Defendant's Exhibit 93.

The Court: It may be received.

[fol. 1704] I would like to have marked for identification

as Defendant's Exhibit 94 a letter dated October 9, 1925, from Carr & Carr to Skerrett & Skerret.

(Letter above referred to was thereupon marked by the Clerk, for identification, as Defendant's Exhibit 94.)

Q. Mr. Gravely, I hand you two sheets that have been marked for identification as Defendant's Exhibit 94. Will you tell us what they are (handing Defendant's Exhibit 94 to witness)?

A. That is a letter written by me for the firm of Carr & Carr to Messrs. Skerrett in Birmingham.

Mr. Ketterer: We offer Defendant's Exhibit 94.

Mr. Nitschke: Your Honor, I object to the last two paragraphs of that letter which I do not think have any reference to the purpose for which these letters are being offered, and particularly the fact that it's sort of a triple hearsay statement in the second paragraph, a statement of Praus-nitzer related to somebody else, as related to Skerrett, and then apparently passed on to Carr & Carr. With respect to the last paragraph it's an opinion as to the ownership [fol. 1705] of the mark.

[fol. 1706] The Court: The objection to the last paragraph on the first page of the letter is well taken and will be sustained. The objection to the concluding paragraph will be overruled. The letter will be received with the exception of the paragraph I mentioned.

Mr. Ketterer: Paragraphs 1, 2, and 4 are admitted?

The Court: Yes.

[fol. 1707] I would like to have marked for identification as Defendant's Exhibit 95 a letter dated October 7, 1925, from Messrs. Skerrett to Carr & Carr.

(Letter above referred to was thereupon marked by the Clerk, for identification, as Defendant's Exhibit 95.)

Q. Mr. Gravely, I have a sheet that has been marked for identification as Defendant's Exhibit 95. I will ask you if you can identify that (handing Defendant's Exhibit 95 to witness)?

A. That is a letter dated October 7, 1925, from Messrs. Skerrett to the firm of Carr & Carr.

Mr. Ketterer: We offer Defendant's Exhibit 95.

The Court: It may be received.

[fol. 1708] I would like to have marked for identification as Defendant's Exhibit 96 a letter dated January 9, 1926, from Carr & Carr to Messrs. Skerrett.

(Letter above referred to was thereupon marked by the Clerk, for identification, Defendant's Exhibit 96.)

[fol. 1709] Q. Mr. Gravely, I have here two sheets that have been marked for identification as Defendant's Exhibit 96. Will you identify them for us, please (handing Defendant's Exhibit 96 to witness)?

A. That is a letter dated January 9, 1926, written by me for Carr & Carr to Messrs. Skerrett.

Mr. Ketterer: We offer all but the first paragraph of the letter.

The Court: It may be received.

[fol. 1710] I would like to have marked for identification as Defendant's Exhibit 97 a letter dated January 9, 1926, from Carr & Carr to The Timken Roller Bearing Company.

(Letter above referred to was thereupon marked by the Clerk, for identification, Defendant's Exhibit 97.)

Q. Mr. Gravely, I have two sheets that have been marked for identification as Defendant's Exhibit 97. I will ask you to identify that, please (handing Defendant's Exhibit 97 to witness)?

A. These sheets constitute a letter dated January 9, 1926, written by me for the firm of Carr & Carr to The Timken Roller Bearing Company.

Mr. Ketterer: I would like to offer Defendant's Exhibit 97.

Mr. Nitschke: Your Honor, I would like to make an objection to the first sentence of the third paragraph, in which [fols. 1711-1712] the attorney expresses an opinion as to the fact that he thinks the action is proper. I don't think that is admissible. I also object to the last paragraph on the ground that it involves the construction of agreements.

The Court: I think both of those objections are well taken and will be sustained. The balance of the letter will be admitted. That means that the first sentence in the third paragraph, and the last paragraph are excluded.

[fol. 1713] I would like to have marked for identification as Defendant's Exhibit 98 a letter dated February 2, 1926,

from Stibbard, Gibson & Co. to The Timken Roller Bearing Company, and as Defendant's Exhibit 99 a joint opinion [fols. 1714-1715] dated January 22, 1926, attached thereto.

(Thereupon the letter above referred to and the joint opinion above referred to were marked by the Clerk, for identification, Defendant's Exhibits 98 and 99, respectively.)

Mr. Ketterer: If the Court please, I have just had marked for identification as Defendant's Exhibits 98 and 99, two documents. 98 is a letter from Stibbard, Gibson & Company to The Timken Roller Bearing Company dated February 2, 1926. It has to do with the registration, or the pending application for registration, to which reference has already been made in the testimony. To that is attached this Defendant's Exhibit 99, which is an opinion of trade-mark counsel in regard to that registration, and I should like to offer Defendant's Exhibits 98 and 99.

Mr. Nitschke: The Government will object to both of these exhibits, your Honor, on the ground that they are expressions of legal opinion as to the law of England.

[fols. 1716-1720] The Court: The objection will be overruled, and they will be admitted, to show that such opinion was given, and the defense is that they acted in pursuance of the receipt of such opinion.

Mr. Ketterer: That is correct.

Reading from Defendant's Exhibit 98:

[fol. 1721] The Court: Do you believe that last portion of that opinion is admissible on any ground?

[fol. 1722] Mr. Ketterer: Well, as I say, the only reason I offered the whole paragraph was because of the fact that in the last three lines, as the Court will observe, there is the suggestion that "the company take prompt steps to make known that you and you only are selling Timken bearings."

The Court: That portion will remain. I think the balance of it will be excluded.

[fol. 1723] Mr. Nitschke: Your Honor, I'm not sure I understand which portion was omitted from that expression. Was it the second last paragraph?

The Court: Candidly, it's undoubtedly my fault that it isn't clear what portion of it remains. I think it's the last paragraph—

Mr. Nitschke: Beginning with "Under the agreements as they at present stand, when the British Company's license comes to an end, you and you only"—

[fols. 1724-1729] The Court: That's right.

Mr. Nitschke: That paragraph?

The Court: That paragraph will go out.

[fol. 1730] I would like to have marked for identification as Defendant's Exhibit 100 a letter dated January 12, 1927, from Carr & Carr & Gravely to The Timken Roller Bearing Company.

(Letter above referred to was thereupon marked by the Clerk, for identification, Defendant's Exhibit 100.)

Q. Mr. Gravely, I have three sheets that have been marked for identification as Defendant's Exhibit 100. I will ask you whether or not you can tell us what they are (handing Defendant's Exhibit 100 to witness)?

A. They are a letter dated January 12, 1927, from the firm of Carr & Carr & Gravely, by me, to The Timken Roller [fols. 1731-1732] Bearing Company.

Mr. Ketterer: If the Court please, I should like to offer the first, second, third, and fourth paragraphs of this letter only.

The Court: It may be received.

[fol. 1733] I would like to have marked for identification as Defendant's Exhibit 101 a letter dated February 2, 1927, from Timken Roller Bearing Company to Carr & Carr.

(Letter above referred to was thereupon marked by the Clerk, for identification, Defendant's Exhibit 101.)

Q. Mr. Gravely, I have here a single sheet that has been marked for identification as Defendant's Exhibit 101, and I will ask you whether you can identify that (handing Defendant's Exhibit 101 to witness)?

[fol. 1734] A. That is a letter dated February 2, 1927, from The Timken Roller Bearing Company signed by J. F. Strough to the firm of Carr & Carr & Gravely, for my attention.

Mr. Ketterer: We offer Defendant's Exhibit 101.

The Court: It may be received.

[fol. 1735] I would like to have marked for identification as Defendant's Exhibit 102 a telegram dated April 1, 1927, from Strough to Messrs. Carr & Carr & Gravely.

(Telegram above referred to was thereupon marked by the Clerk, for identification, Defendant's Exhibit 102.)

Q. Mr. Gravely, I have here a sheet that has been marked for identification as Defendant's Exhibit 102. I will ask you to examine that and tell us what it is (handing Defendant's Exhibit 102 to witness)?

A. This is a telegram dated April 1, 1927, from J. F. Strough to Carr & Carr & Gravely.

Q. And Mr. Strough held what position with Timken Roller Bearing Company at that time?

A. He was secretary and treasurer.

Mr. Ketterer: We offer, if the Court please, Defendant's Exhibit 102.

The Court: It may be received.

[fol. 1736] I would like to have marked for identification as Defendant's Exhibit 103 a telegram dated April 2, 1927, from Carr & Carr & Gravely to Timken Roller Bearing Company.

(Telegram above referred to was thereupon marked by the Clerk, for identification, Defendant's Exhibit 103.)

Q. I have, Mr. Gravely, a paper that has been marked for identification as Defendant's Exhibit 103. Will you tell us what that is, please (handing Defendant's Exhibit 103 to witness)?

A. That is a telegram dated April 2, 1927, to Mr. J. F. Strough from Carr & Carr & Gravely.

Mr. Ketterer: We offer Defendant's Exhibit 103, your Honor,

[fol. 1737] The Court: It may be received. We'll take a recess at this time.

(Recess taken.)

Mr. Ketterer: If the Court please, the Clerk tells me Defendant's Exhibit 103, which was the telegram I read just before the recess from Carr & Carr to Timken was not offered. If it was not I should like to offer it at this time.

The Court: It will be received.

(Letter dated April 2, 1927, from Carr & Carr to Timken Roller Bearing Company marked by the Clerk, for identification, Defendant's Exhibit 104.)

Q. Mr. Gravely, I have three sheets clipped together and marked for identification Defendant's Exhibit 104. I will

ask you if you can identify that (handing Defendant's Ex-
[fols. 1738-1740] hibit 104 to witness)?

A. That is the letter dated April 2, 1927, to The Timken Roller Bearing Company for attention of Mr. Strough, from Carr & Carr & Gravely, signed by me.

Mr. Ketterer: I should like to offer Defendant's Exhibit 104.

The Court: It may be received.

[fol. 1741] Q. Mr. Gravely, I should like to ask you one question about this. In that letter which I have just read, that has been marked Defendant's Exhibit 104, you say that: "A joint application was at one time filed in Great Britain; but was abandoned (as we understand) because of subse-
[fol. 1742] quent adverse opinion of British counsel." What is the fact as to whether or not that was the opinion of D. W. Kerley and F. E. Bray that I read a few moments ago?

A. That is correct. That is the opinion on which the decision to abandon that application was reached.

(Letter dated April, 1927, from Timken Roller Bearing Company to Heman Ely, was thereupon marked by the Clerk, for identification, Defendant's Exhibit 105.)

Mr. Ketterer: I have, if the Court please, what purports to be a copy of a letter that has been marked for identification Defendant's Exhibit 105, dated April 1927, addressed to Mr. Heman Ely. It has no signature on it but the word "Secretary-Treasurer" appears on the second page, and in the left-hand corner "JFS", which I think appears to be Mr. Strough, who was then secretary-treasurer of the company.

[fols. 1743-1745] The Court: Is the letter along the same lines as those which have been read and offered here.

Mr. Ketterer: Yes, it is, your Honor. The part we want to direct the Court's attention to especially is the third numbered paragraph on Page 2. It is in connection with the line of testimony we are offering here now, that is, these were the general instructions given to Mr. Ely before he left for Europe.

The Court: All right.

[fol. 1746] (Cable dated April 5, 1927, from Timken to Stibbard, London, was thereupon marked by the Clerk, for identification, Defendant's Exhibit 106.)

Mr. Ketterer: I have had marked for identification Defendant's Exhibit 106, which is a cable from Timken dated April 5, 1927, to Stibbard-Gibson, in London, which I should like to offer in evidence.

The Court: It may be received.

(Letter dated April 6, 1927, from Stibbard-Gibson & Co. [fols. 1747-1752] to Timken Roller Bearing Company was thereupon marked by the Clerk, for identification, Defendant's Exhibit 107.)

Mr. Ketterer: I have here a letter marked as Defendant's Exhibit 107, which purports to be a copy of a letter from Stibbard-Gibson to the Timken Roller Bearing Company dated April 6, 1927, and I should like to offer it in evidence.

The Court: It may be received.

[fol. 1753] Mr. Ketterer: As for the exhibits that are remaining here, when Mr. Dewar's deposition was taken in [fol. 1754] London he said that he couldn't recall what disposition was made of the trade mark "Timken" in Germany after the company withdrew from Germany in 1934. He said that was done. Now, this correspondence shows, in point of fact, what was done with the trade mark "Timken". It didn't happen to be available in England at the time we were over there, and it shows the mark was transferred to British Timken, and if counsel for the Government is willing to stipulate it was transferred to British Timken, ultimately, I have no desire to encumber the record with this correspondence.

Mr. Nitschke: That is the trade mark rights in Germany?

Mr. Ketterer: That is correct. After we withdrew from Germany in 1934, subsequently, between 1937 and '38 the mark in Germany was transferred on the registrar in Germany to British Timken Limited.

Mr. Nitschke: Well, if that is the fact I certainly won't object to it going in. I certainly have no knowledge of it.

Mr. Ketterer: Well, that is the fact, there is not any question about it.

[fol. 1755] Mr. Nitschke: I do not want to object to counsel making the statement for the record.

Mr. Ketterer: So, with that, it won't be necessary to offer the balance of the correspondence.

Mr. Nitschke: I would like to say this, that the defendant's answer to the interrogatory with respect to trade

marks doesn't show the transfer of the German trade mark to the British Company.

Mr. Ketterer: I didn't understand that.

Mr. Nitschke: I say that the answer to the interrogatory requiring information as to the trade mark rights doesn't show that British Timken was assigned the right to the mark in Germany.

Mr. Ketterer: It doesn't show that?

Mr. Nitschke: No, it does not.

Mr. Ketterer: Well, your Honor, it was overlooked because it certainly was in their name in Germany, there is no question about that.

Mr. Nitschke: I won't raise any point about it at this time, because I don't want to commit myself to the fact, except that if it should turn out otherwise I would like to make an objection.

There is no doubt about it being a fact that it is not included.

[fol. 1756] Mr. Ketterer: That is an oversight. That was prepared in England, and that is where the registration is. There is no question about it.

Mr. Nitschke: All right.

Cross examination of Joseph J. Gravely.

By Mr. Nitschke:

Q. Mr. Gravely, I believe you said there are only a few countries today in which the mark isn't registered by either American Timken, British Timken or French Timken?

A. That is true, I don't think my answer was quite complete on that.

Q. You listed Eritrea, Virgin Islands, Syria, Ceylon and so on and so forth. There were about ten or eleven countries?

A. That is right. And I should have said that Timken Roller Bearing Company filed applications in all of those countries. I only mentioned Virgin Islands, but as a matter of fact we filed in all of them. In some of them we have found that British Timken had already obtained registration or at least have an application on file. I think that is the situation in Nigeria, for instance, possibly in Cyprus, two of them.

Q. It just has an application on file?

[fol. 1757] A. I think it may have a registration. I don't have the complete facts at the moment but I do know we filed in those various countries that I mentioned in my direct examination and that most of them are still in process. In some few cases we have found that British Timken already has filed. I have some of those, I know that in some cases the British Timken applications have matured into registrations.

Q. Do you know if a registration has been made in Saudi Arabia?

A. No, I do not but there are certain other countries where a registration must be based on a British registration or else there must be actual use in the particular country. And what I meant to say in my answer was that we had checked over the list of all countries where we felt that the Timken Roller Bearing Comany could file, and that list that I read was the last list of such countries in which we didn't have registrations. Then we did proceed to file the applications.

Q. So there may be other countries where you have not registered besides those you mentioned?

A. There are undoubtedly countries where we, that is to say the Timken Roller Bearing Company, have not registered due to the fact, as I say, that the registration either requires actual use of the mark, and we haven't been using [fol. 1758] it there, or that the registration, as in the case of a number of British Colonies, must depend from a British registration. Now, what I cannot say is whether or not British Timken has either applications or registrations in all of such countries. As I mentioned a moment ago we have found where they have in some few countries, as Ceylon and Cyprus, as I recall it, and Nigeria, that British Timken is ahead of us with a registration. So they may or may not have applications in all the remaining countries.

Q. So there may be countries of that type where the mark is not registered at this time?

A. Yes, that is right.

Q. Besides those you mentioned?

A. That is right.

Q. I wonder if you could tell us what countries in the world the mark was not registered by American Timken as of January 1st, 1928? Would it help ~~you any if I~~ showed you Government's Exhibit 149?

Mr. Nitschke: May I suggest, your Honor, perhaps you could follow this by looking at Government's Exhibit 28, which is a list of the various countries allocated to British Timken, French Timken and American Timken.

[fol. 1759] A. In other words, you want me to go through this list and pick out those registrations which were in existence as of—what date was that?

Q. I would like you to tell the Court what countries there was no registration of American Timken as of January 1st, 1928.

A. Well, that would depend on my knowledge of geography whether I could list all the countries you ask me to from my recollection. In other words here is a list of the registrations as they existed as of that date, and it seems to me that the rest is simply a matter of looking at the map of the world, and what is not on here is where it was not registered.

Q. Well, based on what you have there, can you give us what countries you can say the mark was not registered in by American Timken in 1928?

A. As of 1928?

Q. As of January 1, 1928.

A. Well, of course, we always start out with the group of England, France and Germany. There was no registration in New Zealand in the name of American Timken. The Dominican Republic registration was later. The Belgian Congo registration was later. The Bolivia registration was later.

[fols. 1760-1762] Q. In other words, you mean there was no registration as of January 1st, 1928?

A. As of January 1st. This exhibit, you remember, gives the date of each of these registrations. There was none in Colombia, Costa Rica, Cuba, Curacao, Dominican Republic, Dutch East Indies, Dutch Guinea, Equador, Ethiopia, Guam—of course there couldn't have been any registration in Guam at that time, Guatemala, Haiti, Honduras, Hong Kong, Ireland, Iran-Iraq, Jamaica, Leeward Islands, Manchuko, Liberia, French Morocco, Newfoundland, Nicaragua, Panama, Paraguay, Russia. Of course, with Russia, we hadn't recognized Russia at that time so there, again, there could not have been a registration in 1928. Salvadore, Siam, Tangier, Trindad and Tobago, Tanna Tuva and Uruguay.

Now, as to those South American countries which I have

read, I will call your attention to the fact that there was an inter-American registration in 1922, so that as of 1928 there were in effect registrations in some of those South American countries, whichever ones had ratified the Inter-American Convention as of that time.

[fol. 1763] Cross examination of Joseph J. Gravely (Continued).

By Mr. Nitschke:

Q. Mr. Gravely, before lunch I believe you had by reference to Government's Exhibit 149, named some countries in which American Timken did not have registered the mark "Timken" on January 1, 1928.

A. That is true, and I'm not quite sure I had finished the answer, because just at the adjournment I was pointing out that I read off some South American countries in which, as of January 1, 1928, there were no individual registrations but I pointed out that in 1922 the Timken Roller Bearing Company had taken out a registration under the Pan American Convention, or the Inter-American Convention, as it was afterwards known, which would in effect be a registration in those of the countries which had ratified it as of that time. So that I really read into the record as not having registrations more countries than I should have. What I meant was there was no individual registration in those countries.

[fol. 1764] Q. As of January 1, 1928, in what countries had British Timken or French Timken registered the mark?

A. You are asking now the affirmative question in which countries they had registrations as of 1928?

Q. Yes.

A. The other one was in reverse, you remember.

Q. Yes.

A. Well, this list shows no registrations by British Timken as of January 1, 1928, nor does it show any registrations by French Timken. It has appeared here, though, that the German representative, Max Prausnitzer had a German registration which, I am quite sure, was much earlier than 1928, and the predecessor, in other words, the Societe de Mecanique de Gennevilliers, which was the French agent or subsidiary, or which was the French company of British

Timken, had a registration in 1921. There was a letter which was read here yesterday which called attention to that.

Q. But British Timken and French Timken had no registrations of January 1, 1928, anywhere?

A. I don't think there was a French Timken at that time. I wouldn't be sure as to that.

Q. Well, British Timken had none?

A. That's right.

[fol. 1765] Q. Anywhere?

A. That's right, so far as this list shows.

Q. And that list is accurate, as far as you know?

A. That's right, these were prepared with my cooperation and under my general supervision. I must say, though, that our knowledge could be depended upon as being absolutely complete only as to our own registrations. We were dependent, naturally, on British Timken and their records for some of those other matters.

Mr. Nitschke: That's all.

Mr. Ketterer: That's all, Mr. Gravely.

[fol. 1766] Thereupon, the Defendant, further to maintain the issues on its part to be maintained, called as a witness Stephe B. Ladas, who, being first duly sworn, was examined and testified as follows:

Direct examination of Stephen B. Ladas.

By Mr. Ketterer:

Q. State your name, please.

A. Stephen B. Ladas.

Q. Where do you live?

A. In New York.

Q. What is your profession?

A. We are handling foreign patents, trade-mark and copyright work for clients, who are attorneys.

Q. Are you admitted to the bar?

A. No.

Q. Where were you educated?

A. In the law school of Athens, in Greece, then in the School of Political Science, at Paris, and Harvard Law School.

Q. Did you graduate from the Law School at Athens?

A. Yes.

Q. Did you practice law in Greece before you came to this country?

A. Yes.

Q. What degree did you obtain from the University of Athens Law School?

[fol. 1767] A. Degree of Laws, as you call it.

Q. What degree did you obtain from the School of Political Science in Paris?

A. Diploma, which is equivalent to A.M. in this country.

Q. Equivalent of what?

A. A.M., Master of Arts.

Q. How long did you attend Harvard Law School?

A. Four years.

Q. And you graduated there?

A. I graduated in 1926 with LL.B. and took my Doctor's degree in 1927.

Q. You have a Doctor's degree from Harvard?

A. Yes.

Q. And in what subject?

A. International Law, generally, and jurisprudence.

Q. Did you have any connection with Harvard Law School after you graduated in 1926 and got your Doctor's degree in 1927?

A. Yes, I stayed there in charge of the Bureau of International Research for Harvard for three years after 1927, and during that time I took charge of courses in international law, substituting for Professor Hudson.

The Court: For Professor who?

The Witness: Professor Hudson.

Q. How long did you teach there at Harvard, substituting [fol. 1768] for Professor Hudson?

A. 12 weeks.

Q. What is your present occupation?

A. Handling foreign patents, trade-marks and copyright cases.

Q. Have you written any books on the subject of trade-marks or trade-mark law, either domestic or foreign?

A. Yes, I have written, when I was in Harvard, the book on International Protection of Industrial Property, which includes patents, trade-marks, trade names, unfair competition, and so on. That was in 1930.

Q. Have you written any other works on that same general subject?

A. The year before I had published a smaller book named International Protection of Trade-Marks by the American Republics, and in 1938 I published a two-volume book on International Protection of Literary and Artistic Property.

Q. Are you connected at the present time with any organizations that have to do with trade-mark law, either domestic or international?

A. Yes, I happened to have served as Chairman of the International Commission on Industrial Property of the International Chamber of Commerce, and also I am Chairman of the International Committee of the U. S. Trade-Mark [fol. 1769] Association, and I am a member of the Executive Committee of the International Association for the Protection of Industrial Property, and also of the International Law Association, Industrial Property Committee.

Q. Are you presently connected with any periodicals that have to do with the reporting of trade-mark law?

A. I was for a number of years Editor-in-Chief of Trade-Mark Reports.

Q. Is that an American publication?

A. That's an American publication.

Q. Are you connected with any publication that has to do with the reporting of trade-mark law on an international basis?

A. I'm suposed to write each year, which I don't usually do, an article reviewing decisions and legislation on industrial property for the magazine which is published by the International Bureau for Industrial Property, at Berne, which is called LaPropieta Industrielle.

Q. What is that group that you just referred to, the International Association for the Protection of Industrial Property?

A. Since 1883 there has been an international convention for the protection of industrial property covering patents, trade-marks, trade names, designs, etc. That convention has been revised periodically, and the last time at London [fol. 1770] in 1934, and it now includes about 40 countries. We are members, we are part of that convention.

Q. By "we" you mean who?

A. I mean the United States. Excuse me.

Q. Yes.

A. And that convention is supposed to have created a union for the protection of industrial property, and the union has a central organ, a central bureau at Berne, Switzerland, which publishes this magazine and generally supervises the protection of industrial property throughout the world.

Q. Now, in addition to the books that you have described, have you written any other articles on the subject of trade-marks?

A. Yes, sir, from time to time.

Q. Over how many years?

A. Oh, ever since I came to New York, in 1930.

Q. Have you continuously since 1930 been engaged in the practice that you have described?

A. Yes, sir.

Q. Or worked in respect of patent and trade-mark matters on the basis of international law?

A. That's right.

Q. I will ask you, Dr. Ladas, whether or not you have [fol. 1771] kept in touch with and kept yourself informed about the laws of the various nations on the subject of trade-marks?

A. Necessarily, because that is my job. As I said before, I'm supposed to be, and my firm, advisors on foreign patent law and trade-mark law and copyright law for our clients, who are all attorneys, particularly patent attorneys and trade-mark attorneys. So, when they have any problem on foreign trade-marks and patents they usually come to us because we are supposed to have knowledge and experience on the foreign laws, as well as on the working of foreign laws. In our business, on my desk every day I may handle 40 or 50 cases involving trade-marks in every conceivable part of the world, from Great Britain to South Africa, to China, to Argentina.

Q. Did I ask you with what firm you are presently connected?

A. Langner, Parry, Card & Langner.

Q. In New York City?

A. New York City.

Q. Are you a partner of that firm?

A. Yes.

Q. Now, I want to ask you, Dr. Ladas, whether or not you

have kept yourself informed as to the trade-mark law in Great Britain and the United Kingdom generally?

A. Yes, sir.

[fol. 1772] Q. And are you familiar with the principles of trade-mark law as they existed in 1925, 1926, and 1927, in Great Britain?

A. Yes, sir.

Q. I would like to ask you first of all, doctor, this question. Is there any difference in England between a common law trade-mark right and statutory trade-mark rights?

A. Yes, sir.

Q. Will you explain what that difference is under the English law, or was in 1925, 1926, 1927?

A. Well, there is a very important difference, in this respect.

[fol. 1773] Q. Proceed.

A. In Britain we have two, shall I say, compartments of law with respect to trade-marks, the passing-off act, and the statutory trade-mark law.

The Court: What is the first one?

The Witness: Passing-off act.

A. (Continuing:) Trade-marks which are registered are protected under the statutes. Trade-marks which are not registered are protected by the passing-off act.

Q. And what did the passing-off act involve in respect of the protection of a common law trade-mark ownership in England?

[fol. 1774] A. A passing-off action protected unregistered trade-marks in England against—

[fol. 1775] The Witness: It protects unregistered trade-marks in England, provided a case is made that the defendant who misuses the trade-mark of the plaintiff is passing off his product for the product of the plaintiff. In other words, provided there is a misrepresentation with respect to the origin of the goods.

Q. Now, you said there was a statutory proceeding for protecting a trade-mark that had been registered in England.

A. Yes, sir.

Q. And, in what respect, if any, did that differ from a passing-off proceeding that was designed to protect the ownership of an unregistered mark in England?

A. In the case of a registered trade-mark the plaintiff was not bound to make a case of misrepresentation; if he could

show that his mark had been used by the defendant there was trade-mark infringement, or there is trade-mark infringement.

Q. Am I correct, then, doctor, in saying that the difference was in one case, that is, the passing-off action, it was necessary for a plaintiff to show that there was misrepresentation [fol. 1776] as to the origin of the goods, whereas in an action in respect of a statutory trade-mark or registered trade-mark, no such proof was necessary?

A. Yes, sir.

Q. I want to ask you this, doctor: How was, or how could a common law trade-mark be established in England in 1925, 1926, and 1927, what conduct or procedure was necessary in respect of a manufacturer to establish the existence of a common law trade-mark in England?

A. Use. If he could show that he has used the trade-mark in connection with his goods so that the public has identified and distinguished his goods by that trade-mark, he had established common law ownership of that trade-mark.

Q. Over what period of time was it necessary under the law at that time for him to establish that use?

The Court: What kind of law, statutory law?

Mr. Ketterer: We are talking about the common law.

The Court: I know you were talking about common law, but in this question you said "under the law." Read the question, please.

(Last question read by the reporter.)

Q. Under the common law.

Mr. Ketterer: Thank you, your Honor.

[fol. 1777] A. No stated or definite period had to be shown. Any use which was made for the purpose of identifying and distinguishing the goods of the user was sufficient to establish common law ownership of the trade-mark.

Q. Was there any difference in respect of establishing a registered or statutory trade-mark as to user?

A. In England you can obtain a trade-mark registration without necessarily having used your trade-mark before registration. In other words, intention to use is sufficient in order to register a trade-mark, or to obtain a registration.

The Court: What period are you referring to, 1928, or when?

Mr. Ketterer: 1925, 1926 and 1927.

Q. The answer you gave, Dr. Ladas, as to the establish-
[fol. 1778] ment of a statutory trade-mark right, or its registration in England, was directed to the years 1925, 1926, and 1927, is that correct?

A. Yes, sir.

Q. Now, doctor, assuming that a manufacturer could show use of a mark for a period commencing in 1910 and running continuously to 1925, the use being the stamping of the trade-mark word upon the manufacturer's product, and assume, doctor, that sales were made by the manufacturer of his product in England with such mark on the product for the period I have indicated, namely, 1910 until 1925. I would like to ask you, first of all, whether or not you have an opinion as to whether a manufacturer making such use of a mark for that period would have any common law ownership in a mark based on such use?

A. Definitely.

Q. What is your opinion?

A. Not only would he have acquired ownership under common law, but his showing in a case of passing off against somene else who has used that trade-mark would be extremely strong, because through the use for a period of 15 years he would establish that the public definitely identified certain products with that trade-mark and, therefore, the use of the same mark by any other person would amount to [fol. 1779] misrepresentation, without necessarily his having to show that there was an actual confusion in the trade.

Q. Now, doctor, would the opinion you have just given be in any wise affected, if at the same time that the user that I described in the preceding question for the British manufacture was going on for the period I indicated, an American manufacturer imported goods bearing the same mark, but which were used by persons who had imported equipment from America and were using the goods for replacement purposes in their product? First of all, do you have an opinion in respect of that?

[fol. 1780] Q. Dr. Ladas, in answer to the preceding question you gave your opinion as to whether or not a British manufacturer who had marked his goods with a mark for a period of from 1910 until 1925 with a trade-mark, as to whether or not such a manufacturer would have a common

law right in the mark established as a result of such user. Now I want to ask you whether or not your opinion in that regard would be changed in any respect if you add to the facts that I assumed in the preceding question this further fact, that during at least part of the time that the British manufacturer was making and selling goods in England bearing the mark for the period I have indicated, there was an American manufacturer who was also importing goods into England which bore the same mark, but which goods so imported were being used and were imported as replacements on capital goods that had been manufactured outside of England and had been brought into England?

A. The ownership at common law of the trade-mark of the British manufacturer under the conditions described in the preceding question would not be affected by this incidental use, which I believe it to be, of the American manu-
[fol. 1781] facturer, on the assumption that such incidental use was limited—

A. On the assumption that such incidental use was limited to a special class of customers or purchasers, rather than to the general public.

Q. And the basis of that answer and that opinion is what, doctor?

A. Well, again I have to explain at length rather than briefly. The British manufacturer had identified his products for the general public—

[fol. 1782] The Witness: I was trying to lay down, your Honor, the basis for saying what I was going to say. In other words, I was trying to say, provided the general public in England knew the trade-mark of the British manufacturer and knew that that mark identified a certain kind of product, that condition of facts on which the law is based would not be affected by an incidental use which is not to the general public but may be only a limited use, to a limited class of persons.

Q. Was there any rule of law in England in 1925, 1926,
[fol. 1783] and 1927, that had to do with the matter of the assignment of trade-marks in gross, or otherwise?

A. The statutory law of England at that time was the same as the common law of England, that is, a mark could be validly assigned only with the entire good will of the business in connection with which it was used.

Q. And I take it from what you say, doctor, that there could not be in England, as of 1925, 1926, and 1927, an assignment of a trade-mark in gross?

A. No.

Q. Disassociated from the business with which it had been built up?

A. Definitely not.

Q. The opinions you have given, doctor, in respect of the trade-mark law in England for the period 1925, 1926, and 1927, I will ask you for what period of time that remained the trade-mark law of England?

A. Are you asking in regard to assignments specifically?

Q. Yes, first.

A. The law changed in 1938.

Q. In 1938?

A. Yes.

Q. And can you tell us when the trade-mark law of England changed in 1938, what the change was?

[fol. 1784] A. It now provides that the trade-mark may be assigned with the good will of the business or without.

Q. In other words, as of the present date, or since 1938, an assignment of a trade-mark in gross that had been registered—is that a qualification?

A. Correct, if it has been registered.

Q. —may be assigned in gross?

A. Yes, that's right.

Q. In respect of the common law trade-marks in England as of the present time, has there been any change in the law since 1928?

A. No.

Q. On the subject of assignment?

A. No. In other words, today a common law unregistered trade-mark can only be assigned with the good will of the business.

Q. And is it correct, doctor, to say that an agreement to assign a common law trade-mark as of the present time in England that did not carry with it the obligation to assign the good will of the business with which the mark was associated, could or could not be enforced?

A. Without obligation to assign good will?

Q. That's correct.

A. It could not be enforced in the sense of being able to transfer the validity in the trade-mark.

[fol. 1785] Q. I want to ask you, doctor, whether or not in 1928 and in 1927 there was any distinction observed in the English law between the equitable ownership of a trade-mark and the legal ownership of it, whether it was a common law trade-mark or whether it was a statutory trade-mark?

A. There was no provision in the statute prior to 1938 about equitable ownership as distinguished from legal ownership. The Act of 1938 for the first time provides for that possibility. But I think that the Act of 1938 is declaratory of the common law prior to 1938, so that with regard to unregistered trade-marks prior to 1938, you could have a situation where the legal ownership belong to one party and the equitable ownership to another.

Q. I believe, doctor, that you have examined the contract that was made between the Timken Roller Bearing Company and the British Timken Limited dated as of January 1, 1928, and especially the trade-mark provisions of that contract?

A. Yes, sir.

Q. Can you tell us whether or not, under British law in 1928, the provisions of that contract in respect of the trade-mark would have the effect of establishing in the American Company the equitable ownership of the mark?

A. Definitely, I think.

Q. Now, as part of your business of advising and dealing [fol. 1786] with international trade-mark law, have you kept abreast of and kept yourself informed concerning the trade-mark law of France

A. Yes, sir.

Q. And what was the general principle of trade-mark law in France in respect of the effect of the registration of a mark in France as of 1921?

A. The first party to register a trade-mark in France acquired ownership, provided there was no prior use by another. In other words, a prior user could annul a subsequent registration by another party.

Q. Now, doctor, if you assume the registration of a trade mark by a manufacturer in France in 1921, was that ownership absolute, or could it have been set aside on any basis?

A. It could have been set aside on a showing of prior use by another.

Q. And that showing would have to be made where?

A. Before the courts in France.

Q. Now, have you kept yourself informed as to trade-mark law in Germany from 1918 down to the present date?

A. Down to 1939, yes, sir.

Q. Down to 1939?

A. Yes.

Q. During that period, can you tell us the effect of the [fol. 1787] registration of a mark in Germany, as to whether that was absolute ownership of the mark or whether it could be set aside on any basis?

A. Contrary to France, in Germany a registration grants ownership, and the registration cannot be set aside on proof of prior use.

Q. Prior user, then, under the German law, was immaterial?

A. Yes, sir.

Q. And did that continue to be the law of Germany from 1918 down to 1939, to your knowledge?

A. That is right.

Q. Now, in Europe generally, were there any other jurisdictions in which the registration of the mark could be upset on any basis or for any period of time?

A. Well, we have really three groups of countries in Europe, one group, a smaller one, in which the law is similar to that of Germany, in the sense that the prior registrant had ownership of the trade-mark; then, a second group consists of countries where a prior user could upset the registration in the name of another at any time; and then a third group where the right of the prior user to cancel a subsequent registration was generally limited in time, he could only take action within a certain term, usually three years, with the exception of cases where a registrant was [fol. 1788] not in good faith in obtaining the registration, or when he knew of the prior user's better right, then the registration could be cancelled even after the term set by law.

Q. Now, as to the first class of countries that you mentioned, namely, those in which prior user was immaterial and in which you say that a registration was proof absolute of ownership of the mark that could not be set aside on any ground, can you tell us what countries fell into that classification?

A. I would like to consult a few notes that I kept because of the details involved.

(Witness consults notes.)

Finland is such a country. That's all, only Finland.

Q. That is, of the countries in Europe, if a registration had been obtained in Germany and in Finland, the registration was absolute proof of ownership and could not be set aside?

A. That is right.

Q. Then you said there was a second group of countries in which, as in France, a prior user could come in and set aside the registration of the mark. Can you tell us what countries those are?

A. At any time. That's Belgium, Greece, Italy, Luxembourg, Netherlands, Portugal, Roumania, Sweden, Switzerland, and Turkey.

[fol. 1789] Q. And there was no limitation as to time in which the registration could be set aside in any of those countries?

A. That's right.

Q. Assuming that it would be possible for some person claiming prior user to demonstrate to a court in such country that there had been user that antedated the registration?

A. Yes. I would like to make one clarification, that in two countries the law has changed since then. Italy, for instance, in 1942, Luxembourg in 1945, and Portugal in 1938, those three countries would allow registration at any time, after many years, even, and they changed the law and now they allow it for a certain time.

Q. In other words, they have a limited period now?

A. That's right.

Q. As to the third class of countries, you said there were certain countries for which varying periods of prior user could set aside the registration of a mark.

A. That's right

Q. What countries are they, Dr. Ladas?

A. Austria—

Q. And within what period?

A. Three years.

Q. Give us that at the same time.

A. Yes. Austria, three years; Bulgaria, one year; Czecho-

[fol. 1790] slovakia, three years; Denmark, five years; Yugo-

slavia, two years; Norway, three years; Poland, one year; and Spain, three years.

Q. Now, you also said, I believe, that in those countries, in the latter group you have just described, that even though there were time limitations, if the person who registered the mark knew of the prior user, the time limitation did not apply. Am I correct in that?

A. Correct.

Q. And was that the law in 1928 in respect of those countries?

A. Yes, sir.

Q. Subject to the change as to the three countries that you outlined a moment ago?

A. Correct.

Q. What is the fact, doctor, as to whether the right of a prior user of the mark in any of the jurisdictions of the three classes which you have outlined could waive that right by contract in respect of this right to set aside a registration?

A. Yes, sir, he could waive the right.

Q. In all of those countries?

A. Yes, sir.

Q. Again going back to the contract that was made and dated as of January 1, 1928, between The Timken Roller [fol. 1791] Bearing Company and British Timken Limited, and referring specifically to the paragraphs of the contract that have to do with trade-mark rights, and assuming that there was a possible prior user on the part of British Timken Limited in any of the countries in which prior user might be used as a ground for setting aside a registration, what is the fact, in your opinion, doctor, as to whether the contract had the effect of waiving such right on the part of British Timken Limited in favor of American Timken?

A. If I recall correctly the articles in question—I would have to see them again.

Q. All right.

Mr. Nitschke: What article is it, now?

The Witness: Articles 3 and 4.

Mr. Nitschke: What are you referring to?

Mr. Ketterer: Plaintiff's Exhibit 12, which is also Defendant's Exhibit 23, a copy of the January 1, 1928 contract, between Timken Roller Bearing Company and British Timken Limited.

Mr. Nitschke: Thank you.

Q. I want to direct your attention, doctor, to this Article 3-(a), (b), and (c) of the contract which has been offered in evidence here as Plaintiff's Exhibit 12 and also Defendant's Exhibit 23 (handing contract to the witness.)

[fol. 1792] A. In so far as Clause (a) of Article 3 provides that nothing will be done to prejudice the rights of the parties hereto, it would seem to me to amount to a waiver on the part of the British company of any action to cancel any registration of the American company.

Q. Dr. Ladas, you have testified about the trade-mark law of Great Britain. I want to ask you to what extent the trade-mark law of the dominions and colonies of Great Britain, with the exception of Canada, was based upon or related to in any way, the trade-mark law of Great Britain itself?

A. Substantially, the law of the British colonies was the same as the British law for that period.

Q. And was there in 1928, or has there been since that time, any colony or dominion of the United Kingdom in which registration of the mark was in any way dependent upon registration in Great Britain?

A. Yes, there are six or seven small colonies, colonial possessions, where a trade-mark cannot be registered except upon the production of a certified copy of the British registration.

Q. And will you tell us what they are, doctor?

A. Yes. Aden, British Borneo, British Somaliland, Falkland Islands, Guernsey, Jersey, and Northern Rhodesia.

Q. And in those jurisdictions registration was dependent upon registration in Great Britain?

[fol. 1793] A. That's right.

Q. Now, as to Australia, upon what was the trade-mark law of Australia based in 1928, and since that time?

A. Very much like the British trade-mark Act of 1905 and 1919.

Q. And New Zealand?

A. New Zealand also.

Q. And British South Africa?

A. Union of South Africa?

Q. Union of South Africa.

A. Yes.

Q. What is your answer?

A. The law is the same, substantially. The procedure is changed somewhat, but in substance the law is the same.

Q. I want to ask you this, doctor. To obtain registration of a trade-mark under the 1938 Trade-Mark Act in Great Britain, what if any showing was it necessary for an applicant to make to obtain such a registration?

A. You said under the Act of 1938?

Q. That's correct.

A. Any trade-mark?

Q. Yes, any trade-mark.

A. The British law makes a distinction between four or five kinds of subject matter which can be registered as a trade-mark. Ordinarily, registration is granted without any [fol. 1794] difficulty to an invented word, or a signature, or a word which has no reference to the character or nature of the product. Some other things cannot be registered unless distinctiveness is shown, and that applies particularly to surnames.

Q. Will you explain a little further what proof of distinctiveness has to be shown in respect of the registration of a surname under the 1938 law in England?

A. The amount of distinctiveness to be shown is governed by the regulations and the practice rather than by the law itself. The practice in England is that you have to show—may I make just one interruption? The British registry is divided into part A and part B of the registry. In part B the showing is much less. For a registration in part A the showing must be extremely convincing and persuasive.

Q. What is the difference between part A and part B of the registry?

A. There are many differences, the essential one being that a part A registration may become conclusive and incontestable at the end of seven years, whereas a part B registration does not become conclusive. So that people ordinarily prefer to get a part A registration.

The Court: In all of these things are you now talking [fol. 1795] about statutory law of Great Britain, or are you talking about law as developed by the judicial decisions in the British courts?

The Witness: The particular question I have been asked, your Honor?

The Court: No, all of these questions.

The Witness: This is all statutory law—

The Court: You were referring to the practice, and I'm especially interested whether in referring to practice you were referring to statutory law of Great Britain or whether you were referring to the judicial decisions which have brought about the practice.

The Witness: I am referring, your Honor, to the practice of the Controller of the Patent Office, as his practice has been reviewed by court decisions and now prevails in England.

The Court: Well, does—

The Witness: The rulings of the Controller of the Registry.

The Court: Does the Controller set rules and regulations?

The Witness: Yes.

The Court: On his own account?

The Witness: He is authorized by the Act to do so.

[fol. 1796] The Court: He is authorized by the Act to do so, and then that is subject to judicial review?

The Witness: That's right.

The Court: And when you are referring to the practice now you are referring to the regulations as promulgated by the Controller, as either affirmed or reversed by the judicial decisions?

The Witness: That's right.

Mr. Ketterer: If the Court please, I thought that Dr. Ladas had made that statement earlier, that when he was talking about practice he was talking about something that wasn't in the statute.

The Court: Well, particularly with reference to this situation, I was quite concerned about what he meant by practice. I wanted to clarify it.

Q. I would like to ask you this, doctor: You say that it is possible to get a registration under either part A or part B of the Trade-Mark Act of 1938 in Great Britain. If you do obtain a registration under either one, part A or part B, does that make any difference as to the assignability of the mark so registered in gross?

A. No.

Q. Either type of registration is assignable in gross?

[fol. 1797] A. Correct.

Q. Now, I want to assume this set of facts, doctor. Assume that a British manufacturer was the registered owner of a trade-mark that consisted of a surname and was using the mark in England, and that an American manufacturer having a trade-mark in its corporate name sought to import its

goods into England, either marked with another mark or unmarked, would it be possible for the British manufacturer under English law to stop such importation under such circumstances?

A. Provided the name of the British manufacturer was well known and had acquired reputation and public acceptance, then the importation of products bearing the name which consisted mainly of the principal name of the British company, or of the trade-mark, could be stopped on a passing-off action.

Q. And under those circumstances an American manufacturer could be prevented from importing his products into England, whether the goods were marked with any mark or whether they were marked with a different trade-mark than the English trade-mark?

A. Yes, on the assumption that the name of the American Company was so similar. In other words, the importation would be stopped or would be suppressed because there was an infringement of the British name or trade-mark by the [fol.1798] use of another name.

Q. And would that rule of law obtain in respect of imports under similar circumstances by an American manufacturer into France?

A. Yes, sir.

Q. And how about the continent of Europe generally?

A. I should say the same thing, a little stronger even because of the fact that in those countries there were no well-developed unfair competition laws, so that trade-marks are much more strictly protected than in some others.

Q. I want to ask you one further question, doctor. Under the 1938 Trade-Mark Act of England, is it possible to license the trade-mark?

A. Yes, sir.

Q. And under the French Trade-Mark law in 1928, and from that time down to the present time, is the license of a trade-mark valid?

A. License is always permitted in France.

Q. How about Germany and other continental countries?

A. In all of them, practically, a license does not impair the protection of the validity of the trade-mark.

[fol. 1799] Cross examination of Dr. Ladas.

By Mr. Stedman:

Q. Dr. Ladas, you testified, as I recall, that it was not necessary under the law of England, that you could obtain a registration in England on the basis of user alone, is that right, under the Common Law?

A. You could obtain, was the question?

Q. What is that?

A. That you could obtain on the basis of user.

Q. Would that apply to any sort of a name, whether it was a fanciful name or whether it was the name of a person, or any name whatsoever?

A. If an invented word, the act says you could obtain a registration without any showing of use. Where a surname, you would have to make a very persuasive showing of distinctiveness.

Q. And what do you mean by distinctiveness?

A. Just what we call in this country, a secondary meaning; the surname has acquired a secondary meaning.

Q. Would you explain what that means as far as the law of England is concerned?

A. Taking the word Timken, it means the name of a person, that is the primary meaning of the word. The secondary meaning Timken means the name of a certain product of a certain manufacturer, designated or defined by that name.

[fol. 1800] Q. In other words, the word Timken ordinarily could be used by anybody, is that right, or just by a person by the name of Timken? I mean, essentially, in the absence of a secondary meaning.

A. I thought your first question was as to the use of a surname. Now you are talking about user.

Q. I am talking about the common law.

A. I said if the British owner of the trade-mark Timken had used the name sufficiently as to give it a secondary meaning, then no one else could use that same name.

Q. So that if you had a situation in which this name meant only, let's say, the British Timken Company, that then that company and only that company would have the right to use the name and could prevent anybody else from using it?

A. Correct.

Q. Could they prevent them using it absolutely, or would there be any qualifications to that prevention?

A. They could prevent—there are two rules about that. First that a person could use his family name, in other words, if a person named Timken in England he could use Timken but he couldn't use the word Timken associated with the word Company, for instance, or Limited, because [fol. 1801] then an action would lie because it would mean he was passing off his goods for the goods of British Timken.

Q. Suppose under the British Common Law that two individuals, products of two individuals were known in the country, both of them under the name "Timken", each of them being produced, let's say, by a company which is properly using the name "Timken" in its name, would it be possible for both of those companies or individuals to sell in England under the Common Law?

A. The law recognizes the concurrent right in a trademark. If those two persons bonafidely and honestly used that name they could use it, but the court, if advised of the matter, would define the conditions under which they could use the name, distinguish the localities, the class of customers, and so on.

Q. For instance if one particular man was selling a product for a certain purpose, the other man could sell it for use to a different class of purchasers, would that be one qualification that might be made which would enable both of them to use the mark?

A. The test would be whether there was deception of the public involved.

Q. In other words, whether there is any confusion between [fol. 1802] the two products?

A. Yes.

Q. Is it correct to say that to the extent the two companies could sell their product without confusing the one product with the other, each would be free, they would both be free to use the same mark?

A. I think you will have to distinguish between confusion and deception of the public. I think the court would rather look for absence of deception of the public. And deception in that sense means that someone who bought the goods marked Timken of one manufacturer would buy them thinking they were the manufacture and goods of another. That is the sort of deception which the court would prevent.

Q. Suppose it could be shown that without deceiving members of the public as to the nature of the product or without deceiving them in the sense of passing off the product of one manufacturer as that of another, as the product of another, the two individuals could sell concurrently under the same name in England, would there be anything to prevent that under the Common Law of England?

A. No, so long as you assume that the court would find that there is no deception.

Q. And that was the law in England in 1928?

A. That is right.

[fol. 1803] Q. And it is the law in England today?

A. Yes.

Q. Now, with respect to registration, you indicated that under the law in 1925 to 1927, I believe it was, there could be a registration of the name under the Registration Act, under the statute, as distinguished from the Common Law, without prior user; is that correct?

A. That is right. That is, with evidence to use, bona fide evidence to use.

Q. With an intention to use you could register the name.

A. Yes.

Q. Were surnames registerable in England?

A. Not without evidence of distinctiveness, and the registrar usually insisted on a very large amount of evidence with regard to surnames.

Q. That was the law in 1925 to 1927?

A. Yes.

Q. Now, is that the law today in England?

A. It is the law except always making a distinction between a Part A and Part B registration.

Q. I am trying to find out for myself what the English law is. Suppose the person attempted to register the name "Timken" under the statute, English statute, what actual [fol. 1804] procedure would be followed in that attempt to register?

A. You will have to file the application accompanied by trade statements. It is altogether technical, setting out the history of the adoption and use of the trade-mark, extent of use and so on. Then this application has to be supported by trade evidence, so-called, consisting of declarations obtained from every one of the seven districts in which England is divided for the purposes of registration,—North

England, South England, West England, East England, as well as Scotland and Northern Ireland. You will have to have at least one declaration from each of those districts and also additional ones from wholesalers, distributing companies, and so forth. A total of twelve declarations, and to prove at least five years of use and a substantial amount of sales, and in addition to that to show distinctiveness. All of this would be to the effect the person was declaring to the state they have known the trade-mark for very many years, and to them it means the product of the applying company, and so on.

[fol. 1805] Q. Suppose in that situation some individual were to appear, a person who enjoyed rights in the name in some other country were to appear before the—was it the Patent Office?

A. Yes.

Q. Is that where the proceedings are held?

A. Yes.

Q. —and introduced evidence to show that this same name meant somebody else's product right here in England. For instance you would have a man from Wales, and that man from Wales said, "This name means to me the product of British Timken Limited," and you have somebody else who introduces an affidavit, perhaps from Wales, saying, "This name means to me the product of Timken Roller Bearing Company of the United States," what would happen, then, in the Patent Office?

A. That would have thrown a monkey wrench into the application, and in a case of that kind, usually the applicant makes a clean face, and states in his statement that in addition to his main use of the trade-mark there has been some incidental use by one other company, and so on. Unless you would make such statement in the statement of the case, then if that comes out, the chance of getting the application through would be very poor.

[fol. 1806] Q. Well, let me go on to another phase of the matter. Is that substantially the law in most of the European countries?

A. About the surname?

Q. Yes.

A. No.

Q. You indicated certain countries do permit the registration of surnames?

A. Most of the European countries permit the registration of surnames the same as any other mark.

Q. In that case it has exactly the same effect as a fanciful name would have?

A. Correct.

Q. What about the British colonies, do they follow the English rule?

A. The important British colonies follow the rule, the dominions, for instance, and the most important other colonies follow very much the same procedure in that respect.

Q. What is the law with respect to the colonies of France, we will say?

A. The French registration extends to the colonies, with the exception of Morocco and Tunisia.

Q. What is the distinction as far as Morocco and Tunisia are concerned?

[fol. 1806-A] A. They are protectorates; they have their own registration office.

Q. What about the other colonies?

A. That differs, again they have in every one of the French colonies a separate registration bureau.

Q. What is the law in Morocco and Tunisia with respect to registration?

A. Very much similar to the French law. In other words, the prior user has better rights.

Q. What about the registration of surnames?

A. The same like in France.

Q. As I recall, in France surnames can be registered?

A. Yes.

Q. And the registration has the same effect as the registration of a fanciful name?

A. Yes.

Q. What about the use of a surname in France? Does that mean that a person who has the same name can't even manufacture and sell in France or import into France?

A. No, the law is the same like in our law or in the British law. A bona fide individual who has that name can trade personally under his name provided, however, he doesn't add anything to the name which may cause confusion, and so on.

[fol. 1807] Q. In other words, if in those areas where the name in substance has the same position that a fanciful name has, the person who has the right to use the name because

it is a family name, his own name, would have the right to sell in that area, to use the name in that area provided he did so without, in effect, passing off or confusing the public?

A. You refer to an individual, not a company.

Q. You indicated in connection with the common law of England that the common law mark is assignable only with good will?

A. Yes.

Q. That was the law from 1925 to 1927?

A. And is still the law now.

Q. Will you explain to the Court just what you mean by "good will" in that situation?

A. I don't think it is any different than what we mean in our trade-mark law here.

Q. What does it mean in England?

A. Well, in England the assignments are stricter than in our country in the sense,—for instance, I can show the difference this way, if a company has two departments, a manufacturing department and a vending department, and uses the trade-mark in connection with the two, manufacturing and the vending of the goods, then he could not sell the vending business alone with the trade-mark, he must [fol. 1808] also sell the manufacturing business, which means in effect he must sell the entire business.

Q. He must sell the entire business, is really what is meant under the good will?

A. That is right.

Q. You cannot, for instance, assign it with one part, one branch of the business?

A. No.

Q. And you certainly couldn't assign it with, oh, let's say, a list of customers or anything of that sort?

A. No.

Q. It has to be assigned with the entire business?

A. Yes.

Q. And that is still the law now, common law in England?

A. Yes.

Q. You indicated under the 1938 Act, passed in 1938, it is now possible to assign the mark with or without the good will of the business to which it is attached?

A. Yes.

Q. Are there any limitations whatever on assignment under the British law?

A. Except when deception of the public may be involved.

Q. If the effect of assigning would be to deceive the public?

A. To deceive.

[fol. 1809] Q. Is that the same sort of deception that the common law refers to?

A. No.

Q. Explain what is the difference.

A. Deception could be avoided completely if the assignee of the trade-mark without good will would advertise the fact that he is not the owner of the trade-mark or puts his name, in addition to the trade-mark, on, so the public will know there has been an assignment.

Q. What about the assignment of marks in other European countries? Is the rule substantially the same?

A. No, there is a great variety. In Holland, Sweden and Germany and Austria not only must you assign the business in that partic ular country with the trade-mark but you must assign your entire business. In other words, an American company having a registration in those countries must assign to the British company not only the business it had in those countries but also its American factories, its American business everywhere.

Q. In other words, what is required is what amounts to your business all over the world, is that right?

A. That is right.

On the other hand, you have France, for instance, and Portugal and Spain and Luxembourg, where you can assign [fol. 1810] control without any limitation whatsoever.

Q. But the number of countries where that is permissible is fairly small?

A. About evenly divided.

Q. It is about evenly divided between those countries in which you can assign, so to speak, in gross?

A. That is right.

Q. And those in which you cannot assign except with the good will of the business, and not just the good will of the business but an assignment of the business?

A. That is right.

Mr. Stedman, if you will permit, I will make the point now, under the new International Convention, as revised in

London in 1934, it is now possible to assign the registration with the good will of the business in the particular country without affecting the other country. So the law I described in Holland and Sweden is no longer in effect.

Q. That law has been limited but is still the law within the territory, within the boundaries of the country itself; is that right?

A. Yes.

Q. You also testified, Dr. Ladas, with respect to equitable and legal ownership of a mark. I am not entirely clear on exactly what you meant by those distinctions.

[fol. 1811] A. Well, all I meant is that the owner of the trade-mark may make a contract with another party by which he recognizes that the trade-mark belongs to the party with whom he is contracting, and that he retains the trade-mark only for a certain time, subject to assignment or abandonment at a later time, in order to permit the party with whom he contracts to acquire ownership of the trade-mark.

Q. Is that a contract which can be enforced irrespective of whether it accurately states what would be the rights of the individuals under the law of that country? I am not sure that question is clear. Do you understand it?

A. Yes, I do, I think I do. The courts would enforce that contract provided the obligation is so clear that it is possible to work out a valid assignment. For instance, if the contract is a good contract, a valid contract, the courts will enjoin the party who gave the equitable ownership of the trade-mark to the other party to desist from further use of the trade-mark, to abandon the trade-mark. So that by such abandonment, then the other party may come in and begin using the trade-mark himself and acquire the right himself. In other words, if it is not possible to execute a valid assignment of the trade-mark proper, you could have an indirect assignment by one party abandoning the trade-mark and permitting the other party to acquire new owner-[fol. 1812] ship of the trade-mark.

Q. Suppose the other party weren't quite quick enough and a third party came in after the abandonment by the person who agreed to abandon it, a third party came in and started to use the mark, if he were quick enough it would be possible for him to do that; is that right?

A. Yes.

Q. In other words, this relationship is purely an equitable

relationship between the two individuals, which the court would enforce simply because the parties have agreed to do this, and would say, "You have agreed to do it, therefore you have to do it."

A. Correct, unless the contract can be so construed as to compel the first party to transfer the good will of the business, together with the trade-mark to the other party.

Q. In which case it would be in substance comparable to an executory contract to transfer the business?

A. Correct.

Q. In that case here, you would do that?

A. Yes.

Q. Would there be one further qualification, that this type of agreement would be enforcible only if it were consistent with public policy of the country in which they were seeking to enforce it?

[fol. 1813] A. If you mean by public policy, the deception of the public would be involved, yes.

Q. It probably would not be enforced if it would result in deception of the public?

A. Correct.

Q. Or if it resulted in—I don't think offhand how this would happen—but if it had some other result which was inconsistent with other laws of the country, perhaps restraint of trade, if it had the effect of restraining trade contrary to the policy of that country?

A. Of course there is no such policy in England. There is no restraint of trade law.

Q. I am not referring to a specific law. I am asking generally, most countries would limit their enforcement of that sort of an agreement by the considerations of public policy and the effect of it.

A. You are going a little too far. I don't know that I can go that far because there is no policy similar to ours in any country, in fact, outside of the United States.

Q. One more question I wanted to raise here, and that was in connection with this question of incontestibility. You indicated that there is a very small number of countries in Europe—this I believe was as of 1928—a couple of countries in Europe in which registration does give absolute owner-
[fol. 1814] ship irrespective of prior use?

A. That is right.

Q. That in a fairly substantial number of countries that

registration is merely, you might call it, declaratory of the rights that the parties have?

A. Correct.

Q. That simply says that you have these rights, therefore you still have them, and therefore you still have them, and in that case I assume the mark is only prima facie valid?

A. Correct.

Q. And would be subject to attack by attempt to use it?

A. Correct.

Q. And anybody who attempted to use it, if he could show a prior use, he would be entitled to do so?

A. Correct.

Q. And then there is another group of countries, which numerically seems to be a large group, in which the mark is prima facie valid for a certain period of time, and after that period of time it becomes incontestible, is that right?

A. Yes.

Q. You made one qualification with respect to incontestibility, and that is it would not become incontestible even after this time elapsed if the mark was obtained by fraud?

[fol. 1815] A. Or if the registrant knew of the prior use of the first user.

Q. Or if the registrant knew of the prior use of the first user.

Can you tell us a little more about how that phase of the law operates, what constitutes fraud, and what constitutes prior knowledge of a user? Perhaps I could give you a hypothetical example. Suppose that in a given country where the law was that a mark became incontestible if I obtained the registration and had it, let us say, for three years, and I applied for the registration in Austria of the given mark, and during the time of application I knew about a prior user in Austria and I said nothing about it, and I went ahead and got the registration and for a period of three years, let's say, everybody kept quiet, now, is that registration incontestible after that period?

A. No, it can be contested after the three years.

Q. It could be contested after the three years, it could be contested by you if you were the active prior user?

A. Only by me, not by the third party.

Q. A third party couldn't raise that issue, is that right?

A. Yes.

Q. That, I take it, is generally the law in those countries where this incontestability provision applies?

[fol. 1816] A. That is right.

Q. Now, there was one other thing I wanted to ask you about in connection with this 1938 Act. You testified that there were two parts of that Act, part A, and part B, and you indicated that one of the differences between them was that registration under part A was incontestable, and under part B was not, is that correct?

A. Yes.

Q. So that what you have under that Act is that those marks which would be registered under part A would come into the category of those countries where during a certain period of time the mark is merely prima facie valid and after that period of time it becomes incontestible, and in other words conclusively valid.

A. Well, I will say something more. The incontestibility under British law goes further than incontestibility under the continental laws. In other words, there is the distinctive conclusion, except for three reasons: Either the mark has not been used in the meantime; if the mark was obtained by fraud; or if the mark may be used for deception of the public.

Q. Now, is that the only difference between part A and part B?

A. There are other differences also. The scope of protection of the registration under part A is much wider than [fol. 1817] under part B registration.

Q. Just what do you mean, in what sense is the scope of protection wider?

A. A part B registration is very much the same nature as what we have under the supplemental registration.

Q. Again I would appreciate your confining your statement to the English law.

A. I mean to say, when you use a registration in part A, the use of your trade-mark registered under part A, prima facie is an infringement, technical infringement, regardless of whether there is likelihood of confusion or not. In the case of a part B registration you have to show likelihood of confusion in addition to showing you have a registration under part B. That is an important difference.

Q. In other words, so far as the registration under part B is concerned, that part, for all time, as far as that goes, is

subject to attack on the basis of prior use or possibility of confusion, but to any of those grounds, is it prima facie? Is the registrant prima facie the owner? Is there a prima facie case?

A. No, there is prima facie evidence of the fact of registration.

Q. Prima facie evidence of the fact of registration but not even prima facie evidence of ownership?

A. With this difference, that the part B may become part [fol. 1818] A registration after five years.

Q. If a person can establish it on the basis of distinctiveness?

A. Yes.

Q. In connection with this registration under part A or part B where would a surname be registered?

A. The choice is with the applicant. There is a very heavy onus of proving distinctiveness for a part A registration. Then he can go provisionally into part B, after waiting a number of years until he is an established user he can go into part A.

Q. So that really what it comes down to, and I will ask you if this is correct, a registrant in order to establish his rights and get a registration under part A, would have to establish the distinctiveness or uniqueness, and so forth, which would give him exclusive right to the use of the mark?

A. That is right.

Q. Do you happen to know, Dr. Ladas, this is not I believe any question in connection with anything specifically you have testified on, I would like to ask you briefly about registrations in some other countries, if I might, not the details of them so much, but just simply whether they have trade-mark laws or whether, let's say, they are a part perhaps of some other trade-mark system, such as the colonies of Great Brit- [fol. 1819] ain. Do you know about Albania, does Albania have a trade-mark system?

A. Yes, they have the old Turkish law which was supposed to be applicable to Turkey and people could register trade-marks there.

Q. Do you know about Anglo-Egyptian Sudan?

A. Yes, it has a registration act.

Q. Angola?

A. Angola is a part of Portugal. In other words, if you

have a registration in Portugal you can in Portugal extend the registration to Angola.

Q. Basutoland?

A. Basutoland has trade-mark registration also.

Q. Borneo?

A. Borneo, you must present a certified copy of a British registration.

Q. British Somaliland?

A. The same as Borneo.

Q. Burma?

A. No registration act.

Q. East Indies?

A. I don't know what that means.

Q. Netherlands East Indies?

A. Netherlands East Indies, yes, it has a registration act.

[fol. 1820] Q. Estonia?

A. Yes, prior to 1919.

Q. But it does not at the present time?

A. No.

Q. It has rather disappeared somewhere along the line?

A. Yes.

Q. Germany, of course has.

Italian East Africa?

A. Italian East Africa, you could extend an Italian registration in Italy.

Q. An Italian registration would apply in that territory?

A. Yes.

Q. Kenya?

A. Yes.

Q. Latvia?

A. Same as Estonia.

Q. Libya?

A. Libya, there is no such state.

Q. That doesn't exist any more. I hope you will excuse my ignorance on the geography part, I have been working too much on law.

Liechtenstein?

A. Liechtenstein, you can use a Swiss registration there.

Q. Monaco?

[fol. 1821] A. No.

Q. Mozambique?

A. Mozambique is a Portugal colony, the same thing like Angola.

Q. Nigeria?
A. Yes.
Q. Palestine?
A. Yes.
Q. Rio de Oro?
A. That is a French colony. You don't need any registration there.
Q. San Marino?
A. No registration there.
Q. San Marino is even smaller than Monaco?
A. Yes.
Q. Sardinia?
A. No separate registration; part of Italy.
Q. Spanish Morocco?
A. Part of Spain.
Q. Swaziland?
A. Separate registration.
Q. Syria?
A. Yes.
Q. Tanna Tuva?
[fol. 1822] A. — — —
Q. Tasmania?
A. Tasmania is part of Australia.
Q. Transjordania?
A. Transjordania, separate registration.
Q. Trinidad?
A. Yes, separate registration.
Q. Union of South Africa?
A. Yes.
Q. Yugoslavia?
A. Yes. I should probably mention many of those small British colonies like Transjordania and others, have been passed after 1930.
Q. Some of those have been passed since 1930?
A. Basutoland, for instance, passed its first registration act in 1939.
Q. But they all do have trade-mark registration at the present time even though they may not have had prior to 1930?
A. Yes.
Q. How about British Honduras?
A. British Honduras had a separate trade-mark registration, but at the present time you must present a certified

copy of British registration, but at the same time you can assign it through the American Consul.

[fol. 1823] Q. French Guiana?

A. That is part of France.

Q. Liberia?

A. No registration.

Q. Outer Mongolia?

A. No registration.

Q. Nova Scotia?

A. Part of Canada.

Q. Prince Edward Island?

A. Part of Canada.

Mr. Stedman: I think that is all.

Redirect examination of Stephen B. Ladas.

By Mr. Ketterer:

Q. I have two questions I would like to ask Dr. Ladas. First of all, over in England, France, Germany, and on the continent of Europe, generally, is it lawful in those jurisdictions to give an exclusive license of a trade-mark?

A. Yes.

Q. One other question. You were asked during the course of your cross examination as to whether in France, for example, a person who was living in France who had the name "Timken" could make use of that name in respect of anything that he personally did. If you recall that.

[fol. 1824] A. That is right.

Q. I want to ask you whether or not that would apply to a company either in France or a company that came in from outside of France with the name of "Timken" in its corporate name and would undertake to make use of it, if that mark had been registered in somebody else's name in France?

A. No, it could not. The exception is special to a man, to a person, a physical person who has his own name and wants to do business under his own name.

Mr. Ketterer: That is all.

The Court: Are particular British laws relating to trade-marks so well settled and precise that the law applicable to them, to trade-marks particularly, may be stated with definiteness, and not merely as a matter of opinion?

The Witness: Your Honor, I have attempted in answering, in response, to precede my explanation by some statement in order to qualify the answer or to explain the answer. However, I did not have a chance to do it. There is no doubt, as you say, the law is uncertain in many respects, except in so far as covered by the Registration Act.

The Court: What I want to know is whether or not England had reached a point so far ahead of us that the common [fol. 1825] law is so clear and well defined that no difference of opinion may exist as to it.

The Witness: Your Honor, the common law of trade-marks has very limited application in England because the statutory law has created substantive rights in trade-marks.

The Court: These matters in which common law does take part, are matters of opinion as most recently announced by the Courts.

The Witness: That is right.

The Court: Now, what about the matter of distinctiveness? Is that determined by the registrar or is that defined by statute?

The Witness: The statute merely says a surname, for instance, is registrable upon evidence of distinctiveness to the satisfaction of the registrar.

The Court: But the determination of distinctiveness is a matter of discretion with the registrar, and is that subject to review by a court?

The Witness: His discretion is subject to review by a court.

The Court: And it is the court, then, that determines whether or not a trade-mark is or is not distinctive?

[fols. 1826-1831] The Witness: In that case, yes.

[fol. 1832] Thereupon the Defendant recalled as a witness, Donald P. Hess, who, having been previously sworn, further testified as follows:

Further Direct Examination of Donald P. Hess, *By Mr. Ketterer*:

Mr. Ketterer: If the Court please, we had Mr. Hess testify a week ago last Thursday, at which time he completed testimony concerning the reports that were made by him in 1927 as to his observations and recommendations in respect of the British, French and German situations. We want to resume with him at this time.

[fols. 1833-1835] (Letter of February 6, 1928, from Mr. Dallow to Mr. Hess was thereupon marked by the Clerk, for identification, Defendant's Exhibit 109.)

Q. Mr. Hess, I hand you some photostatic sheets that have been marked for identification Defendant's Exhibit 109. Will you look at those and tell me whether you can identify them, please?

A. Yes, that is a letter written to me by Mr. Dallow of British Timken in the form of a report, together with the letter.

Q. Mr. Dallow was who at that time?

A. He was a director of British Timken.

Mr. Ketterer: We offer Defendant's Exhibit 109. It is dated February 6, 1928.

The Court: And what is the document?

Mr. Ketterer: It is a letter from Mr. Dallow to Mr. Hess.

The Court: It may be received.

[fol. 1836] (Letter dated February 20, 1928, from The Timken Roller Bearing Company to British Timken Limited, was thereupon marked, by the Clerk, for identification, as Defendant's Exhibit 110.)

Q. Mr. Hess, will you examine the paper marked for identification Defendant's Exhibit 110 and tell us what that is please?

A. That is a letter I wrote under date of February 20, 1928, to British Timken, Attention Mr. Dallow with reference to a report he had sent in.

Mr. Ketterer: We offer Defendant's Exhibit 110.

The Court: It will be received.

[fol. 1837] (Letter dated September 3, 1929, from The Timken Roller Bearing Company to Dallow, thereupon marked by the Clerk, for identification, Defendant's Exhibit 111.)

Q. Will you look at this paper, Mr. Hess, that has been marked for identification Defendant's Exhibit 111 and tell me what that is?

A. That is a letter dated September 3, 1929, that I wrote to Mr. Dallow.

Mr. Ketterer: We offer Defendant's Exhibit 111.

The Court: It may be received.

[fol. 1838] (Letter dated March 29, 1928, from Hobley to Hess, thereupon marked by the Clerk, for identification, Defendant's Exhibit 112.)

Q. I have here, Mr Hess, a letter that has been marked for identification as Defendant's Exhibit 112, to which is attached some sheets. Will you look at that and tell me what it is, please?

A. That is a letter dated March 29, 1928, addressed to me by Mr. Hobley, and has various data on business handled in January of British Timken.

[fol. 1839-1845] I would like to offer at this time Defendant's Exhibit 112, which is the letter of March 29, 1928, with certain attachments.

The Court: It may be received.

[fol. 1846] Mr. Ketterer: I would like to have marked for identification as Defendant's Exhibit 113 a letter dated October 8, 1929, from British Timken to Hess.

(Letter above referred to was thereupon marked by the Clerk, for identification, Defendant's Exhibit 113.)

Q. Mr. Hess, before looking at a further exhibit, the last report which was marked Defendant's Exhibit 112 and had attached to it some data in respect of sales made by British Timken and different classifications, what is the fact as to whether or not you received regularly from British Timken, from time to time, similar reports as to their sales and classifications of sales?

A. According to my recollection, we received those very regularly.

[fols. 1847-1855] Mr. Ketterer: I don't want to encumber the record unnecessarily with a whole group of those, your Honor.

Q. I have here a letter which has been marked for identification as Defendant's Exhibit 113. Will you examine that and tell us, if you can, what that is (handing Defendant's Exhibit 113 to witness)?

A. That is a letter dated October 8, 1929, sent to me by Mr. Dewar.

Mr. Ketterer: We offer Defendant's Exhibit 113 in evidence.

[fol. 1856] I would like to have marked for identification as Defendant's Exhibit 114 a letter dated May 27, 1930, from Timken Roller Bearing Company to British Timken Limited.

(Letter above referred to was thereupon marked by the Clerk, for identification, as Defendant's Exhibit 114.)

Q. Mr. Hess, I hand you some sheets that have been clipped together and marked for identification Defendant's Exhibit 114. Will you examine those and tell us what they are, please (handing Defendant's Exhibit 114 to witness)?

A. It is a letter dated May 27, 1930, to British Timken Limited, attention Mr. Dallow, and signed by me.

Mr. Ketterer: We offer Defendant's Exhibit 114.

[fol. 1857] The Court: Yes, that may be received.

[fol. 1858] Q. Mr. Hess, will you examine that sheet and explain it, the first one, the first attached sheet to that exhibit, explain to the Court what that shows in respect of the operations in the Columbus plant, the Canton plant of American Timken, and the Birmingham plant of British Timken (handing Defendant's Exhibit 114 to witness)?

A. Well, this report was made to compare the costs of manufacturing between the Canton plant and the Columbus plant and the Birmingham plant, Birmingham meaning [fol. 1859] British Timken. It is summarized in the total here in percentages of what is called a standard value. It shows the Canton plant and the Columbus plant reasonably close in total. I might read you those totals, as those percentages are shown. The Canton plant shows 127%—this is all relative to 100%, you understand—the Columbus plant 132% and the British Timken 290%. That indicates that the British costs were in that proportion compared to the American costs in the Canton and Columbus plants.

The Court: That's comparative costs?

The Witness: Yes.

The Court: Between those plants?

The Witness: Between those three plants, as compared with what we call a par value of 100%.

Q. There are two other sheets that are attached to this Exhibit 114. Will you explain to the Court what they show?

A. Well, these sheets identify various classifications. For instance, in the Canton and Columbus plants direct labor and indirect labor, and in the British Timken terms they call it "Productive wages and viewers Stock Taking-Overtime-Sundry Allowances." That's a rather detailed explanation of what goes into these various items of expenses [fol. 1860] and costs.

Q. As shown on the preceding sheet?

A. As shown on the preceding sheet, yes.

Q. And that last column under British Timken, I take it from what you say, was intended to explain to British Timken how you had allocated various items under the headings shown on the first sheet for these comparison purposes?

A. That is correct.

The Court: That's a breakdown, I assume.

Mr. Ketterer: Yes, a detailed breakdown.

The Witness: Of terms and classifications.

The Court: Now, what was the total standard value for? Was that for comparison purposes?

The Witness: Yes, that's for comparison purposes. These reports were prepared monthly, and we judged the reports monthly by comparison of one month to another.

Q. You mean by that they were prepared at American Timken monthly?

A. Yes.

Q. For the purpose of comparing the Columbus and Canton plants?

A. That's right.

[fol. 1861] Q. And after British Timken came into the picture then you did the same thing in respect to British Timken?

A. Well, I don't recall whether we did it monthly for British Timken or not, but I know we did it periodically.

Mr. Ketterer: I would like to have marked for identification as Defendant's Exhibit 115 a letter dated September 11, 1931, from Timken Roller Bearing Company to Mr. Dallow.

(Letter above referred to was thereupon marked by the Clerk, for identification, Defendant's Exhibit 115.)

Q. Mr. Hess, I hand you a sheet that has been marked for identification Defendant's Exhibit 115. Will you tell

us what that is, please (handing Defendant's Exhibit 115 to witness)?

A. This is a letter dated September 11, 1931, to Mr. Dallow and signed by me.

Mr. Ketterer. We offer Defendant's Exhibit 115.

The Court: It may be received.

[fol. 1862] Q. Now, I would like to ask this question, Mr. Hess, in respect of the material in this letter that has been marked Defendant's Exhibit 115. You say that some of their high cost was due to the great many changes which they had owing to their smaller volume. Will you explain to the Court what you meant by that statement?

A. Well, it's due to the fact that they made such small quantities of the various part numbers, and that meant [fol. 1863] they had to change their machinery setup very much oftener than normally we would in Canton or Columbus.

Q. And that had what effect on their costs?

A. Well, that would have a tendency to increase their costs.

Q. There was a reference made here in one of these letters that was read a while ago, and which I handed to you, about a Mr. Porter. Will you tell the Court who Mr. Porter was?

A. Mr. Porter was our vice-president in charge of sales work, and he went to Europe in that period. I don't recall the year he went.

Q. But he had been in Europe in connection with the affairs of British Timken and of American Timken?

A. Yes, sir.

Q. Is he retired now or still with the company, to your knowledge?

A. I think he is retired.

Mr. Ketterer: I would like to have marked for identification as Defendant's Exhibit 116 a letter dated October 20, 1931, from Mr. Dewar to Mr. Hess.

(Letter above referred to was thereupon marked by the Clerk, for identification, Defendant's Exhibit 116.)

Q. Will you look at these sheets that have been marked [fols. 1864-1865] for identification as Defendant's Exhibit

116 and tell us, please, if you can, what they are, Mr. Hess (handing Defendant's Exhibit 116 to witness)?

A. That is a letter from British Timken dated October 20, 1931, addressed to me and signed by Mr. Dewar.

Mr. Ketterer: We offer Defendant's Exhibit 116 in evidence.

The Court: It may be received.

[fol. 1866] Now, Mr. Hess, what was meant in this letter marked Defendant's Exhibit 116 by the reference to No. 2 specification and No. 1 and No. 4 specifications?

[fol. 1867] A. Well those were covering various tolerances of bearings as produced at that time by the various plants.

Q. And did that have to do with the finish that was placed on the bearings?

A. Partially, and also the tolerances and, the eccentricities, the bore, and things like that.

Q. And there was a variation as to tolerances, and so on, depending upon the use to which the bearing was put, is that correct?

A. That is correct.

Mr. Ketterer: I would like to have marked for identification as Defendant's Exhibit 117 a letter dated November 6, 1931, from Timken Roller Bearing Company to Mr. Dewar.

(Letter above referred to was thereupon marked by the Clerk, for identification, as Defendant's Exhibit 117).

Q. Mr. Hess, here are two sheets that have been marked for identification Defendant's Exhibit 117. Will you examine them and tell us what they are, please (handing Defendant's Exhibit 117 to witness)?

A. That is a letter dated November 6, 1931, addressed to Mr. Dewar and signed by me, sent by me.

Mr. Ketterer. We offer Defendant's Exhibit 117 in [fols. 1868-1871] evidence.

The Court: It may be received.

[fol. 1872] Q. Mr. Hess, who was the Mr. Fegan referred to in this letter marked Defendant's Exhibit 117?

A. He was one of British Timken's technical men that they sent over here to be educated and taught how to make bearings.

Q. That is to say, he had come to the United States?

A. That's right.

Q. Is it correct to say he had come prior to the time that this letter was written?

A. I assume so from that letter. I don't recall directly.

Q. Did you spend any time with him in connection with [fol. 1873] the operations of American Timken?

A. Yes, sir.

Q. Now, you refer also to the fact that in 1931 the Columbus plant was closed down. What is the fact as to whether or not that was a temporary shutdown?

A. Well, it was temporary, all right. I don't recall that we knew at the time it was temporary.

Q. The plant was reopened?

A. Oh, yes.

Q. And in operation after that date?

A. Yes, sir.

Mr. Ketterer: I would like to have marked for identification as Defendant's Exhibit 118 a letter dated November 25, 1931, from Timken Roller Bearing Company to Mr. Dewar.

(Letter above referred to was thereupon marked by the Clerk, for identification, Defendant's Exhibit 118.)

Q. I hand you here a single sheet marked for identification Defendant's Exhibit 118, Mr. Hess, and ask you to tell us what that is (handing Defendant's Exhibit 118 to witness)?

A. This is a letter dated November 25, 1931, to Mr. Dewar and signed by me.

[fol. 1874] Mr. Ketterer: We offer Defendant's Exhibit 118.

The Court: It may be received.

I would like to have marked for identification as Defendant's Exhibit 119 a letter dated November 27, 1931, [fols. 1875-1877] from Mr. Dewar to Mr. Hess.

(Letter above referred to was thereupon marked by the Clerk, for identification, Defendant's Exhibit 119.)

Q. Mr. Hess, here are two sheets that have been marked for identification as Defendant's Exhibit 119. Will you tell us what that is, please (handing Defendant's Exhibit 119 to witness)?

A. That is a letter dated November 27, 1931, and sent to me by Mr. Dewar.

Mr. Ketterer: We offer Defendant's Exhibit 119.

The Court: It may be received.

[fol. 1878] I would like to have marked for identification as Defendant's Exhibit 120 a letter dated April 14, 1930, from British Timken to Hess, attached to which are six sheets of trading reports.

(Documents above referred to were thereupon marked by the Clerk, for identification, Defendant's Exhibit 120.)

Q. Mr. Hess, I hand you a group of sheets that have been clipped together and marked for identification Defendant's Exhibit 120, and ask you if you can identify that (handing Defendant's Exhibit 120 to witness)?

A. Yes, this is a letter of April 14, 1930, sent to me by Mr. Squire, secretary of British Timken, including what they call their trading results for the first two months of the year 1930.

Mr. Ketterer: We offer Defendant's Exhibit 120.

The Court: It may be received.

[fol. 1879] Q. These sheets that are attached to the letter of April 14th, 1930, which are a part of Defendant's Exhibit 120, will you look at those, Mr. Hess, and tell us what they are intended to show in respect of British Timken operations?

A. They were intended to show their total sales, their cost of sales, and their gross profit as covered by the various divisions of their business. There is also various other data and expenses, salaries and commissions, traveling expenses, and the condition of their inventories, their overhead, factory charges, and their various sales of bearings, as I said before, by various divisions over that same period.

[fol. 1880] Q. Now, you recall that there was a letter read a little while ago this morning that was addressed to you by Mr. Dallow in which he outlined the type of report that you had requested from British Timken covering a variety of subjects, such as their costs that you have outlined in this report, trading results, overhead, and so on. What is the fact as to whether the trading results report attached to this letter of April 14, 1930, was a sample of

the type of report that was sent by British Timken as outlined in that letter from Mr. Dallow?

A. Well, those reports are a part of the reports that we asked for in that letter.

Q. They are a part of it?

A. That's right.

Q. And they were sent as agreed between you and Mr. Dallow, as outlined in that letter?

A. That's right.

Q. Now, during the time you were with the American Timken Company, I believe you said that was up until 1936 when you were on the stand a week or so ago, did you continue to receive these reports during that entire period?

A. Yes, sir.

Q. And this is illustrative of the type of data that you constantly received from British Timken?

A. That is correct.

[fol. 1881] Mr. Ketterer: I would like to have marked for identification as Defendant's Exhibit 121 a weekly report of British Timken of orders on hand for the week ending March 17, 1928.

(Document above referred to was thereupon marked by the Clerk, for identification, as Defendant's Exhibit 121.)

Q. I hand you, Mr. Hess, a single sheet that has been marked for identification Defendant's Exhibit 121, and ask you if you can identify that?

A. Yes, sir. That's a weekly statement that we received from British Timken with reference to orders on hand, orders received, orders invoiced and orders cancelled.

Q. And was that also in accordance with the outline of material that you were to receive from British Timken, as outlined in the Dallow letter which I referred to a while ago?

A. Yes, sir.

Mr. Ketterer: We offer Defendant's Exhibit 121 and, inasmuch as the witness has testified it is illustrative, I don't care to read the figures shown on it.

The Court: It may be received.

Mr. Ketterer: I would like to have marked for identifica-
[fol. 1882] tion as Defendant's Exhibit 122 a letter dated December 2, 1938, from British Timken to W. Robert Timken.

Mr. Ketterer: If the Court please, the next letter that we have here is one that is dated December 2, 1938, from British Timken to W. Robert Timken. That has been marked for identification as Defendant's Exhibit 122. Of course, that was after Mr. Hess had left the employ of Timken Roller Bearing Company, but I would like to offer this at this time since it has to do with the same general subject we are interested in now, and I will later ask Mr. [fol. 1883] W. Robert Timken, who is going to testify, some questions in regard to the contents of it.

The Court: All right, it may be received.

(Letter of August 6, 1930, from Hess to Dallow thereupon marked by the Clerk, for identification, Defendant's Exhibit 123.)

Q. Mr. Hess, I have a single sheet that has been marked for identification as Defendant's Exhibit 123 and I ask you if you can identify that, please?

A. That is a letter dated August 6, 1930, to British Timken, Attention Mr. Dallow, and signed by me.

Mr. Ketterer: We offer Defendant's Exhibit 123.

The Court: It may be received.

[fol. 1884] (Letter dated August 15, 1930, from Dallow to Hess thereupon marked by the Clerk, for identification, Defendant's Exhibit 124.)

Q. I have, Mr. Hess, a single sheet that has been marked for identification Defendant's Exhibit 124. Will you please tell us what that is?

A. That is a letter dated August 15, 1930, from Mr. Dallow of British Timken addressed to me.

Mr. Ketterer: We offer Defendant's Exhibit 124.

The Court: It may be received.

(Letter dated October 1, 1930, from British Timken to Hess thereupon marked by the Clerk, for identification, Defendant's Exhibit 125.)

Q. I have here three sheets, Mr. Hess, that have been marked for identification as Defendant's Exhibit 125. I will ask you what they are, please?

A. That is a letter of October 1st, 1930, signed by Mr. Dallow of British Timken to me and contains data on their [fols. 1885-1905] machinery.

Mr. Ketterer: We offer Defendant's Exhibit 125.

The Court: It may be received.

[fol. 1906] Q. Mr. Hess, I want to ask you whether or not in 1930 you had followed, or up to 1930 you had followed the relationship between American Timken and British and French Timken and German Timken?

A. Yes, sir.

Q. And was it part of your duty as assistant to the president of the Timken Roller Bearing Company to keep abreast of developments existing or the connection between American Timken, British and French Timken?

A. Yes, sir.

[fol. 1907] Mr. Ketterer: I would like to have these reports marked Defendant's Exhibits No. 127, 128, 129, and 130, for identification.

(Reports referred to were thereupon marked by the Clerk, for identification, Defendant's Exhibits 127, 128, 129, and 130.)

Q. Now, Mr. Hess, I hand you here a single sheet that has been marked for identification as Defendant's Exhibit 127. I will ask you if you can tell us what that is, please?

A. This is a report made by me under date of August 19, 1932, covering a summary of results for the first half of 1932 of British Timken operations.

Q. Was that made following a trip you had made to England?

A. I have an idea that it was, but I can't remember exactly.

[fol. 1908] Q. Well, will you refer to it and see if you can tell from looking at it whether it was based on a trip that was made over there?

A. I will have to read it.

Q. Will you glance at it, then?

(Witness reads report.)

A. Yes, I would say it was.

Q. Now, I hand you another document of several pages, which has been marked for identification as Defendant's Exhibit No. 128. Will you tell us what that is, please?

A. This is a report made by me on a visit in February and March 1932, to Europe. It covers British Timken, French Timken, and Deutche Timken.

Q. I hand you some other papers marked for identification Plaintiff's Exhibit No. 129, and ask you if you can tell us what that is?

A. That is a report covering a visit to French Timken.

Q. At what time?

A. That's March 29, 1932. That's the date of the report.

Q. And handing you the papers marked Defendant's Exhibit 130 for identification, will you tell the Court what that is, please?

A. That is a report of a visit to German Timken dated March 29, 1932.

[fols. 1909-1913] Q. I will ask you to state whether or not those reports were prepared and submitted to executives of the Company in the performance of your duties?

A. That is correct.

Mr. Ketterer: We offer Defendant's Exhibits 127, 128, 129, and 130.

Mr. Nitschke: Your Honor, I object to the admissibility of these reports on the general ground on which I have objected to all this type of testimony, but, in addition, on the ground that the contents here are irrelevant in a great many respects, and I can't give it all to you at once. But, for example, the report contains estimates, predictions, opinions as to what other companies may do, includes trade gossip of the most hearsay type.

[fol. 1914] Mr. Ketterer: May I suggest, then, if the Court please, that we read the report and as we come to any items that counsel for the Government regard as objectionable, that we consider their content at that time?

The Court: I think that's the best way of proceeding, unless you wish to go into something else, and during recess I will show a longer recess and have you and counsel for the Government go over it.

Mr. Ketterer: There is so little of the so-called gossip items, your Honor, that I really don't think we would save much time in that way.

The Court: All right go ahead in the way you suggested.

Mr. Ketterer: I am going to read from a typed copy, your Honor, Now, this is Defendant's Exhibit No. 127, under date of August 19, 1932:

"Messrs. H. H. Timken Sr., H. H. Timken, Jr., Ernst, Spray, Umstattd and Brower.

"Following is a brief summary of results for the first half of 1932 covering British Timken operations:

"Sales for this period were $660,000.00 as compared with $1,180,000.00 for the similar period of last year. This [fol. 1915] large decline was due primarily to the loss of Russian business which for the first six months of 1931 amounted to $330,000.00 against $6,300 for this year. If we eliminate this Russian business from our sales figures for both years to date, we find that 1932 sales are 20% below last years. Another point we must remember is that Mr. Dewar advised us that his selling prices on the average had declined 14% from last year.

"We are making real headway in developing Industrial Sales at British Timken. While the figures show an 8% decline from the first half of last year, our second quarter business was 10% ahead of last year. The first rolling mill equipped with British Timken bearings recently went into operation and is meeting every guarantee of its makers. Our engineering department at British Timken is swamped with industrial layout work, and Mr. Dewar wants to keep our engineer Moreland for another year. England generally has realized they must modernize their industrial equipment, and we are going to share very largely in this development.

"Another encouraging factor is the development of our railroad business. We received an order recently for 15 [fol. 1916] cars from the London Midland & Scottish Railway similar to the type which have operated so successfully on the Metropolitan Railway during the past year. The former is the largest railway in England and is considered one of the best managed and financed not only in England but on the Continent as well. Recognition of our product by this road will be of immense help to us throughout Europe. We are also equipping a trial car for the Belgian State Railways.

"Profits for the first half were $36,000.00 as against $270,000.00 for the same period in 1931. This rather indicates that with sales of $1,200,000.00 annually we will just about break even.

"Progress is being made in the development of our straight roller and ball bearing business. We expect to

be marketing the former type bearing by October of this year and the latter by the Spring of 1933."

Then there is a note at the bottom: "Note A: All figures are based on the pound sterling at par. Note B: French Timken and German Timken figures for the first half of 1932 are not yet available."

Turning to the sheets that have been marked for identification as Defendant's Exhibit 128, which is the report [fol. 1917] on British Timken Limited:

(Reading:)

"Sales. During 1931 British Timken total sales were $1,860,000 which is a decrease of 1.3% under 1930. As has been our experience in England for the past few years, commercial vehicles and service represent the largest part of our sales or 31% and 25% respectively or a total of approximately $1,040,000. It is rather interesting to know, however, that, while these figures represent the monetary value of these sales, the total number of bearings shipped for commercial and passenger car vehicles is approximately the same, although the latter represent only 10% of our gross sales in monetary value. This figure, of course, includes the Ford business, as we are receiving all of this business available from the British Ford plant."

Mr. Nitschke: I think at this point I would like to object to this paragraph. I don't see what the relevancy is of this data respecting British Timken's sales and its proportion of the bearing business, and of some of these companies. I don't see how it is relevant to any defense in this case.

The Court: The defense is that this was a joint venture [fol. 1918] and was not a conspiracy in restraint of trade, it was a joint venture between The Timken Roller Bearing Company, British Timken, and French Timken, and I assume this testimony is introduced for the purpose of showing the method of checking the business of the British Company to show what has been termed by one or two witnesses here as the partnership. Of course, the mere assertion that it's a partnership, or the mere assertion by one or the other, or several, of the fact that it is a partnership or joint venture doesn't make it so. But assuredly evidence

to show the fact that it was a joint venture is permissible and should be allowed to be introduced by the defense, and I am receiving it for that purpose, and I understand that is the purpose of this testimony.

Mr. Ketterer: That is correct, your Honor.

The Court: The objection will be overruled.

Mr. Ketterer: Continuing:

"During the past year approximately 68,000 commercial vehicles were produced in England and with the exception of Chevrolet, Austin, Morris, and Hillman, we are represented in at least one position on every truck produced. To put it another way, Timken bearings are used on 97% of the commercial vehicles in England, excluding Chevrolet (see Exhibit 'A'). Prices range from our No. 14 to No. 16, [fols. 1919-1921] but we are now faced with severe SKF competition, who are now equipped in England to make truck size bearings. During the past year this latter company has quoted several of our customers and during the writer's visit Leland Motors, one of our best accounts, called up and stated SKF had just quoted them the equivalent of our No. 9 price, which of course is lower than our costs at British Timken."

Mr. Nitschke: Your Honor, this next sentence I will object to on the ground that it's not a fact but an opinion.

[fol. 1922] Mr. Ketterer: Very well.

[fol. 1923] Q. Mr. Hess, in preparing this report I will ask you whether or not you stated facts in here as you developed them at the time of your trip to England, France, and Germany, in 1932?

A. Yes, sir.

Q. Do you recall at the present time whether or not in 1932 SKF was in the production of tapered roller bearings for use in commercial vehicles in England?

A. Well, I recall it after reading that report.

Q. Well, can you tell by refreshing your recollection and referring to this report that has been marked for identification as Defendant's Exhibit No. 128 what the situation was in that regard?

A. Yes, sir.

Q. Do you need that report to refresh your recollection on that point?

A. Yes, sir.

Q. Will you refer, then, to Defendant's Exhibit No. 128 and refresh your recollection so that I can ask you a question on that point?

A. Is this about SKF competition?

Q. Yes, in the commercial vehicle field.

A. (Witness reads report:)

Yes, sir.

Q. Now, having refreshed your recollection by exam-
[fols. 1924-1930] ination of this report, which is marked for identification Defendant's Exhibit 128, will you tell the Court whether or not in 1932 SKF was in the business of producing tapered roller bearings in England for use in commercial vehicles?

A. Yes, sir. At that time [illegible] had offered a quotation to Leland Motors which indi[illegible] they were either in the manufacture of tapered roller bearings or expected to be so that they could supply Leland Motors. That's where British Timken received this information about the price.

Q. And had they prior to that time, to your knowledge, been in the business of producing tapered roller bearings for use in commercial vehicles?

A. That I can't recall. I don't know how long they had been in that business in England.

[fol. 1931] Q. Mr. Hess, you heard what was read from
[fols. 1932-1974] the paragraph of this exhibit in respect of the production of motor cars in England by Austin and Morris. Can you tell us now where the data was obtained as to the number of vehicles produced in England, and the number produced by those two manufacturers?

A. No, I can't. I can't recall 17 or 18 years later just where I got that information.

[fols. 1975-2037] Donald P. Hess resumed the stand for further direct examination.

[fols. 2038-2041] Mr. Ketterer: If the Court please, in line with the Court's suggestion, there are only two sections of the reports, one relating to British Timken and one relating to French Timken, as to which I would like to ask Mr. Hess two questions. As to the balance I would like to go along with the Court's suggestion, wherever it appears to the Court it is based on personal observation it will be received, and where it is not it will not be.

[fol. 2042] Mr. Nitschke: Well, your Honor, I think perhaps if I might try to restate my understanding, that I may be clear, this evidence is admitted, with the exception of the two portions Mr. Ketterer is now going to offer, for the sole purpose of showing that discussions were had, or that Mr. Hess talked to the people he did talk to, with the exception of where it is very clear from the report that he is making a personal observation or his own observation not what he got from someone else, or what he read in the newspapers, or whatever it is, then it will be taken under the business entry rule.

The Court: Your understanding is correct.

Mr. Day: He says "if it is very clear".

Mr. Nitschke: Well, if it is clear to the Court.

[fol. 2043] Mr. Day: He says "if it is very clear."

The Court: Is there a degree of clarity?

Mr. Nitschke: I'm willing to withdraw the "very".

Mr. Day: All right.

Q. In the report with respect to your visit to the British Timken plant in 1932, commencing on Page 10, under the heading of "Manufacture" extending over pages 11 and 12 to the first four paragraphs on Page 13, there is a description of methods, and recommendations with respect to manufacturing methods used in the plant of the British Timken Company. I want to ask you whether or not the observations made in those paragraphs and those pages of the report were based on your personal observations of the manufacturing methods employed in the British Timken plant in 1932?

A. That is correct.

Q. And I would like to direct your attention to the report of French Timken commencing on Page 3 of that report, under the same heading "Manufacture" extending over to Page 4 of the report, whether your observations about the manufacturing methods and practices employed in the French Timken plant were based upon your observation of those methods at the time of your visit in 1932?

[fol. 2044] A. Yes, sir.

Q. Now, Mr. Hess, do you recall in 1934 there was a discussion with the representatives of British Timken in respect of a proposed sale of stock, or some stock of the

British Timken Company to the investing public in England?

A. Yes, sir.

Q. And without giving the details of the discussions that you had on that subject, can you tell us whether or not those discussions were in person or how they were conducted with the representatives of the British Timken Company?

A. I don't recall all of the discussions, how they were conducted but I do recall there were telegrams and telephone conversations.

Q. Do you recall whether or not Mr. Dewar and Mr. Pascoe came to America in 1934 to discuss the matter with representatives of American Timken?

A. Yes, I believe they did.

Q. Now, during the course of those negotiations, what if anything happened with respect to the extension of the term of the then existing contract, the 1928 contract, between American Timken and British Timken?

A. We were asked to extend for a given number of years [fol. 2045] over what the contract then called for. I think there was some complaint of the brokers in London that the agreements were of too short a nature.

Q. And the basis of the complaint that the agreements were of too short a nature was what, if you recall?

A. I don't recall the details of it, Mr. Ketterer.

Q. To refresh your recollection on that, did that have anything to do with the use of the name "Timken" as a trade mark, and of the name "Timken" in the corporate name of the British Company?

A. I think it did.

Q. Do you recall whether that particular subject was discussed by you by telephone or otherwise with Mr. Dewar?

A. Yes, I think either I called Dewar or he called me, I don't recall which way it went, but I think I talked about it over the phone.

Q. And raised the point as to the extension of the agreement?

A. Yes, sir.

Q. do you recall whether or not you sent any cable to British Timken or to Mr. Dewar in respect of the request for extension of the term of the agreement?

A. Yes, I think there were several cables sent.

(Report dated May 31, 1935, by Mr. Hess thereupon marked by the Clerk, for identification, Defendant's Ex-
[fol. 2046] hibit 131.)

Mr. Ketterer: Now, if the Court please, I have had marked as Defendant's Exhibit 131 a report dated May 31, 1935, of Mr. Hess' with respect to his telephone conversation. I am not offering it in connection with the telephone conversation because he has sufficiently testified about that in oral examination, but the report does have a copy of the cable I would like to have Mr. Hess identify, and offer this only as with respect to this containing a copy of the cable sent to Mr. Duncan in connection with that transaction.

Q. Now, I have here two sheets marked Defendant's Exhibit 131, Mr. Hess. First of all can you identify the document in its entirety, in general?

A. Yes, sir.

Q. And what is it?

A. It covers a memorandum I wrote of Mr. Dewar's conversation with me and the memorandum is dated May 31, 1935.

Q. Now, I want to direct your attention to what appears in the last line on the bottom of the first page of Exhibit 131 to be a quotation, and the top of the second page, and I will ask you if you can identify that?

[fol. 2047] A. Yes, that is a copy of a cable I sent to Mr. Duncan, our attorney in London.

Mr. Ketterer: I would like to offer the portion of Exhibit 131 which shows the cable only.

The Court: It may be received.

Q. Now, I believe, Mr. Hess, you said that Mr. Duncan, or the Mr. Duncan to whom that cable was addressed, was attorney for American Timken in England?

A. That is correct.

(Cable dated May 31, 1935, from Duncan to Hess thereupon marked by the Clerk, for identification, Defendant's Exhibit 132.)

Q. Now I hand you what has been marked for identification Defendant's Exhibit 132 and ask you if you can identify that?

A. Yes, that was a cable sent to us by Mr. Duncan from London.

[fol. 2048] Q. Bearing what date?

A. May 31, 1935.

Q. Was that in reply to the earlier cable we just had identified and which was read into the record?

A. Yes.

Mr. Ketterer: I offer Defendant's Exhibit 132.

The Court: It may be received.

(Cable dated May 31, 1935, of Hess to Duncan thereupon marked by the Clerk, for identification, Defendant's Exhibit 133.)

Q. I have, Mr. Hess, a sheet or photostat which has been marked for identification as Defendant's Exhibit 133. Will you tell us what that is?

A. That is a cable dated May 31, 1935, from me to Mr. Duncan.

Mr. Ketterer: We offer Defendant's Exhibit 133.

[fol. 2049] The Court: It may be received.

(Cable dated May 31, 1935, from Duncan to Hess thereupon marked by the Clerk, for identification, Defendant's Exhibit 134.)

Q. So that there is no confusion about names, what was the name of the firm with which Mr. Duncan was associated, do you recall?

A. No, I don't recall the full name. I would know it if I heard it.

Q. Was the name Stibbard, Gibson & Company?

A. That is right.

Mr. Ketterer: Some of the cables are signed "Stibbard", some signed "Duncan". I thought we ought to get it cleared up.

Q. I have another sheet marked Defendant's Exhibit 134, and ask you if you can identify that?

A. Yes, that is a cable to me from Duncan dated May 31, 1935.

Mr. Ketterer: We offer Defendant's Exhibit 134.

The Court: It may be received.

[fol. 2050] (Cable dated May 31, 1935, from Hess to [fol. 2051] Dewar thereupon marked by the Clerk, for identification, Defendant's Exhibit 135.)

Q. I have here a sheet that has been marked for identification as Defendant's Exhibit 135, can you identify that?

A. Yes, that is a cable dated May 31, 1935, to Mr. Dewar and signed by me.

Mr. Ketterer: I offer Defendant's Exhibit 135.

The Court: It may be received.

Q. Now, do you recall, Mr. Hess, whether the subject of the extension of the agreement was discussed, without giving the details of the discussion, with any other officers and executives of American Timken?

A. I recall discussing it with Mr. Timken and I think all our executives. I recall discussing it with Mr. Ernst, I believe, of Ernst & Ernst.

Q. Will you state whether or not that discussion took place before the last cable which was read where you advised Mr. Dewar of American Timken's willingness to extend the contract for a thirty year period?

[fol. 2052] A. That is correct.

Q. Now, going to another subject, you will recall yesterday we offered some evidence as to your request for reports from British Timken and your testimony with respect to that subject.

(Letter dated February 18, 1930, from Seward to Hess thereupon marked by the Clerk, for identification, Defendant's Exhibit 136.)

Q. (Continued) Going to the French Timken situation as to the requests for information from them, I have here Defendant's Exhibit 136. Can you identify that?

A. Yes, that is a letter dated February 18, 1930 to me and signed by Mr. Seward of French Timken.

Q. What was Mr. Seward's connection with French Timken?

A. He was manager of French Timken.

Q. And was he French or English?

A. English.

Mr. Ketterer: We offer Defendant's Exhibit 136.

The Court: It may be received.

[fol. 2053] Q. Will you tell us what the initials "D.O.H. steel" mean?

A. Direct oil hardening.

Q. What significance did that have in respect of the French Timken operations?

A. They were using a different type of steel than was used in British Timken and American Timken in all of their operations. We used some of that type of steel at British Timken.

Q. What is direct oil hardening steel?

A. That is high carbon, high chrome steel.

[fol. 2054] Q. And the hardening process involves the use of what material?

A. Well, you don't use carburizing at all.

Q. You mean you omit the carburizing process you described when you were on the witness stand ten days or so ago?

A. That is correct.

[fol. 2055] Direct examination of Donald P. Hess

By Mr. Ketterer:

Mr. Ketterer: I would like to have the cable of March 4, 1930, from Hess to Seward marked for identification as Defendant's Exhibit 137.

(Cable above referred to was thereupon marked by the Clerk, for identification, Defendant's Exhibit No. 137.)

Q. Mr. Hess, I have a sheet that has been marked for identification as Defendant's Exhibit 137. Will you examine it and tell us what it is, please?

A. That is a cable dated March 4, 1930, to Mr. Seward of French Timken, and signed by me.

Mr. Ketterer: We offer Defendant's Exhibit No. 137.

The Court: It may be received.

[fol. 2056] I will have marked for identification as Defendant's Exhibit 138 a cable dated March 5, 1930, from Seward to Hess.

(Cable above referred to was thereupon marked by the Clerk, for identification, as Defendant's Exhibit No. 138.)

Q. Mr. Hess, will you examine this sheet that has been marked for identification as Defendant's Exhibit No. 138, and tell us what it is, please?

A. That is a cable dated March 5, 1930, from Mr. Seward to me at Canton.

Mr. Ketterer: We offer Defendant's Exhibit 138.

The Court: It may be received.

I will have marked for identification as Defendant's Exhibit No. 139, a letter dated December 16, 1929, from Seward to Timken Roller Bearing Company.

(The letter above referred to was thereupon marked by the Clerk, for identification, Defendant's Exhibit No. 139.)

[fol. 2057] Q. Mr. Hess, I have here some papers marked for identification Defendant's Exhibit 139. Will you tell us what the first page is and what the attachments to it are?

A. This is a letter and data dated December 16, 1929, to us at Canton from Mr. Seward, and gives the data on their orders, their production for the week ending December 14, 1929.

Mr. Ketterer: We offer Defendant's Exhibit No. 139.

The Court: It may be received.

[fol. 2058] Mr. Ketterer: I would like to have marked for identification as Defendant's Exhibit 140 a letter dated May 30, 1930, from French Timken to Timken Roller Bearing Company.

(The letter above referred to was thereupon marked by the Clerk, for identification, Defendant's Exhibit No. 140.)

Q. I have, Mr. Hess, a group of documents clipped together which have been marked for identification Defend-
[fol. 2059] ant's Exhibit 140. I will ask you if you can identify the first page and the documents that are attached to it?

A. This is a letter and data, dated May 30, 1930, and sent to us at Canton by Mr. Seward and covers their trading results for the four months' period ending April 30, 1930.

Mr. Ketterer: We offer Defendant's Exhibit 140.

The Court: It may be received.

[fol. 2060] Mr. Ketterer: I would like to have marked for identification as Defendant's Exhibit 141 a document headed "Data Now Received From British Timken."

(The document above referred to was thereupon marked by the Clerk, for identification, Defendant's Exhibit 141.)

Q. Mr. Hess, I have three sheets here that are clipped together and marked for identification as Defendant's Exhibit 141. Will you examine those and tell me what they are?

A. It doesn't have a date, either, does it? This is data we received from British Timken, and my writing on here shows that we also received it from Deutsche Timken and Francaise Timken covering monthly trading results, payrolls, orders on hand, orders received, pieces produced by part number, supervision expense, indirect labor expense, [fols. 2061-2962] material costs, labor costs, departmental payrolls, and various lists of machinery, quarterly, and data semi-annually.

Q. I will ask you, Mr. Hess, whether that is an outline of the materials, samples of which have been introduced in evidence here, that you were receiving from the Timken Companies abroad, British Timken, French Timken, and German Timken, as long as the latter company, of course, was in operation?

A. Well, this is the data we received from British Timken and French Timken. I can't remember whether we received any from German Timken, and I don't believe you have introduced any from German Timken.

Q. But as far as British Timken and French Timken are concerned, this is actually the data received?

A. That's correct.

Mr. Ketterer: We offer this Defendant's Exhibit 141. [fol. 2063] Mr. Ketterer: That's what he testified to yesterday. Has the Court received this Exhibit 141?

The Court: Yes, it will be received.

Mr. Ketterer: I would like to have marked for identification as Defendant's Exhibit 142 a letter dated December 2, 1930, from Timken Roller Bearing Company to British Timken Limited.

(The letter above referred to was thereupon marked by the Clerk, for identification, Defendant's Exhibit No. 142.)

Mr. Ketterer: And as Defendant's Exhibit 143 a letter dated January 9, 1931, from British Timken Limited to Mr. Hess.

(The letter above referred to was thereupon marked by the Clerk, for identification, Defendant's Exhibit No. 143.)

Q. I have two sheets here, Mr. Hess, marked for identification as Defendant's Exhibits 142 and 143. I will ask you if you can identify those, please?

A. This first exhibit is a letter dated December 2, 1930, to British Timken and signed by me. The second one is a letter dated January 9, 1931, to me from Mr. Dallow of British Timken.

[fol. 2064] Mr. Ketterer: We offer Defendant's Exhibits 142 and 143.

The Court: Both may be received.

[fol. 2065] I would like to have marked for identification as Defendant's Exhibit 144 a letter dated June 26, 1931, from Timken Roller Bearing Company, to French Timken.

(The letter above referred to was thereupon marked by the Clerk, for identification, Defendant's Exhibit No. 144.)

Q. Mr. Hess, I have here a sheet that has been marked for identification Defendant's Exhibit 144. Will you examine that and tell us what it is, please?

A. This is a letter dated June 26, 1931, to French Timken, attention Mr. Seward, and signed by me.

Mr. Ketterer: We offer Defendant's Exhibit No. 144.

The Court: It may be received.

[fol. 2066] I would like to have marked for identification as Defendant's Exhibit No. 145 a letter of August 24, 1931, from Timken Roller Bearing Company to Mr. Dallow, with a sheet attached.

(The letter above referred to was thereupon marked by the Clerk, for identification, Defendant's Exhibit No. 145.)

Q. Now, Mr. Hess, I have two sheets that have been marked for identification Defendant's Exhibit No. 145. Will you examine those, please, and tell us what they are?

A. This is a letter dated August 24, 1931, to Mr. Dallow [fol. 2067] of British Timken, signed by me, and enclosing data covering manufacturing costs of Canton, Columbus, and Paris, for the month of April, 1931.

Mr. Ketterer: We offer Defendant's Exhibit 145.

The Court: It may be received.

Q. I would like to ask you, Mr. Hess, whether or not this comparison of costs that is attached to this letter of August 24, 1931, was prepared on the same basis and [fol. 2068] shows the same type of data as you explained to the Court yesterday in respect of the comparison of costs between Canton, Columbus, and Birmingham?

A. May I have another look at it?

Q. (Handing exhibit to witness.)

A. Yes, that's the same data.

Q. And the percentage figures that appear in the right hand columns under "Canton," Columbus," and "Paris," are in reference to and calculated in the same fashion as they were in respect of Canton, Columbus, and Birmingham?

A. That's right.

Mr. Ketterer: I would like to have marked as Defendant's Exhibit No. 146 for identification a letter dated January 5, 1931, from Seward to Timken Roller Bearing Company, and attached to which is a production report for the month of November, 1930.

(The letter above referred to was thereupon marked by the Clerk, for identification, Defendant's Exhibit No. 146.)

Q. Mr. Hess, I have several sheets marked for identification as Defendant's Exhibit 146. Will you examine those and identify them, please?

A. This is a letter dated January 5, 1931, from French Timken to us, and it includes various data, such as pro- [fol. 2069] duction by part number, gross hours required to produce at French Timken.

Q. And that covers what period?

A. The month of November 1930.

Mr. Ketterer: We offer Defendant's Exhibit 146.

The Court: It may be received.

Mr. Ketterer: I would like to have marked as Defendant's Exhibit 147 for identification a letter dated July 7, 1931, from Seward to Timken Roller Bearing Company.

(The letter above referred to was thereupon marked by the Clerk, for identification, Defendant's Exhibit No. 147.)

Q. I have here a single sheet, Mr. Hess, marked for identification Defendant's Exhibit 147, and I will ask you [fol. 2070] if you can tell us what that is, please?

A. That is a letter dated July 7, 1931, to us at Canton, from Mr. Seward of French Timken.

Mr. Ketterer: We offer Defendant's Exhibit No. 147.

The Court: It may be received.

[fol. 2071] Q. Now, do you recall whether or not Mr. Seward did come to America at any time prior to the time that you left the Timken Roller Bearing Company in 1936?

A. Yes, sir.

Q. He was at the Timken plant in Canton?

A. That is right.

Mr. Ketterer: I would like to have marked as Defendant's Exhibit 148, for identification, a letter dated July 18, 1933, from French Timken to Timken Roller Bearing Company, attached to which is a detail of productive wages and general charges.

(The letter above referred to was thereupon marked by [fol. 2072] the Clerk, for identification, Defendant's Exhibit No. 148.)

Q. Mr. Hess, will you examine the two sheets that have been marked for identification as Defendant's Exhibit 148, and tell us what they are, please?

A. This is a letter dated July 18, 1933, from Mr. Beauvivier to us and contains production data on wages and general charges for the month ending May 31, 1937, and covering operations of French Timken.

Mr. Ketterer: We offer Defendant's Exhibit No. 148.

The Court: It may be received.

[fol. 2073] Q. Mr. Hess, apparently this sheet which I have now had marked also as Defendant's Exhibit 148 was detached from the other exhibit bearing the same number. Will you look at that and identify it for us, please?

A. Yes, that is a list of material used in May 1933, at the French Timken plant covering tubing, bar, strip, wire, and certain stamped cones and cups, rolls and cages.

Mr. Ketterer: We offer this as part of Defendant's Exhibit 148.

The Court: It may be received.

Mr. Ketterer: I would like to have marked as Defendant's Exhibit 149, for identification, a letter of July 1, 1933, from French Timken to Timken Roller Bearing Company.

[fol. 2074] (The letter above referred to was thereupon marked by the Clerk, for identification, Defendant's Exhibit No. 149.)

Q. I hand you here, Mr. Hess, a single sheet marked for identification Defendant's Exhibit 149, and ask you to identify that.

A. That is a letter dated July 1, 1933, sent to us at Canton by Mr. Beauvivier, and covers production reports, wage statement, efficiency operations, for the month of May, the first and second fortnights.

Mr. Ketterer: We offer Defendant's Exhibit No. 149.

The Court: It may be received.

[fol. 2075] I would like to have these three sheets headed, "Particulars of Employees (Excluding Staff)" marked for identification Defendant's Exhibit 150.

(The summary above referred to was thereupon marked by the Clerk, for identification, Defendant's Exhibit No. 150.)

Q. I have three sheets, Mr. Hess, marked for identification Defendant's Exhibit 150. Will you examine those and tell us what they are, please?

A. That is a report dated December, 1933, covering particulars of employees in the various departments of French Timken, and covers the period of December, 1933.

Q. And the third sheet, what does that cover?

A. That covers the hours worked and the amount of money paid for piecework, day work, and overtime.

Mr. Ketterer: We offer Defendant's Exhibit 150.

The Court: It may be received.

[fol. 2076] I would like to have marked for identification as Defendant's Exhibit 151, a letter dated October 6, 1927, from Timken Roller Bearing Company to British Timken.

(The letter above referred to was thereupon marked by the Clerk, for identification, Defendant's Exhibit No. 151.)

Q. I hand you, Mr. Hess, a sheet that has been marked for identification Defendant's Exhibit 151, and ask you to identify it, please.

A. That is a letter dated October 6, 1927, to the British Timken Company attention Mr. Dewar, signed by me. [fol. 2077] Mr. Ketterer: The letter is dated October 6, 1927, from Timken Roller Bearing Company to British Timken Limited. We offer Defendant's Exhibit 151.

The Court: It may be received.

I would like to have marked for identification as Defendant's Exhibit 152, a letter dated January 4, 1933, from Timken Roller Bearing Company to Mr. Dewar, and as Defendant's Exhibit 153, a letter dated November 28, 1932, from Mr. Dewar to Mr. Hess.

(Said letters above referred to were thereupon marked by the Clerk, for identification, Defendant's Exhibits 152 and 153.)

Q. I have here two sheets, one of which is marked for identification Defendant's Exhibit 152, and the other as [fol. 2078] Defendant's Exhibit 153. Will you examine those and tell us what they are, please?

A. This first one is a letter dated January 4, 1933, and written to Mr. Dewar and signed by me. The other one is a letter dated November 28, 1932, sent to me by Mr. Dewar.

Mr. Ketterer: We offer Defendant's Exhibits 152 and 153.

The Court: They may be received.

[fols. 2079-2080] I would like to have marked for identification as Defendant's Exhibit 154, a letter dated March 21, 1933, from Dewar to Hess.

(The letter above referred to was thereupon marked by the Clerk, for identification, Defendant's Exhibit No. 154.)

Q. Mr. Hess, will you examine this sheet which has been marked for identification as Defendant's Exhibit 154 and tell us what it is, please?

A. That is a letter dated March 21, 1933, and written to me by Mr. Dewar.

Mr. Ketterer: We offer Defendant's Exhibit No. 154.

The Court: It may be received.

[fol. 2081] Q. Will you identify for the Court, please, the Mr. Moreland who is referred to in this letter?

A. He was a man we sent from American Timken to aid British Timken at that time.

Q. What was his position with American Timken?

A. As I recall, he was in our Engineering Department.

Q. Did he specialize in any particular type of bearing applications, to your knowledge?

A. I think it was rolling mill applications.

Q. Do you know whether he was in Europe more than once in connection with the affairs of British Timken?

A. I don't recall that.

Mr. Ketterer: I would like to have marked for identification as Defendant's Exhibit No. 155, a letter dated April 6, 1933, from Timken Roller Bearing Company to Dewar.

(The letter above referred to was thereupon marked by the Clerk, for identification, Defendant's Exhibit No. 155.)

Q. Mr. Hess, will you examine this paper which has been marked for identification as Defendant's Exhibit No. 155 [fol. 2082] and tell the Court what it is, please?

A. This is a letter dated April 6, 1933, addressed to Mr. Dewar and signed by me.

Mr. Ketterer: We offer Defendant's Exhibit No. 155.

The Court: It may be received.

[fol. 2083] I would like to have marked for identification as Defendant's Exhibit No. 156 a letter dated April 20, 1933, from Dewar to Hess.

(The letter above referred to was marked by the Clerk, for identification, Defendant's Exhibit No. 156.)

Q. Mr. Hess, I hand you a paper which has been marked for identification Defendant's Exhibit 156, and ask you to tell the Court what that is, please.

A. That is a letter dated April 20, 1933, addressed to me and signed by Mr. Dewar.

Mr. Ketterer: We offer Defendant's Exhibit No. 156.

[fol. 2084] The Court: It may be received.

Q. Mr. Hess, there has been some testimony offered in this case in respect of an agreement reached between French Timken an SKF in France, which the record indi-

cates was negotiated by Mr. Dewar. Do you recall that matter?

A. Yes, sir.

Q. I want to ask you, first of all, did you personally at any time participate in any negotiations that led up to the execution of that agreement?

A. No, sir.

Q. Did you ever meet with any representatives of SKF or any other bearing company in France in respect of any such arrangement?

A. No, sir.

Q. What is the fact as to whether or not that was handled exclusively by Mr. Dewar or Mr. Pascoe, or both of them?

[fol. 2085] A. That is my recollection.

Q. Now, I will ask you whether or not you were acquainted with the fact that that arrangement was worked out between French Timken and SKF in France?

A. Yes, sir.

Q. And did you object to the making of the arrangement at any time?

A. I don't recall that we objected to it, except we asked several questions about it.

Q. And on what basis did you withhold any objections to the making of the arrangement?

A. Well, it had been our policy that we allowed Mr. Dewar full charge of all French and British and German operations. He was the so-called managing partner in those divisions, and we normally, in fact, I don't know of any case offhand that we didn't follow his advice.

Q. There has been some testimony offered here in respect of a matter that involved the Timken-Detroit Axle Company and its sale of bearings for replacement purposes in, I believe, Budapest, Hungary. What if any relationship is there between the Timken-Detroit Axle Company and the Timken Roller Bearing Company, or was there at any time during the time you were connected with the Timken Roller Bearing Company?

[fol. 2086] A. They were our customers.

Q. Well, I will ask you to tell the Court whether or not there was any—

The Court: The relationship between Detroit Axle and—

Mr. Ketterer: The Timken Roller Bearing Company.

The Court: It was that of customer and supplier?

The Witness: Well, we supplied bearings to them. There was no corporate relationship between the two companies, as I recall it, from the standpoint of stock ownership or anything like that.

Q. To your knowledge, was there any control that was exercised by Timken Roller Bearing Company over Timken-Detroit Axle Company, or vice versa?

A. No, sir.

Q. Have you any personal recollection of every having discussed with anybody at the Timken-Detroit Axle Company any matter involving the sale of replacement bearings in Budapest, Hungary, as of the present time?

A. No, sir.

Q. And to your knowledge, was there anything in the connection between the Timken Roller Bearing Company and the Timken-Detroit Axle Company as a result of which [fols. 2087-2088] could have required the Timken-Detroit Axle Company to do one thing or another in respect of the sale of bearings?

Mr. Nitschke: I think I will object to that question. [fol. 2089] The Court: Well, I can't see what effect it would have, but I will let him answer.

A. No, sir.

Q. There has been some testimony, Mr. Hess, as to the fact that the market for tapered roller bearings or anti-friction bearings generally falls into two classifications, bearings for original installation and bearings for replacement purposes. Do you recognize, on the basis of your experience with Timken Roller Bearing Company over the years those two classifications in the market for tapered roller bearings or anti-friction bearings?

A. Yes, sir.

Q. For what period of time while you were with Timken Roller Bearing Company, did you follow the operations of the foreign companies, British Timken, French Timken, and German Timken that were associated with the Timken Roller Bearing Company?

A. From the summer of 1927 until I left in the Spring of 1936.

Q. Now, based upon the experience that you had, what is [fol. 2090] your opinion as to whether or not sales for original installations could be made in a country where there was a substantial manufacturing economy unless a plant was in operation in that country?

A. It would be extremely difficult.

Q. And will you state why, in your opinion, it would be difficult?

A. That's a pretty broad question but, generally speaking, in countries like England, France, and Germany, and to some extent Austria, the original equipment builders insisted on bearings made in their own country for many reasons, one of which was extremely important at some time in that interval. I believe it didn't start in 1927, but a little later on, a nationalistic feeling. For instance, in England there was a very strong attitude to buy British, and in France, I have a general recollection that Mr. Citroen's men told me they couldn't possibly use bearings except those made in France as a permanent installation in their cars. The other difficulty was largely involved in tariffs and trade restrictions, where you almost had to make products in countries that had large products of that type.

Q. Now, what if anything does knowledge of engineering practices in the different countries have to do with the necessity of making bearings in those countries?

[fol. 2091] A. Well, that's important, but of even greater importance is the application of close manufacturing tolerances and know-how, and contacts with customers in those countries. By that I mean you couldn't very successfully sell and replace bearings with a Britisher in France in original equipment jobs.

Q. How about Germany?

A. The same way in Germany, and vice versa, the same way in England.

Q. Mr. Hess, in connection with the sale of bearings in countries in Europe where there is a substantial manufacturing economy for original installation, what if anything does the fact that the governments of those countries represented part of the markets have to do with the necessity of having a plant in the country?

A. Well, of course, they always wanted to buy products

made in their own countries, but you read this morning, and which I recall at the time in Germany, they told us that but they were buying special made bearings for their railroads from Switzerland.

Q. Now, as to replacement bearings and the business for [fol. 2092] replacement bearings, what was your experience as to where that business went to in respect of it following or not following the original installation in the equipment that was manufactured?

A. Well, normally it followed the original installation. For example, if we shipped trucks either from America into England or France they would want to replace the bearings with the same kind of bearings that were in there.

Q. Now, if capital goods or equipment was manufactured in England and the bearings that were installed in the equipment were English-made bearings, what was your experience as to whether the bearings for replacement purposes in respect of that equipment would, generally speaking, go to English manufacturers?

A. They would.

Q. Are you able to tell the Court as to whether or not Germany was a large manufacturing country and producer of capital goods between 1927 and 1936?

A. My recollection is that it was.

Q. And by comparison with other European countries was it the largest or what was its general position?

A. Well, I would generally think and say it was somewhat larger than England.

Q. And as to France?

[fol. 2093] A. Not as large in capital goods as either Germany or England.

Q. That is, France was third in your opinion?

A. Yes, sir.

Q. As to machine tools, trucks, rolling mills, things of that sort or type of capital goods, were they produced in substantial amount in Germany in the period between 1927 and 1936?

A. Yes, I would say so.

Q. And to the extent that they employed anti-friction bearings in respect of replacement business, where would that replacement business normally go or where did it go as you observed it?

A. Well, I will have to break that down. For truck pur-

poses and passenger car purposes they tried to replace with the original bearings that were in there.

Q. Well, if a truck or passenger car was produced in Germany and it included German bearings, for replacement purposes where would the business go?

A. To Germany, which was the manufacturer.

Q. How about other types of equipment made in Germany in which various kinds of anti-friction bearings were used, in respect of replacement business? For example, rolling mills.

A. If any bearings were made in Germany for rolling mills they would go to the German manufacturer of the [fol. 2094] bearing.

Q. Was that your experience generally in respect of the replacement business?

A. That is right.

Q. Now, one other question. Over the period from 1927 to 1936, to your knowledge was there an exchange of personnel between American Timken and British Timken? By that I mean people going over from the British Timken plant to America or going over from America to British Timken?

A. Yes, sir.

Q. Can you give us some of the names of the people, first from British Timken, who came over to America during that period to your knowledge?

A. Well, of course, there was Dewar and Pascoe, and a fellow by the name of Fegan, and Spear.

Q. Will you tell the Court who Messrs. Fegan and Spear were?

A. Well, Fegan was a factory man, as I recall it, and Spear was an engineer. I don't recall any others. I believe there were more.

Q. From French Timken, do you recall any of the names of French people who came to America?

A. Seward came, he was the manager, and another engineer, Mr. Beauvivier's son came and spent some time in our Engineering Department.

[fol. 2095] Q. Do you know how long Mr. Beauvivier was here?

A. I don't recall.

Q. Was it a short period or long?

A. No, it was several months.

Q. As to people going over from American Timken to British Timken, were there any of those during the period 1927 to 1936?

A. Yes, sir.

Q. Can you give us the names of any of them?

A. Yes, I see some of them right here: Mr. Shuler, Mr. Sloan, Mr. Moreland—I don't recall any more at the moment.

Q. To what extent did you make arrangements for those people who went from American Timken to British Timken?

A. Well, I always contacted Mr. Dewar on it.

Q. And did you make the arrangement at the American Timken plant for the people from American Timken who went over there?

A. Generally speaking, yes. We had various departments that took care of the traffic and tickets and things like that.

Q. Will you tell the Court generally what the purpose was of sending people from American Timken to French and British Timken?

A. Mostly to give them education and advice in their various problems.

[fol. 2096] Q. Were they problems relating to the production of bearings and the use of machinery and equipment?

A. Yes, as well as engineering work and sales work.

Q. Will you tell the Court the general purpose of having the British Timken personnel, some of whose names you have given, come to America?

A. So that they could see our methods and our ways of doing business.

Q. To what extent after 1927 was the equipment that was in the British Timken and French Timken plants the same general type of equipment that was employed in the American Timken plants in America for the production of bearings?

A. Well, they used as much equipment as we had in America that they could use to advantage.

Q. Was that on your recommendation as to the type of equipment they could use?

A. In most cases.

Q. You say they used it to the extent it was possible. What factors were there that prevented them from using all the same type of equipment as used by American Timken?

A. Well, there were several factors: Their small quantity of production sometimes would not permit them to use what we call high production machinery. There was another example in the type of gas they had in their plant [fol. 2097] at Birmingham, they couldn't use our type of equipment because of the type of gas they had.

Q. Was that for the carburizing process?

A. Yes, and some heat treatments besides carburizing.

Q. Is it correct to say, aside from the size and the other limitations mentioned, their equipment generally followed the same type of equipment as used in the American Timken plants?

A. Yes, after 1927.

Q. Prior to 1927 the equipment that was in use, was that described in your report of 1927?

A. Yes, sir.

Mr. Ketterer: I think that is all.

Q. Mr. Day suggested I ask you one other question, and that is where were you born and educated?

A. In Cleveland, Ohio.

Mr. Ketterer: That is all.

Cross examination.

By Mr. Nitschke:

Q. Mr. Hess, in connection with Defendant's Exhibits 128, 129, and 130, which were your reports of your visits to British Timken, French Timken, and German Timken, there were attached certain exhibits. One of them I would like to call your attention to, which is labeled Exhibit J, [fols. 2098-2099] and it has two pages and has your initials at the end, dated February 29, 1932, Turin, Italy.

Q. I would like to call your attention to the first paragraph of this memorandum headed "Exhibit J," entitled, "R.I.V., Turin, Italy."

[fol. 2100] Now, Mr. Hess, did you have any arrangement to give know-how to RIV?

A. No, sir.

Q. Had you made recommendations to RIV on how to make tapered roller bearings?

A. No, sir.

Q. Did you send men over there to show them how to do it?

A. No, sir.

Q. A week ago last Thursday, when you testified before, I believe the nature of this testimony was to the effect that as a result of Timken's investment in British Timken, you took a trip over there in 1927?

A. That is correct.

Q. And that you examined their methods of operation and made recommendations on how to improve their methods of operation?

A. That is correct.

[fol. 2101] Q. I believe you found in some instances they weren't using as good material as they could have used?

A. Yes.

Q. Some of their applications weren't as efficient as they might have been, some of the applications which they were recommending?

A. You mean bearing applications?

Q. Yes.

A. Yes, sir.

Q. Tapered roller bearings?

A. That is right.

Q. And that some of their processes and methods were not entirely efficient?

A. That is right, as compared to American standards.

Q. And that some of the bearings they were making were of an old-fashioned type?

A. Well, what do you mean by old-fashioned? They were making what was known as a V-type bearing which we had made here in America for years and years, but we had swung over to a new design called the F-type bearing by that time.

Q. At that time they were still making some of the V-type?

A. Yes, the bulk of their production was the old V-type.

Q. Now, at that time that you went over there, Mr. Hess, were you familiar with the fact that an agreement was

[fol. 2102] entered into or was in the process of being entered into between American Timken and British Timken regarding allocation of territories?

A. Yes, sir.

Q. You are familiar with the fact that such an agreement dated January 1, 1928 was entered into?

A. Yes, sir.

Q. And that it did have provisions for dividing territory?

A. Yes, sir.

Q. Are you also familiar with the fact that prior to January 1, 1928, there were in effect other agreements between British Timken and American Timken which also contained provisions dividing territories?

A. Yes, sir.

Q. So that both before you made this trip over there and afterwards there were in effect between American Timken and British Timken agreements dividing territories?

A. Yes, sir.

Q. In other words, before you went there, when they had these rather inefficient methods as compared to ours and the bearings weren't the same type, they still had the allocation of territories then?

A. Yes.

Q. And they also had it after you made these recom-

[fols. 2103-2105] mendations and were charges made in the techniqne?

A. That is correct.

Q. I would also like to call your attention to Defendant's Exhibit 131, which is the memorandum that you testified to, dated May 31, 1935, reporting a phone call with Mr. Dewar about getting the agreement lengthened from 16 years to 30 years in comection with something he had said to the brokers?

A. Yes, sir.

Q. You said in this memorandum: "I explained that in this country a 30-year period was practically unheard of and that all similar types of agreements were usually made for 15 years and some extreme cases for 20 years."

Now, was that your view at that time, that a 30-year period was practically unheard of?

A. Yes, sir.

[fol. 2106] Mr. Nitschke: I have no further questions.

Mr. Ketterer: I would like to offer this document identified as Defendant's Exhibit 131 in its entirety in view of the fact that counsel for the Government used it on cross examination.

The Court: It may be received.

Mr. Ketterer: That is all.

[fol. 2107] Thereupon, the Defendant, to maintain the issues on its part, called as a witness

CLIFFORD L. EASTBURG,

who being first duly sworn, was examined and testified as follows:

Direct examination.

By Mr. Ketterer:

Q. Will you state your name?

A. Clifford L. Eastburg.

Q. Where do you live?

A. Canton, Ohio.

Q. And you are employed where?

A. Timken Roller Bearing Company.

Q. How long have you been employed by The Timken Roller Bearing Company?

A. Since September 12, 1927.

Q. In what capacity have you been employed at various times since 1927 down to the present time by the Timken Roller Bearing Company?

A. From 1927 to about 1936 I was employed as an engineer for the design of roller bearing applications, Timken roller bearing applications to railway equipment. From 1936 to 1945 I was supervisor engineer in the Railway Engineering Department, and from 1945 to the present time [fol. 2108] I have been Assistant Chief Engineer of the Railway Engineering Division.

Q. And that covers the entire period of your employment with the Timken Roller Bearing Company?

A. It does.

Q. Now, as engineer in the Railway Bearing Division of the Timken Roller Bearing Company, I will ask you to state whether or not you have had any contact from time to time with the British Timken Company?

A. During the period of 1927 to 1936 I was occasionally called upon to check applications sent in by British Timken covering various types of railway applications. From 1936 on I also checked applications which were sent in. However, during the war period there was not so much of this work. Then from about 1941 or 1942 up to the present time there was a sort of pick-up on railway business, particularly in regard to points other than in Great Britain itself, such as Australia or South Africa, and we checked applications and made recommendations to British Timken on those applications in accordance with our practice.

Q. Now, when you say you checked applications for the British Timken Company, will you tell the Court what you mean by that?

A. Why, British Timken would send in drawings, generally arrangement drawings, covering the general picture [fol. 2109] of the application, and we would go over these and check the bearings recommended, that is the capacity of the bearings, and see whether the bearing had ample capacity and whether it was applied to the piece of equipment in the manner in which it should be or in the manner which we had it here in America.

Q. Now, that involved such things as sizes of bearings?

A. Yes, size and type of a bearing, that is the size for the particular type, particular piece of equipment.

Q. Well, in the railway bearing field, without being too technical in your description, will you tell the Court generally where anti-friction bearings are used on railway equipment?

A. Well, they are used on all axles of passenger cars and locomotives, including tenders of locomotives, and in recent years we have been making applications to crank pins and cross-head pins of steam locomotives. They are also used on Diesel equipment, and in recent years we have been getting into the freight line more. However, the freight business is confined largely to this country.

Q. Now, what do you mean by crank pins and reciprocating parts?

A. Well, the crank pins are the members of a steam locomotive that are placed in the wheel, the driving wheel of the locomotive, on which the bearing is mounted, and in [fol. 2110] turn in which the driving rods and connecting rods of the locomotive are placed, which in turn connect to a member called a cross-head. It is merely the connection between the main driving rod of the locomotive and the piston rod, and that in turn carries on to the piston and the cross-head being this connection between the piston rod and the main rod.

Q. Now, this checking of applications from British Timken, was that all done by you in the Engineering Department of American Timken, or were there other engineers in the department who also worked on that?

A. There were other engineers who also worked on that.

Mr. Ketterer: Now, if the Court please, in respect of the business of checking of the applications we have had collected here in one group all the material that has been submitted to British Timken in handling one such type inquiry, by way of illustration of the type of work that has been done by American Timken in connection with British Timken. And I should like to have marked and offer as one exhibit the entire group of material, and then by reference to it I should like to have the witness show how the thing was carried on, and by reference to various things in connection with the exhibit show the type of information that has been supplied to the British Company in this type of [fol. 2111] work.

The Court: All of those will be offered as one exhibit?

Mr. Ketterer: As one exhibit, that is correct.

Q. Mr. Eastburg, I have here a collection of papers I have collectively marked for identification as Defendant's Exhibit No. 157. I will ask you to tell the Court what they include and who collected them.

A. These are the letters that passed between British Timken and American Timken and interorganizational correspondence of American Timken, with prints dating back from August 27th, up to the present time, covering an inquiry from British Timken on axle applications, light weight reciprocating part applications and crank pin applications

to a 484 class locomotive on the South Australia Railway. These letters and prints were collected by myself and represent the work we go through in order to prepare such a recommendation.

(Whereupon, the documents above referred to were marked by the Clerk, for identification, Defendant's Exhibit No. 157.)

Mr. Ketterer: I should like to offer at this time Defendant's Exhibit No. 157 in connection with the testimony of Mr. Eastburg.

The Court: How will you fasten these together so there [fol. 2112] will be no question arise?

Mr. Ketterer: I just suggested to Mr. Wilson I thought they should be tied together all the way around, both longitudinally and latitudinally, and with the exhibit number clipped onto them on a separate tag, or we can have each one of the sheets lettered with the same number.

The Court: Well, it doesn't matter which way you do it, so there will be no confusion result.

The exhibit will be received.

I want to be sure there will be no difficulty as a result of the numerous letters that are included in this exhibit.

Mr. Ketterer: Well, we will endeavor to see they are fastened together so they won't become separated and any problem on that score.

Q. Now, Mr. Eastburg, will you keep this file in front of you so I can ask you some questions to show the character of the work that was done? In connection with that job, what was the date of the original inquiry from British Timken in respect of the bearings on the locomotives on the South Australia Railway?

A. Based on a letter dated July 1, 1941 from Mr. Gibson of British Timken.

[fol. 2113] Q. In Australia?

A. In Australia.

Q. And how many locomotives did that cover?

A. The inquiry originally was for five locomotive sets. It was later increased to eight locomotive sets. That was for axle applications only.

Q. That covered only axle applications for those locomotives?

A. That is right.

Q. Tell the Court, if you will, please, what was done by American Timken in respect of that inquiry for anti-friction bearings or tapered roller bearings on the axles of the locomotives?

A. We made preliminary mark-up drawings to typify the application we would recommend on each of the several applications on the locomotive, that is the lead truck, or engine truck, the main driving axle, other than the main driving axle, and the tender axle.

After these preliminary prints had been submitted to British Timken they submitted further data, and as time went on revisions were made, and as we assembled all of the data that were required to prepare a permanent application for the job. And when the order was received on the basis of these preliminary prints we made final assembly and detail drawings with complete details of material [fol. 2114] covering all of the material necessary to make the mounting parts for the roller bearing application. In the design of these applications we designed all the housings, the axles, and all of the mounting parts, closures, and all the parts which go to make up the application.

Q. Now, was all of that work done and submitted to the British Timken representative in connection with this particular job?

A. That is right.

Q. Do you have any of those blueprints there that show the final recommendation of the Company as to that work?

A. Yes.

Q. By the "Company" I mean the American Company.

A. There are included in these prints the prints of the arrangement drawings only. That is, if we had taken all of the detail parts we would have had quite a massive stack of prints, so we have tried to boil it down to just the arrangement drawings and the arrangements of the bearings themselves. But here is a typical arrangement drawing of the driving applications.

Q. And that was submitted to the British Timken representative?

A. Yes.

Q. Now, how about these detailed drawings? You say you have not collected them because of their volume. Were [fol. 2115] they also submitted?

A. They were all submitted to British Timken who in turn submitted them to their customer for their approval, and upon approval of these detail drawings we would go ahead and make up the parts.

Q. At any time after the original inquiry was received was there any change or addition made to the inquiry covering the application of bearings, to other parts of the locomotives?

A. Well, there were changes, of course, as we went along, but then this application was finally built, so far as the axle applications were concerned, and in, I believe it was 1946, an additional inquiry came from British Timken in England requesting the preparation of recommendations on the light weight reciprocating parts, and crank pin application for the single locomotive.

Q. The same class?

A. Same class locomotive only it was a trial, a single locomotive.

Q. Had that been included in the original inquiry you had received?

A. No; the original inquiry covered only the axle applications.

Q. What was done in respect of the additional inquiry for bearing applications in the other parts of the locomotive, the crank pin and reciprocating parts?

[fol. 2116] A. We prepared our recommendations, we prepared arrangement drawings and our bearing recommendations on these applications and submitted them to British Timken.

Q. How were they submitted?

A. Well, the first draft of the application was submitted by mail and at a later time Mr. Dewar and Mr. Pascoe had made a visit to our plant and it was decided at that time that inasmuch as British Timken had not had any experience on the design of these particular types of applications that someone be sent to England to familiarize them with designing of light weight reciprocating parts and crank pin applications.

[fol. 2117] Further direct examination of Clifford L. Eastburg.

By Mr. Ketterer:

Q. I think, Mr. Eastburg, when we concluded yesterday, you had just said that Mr. Dewar and Mr. Pascoe had come to America and there was some discussion as to the knowledge and experience of British Timken in respect of crank pin and reciprocating parts applications. Do you recall that?

A. I do.

Q. Did you have any discussion with Mr. Dewar or Mr. Pascoe yourself on that subject?

A. I did.

Q. And was that in Canton?

A. In Canton, yes.

Q. And what happened following that discussion in respect of anybody going to Europe?

A. It was decided that I be sent to England to familiarize the British Timken engineers with our methods and our designs of lightweight reciprocating parts applications, and crank pin applications, as well as bringing them up to date on all other types of railway roller bearing applications.

[fol. 2118] Q. Now, did you go to Europe following that discussion?

A. I did.

Q. And when did you leave for Europe?

A. On June 20, 1946.

Q. And approximately how long was that after the discussion with Mr. Dewar and Mr. Pascoe?

A. About four weeks.

Q. How long were you in England after you left here in June, 1946?

A. I returned from England, arriving in New York October 21, 1946,—about four months.

Q. Now, what if any material did you take with you when you went to England?

A. Well, in preparation for the trip I spent approximately three weeks gathering data and prints and material to take to England with me and I took enough material with the thought of actually setting up a railway engineering department there if necessary.

Q. And by "material" what do you mean, what type of material was it?

A. Well, we had selected prints covering the typical applications for all types of railway equipment,—cars, locomotives, diesels and anything comprising a roller bearing application to railway work. That is, we took arrangement [fol. 2119] drawings and detail prints covering each specific type of application and in addition to this we took all of our assembly and dis-assembly and construction files, photographs, motion picture films,—well, most everything that would be required in an engineering line to bring their engineers right up to our latest practice.

Q. Now, were the drawings that you took along in the quantity you have described similar to the ones attached to this exhibit that we identified yesterday and marked Defendant's Exhibit 157, or were they more detailed than those?

A. They were in much more detail. As a matter of fact there were approximately 1200 prints and all the fitting practices and stress sheets and everything pertaining to the applications, as well as photographs of those applications.

Q. That covered American Timken's practice in the railway field?

A. That is right.

Q. Now, after you arrived in England where did you go?

A. I went immediately to Birmingham and I spent most of my time in the drawing offices at the Birmingham plant at Aston.

Q. And what arrangement was made for you and what did you do at the Birmingham plant after you arrived there?

A. I was assigned an office in the engineering department [fol. 2120] and an engineer was selected to work with me, whom I was to train in the design particularly of reciprocating parts and crank pin applications. This young engineer worked with me each morning and in addition to this engineer their regular railway engineer, an older man, also spent most of the day with me. In the afternoon their advisory and development engineer, Mr. Doughty spent from two to three hours with me.

Q. What was done during the period of time each day in the morning with the young engineer who was assigned to you for training, what sort of course did you follow in respect of him?

A. Well, we would take a job and carry that job through from the time that we received an inquiry on it, and carry it through just the way, and familiarize them just the way we would process a job through our department. That is, we reviewed the information that was given to us by the railroad or the customer and from this information we developed our assembly drawings and our detail drawings, our fitting practices, our stress calculations, and everything that was necessary to bring this job to a conclusion.

Q. Now, what if any different method was used in the afternoon when Mr. Doughty and any other of the older [fol. 2121] engineers of the British Timken organization were with you?

A. Well, they also reviewed these same jobs but possibly not in as much detail as the younger man. The younger man went into it more from the drawing room standpoint, where the older man took more of the engineering angle into consideration.

Q. What use if any did you make of the blue prints and drawings that you took over there in connection with the discussions that you had with the British Timken engineers?

A. Well, we used these drawings for reference and they were left with British Timken for future reference.

Q. Did you revi w all of the drawings you had with respect to the different types of applications that American Timken had made in the railway field?

A. Practically every application was reviewed and all typical applications were reviewed. That is, where we had a number of applications that were almost identical we would pick out a specific application and follow that through.

Q. Now, did you do anything else while you were over in England, aside from training the British Timken engineers in the railway field in the fashion that you have outlined?

[fol. 2122] A. Yes, I was sent out on various trips with the railway sales engineers of British Timken to contact their customers.

Q. Do you know how many sales calls of that kind you made while you were in England?

A. I believe I made approximately 18 calls of that type.

Q. And with whom did you make contact when you went out on such calls?

A. The chief mechanical engineers of the four major railways in England, the chief engineers and officials of the

various car building or carriage building companies, that is, I visited three of the four principal carriage building companies, and I visited three of the principal locomotive builders in England and Scotland. And we went over the history of our railroad engineering, the application of roller bearings to railway equipment in the United States, and gave them our background on it.

Q. And was there anything else done while you were in England aside from these sales calls?

A. Well, on six occasions we gave, I gave film shows. British Timken had arranged for these shows at various points, to show about fifteen or sixteen hundred feet of motion picture film that I had taken with me to England.

Q. And that motion picture film covered what subject?

[fol. 2123] A. Well, the one of principal interest was a slipping test conducted on the Chicago, Burlington & Quincy Railroad to demonstrate the advantages of lightweight reciprocating parts and crank pin applications on steam locomotives. Then there was also a film showing some of our laboratory work in connection with our railway equipment at our Canton plant, and there were two rolls of films covering the application and maintenance of Timken bearings on locomotives on the Chicago, Burlington & Quincy Railroad.

Q. Now, to whom were these films exhibited?

A. Why, there was one show given to the officials of the Southern Railway. They in turn requested that the films be shown to their mechanical people at Brighton, and there was one show given to the Chief Mechanical Engineer of the London, Midlands & Scottish Railway at Darby. Another show at the Vulcan Foundry, which is a large locomotive builder at Manchester. That was given before a picked group of their officials and supervisors. And then a show was given at the North British Locomotive Works at Glasgow, before a group of railroad men and locomotive builders. And the last showing was given in the Mayfair Hotel in London before a selected group of chief mechanical engineers and mechanical officers of the railroads throughout England.

[fol. 2124] Now, at those film shows did you discuss American Timken's practice in respect of the use of tapered roller bearings in all railway applications?

A. I did. I gave a talk along with the picture, the picture

being a silent picture, and after each meeting the session was thrown open for discussion and there was usually three-quarters to an hour's discussion.

Q. On a question and answer basis?

A. That is right.

Q. You say these were selected groups of engineers from the various railroad-. Who made those selections?

A. The officials of British Timken, and in the case of some of these showings at the railroads the railroads themselves made their selection of their audience, but at the Mayfair meeting in London the British Timken officials made the selection.

Q. Now, was there anything else done while you were in England during the period you have described other than the items you have gone into?

A. Well, as I mentioned before these calls and discussions were not only with the railway officials but with consulting engineers who represented and specified the materials to be used in the various railroad applications throughout the British Empire.

[fol. 2125] Q. Now, did you go on to the Continent to visit French Timken on that trip?

A. I spent one week at French Timken.

Q. And that was on the occasion of this 1946 trip?

A. That is right.

Q. What was done at French Timken while you were there during that week?

A. Well, the matter of our engineering practice on railway applications was reviewed with Mr. Robert Beauvivier and Mr. Beauvivier took me to various railway offices and shops in France. I believe we made six calls.

Q. And what was discussed there?

A. Well, principally the interest was in the recent group of engines equipped with Timken roller bearings acquired by the French National Railway. I believe 1340 locomotives were involved.

Q. And where were those locomotives built?

A. Those locomotives were built in America and Canada. There were 480 built by the Baldwin Locomotive Works, the same number by the American Locomotive Company, and there were 260 built by the Lima Locomotive Company, and I believe 100 by the Montreal Locomotive Company and 30 or 40 by the Canadian Locomotive Company.

Q. Were they purchased by the French Government or [fol. 2126] French buying mission in Washington?

A. I believe they were purchased by the French buying mission and handled under the Lend-Lease arrangement.

Q. Had some of those locomotives arrived in France while you were there in 1946?

A. There were quite a number of them there, they were still being shipped, but they had the majority of them in service at that time.

Q. And were they equipped with Timken roller bearings?

A. They were equipped in varying degrees with Timken bearings. Where Timken bearings were not used plain bearings were used. As an instance, the leading truck and the trailing truck on all of the locomotives were equipped with Timken bearings. There were 260 locomotives equipped with Timken bearings on the main driving axles, and 460 locomotives had all driving axles equipped with Timken bearings; and 640 locomotives equipped on the tenders with Timken bearings.

Q. The discussion related to what with respect to the locomotives, on the call you made to Mr. Beauvivier?

A. Principally on the service of these engines and the manner of handling the application and servicing of them.

Q. Was French Timken at that time making any tapered roller bearings for use on railway applications?

A. I believe they were making some of the smaller sizes.

[fol. 2127] Q. Were they making a complete line?

A. No.

Q. Did you go with their engineering department into the subject of American Timken railway practice in the field of railway applications, with the engineering department of French Timken, as you did in England?

A. I did, but not in as much detail.

Q. Now, we were talking yesterday, Mr. Eastburg, about a job that arose in 1941 for the South Australia Railway, and I think we had gotten up to about 1946 when there were some additions made to some parts of the job. I think you said there were some additional anti-friction bearing applications to be used on the locomotives. Do you recall that?

A. Yes. Inquiry came to us from British Timken for designs to cover the cross-head for lightweight reciprocating parts applications as well as crank pin applications.

Q. Now, was anything done in respect to that particular order on your European trip in 1946?

A. That inquiry had been in our office a few months prior to my going to England and our arrangement drawings, the preliminary arrangement drawings, had been prepared and taken by me to England for discussion with their engineers. And British Timken, after this discussion, submitted these prints to their representatives in south Australia and [fol. 2128] in turn they were submitted to the railroad.

Q. Well, then, is it correct to say that the order and inquiry was finalized while you were in England under your supervision at the British Timken plant?

A. No, there was considerable work completed on this after my return to America. As a matter of fact there were changes made in things due to the distance and time involved in transmitting this information to Australia. I was unable to take care of it all while I was in England.

Q. But there was some work done on it while you were there?

A. Definitely.

Q. Do you know who supplied the bearings on this order ultimately when the railway company in South Australia finally determined what they were going to do on the subject of anti-friction bearings?

A. Is this in regard to the reciprocating parts applications and crank pins?

Q. Yes.

A. American Timken furnished bearings on the crank pin applications and British Timken furnished the bearings on the cross-head applications of the reciprocating parts.

Q. And has this order that is covered by the material in Defendant's Exhibit 157 been completed now to your [fol. 2129] knowledge?

A. There is some of the material still being made up. As a matter of fact the application has not been put on the locomotives as yet, or on the locomotive, one locomotive.

Q. Now, I will ask you, Mr. Eastburg, whether or not the material that has been collected in this Defendant's Exhibit 157 is illustrative of the type of work that you have done? By "you" I mean the American Timken engineering force has done, in conjunction with British Timken in respect of railway applications over the years to your knowledge?

A. It is.

Q. Now, do you know whether or not at any time there have been any representatives of British Timken who have come to Canton during the time you have been with the railway division of American Timken?

A. Yes, there have been a number of representatives here. There was a Mr. Bowden, in about 1928. Mr. Spear, I believe he was here in the early '30's. Then a Mr. Robert Beauvivier—well, he is from French Timken. Mr. MacNichol. Then there was a young man here just recently, he spent about a year at our plant for training in various divisions.

Q. Do you recall his name?

A. I recall his first name, Ashton. I don't recall his last [fol. 2130] name.

Q. His name was what, did you say?

A. I don't recall his last name. I remember his first name only.

Q. What was that?

A. Ashton.

Q. What if anything did you do with these people, Mr. Bowden, Mr. Spear, the man you identified as Ashton, or Mr. Beauvivier when they came to Canton?

A. They spent some time in our department reviewing our railway applications and we showed them various arrangement drawings and prints, or anything that they might have been interested in and anything we thought would be of interest to them.

Q. Have you any recollection now as to how much time they were in the engineering department working with you or with other engineers in the railway division?

A. Well, that would vary. Sometimes it was a matter of just a few days to a few weeks. I recall this young man's name now, Dennis Ashton.

Q. Ashton was his last name?

A. Yes. There was another gentleman from Australia here not long ago, a man named Fall, also.

Q. Now, what was done with those people when they were in the engineering department for varying periods of time?

A. Well, in the case of Ashton we had him working on a [fol. 2131] drawing board and going through a typical job with us, and then we let him review all of our data and prints covering various applications, and it is my understanding that he did the same thing throughout the other engineering

divisions of Timken, as well as working in the laboratories and with the shop and development people.

Q. Well, was Mr. Ashton in the engineering department for any substantial period of time working on railway applications?

A. I believe he was with us about three weeks, three to four weeks.

Q. You mentioned Mr. Fall's name. What did he do when he was there?

A. Well, he spent a few days in our division, in our railway division, going over the various designs, and then he spent several days visiting our sources of supply for mounting parts, and also he accompanied our service engineers to a few of the railroad shops.

Q. Now, I want to ask you this, Mr. Eastburg, has there been any part of American Timken's practice in respect of railway applications that has not been discussed and gone over with the representatives of British Timken either when they came over here to the United States or when you were in England in 1946?

A. We have made every effort to keep them advised and [fol. 2132] up to date with our practice. When their representatives call we show them everything that we have that could be of interest to them, and inquire if there is anything we can show them in addition, and when my visit was made to England every attempt was made to familiarize them with our practices, and some of the information that was given them was in the form of a volume of data that I had personally compiled over a period of twenty years covering practically all of the applications that we have made.

Mr. Ketterer: I think that is all.

Mr. Nitschke: No questions.

[fol. 2133] Thereupon the Defendant called as a witness in its behalf JOHN B. BAKER, who, being first duly sworn, testified as follows:

Direct examination of John B. Baker.

By Mr. Ketterer:

Q. Will you state your name, please?

A. John B. Baker.

Q. Where do you live, Mr. Baker?

A. Canton, Ohio.

Q. By whom are you employed?

A. The Timken Roller Bearing Company.

Q. In what capacity are you employed by The Timken Roller Bearing Company at the present time?

A. I handle the product and design of both roller bearings and rock bits and also the tool engineering for the product, that is the gauges and the tool engineering.

Q. Are you the head of any department in the plant?

A. I am the chief engineer of the rock bit division and also the chief tool engineer.

Q. Of the company?

A. Of the company.

Q. Do you have any engineers working under your [fol. 2134] direction?

A. About 60.

Q. And they perform what services?

A. They handle the general design of the product, the detailing of the product and the tool engineering for the product.

Q. Now, when you say they handle the general design of the product, will you tell us what you mean by that?

A. When a bearing is required, that is, a new bearing, the external dimensions of it are set by the requirements of the job or by the customer. Certain specifications in regard to the bore and o.d., outside diameter, the width of the bearing, the angularity of the bearing and the bearing capacity are prepared. It is the function of these people under my supervision to develop a bearing which fulfills those requirements. That is done through calculation and by detailed drawings.

Q. Now, in respect of tool designing, you say you are the chief engineer of the tool designing division. Will you explain to the Court what that is, please?

A. The tools required for producing the various parts are those which are applied to the machine itself. The tools can be changed for each individual job. These tools may be heading tools for rolls, they may be press tools for the cages or retainers, and they may be cutting tools for the [fol. 2135] inner race, the cone, or the outer race, the cup. For each operation there must also be a gauge, and a proving gauge and a master to determine if these operations are

figured correctly, and it is our function to provide the drawings or the engineering for those tools.

Q. And if new bearings are designed and developed for new applications in your department, is it necessary to design any tooling for the new bearings as they are designed?

A. Absolutely, and the amount of the tooling depends on the production quantity which is anticipated for the bearing. We may, in the case of a large bearing, have very few tools, but on a small bearing which is going into automotive production we have a great many.

Q. That difference is dictated by what factor principally?

A. By the anticipated production quantity.

Q. How long have you been acting for the company in the capacities you have described, for what period of time?

A. Since 1934 as bearing designer and tool designer, and since 1932 as the rock bit engineer.

Q. Were you employed by the company in any other capacity prior to that time?

A. I have been with the company since July, 1925. For the first three years as sales engineer and district manager, then as steel mill engineer and steel mill finishing mill {fol. 2136} superintendent for three years, and as new development engineer for two more years. That would take it up to 1932.

Q. During the time you have been serving the company in the capacities you have described, especially since 1934, what if any contact have you had with British Timken or the French Timken organizations?

A. The contact has been mostly with the British Timken organization, and it has been continuous in a routine manner.

Q. I will ask you this question. You have described the methods that are followed in respect of designing bearings for new applications and designing tooling for new bearings as the new bearings are designed. What if anything is done with the blue prints that are developed in connection with that work?

A. Part of our job has to do with the routine revision of prints on a product which is already established. The drawings, after they are revised, are released to the factory for use. When I say "factory" I mean all of our plants, and as far as our engineering department is concerned we regard the British Timken plant, and have always regarded British

Timken plant, as one of our regular plants, and they are on [fol. 2137] the all-concern run and receive prints the same as any of our other plants.

Q. Is it correct to say, then, that if a new bearing is designed and tooling for that bearing developed in the engineering department, that those drawings are sent to the different Timken plants?

A. That is correct. Now, if British Timken has asked us for a new bearing, a specific bearing for a special job, then we send the drawings to them in a separate manner, that is, with a covering note.

Q. But before we get to the question of any specific inquiries from British Timken, what if anything is done as a matter of routine as to sending drawings that are developed in America of new bearings and toolings for the production of the new bearings?

A. Those drawings are sent as a matter of routine to British Timken, and have always been handled that way, except during the war years.

(Thereupon group of folders containing list of blue prints was marked by the Clerk, for identification, Defendant's Exhibit 158.)

Q. I have here, Mr. Baker, a group of folders which have been marked collectively for identification as Defendant's Exhibit 158, on the outside of the top folder there is a sticker on which the words appear "List of Blue Prints [fol. 2138] Furnished British Timken by the Timken Roller Bearing Company, 1928." I will ask you if you can identify that group of folders for the Court?

A. This group of folders contains a certain number of sheets on which has been typed the drawing numbers which have been sent to British Timken over a period of years. Each folder contains, according to our file records, a list of prints sent during that year.

Q. And those drawings cover what type of product or tooling, or what?

A. It covers both product and tooling, as I said before, which have been sent them in a routine manner.

Q. Were they compiled under your direction?

A. Yes.

Mr. Ketterer: We would like to offer Defendant's Exhibit 158. Now, if the Court please, this follows the procedure

that was discussed earlier in the trial of the case. By that I mean we have developed in outline form a list of the prints that have been sent to the British Timken, giving the numbers, the general description of what was in it, and whether they were specifically requested by British Timken or whether they just went out. I don't think it is necessary [fol. 2139] to refer to these in any detail beyond referring to the method in which are are prepared. There is one here for each year from 1928 down to the present time, and it shows the number of the blue prints in each year that were forwarded to British Timken from American Timken.

The Court: Is there any necessity for offering those specific blue prints? Would it not be possible to stipulate that a certain number of blue prints were sent? You are going to have a record that will be tremendous if you are going to be offering those blue prints.

Mr. Ketterer: We are not offering the blue prints as such, your Honor. This is just an outline showing the number of the print. There are nc prints in these folders.

The Court: Oh, I see. Even the list of them makes rather a sizable exhibit.

Mr. Ketterer: That's true, your Honor, but there are no prints themselves in the books, because this was to obviate the necessity of having a tremendous number of prints, as such. But this shows in outline form only, or in tabular [fol. 2140] form, the number of prints.

The Court: I believe you have done exactly what I suggested should be done.

Mr. Ketterer: Very well.

Mr. Nitschke: That exhibit is for each year, is it not?

Mr. Ketterer: Yes.

Mr. Nitschke: From 1928 to 1948, is it?

Mr. Ketterer: To 1947.

Mr. Nitschke: To 1947?

Mr. Ketterer: Yes, 1947.

The Court: What is the number of the exhibit?

Mr. Ketterer: That's Defendant's Exhibit 158.

The Court: That's a list of blue prints sent to British Timken?

Mr. Ketterer: That's correct, by American Timken.

Q. I notice, Mr. Baker, in one of the folders that is part of this exhibit, there is one folder covering several years,

principally the war years. Can you explain to the Court why they were combined?

A. I think it was in the summer of 1940 that British Timken wrote us and asked us to stop sending prints because [fol. 2141] of the lack of shipping space, and we retained the prints for some time but did not send them, and we have not resumed sending them until the war was over. I think 1945 or 1946 was the first year we began again.

Q. And since that time you have been following the same routine?

A. Since that time we have been following the same routine.

Q. That was followed prior to the war?

A. That's right.

Q. When you send a blue print or a set of blue prints showing the design of a new bearing, do the tooling prints also go along with that?

A. Yes, but usually not at the same time. The way that works out, British Timken develop a need for a certain bearing, and they either write us or cable us, usually cabling, and ask us for a bearing of a certain size or a part number for a certain size which we have already selected. They later send us temporary details of the bearing, that is, they designate major dimensions. They need that so that they can get started in the production of the bearing themselves. We work out the design of the bearing and determine the complete dimensions of the various parts, the details, as we call them, and send them the part number and detailed prints as soon as we can get them finished. The time that elapses is about a week to ten days at the [fol. 2142] outside. Then we proceed with tool engineering and forward that as fast as we complete that. That usually takes another three weeks' time.

Q. Will you step down here and select from the material that is on the table an example of an inquiry from British Timken for a specific bearing so that we can follow through from that what is done in respect of it?

(Witness steps down and selects data.)

Mr. Ketterer: I would like to have that marked Defendant's Exhibit 159.

(Envelope containing data was thereupon marked by the Clerk, for identification, Defendant's Exhibit 159.)

Q. Mr. Baker, I have here some photostats of blue prints that have been marked collectively for identification as Defendant's Exhibit 159, and I will ask you if you can identify that?

A. This exhibit shows a collection of photostats and prints submitted with British Timken's letter of December 23, 1947, with which they enclosed details of a bearing they had provisionally numbered EX-9633. That was a single roll, steep angle bearing, as we refer to it, and they requested us to proceed with the symbol numbers and the details.

Q. Did they send along any preliminary print in connection with that inquiry?

[fol. 2143] A. Yes, their preliminary prints are identified with certain drawing numbers and show a bearing with 3½ inch bore, 6⅜ inch o.d., 1 5/16 inches wide.

Q. And these preliminary prints of British Timken came along with their inquiry to which you have just referred?

A. That is correct, and they show the details of the cone or inner race profile, the cup or outer race, the cage and the rolls.

Mr. Ketterer: We offer Defendant's Exhibit 159.

The Court: It may be received. I don't believe you offered the prior exhibit.

Mr. Ketterer: I beg your pardon. I thought we had. That is Defendant's Exhibit 158. We offer it.

The Court: It may be received.

Mr. Nitschke: How much of this which is in this envelope is Exhibit 159, Mr. Ketterer?

Mr. Ketterer: All of it.

Q. Now, after you got these preliminary drawings from British Timken, will you explain to the Court what was done in respect of this particular bearing by the engineering organization at American Timken under your direction?

A. We proceeded with the required calculations to determine if the original calculations were correct, found them to be so, and then continued with further details which [fol. 2144] we require for the tool engineering. We also assigned a part number, and I wrote them advising them of the part number, and sending them prints of our detailed drawings. A photostat of that letter is included there.

Q. To digress for just a moment, Mr. Baker, what has

been the practice since 1934 in respect of the assignment of part numbers for bearings that are manufactured by British Timken?

A. We usually assign the part numbers and keep a record of them in our master book in our engineering department in Canton. However, there is an arrangement with British Timken to the effect that they can adopt a new part number, or adopt an existing part number by using the suffix letter "X" after the part number, advising us later of their action.

The Court: Now, let me get that. The practice has been to assign the part numbers on all bearings manufactured by British Timken by the company in Canton?

The Witness: That is right, your Honor.

The Court: They assign the number. Other than that, they were permitted to do it but they would have to put an "X" at the end of the number and advise you about it, is that correct?

The Witness: That is right, your Honor. That can [fol. 2145] occur, however, only in an existing series or family group of bearings, not in a new bearing.

Q. And under what circumstances—

The Court: What can occur in a family group?

The Witness: The bearings are grouped in series. For instance, when we have a certain bearing, we may vary the bore in that bearing, or we may vary the o.d. Every time a variation is made a new part number is required. Those part numbers all carry a certain identifying arrangement of numbers so that we can determine if they belong in that series.

Q. Under what circumstances does British Timken use this "X" business of numbering a bearing, and use the part number that has been assigned in that series?

A. They may have a customer over there who wished to use an existing part number but with a variation in the radius of the cone, and if they change that radius they put the letter "X" after the existing part number.

Mr. Ketterer: Does the Court understand that now?

The Court: Yes.

Q. What is the fact as to whether American Timken is [fol. 2146] advised of that change in the number by British Timken?

A. In due course we receive prints from them which show that part number, and we keep a file of it.

Q. Going back again to this job that we identified as Defendant's Exhibit 159, after you had gotten the preliminary drawings and prints from British Timken, did you prepare the detailed drawings of the design of the bearing, after checking their preliminary prints?

A. Yes, sir.

Q. And are the blue prints that are attached to this Exhibit 159 the prints that were sent to British Timken, or copies of them, in respect of the design work that was done by your department?

A. Yes, these are copies of the drawings.

Q. Now, those drawings that were sent to them, did they cover all the details of the design that were necessary for the production of the bearing?

A. Yes, for this particular bearing.

Q. By the way, was that a bearing that was being manufactured at that time, or had it ever been manufactured, to your knowledge, by American Timken?

A. Not as yet.

Q. And you referred to that, I think, a while ago as a steep angle bearing.

A. That is correct.

[fol. 2147] Q. What do you mean by a steep angle bearing?

A. By steep angle bearing we mean one whose angle of the internal parts is such that the bearing has considerably more thrust capacity than it has radial capacity, although it has both.

Q. Was there anything done in respect of tooling for the production of this bearing at the time the design drawings were prepared that are in this file marked Defendant's Exhibit 159?

A. Yes, tool engineering operations followed immediately after and were completed in a few weeks.

(Thereupon two envelopes containing data were marked by the Clerk, for identification, Defendant's Exhibits 160 and 161.)

Q. I hand you two envelopes that are marked for identification as Defendant's Exhibits 160 and 161, and ask you if you can identify those?

A. Defendant's Exhibit 160 bears a label reading "Cone Tools for Part No. LM-919447, cup tools LM-919412, roll tools LM-919401." This envelope contains prints of the tooling required for those three parts.

Q. Were they the parts that were covered by the design of the steep angle bearing that you referred to and described in connection with Defendant's Exhibit 159?

A. Yes, sir.

[fol. 2148] Q. What about Exhibit 161?

A. Exhibit 161 is an envelope bearing label reading "Caging, LM-919405, Hardening Plug LM-919447, Cone; Hardening Plug LM-919412, Cup."

Q. Are the blue prints contained in those envelopes that have been marked for identification as Defendant's Exhibits 160 and 161 reproductions of the ones that were sent to British Timken covering the tooling for the production of the steep angle bearing that you have referred to?

A. They are.

Mr. Ketterer: We offer Defendant's Exhibits 160 and 161.

The Court: They may be received.

Q. As I understood, from what you said a while ago, this material that is covered in Defendant's Exhibits 159, 160 and 161, represented the type of information that is sent to British Timken in cases in which they request information as to a particular type of bearing that they have under consideration for manufacture?

A. That is right. It is typical of the work we do for them on one single bearing.

Q. And that is illustrative of the type of thing that is done any time they make such a request?

A. That is right.

[fol. 2149] Q. Now, am I correct in this, that that is a separate type of information that is submitted to them, quite aside from the routine drawings both for bearing design and tooling that is submitted in respect of bearings that are developed in this country?

A. You are correct.

Q. That's an entirely different type of material that is submitted to them?

A. It is.

Q. What is the fact as to whether or not it is necessary that British Timken have substantially the same machine tools for the manufacture of their bearings if they are going to use the tooling that is designed in your department for the manufacture of bearings?

A. We assume that they will use the same tooling when we send them the drawings. However, they may not. If they do not, they have an engineering department over there in which they can convert our figures and our designs to tools suitable for use on the machines which they select.

Q. But if they use the tooling design, they have to have substantially the same equipment?

A. They will use it on the same machines.

Q. Now, have you, during the time you have been in the engineering department, had anything to do with the training of any representatives from the British Timken Com-
[fol. 2150] pany who have come over here at any time since 1934 down to the present time?

A. I have.

Q. Can you recall the names of any of the people who have come over during that period?

A. Dennis Ashton's name was mentioned recently. He spent a year with us, and I think half of that time he spent in my department.

Q. What did he do while he was in your department for that period of approximately six months?

A. He went through the various phases of our work, working first on design work on bearings, then on detail work, then on tool engineering for the different parts of the bearing, including the cone, the roll, the cup, the cage, the hardening plugs, and finally the special tools.

Q. What if any assistance was given him to familiarize himself with the practices of American Timken, either as to design of bearings themselves for different applications, or as to the design of tooling for the production of the bearings?

A. We gave him everything that we could. We opened our books, our notebooks, our formula sheets to him, and gave him every help that we could. However, he was not a

greenhorn when he came over here because he had been working on exactly that same sort of work in England.

Q. Have there been any other people here, to your knowl-
[fol. 2151] edge, aside from Mr. Ashton, who worked in your department or had any training there?

A. No, Mr. Ashton is the only one from British Timken, although when Mr. McNichol comes over here he always spends some time with me, as he is particularly interested in factory gauges.

Q. Who is Mr. McNichol?

A. I believe he is the works manager of British Timken, or factory manager.

Q. What has he done when he has been here, what has he done in the department?

A. We have discussed the different types of gauges used on different operations, and we have shown him anything new which we have developed.

Q. Is there anything in respect of the engineering practices of American Timken as to the design of bearings or as to the tooling used for the production of bearings that has been withheld from representatives of British Timken, to your knowledge?

A. Not to my knowledge.

Q. Have you given them openly anything that they have asked for, or anything that has come into your department over the years?

A. We have given them everything they have asked for, and we have given them everything that we could think of.
[fol. 2152] Mr. Ketterer: I think that's all.

Mr. Nitschke: No questions.

Mr. Ketterer: Just a minute, Mr. Baker, I want to ask you one other question.

Q. Over the years, to your knowledge, has there been any information that has come from British Timken to American Timken, either in respect of design of bearings or in respect of tooling?

A. Since 1934 there have been occasions when they have supplied us with information.

Q. As to what?

A. In respect to types they have made of bearings, new designs they have made, and on one occasion they have, during the war, asked us to make a thrust bearing for use

on the Rotol engine and propeller parts, and they furnished us with drawing specifications, test results, and a sample bearing.

Q. Did American Timken make that bearing then during the war?

A. Yes, we produced, I think, 35,000 of those for them, for the British Air Ministry.

Q. Can you recall any other items of either design information or tooling information that has come from British Timken over the years, aside from the air screw bearing that you mentioned?

A. Yes, they sent us information one time on the Emmer- [fol. 2153] ton plug gauge—that's E-m-m-e-r-t-o-n—which is a modified plug gauge with small balls at the entering end to facilitate entering the plug.

Q. Did we make any use of that plug gauge?

A. We tried it. We did not like it as well as the plugs which we had already been using.

Q. We didn't change over to the use of the Emmerton plug gauge?

A. No, we did not. We had information on some self-aligning double bearings, I think that was around 1936 or 1938, and we never made any of those for sale, although we tested them and used them in our mill. There may be other occasions too, but I can't recall the specific instances.

Q. Am I correct, then, that when they present the material on a new bearing, such as the air screw bearing or the steep angle bearing that you have testified about, American Timken checks over the design and works up the details on those occasions?

A. Yes, although they give us more information at that time than they do when they ask us to design a bearing for them.

Q. What happened to Mr. Ashton after he had finished in the engineering department? Do you know whether he returned to England, or what happened to him?

A. When the year was up he returned to England and is now working in their engineering department, as far as I know.

Mr. Ketterer: That is all.

Mr. Nitschke: No questions.

[fol. 2154] Thereupon the Defendant, further to maintain the issues on its part to be maintained, called as a witness WALTER F. GREEN, who, being first duly sworn, was examined and testified as follows:

Direct examination of Walter F. Green.

By Mr. Ketterer:

Q. Will you state your name, please?

A. Walter F. Green.

Q. By whom are you employed, Mr. Green?

A. Timken Roller Bearing Company.

Q. How long have you worked for the Timken Roller Bearing Company?

A. Since January, 1935.

Q. In what capacity are you employed at the present time?

A. I am manager of the division of development and research.

Q. How long have you been manager of the development and research division?

A. Since September of last year, 1947.

Q. What kind of work is done in the development and research division of the company?

A. We—our main job is to develop more economical methods of manufacture of bearing parts and to develop methods for making more accurate bearing parts.

[fol. 2155] A. Yes.

Q. Is that development and research division in the main plant of the company, or do they occupy a separate plant of their own?

A. It's in a separate building in Canton.

Q. But it is not in the main plant of the company?

A. No, it's on—it's in the other end of town.

Q. How many people work in that division?

A. Approximately 70.

Q. Is their time devoted exclusively to the business of producing new methods and new tooling and things of that sort in respect of the production of tapered roller bearings?

A. We also make small quantities of new designs of bearings with the intention of testing those out and comparing them with present designs.

Q. Prior to the time that you became manager of this experimental division of the company, what was your connection with the Timken Company?

A. Just prior to that I was assistant works manager.

Q. And back to 1935, what have you done at various times?

A. I was employed by the company in the experimental department as experimental engineer in January, 1935. In September, 1935, I was transferred to the works engineering department as a machine designer. I continued [fol. 2156] in that until 1938, the latter part of 1938, at which time I started to assist in the supervisory duties of the department under Mr. Makely. I continued in that until Mr. Makely's death in May, 1941, at which time I was made assistant works manager in charge of the specification and development and design of manufacturing equipment for all the bearing factories.

Q. Now, during the period of time that you have worked for the company in these various capacities that you have just described, have you had anything to do with the matter of machines or tooling for British Timken?

A. All of the methods, manufacturing methods that we work out, more or less as a matter of routine, are passed on to them. When we try to develop a new machine for a certain operation for bearing manufacture, that work is done for the benefit of all bearing plants, and more or less as a matter of routine that method is adopted by British Timken.

Q. How is that information passed along either to British Timken or to any other plants of American Timken?

A. Periodically there are visits back and forth by the management personnel, either by American officials going there or British officials coming to the States. During these visits, whenever they come, the British officials come to Canton, they are shown through the division, where [fol. 2157] they are shown the things we have under development, and at the same time they are taken through our plants to show any new methods that have been adopted since their last visits.

Q. What discussions have you had with British Timken representatives in respect of what is going on in the experimental and development department?

A. Well, Mr. McNichol, the works engineer in Britain, has been over here on at least two occasions. At these times we get together and discuss our more or less mutual problems, and we give him what we think are the best methods, and quite often he gives suggestions that are valuable to us.

Q. Can you recall when Mr. McNichol came to America?

A. Well, the first contact I had with him was in the summer, I believe, of 1945, and he has been over here, I am sure once since then, and I believe the third time. I wouldn't swear to that last.

Q. Where did you see him on those occasions?

A. In any of his visits he contacts the research division.

Q. Have you talked with him personally?

A. Many times during those visits.

Q. Now, what is the fact as to anything that is under development in the way of equipment, or methods, or tooling, in the experimental and research division, being made [fol. 2158] available to British Timken, and discussed, when they come over here?

A. Yes, they are advised of everything we have either under trial or even under consideration.

Q. And is there anything that is being developed in the experimental and research division that is withheld from them?

A. Nothing.

Q. Now to your knowledge, has American Timken at any time had anything to do with the procurement of machines for British Timken?

A. Yes, to my knowledge, almost continuously since the latter part of 1938. It was carried on before that time by my predecessor in the works engineering department.

Q. State for the Court what procedure was followed in respect of the procurement of machines for use in the British Timken plant.

A. Well, you would have to break that down a little bit. Quite frequently, or at least at numerous times, we have sold them existing equipment from our plants. Now, in a case like that all that is done is that the machine is operated as it is expected to operate in England before shipment, and then it is shipped to them. In other cases, where we are to supply them with machinery, it is built to our own design, that is, Timken Roller Bearing Company's [fol. 2159] design. We get estimates from outside con-

cerns and choose the lowest bidder, assuming he is responsible, and have the machinery built to our drawings and specifications, shipped into our plant for final test to make sure it's all right, then it is boxed for export and shipped to them. The third class would be more or less standard machine tools that are manufactured by American machine tool companies. In a case like that we would furnish them the complete tooling details to show them how the operation was to be set up. After they had the machine ready for operation in their plant, we would forward them test samples, cups, cones, or rollers, whatever the case might be, for test on their floor.

Q. By "their floor" you mean the manufacturer of the machine tool?

A. That's right. Then the machine would be tested there and the samples returned to American Timken for final inspection to make sure they are satisfactory. After that was done the machine would be shipped direct by the American machine tool builder.

Q. That is, direct to—

A. British Timken.

Q. To British Timken?

A. Or French Timken, as the case might be.

Q. That same thing was done on occasions for French [fol. 2160-2163] Timken, as well?

A. Yes, although during the time I have been active on that end of it not nearly so much as for British Timken. There was one big order of equipment we got out—I think shortly after the war started, in 1939, September, 1939, the orders came to us and we shipped over roughly $125,000 worth of machinery to French Timken. That was delivered early in 1940.

Q. Was that new equipment, or was that equipment that was taken out of the American Timken plants?

A. I am quite sure all the equipment that went to French Timken was new.

Q. Was all new?

A. No, there were some exceptions to that. There were some Gridley automatics included in that that came out of our plants. That's right.

[fol. 2164] Q. Mr. Green, I would like to ask you this question. At the plant where you say that the experimental

and development work is done in Canton, is everybody in the Timken organization permitted access to that plant?

A. No.

Q. Is entry to that restricted?

A. Yes.

Q. And to whom?

A. Well, there is a list of about ten individuals that we normally have business with more or less continuously. Other people from the organization are admitted only on a pass that can be issued by four members of the organization.

Q. I will hand you, Mr. Green, three folders that have been marked for identification as Defendant's Exhibit 162, 162-A and 162-B, and I will ask you if you can identify those?

A. Those were lists of machine tools that were sold to British Timken.

[fol. 2165] Q. From American Timken?

A. It goes back to 1928 and up to the present time. The labels are not marked that way but it does go up to the present time.

Q. And were they prepared under your supervision from the files of the company?

A. They were.

Mr. Ketterer: We offer Defendant's Exhibits 162, 162-A and 162-B.

The Court: They may be received.

Q. Now, I take it from what you say that represents the one type of machine business that is handled with the British Timken Company, that is the type involving sales of equipment from American Timken's plants,—that is the Exhibits 162, 162-A and 162-B?

A. Yes.

Q. Now, the other two instances, in which we order for them machine tools of American Timken's design, or standard machine tools, with specifications that we-- prescribed, are not covered in those lists?

A. They are covered. All three types of sales to them are covered by samples in these lists. In some cases the machines are marked as used, that means they came out of the American Timken plant and were shipped to them.

Q. At any time have representatives of British Timken

[fol. 2166] come to the experimental and development division of the company?

A. Yes.

Q. Who has been there to your knowledge?

A. Mr. Dennis Ashton was up there twice for two different periods during the year he spent in our plant.

Q. And what did he do while he was there, to your knowledge?

A. Well, during the first visit he spent about five weeks there in our division. He went over all the different projects that we had under development at that time. He was so much interested in some of the projects that we had underway that he got special permission to come back again for about two weeks before he went to sail for England.

Q. Now, was there any work that was in process of development there that was not exhibited to the representatives of British Timken, either Mr. Ashton or Mr. McNichol, whom you say was there also?

A. No, they had complete access to everything we worked on.

Q. To your knowledge has data concerning development work that has been finalized, been sent to British Timken from time to time since your connection with the experimental and development division?

A. Yes.

Q. Has at any time anything been withheld from them?

A. No, absolutely not. In one particular case they even [fol. 2167] had a machine in operation in the British plant before it was adopted as standard operation in the Columbus and Canton plants.

Q. What machine was that?

A. An automatic honing machine for cups.

Q. Automatic honing machine?

A. Automatic honing machine, that is right.

Q. Do you receive from time to time any requests for information from British Timken in respect of machines and tools, have you any recollection of that?

A. That doesn't come directly to me, no.

Mr. Ketterer: That is all.

Mr. Nitschke: No questions.

[fol. 2168] Thereupon the Defendant, to maintain the issues on its part to be maintained, called as a witness

SAMPSON M. WECKSTEIN who, being first duly sworn, was examined and testified as follows:

Direct examination of Sampson M. Weckstein.

By Mr. Ketterer:

Q. Will you state your name, please?
A. Sampson M. Weckstein.
Q. Where do you live?
A. Canton, Ohio.
Q. By whom are you employed?
A. Timken Roller Bearing Company.
Q. In what capacity.
A. Chief engineer of the industrial division.
Q. How long have you been employed by the Timken Roller Bearing Company?
A. Since December, 1923.
Q. Have you always been connected with the industrial division of the Timken Roller Bearing Company?
A. Yes, I have.
Q. How long have you been chief engineer of the industrial division?
A. For the last ten years.
[fol. 2169] Q. And generally what type of bearing applications are handled in the industrial division of the company?
A. The industrial division handles everything which is not a railroad application or a strictly automotive application, such as buses, trucks and passenger cars.
Q. And any other bearing applications go through the industrial division?
A. That is right.
Q. What sort of work is done by the industrial division in that connection?
A. The work that is done varies depending upon how the work originates. We get some work from our sales engineers. They call on the prospects, discuss the job which is to be analyzed and for which bearings are required and they make preliminary recommendations for the job. Their preliminary recommendations are sent into Canton and are

studied in the industrial engineering division. After they are reviewed by the engineers they are finally checked by my assistants. If the jobs are of special or new nature they are brought to my personal attention before they are returned to the field for final transmittal to the customer.

Q. Are there any engineers who work under your direction in that department?

A. I have 20 engineers working in Canton, and then all [fol. 2170] of our field engineers, we have about 35, all but three of them are graduates under my supervision of the industrial engineering department.

Q. And what is the fact as to whether the territory in the United States, for example, and elsewhere, is divided up into districts or divisions?

A. We have approximately 18 districts in the United States. We classify Canada as a district and we also classify everything outside of Canada and the United States as a foreign district. Each one of those is carried as that district under the manager of the district for the purpose of following the jobs as they come into the engineering department.

Q. By "jobs" you mean the work involving applications that customers inquired about in the various districts?

A. Yes, sir.

Q. Are there any reports made to your department with respect to these various districts?

A. Yes, sir. We receive on the average 100 to 110 inquiries on jobs every week. In order to keep a proper record of them I have my secretary prepare a weekly report. This weekly report is classified according to the respective territories, and under each territory we list the name of the company from whom the job is sent in, the type of [fol. 2171] application it is, the type of work which has to be done on it, the date the job is received and the date the job is completed. This weekly report goes to the heads of the sales department, the heads of the engineering department, and to British Timken. The sales department takes this report and analyzes it and then they take a copy of the report and chop it up to the different territories, return the portions to each territory so the manager of the territory will know exactly the status of his job in the engineering department.

Q. I have here, Mr. Weckstein, a reproduction of reports

bearing the heading "Industrial Engineering Department Report," which have been marked for identification as Defendant's Exhibits 1613 and 163-A. Are they the type of reports that you have just described as being handled in the engineering department?

A. Yes, sir, they are. One of them is a report for the week of October 27 to October 31, 1947; the other for the week of March 8 to March 12, 1948.

Q. And those are typical of the reports that are prepared weekly in the industrial engineering department?

A. Yes, sir.

Mr. Ketterer: We offer Defendant's Exhibits 163 and 163-A.

The Court: They may be received.

[fol. 2172] Q. Now, I notice that on the report, on the various pages under the heading "Territory #1 Mr. Jehu, Territory #2, Mr. Crouch", and so on down through the report. Who are those individuals?

A. The name that appears under the territory is the name of the manager of the territory. Some of the territories have two men, some five, some only one, but the name that appears is the name of the person in charge of that territory.

Q. And then underneath that appears the list of names of companies, of applications, of work done, of delivery dates and date completed, and so on?

A. That is right.

Q. What is that supposed to show?

A. That is supposed to show who the job is received from, that is, the name of the company, the type of application it is, what is to be done with it, whether it is merely to be checked or lay-out made, or analysis made; when this job was received in the engineering department and when it was completed.

Q. I notice on the last page of Exhibit 163-A there is a heading "Territory of Foreign week of March 8 to March 12, 1948". Then there appears underneath that "British Timken, French Timken" and some Chinese name. Is that the foreign territory classification to which you referred [fol. 2173] a while ago in your testimony?

A. Yes, it is.

Q. Now, you say that sections of this report are sent to the heads of the various territories in the United States?

A. Yes, sir.

Q. Is that correct?

A. Yes, sir.

Q. And the section being the part that relates to the manager of that territory, that is what he gets?

A. That is right.

Q. What, in respect of British Timken, is done as to these reports?

A. At the head of the report there is a tabulation giving the names of the people who received the copy of the report. Mr. Doughty's name is there, he is the chief engineer or senior engineer of British Timken, and his name appears on the report. He gets a complete copy of the weekly report.

Q. In other words his is not split up as to any territory in the United States, he gets an entire copy of the report?

A. That is right.

Q. Does he have to make any special request for that or is that done as a matter of routine?

A. That was set up by Timken in 1928, when Mr. Hess [fol. 2174] requested we send copy of everything we do to British Timken.

Q. What if anything does British Timken do as to these reports, to your knowledge?

A. In view of the fact they receive a complete copy of the report we occasionally receive requests from British Timken making reference to a certain job in a certain territory and advise us it is a new application to them and they are interested in it, and they would like to have information. We have sent them complete information on anything they have asked for except confidential data which we handle with the Army and the Navy.

Q. And to your knowledge has that occurred on frequent or infrequent occasions?

A. I would say it probably occurred several times a year.

Q. Now, what sort of data do you send to them on the basis of inquiries that originate through these weekly industrial engineering reports that have been marked Defendant's Exhibits 163 and 163-A.

A. Do you refer with reference to their territories, other territories or their particular territory?

Q. No, I am referring to the case where they make a request based upon receipt of this saying they are interested

in a particular application that appears some place on the report. What sort of data do you send British Timken after you receive a request of that kind from them?

[fol. 2175] A. We analyze their request as well as the job they refer to, and if there is nothing confidential on the job —by confidential I mean if the customer has not asked us to keep the data on that job confidential—then we will send them a copy of our work sheet which shows our analysis and computations as well as a copy of the specifications, a sketch or lay-out. In other words we will give them the same information that we give to the field man who originally requested the information from the company.

Q. The same data and the same information?

A. That is right.

Q. So that the record will be clear on this, your department or your division does not design bearings as such?

A. No, sir, we may receive requests from our customers for bearings that we do not have at the present time. In other words there may be a special application. When we receive such a request we usually go back to the customer in order to obtain complete information on the job. After we get that information we analyze it very carefully and try to establish the limits of the bearing that is required, after that is established we obtain approval from the management to design such a bearing. When that approval is obtained it is turned over to Mr. Baker who proceeds with the design.

[fol. 2176] Q. That is the Mr. Baker who testified this morning?

A. That is right. When Mr. Baker completes the design of the bearing he returns it to me. We then make a study of the application of the bearing and send it back to the field man or to the customer. If the application is satisfactory then we proceed with the design, tool design and manufacture of the bearing.

Q. And is all that data with respect to design, tool design, does that go to British Timken, too, if they make an inquiry about it?

A. Yes, sir.

Q. I hand you here, Mr. Weckstein, four sheets of paper that have been clipped together and marked for identification Defendant's Exhibit 164, bearing the heading "Engineering work done in our industrial engineering depart-

ment for British Timken Limited", and another set for Francaise Timken. Can you tell the Court what they are, please?

A. These sheets cover the tabulation of all the work which we have done for British Timken from 1937 to date. The information was obtained by going back to the files, pulling out all the weekly reports from 1937 to date and tabulating the jobs handled during those years for British Timken.

Q. And was the same procedure followed in preparing the table in respect of the engineering information sent to French Timken?

[fol. 2177] A. Yes, it was.

Mr. Ketterer: We offer Defendant's Exhibit 164.

The Court: It may be received.

Q. Now, was that data or information that was sent by reason of inquiries that originated on the basis of the weekly reports that were marked Defendant's Exhibits 163 and 163-A, or were they that plus any independent inquiries that British Timken might have asked American Timken for?

A. It covers all types of inquiries.

Q. Both types?

A. Yes.

Q. Now, under the heading on this exhibit, Defendant's Exhibit 164, there is a heading "Work done" and the words appear under there "Check" or "Recom.", or words of that type, "Typicals". What do they indicate?

A. When a job is listed, the job having the "Check" means that British Timken, or for that matter the customer, for that refers to the complete report, had sent us some preliminary design which they have worked out. In other words they may have prepared a lay-out showing the application of a Timken bearing or it may be a new design, and one they have not previously had experience with, and they sent it to us so that we may check it to see whether it follows some applications in the States, and whether the design is the best possible for the particular applica-

[2178] tion. We check their work, comment on it and make suggestions and return it to them. Where it says "recommendation" it means either they have sent us an inquiry on a proposition on which they have not previously worked, and we have either made bearing recommendations,

or we have prepared lay-outs showing just how the bearing should be applied.

Q. Now, has that information come not only in instances in which they want data about bearings and application and for use in the manufacture of bearings, but otherwise, too?

A. We get into the subject of manufacturing bearings only at infrequent intervals. Those subjects come up when we get into the multiple type of bearing, that is the double row, the four-row type, that are used in heavy duty rolling mill equipment, rubber machinery, plastic machinery of that type. In those bearings, since we regulate the adjustment or the set-up of the bearing in Canton before the bearing is shipped, there are questions come up as to the amount of lateral or looseness that comes into the bearing, or just how the bearing should be fitted into the machine so that the proper looseness will be had in all parts of the bearing. In those cases we go into the manufacture and set-up of the bearing, but, primarily, in my division we are restricted to the application of the bearings.

Q. To your knowledge have there been any representa- [fol. 2179] tives of British Timken or French Timken who have spent any time in your industrial engineering department of American Timken?

A. Yes, sir, there have been quite a number.

Q. Can you tell the Court the names?

A. Well, Bill Snedden came there, I believe in 1933, and spent considerable time, a lot of time with me personally in the study of the application of our bearings in rolling mill equipment. He spent a number of months in our engineering department. I made a number of trips with him to visit various rolling mills as well as the manufacturers of rolling mill machinery so that he could get a picture of what we were doing in the States. In addition to the work I personally did with him he did a lot of work with other representatives, both in the field and in Canton.

Q. Do you recall anybody alse who has been over from British Timken or French Timken?

A. Mr. Riley was over in this country, I don't remember the year but it was at the time when Richard Thomas were buying a lot of rolling mill equipment.

Q. Richard Thomas was an English concern?

A. Yes, an English concern. Mr. Riley came over here to follow the application of Timken bearings in that equip-

ment. He spent quite a number of months with us, not so much on the direct engineering but in following and watch-
[fol. 2180] ing the builder of the machinery to make sure that the proper size bearings were incorporated in the rolling mill equipment.

Q. And did you accompany him at any time he made any calls or visits?

A. Yes, sir, I made a number of calls with him to plants of mill builders in this country.

Q. Do you recall anybody else who has been there?

A. Two gentlemen, one by the name of Gibson and one by the name of Fall, representatives of British Timken in Australia, have been in Canton on several occasions. These men did not spend time at actual engineering work but spent quite a bit of time with me in discussing special or particular jobs which they happened to have under consideration at that time.

Q. And they were jobs in the industrial engineering field?

A. That is right.

Q. Anybody else you can recall?

A. Beauvivier was over in this country, I believe in 1931. He spent three or four months with me in the engineering department, and after he got through we sent him out into the field with some of our service engineers so that he could study the actual installation and application of bearings in industrial equipment.

Q. Mr. Beauvivier was a representative at that time
[fol. 2181] of French Timken?

A. That is right.

Q. Do you remember anybody else who has been here?

A. Within the past year Dennis Ashton spent about three months in the engineering department. He spent a considerable time in Canton and before going back to England he wanted some information on industrial applications, so he spent about three weeks in the industrial engineering department working on checking and analyzing industrial applications.

Q. Did you have anything to do with training him with respect to industrial applications while he was in the department for several weeks?

A. I talked to him on several occasions, yes.

Q. What work did he do with any of the other engineers in the industrial engineering division?

A. When a man comes in for a short period like that I usually turn him over to one of our head checkers and have him work closely with him, trying to give him jobs of various types so he will get an idea of the different types of jobs we have to handle in the engineering department.

Q. In talking with these various representatives of British Timken and French Timken in the fashion you have described when they have come to America, has there been any item of information involving the industrial bearing [fol. 2182] department of the Timken Roller Bearing Company that has been withheld from them aside from the confidential material?

A. Not to my knowledge.

Q. And have you given them everything that has been available in the department?

A. Everything except what has been designated as confidential by the Army and Navy.

Q. What is the fact as to whether or not American Timken publishes from time to time engineering journals on various phases of industrial applications of bearings?

A. We divide up the industrial work into about 51 various classifications, such as machine tools, road building machinery, farm implements, transmission machinery, marine equipment, conveyors, materials handling, mine cars. In these major industries, in order to distribute as much information as possible on the application of Timken bearings we publish additions to our general catalogs and we refer to these as engineering journal sections covering particular industries. Some of these books are only 10 or 20 pages, some 50 or 60 pages. Every time such a new booklet is published or revised copies are automatically sent to British Timken and French Timken.

Q. I will hand you, Mr. Weckstein, three bound books all of which have been marked for identification as Defendant's Exhibit 165, and I will ask you whether or not they are [fol. 2183] samples of the type of engineering journals which you say the company has been putting out from time to time in the industrial engineering field?

A. Yes, sir, they are.

Q. And those three marked Defendant's Exhibit 165 cover what branches of the industrial engineering field?

A. The first is crane and hoisting equipment section, the

second, conveyor and transfer equipment section, the third, marine and hydraulic section.

Q. And are they typical of the things that you have described in the 50-odd divisions of the industrial application field of Timken roller bearings?

A. Yes, they are.

Mr. Ketterer: We offer Defendant's Exhibit 165.

The Court: It may be received.

Q. What sort of material do you collect in these engineering journals? I notice that there are a great many sketches and drawings of one sort and another in the booklets that have been identified as Defendant's Exhibit 165.

A. Well, in a given industry there may be as many as several hundred various places where Timken bearings can be properly used. As we recommend bearings for these various applications we get approval from the manufacturer to whom the recommendation is made to reproduce that recommendation of industrial application in our engi- [fol. 2184] neering journal. You find in many of these sections we publish at least 90 per cent of the lay-outs shown are actual reproductions of installations which have actually been made and are in service; the other 10 per cent may be ideas which we have originated, which may as yet not have been adopted.

Q. You say those go as a matter of routine, as fast as they are published, to British Timken?

A. Yes, sir.

Q. Are they also sent to French Timken?

A. Yes, sir.

[fol. 2185] Direct examination of Samson Weckstein (continued).

By Mr. Ketterer:

(Material submitted to British Timken by the Industrial Engineering Division of American Timken was thereupon marked by the Clerk, for identification, Defendant's Exhibit No. 166.)

Q. Mr. Weckstein, before the adjournment you testified generally about the form in which material from the Indus-

trial Engineering Division is submitted to British Timken and to French Timken from time to time.

A. Yes, sir.

Q. I have here a group of papers and blueprints that have been marked for identification Defendant's Exhibit 166, and I will ask you if you can identify that?

A. Yes, sir, I can.

Q. And will you tell us what it is, please?

A. This is an inquiry from British Timken, which originated in the form of a letter dated November 12, 1947, requesting information on the application of tapered roller bearings in America to rubber roll mills. We replied to this letter through our Mr. Sauer, giving them blueprints covering typical designs for three different sizes of mills which covered the applications which have been made in this country.

[fol. 2186] Mr. Ketterer: We offer Defendant's Exhibit 166.

The Court: It may be received.

Q. Now, is the material contained in Defendant's Exhibit 166 illustrative of the form in which you have, from time to time over the years, submitted data and information from the Industrial Division to British Timken in response to inquiries from them for data and information?

A. Yes, sir, it is.

Mr. Ketterer: That's all.

Mr. Nitschke: No questions.

[fol. 2187] Thereupon, the Defendant further to maintain the issues on its part to be maintained called as a witness WILLIAM E. SLOAN, who, being first duly sworn, was examined and testified as follows:

Direct examination of William E. Sloan.

By Mr. Ketterer:

Q. Will you state your name, please?

A. William E. Sloan.

Q. Will you keep your voice up, please, so that we can all hear what you have to say?

A. Yes, sir.

Q. Where do you live, Mr. Sloan?

A. Mt. Vernon, Ohio.

Q. By whom are you employed?

A. Timken Roller Bearing Company.

Q. How long have you been employed by the Timken Roller Bearing Company?

A. Since 1918.

Q. And in what capacities have you worked for the Company since that time?

A. I started there as a toolmaker and then was in the Experimental Department for about 15 years, and in 1935 I took charge of the rock bit manufacturing.

Q. At Mt. Vernon, Ohio?

[fol. 2188] A. At Canton, first, and then I went to Mt. Vernon in the latter part of 1935.

Q. You have been in charge of the rock bit plant in Mt. Vernon since 1935?

A. That's right.

Q. At any time prior to your going to Mt. Vernon in charge of the rock bit plant, did you make any trip or trips to England, to British Timken, or to French Timken?

A. I did, in 1929, and went back in 1930 again.

Q. Can you tell us approximately when it was in 1929 that you went to British Timken?

A. It was the latter part of February when I left New York. I arrived in Southampton about March 7th.

Q. And you were there for approximately what period of time?

A. Three and a half months.

Q. And on that occasion did you visit both British Timken's plant in Birmingham, and the French Timken plant?

A. I did.

(Report of Mr. Sloan was thereupon marked by the Clerk, for identification, as Defendant's Exhibit No. 167.)

Q. Did you make a report on what was done at the British Timken plant while you were there?

A. I did.

[fol. 2189] Q. I hand you here some sheets that have been clipped together and marked for identification as Defendant's Exhibit 167, and I will ask you if you can identify that?

A. These are reports sent by me to Mr. Hess of The Timken Roller Bearing Company, in Canton, Ohio, while I was at the British Timken plant.

Q. Is that based upon your observations there?

A. That is right.

Mr. Ketterer: We offer Defendant's Exhibit 167.

[fols. 2190-2212] The Court: It may be received.

[fol. 2213] Q. I will ask you, Mr. Sloan, whether, when you were at the British Timken plant in 1929, you examined the entire plant from one end to the other?

A. That is right.

Q. And the report that I have just read, which has been marked Defendant's Exhibit 167, represents your own observations and recommendations, and discussions that you had, at the time you were in the British Timken plant?

A. That's right.

Q. How long did you say you were there?

A. Three and a half months the first year.

Q. Three and a half months?

A. That's right.

Q. Now, did you go to the French Timken plant thereafter?

A. I was at the French Timken plant one week that year.

Q. Generally speaking, at the time you were there in 1929, was the French Timken plant making bearings complete?

A. No, they were just doing some grinding and assembly.

Q. Grinding and assembly?

A. That's right.

Q. The preliminary operations prior to that were not being done at the French Timken plant?

A. They were being done in the English plant and shipped to France.

[fol. 2214] Q. Now, I want to direct your attention to the last page, which is part of this record—

The Court: What was it the witness said was done in England?

The Witness: The component parts were practically all manufactured, with the exception of the grinding and assembly which they did at the French plant.

The Court: The only thing that was required was the grinding and assembly?

The Witness: That's right.

Q. That was in 1929?

A. That's right.

[fol. 2215] Q. I want to direct your attention to this last page of this document which has been marked for identification Defendant's Exhibit 167, and I will ask you what that is?

A. This is a report by me to Mr. Hess, at the request of Mr. Dewar, requesting me to go to France to set up two Gridley machines.

Q. That was the report of the 1929 trip?

A. That's right.

The Court: I'm sorry, you sort of clipped your words off there. Will you repeat that?

Mr. Dewar requested you to do what?

The Witness: Mr. Dewar requested me to go to France and set up two 3-¼" Gridley automatics.

Mr. Ketterer: Reading from Defendant's Exhibit 167, the last page, under the heading "Francaise Timken":

"Mr. Dewar requested the writer to go to France and set up the two Gridleys, one 3-¼" machine for #29177 cone and one 4-¼" machine for #29334 cup which he had sent to the French Timken plant. Mr. Fegan, their efficiency expert, accompanied me.

"The Gridleys sent over were badly worn and should have been overhauled. The writer started Mr. Fegan to set up the 3-¼" machine while he was setting up the cup machine. The cup set gave a machine time of 2 min. 50 [fol. 2216] seconds as compared to the British Timken time of 4 min. 37 seconds on D.O.H. steel."

Q. Stopping there, what do you mean by D.O.H. steel?

A. That's high carbon steel. It's direct oil hardening steel.

Q. Direct oil hardening steel?

A. That's right.

Q. Is that what was being used in France at that time?

A. That's right.

Mr. Ketterer: (Reading:)

"The cone set up had not been completed when the forming tool broke due to a hardening crack, and as they did not have an extra tool on hand they had to make up one. They are using Direct Oil Hardening Steel for their product which made it quite difficult to approach Moly steel time. Mr. Fegan has got the production idea well in mind, and will get the machines running as fast as possible.

"Mr. Seward had the French furnace man come and get the furnace adjusted properly. However, the 15 cups hardened in a test run had a thin skin which was soft to a depth of .002" whereupon Mr. Seward sent for the steel man and they blamed each other. It is the writer's contention that the air and gas mixture was not quite right and a slight decarburizing action occurred as the cups were [fol. 2217] quite hard under the skin."

Q. Now, I would like for you to take this cup that has been offered in evidence here and explain to the Court briefly what you meant in that report by having a soft skin on the surface?

A. Well, in carburizing or hardening, if the air condition in the furnace isn't right, it leaves the outer surface of the cup to a depth of .002 soft while that under it is hard. This soft surface causes trouble in your grinding operations.

Q. And that was what you meant by soft skin?

A. That's right.

Q. Soft surface on the outside of the cup?

A. That's right.

Q. The carburizing process is intended to develop a hard surface?

A. That's right, it puts the carbon in the cup to make it hard.

Mr. Ketterer: (Reading:)

"The #3 Centerless Cup Grinder was set the same as in England so the writer changed it but having only 15 cups to work with it was impossible to arrive at any time. The Heald time was 1 min. per cup.

"I went over the entire plant with Mr. Seward and Mr. Fegan. They intend to repair the automatics and work everything to the Canton standard.

[fol. 2218] "My passage was booked for the 4th of May but owing to the poor condition which the Gridleys were

in it was cancelled so as to be sure of getting everything started right.

"Mr. Seward would like to have prints of the green and finish cone gauges sent direct to him as he has been having a hard time in getting them from England. He gave the writer a list of bearing part numbers on which he wants the gauge prints."

Q. I will ask you whether or not you arranged to supply those gauge prints, as requested by Mr. Seward?

A. I did.

Q. Now, you said you were at the French plant on that occasion for one week?

A. That's right.

Q. Did you at a later time go to the British Timken and French Timken plants?

A. In 1930.

Q. In 1930?

A. Yes, sir.

Q. And when was it in 1930 you left this country to go to England or France, or both?

A. It was in February.

Q. Of 1930?

[fol. 2219] A. That's right.

Q. And where did you go first?

A. To England.

Q. And how long did you stay in England?

A. Oh, possibly, a week.

Q. And what was done while you were in England during that week?

A. I was just rechecking what I had done the year before.

Q. And what was the purpose of that recheck?

A. Why, to see if everything was being done that I started over there.

Q. And what did you learn?

A. I learned that most of it was being done, with the exception of some parts of it, they didn't have the supplies and materials to do it with yet.

Q. Then, where did you go after that one week's stay at the British Timken plant?

A. I went to the French plant then.

Q. What was the purpose of your going to the French plant?

A. To put in the necessary equipment to completely manufacture the bearings in the French plant.

Q. So that the entire bearing could be manufactured there?

A. That is right.

Q. I believe you said a while ago that when you were there in 1929 they were only doing grinding and assembly [fol. 2220] at the French plant?

A. That's right.

Q. And how long were you at the French plant on that occasion?

A. I couldn't exactly say, but in that year I was over there seven and a half months, and I made a few trips back to England for a day or two at a time. Practically all the time was in the French plant.

Q. And that was for the purpose of setting up the plant for a completely integrated bearing manufacturing operation?

A. That's right.

Q. I will ask you, Mr. Sloan, whether while you were at the French Timken plant in 1930 you made reports from time to time of what you did there?

A. I did.

(Reports of Mr. Sloan marked by the Clerk, for identification, Defendant's Exhibit No. 168.)

Q. I will hand you a group of photostats that have been clipped together and marked for identification Defendant's Exhibit 168. Will you tell us what these are, please?

A. These are reports sent by me to Mr. Hess in 1930 on the installation of equipment in the French plant.

Mr. Ketterer: We offer Defendant's Exhibit 168.

Mr. Nitschke: Well, your Honor, I wonder just what the necessity is of putting in this detailed data as to the phys- [fols. 2221-2223] ical operations of the British and French plants?

[fol. 2224] The Court: I now understand that you are urging the introduction of this testimony to show a joint enterprise or joint venture on the part of French Timken, British Timken, and American Timken, not for the pur-

pose of restraining trade, not for the purpose of making an agreement to enter into a restraint of trade, but for the [fol. 2225] purpose of carrying out a lawful agreement.

Mr. Day: A lawful basic agreement.

The Court: That's the basis of it?

Mr. Day: Yes, and that's what I said in the opening statement.

The Court: I believe I understood that, but you had made some comments about the defense of joint venture not being—

Mr. Day: Your Honor, I want to clear this up in the record. The reason I made the remarks I did about joint venture yesterday was that if we simply say our defense was a defense of joint venture without explaining, and if our brief treats of the defense of joint venture without any explanation, then somebody might say, as Mr. Nitschke said yesterday, "Well, the mere fact it is a joint venture doesn't constitute a defense, because there might be a joint venture to do something good and there might be a joint venture to do something bad."

The Court: That's exactly what I said a moment ago.

Mr. Day: Our claim here is, as stated in the opening statement, that to the extent that there are agreements here dividing territory between British Timken, French [fol. 2226] Timken and American Timken, and to the extent that it could be found that they impose any restraint whatever, that those agreements as to the territorial division are ancillary to a main agreement between Dewar and American Timken, and main agreements between American Timken, British Timken, and French Timken, to manufacture and sell Timken roller bearings and, being ancillary and purely ancillary, and being reasonable, whatever restraint they impose, if the Court finds they impose any, is lawful.

The Court: I believe I understood your point, and I don't think there is any doubt about it. There was some confusion created by your comments yesterday when I pointed out the fact that you yourself referred to the defense of joint venture in your brief.

Mr. Day: We do, but it is a joint venture.

The Court: The only confusion that resulted was undoubtedly because of what you just said, when you refer

to joint venture without limiting it or qualifying it to the extent that you qualified it a moment ago.

Mr. Day: Yes.

The Court: Mr. Nitschke's objection to all of this, of course, is the fact that it goes to such endless quantity in discussing technical installations, that it could be short-[fols. 2227-2247] ened by simply relating the fact that the installations were made. The whole discussion, of course, I think is for the purpose of shortening the record, possibly. However, the record is long enough now so that I think a few sheets more added to it isn't going to make a great deal of difference. Certainly, if that's the only purpose served by excluding it, I don't see how we gain anything by it.

[fol. 2248] Q. Now, Mr. Sloan, I would like to ask you this question: What is the fact as to whether or not in setting up the French Timken plant as outlined in these various reports in 1930 you set it up so that it conformed to the methods of American Timken for the production of bearings?

A. That is right.

Q. And the practices, as you instructed the operators over there in the operation of the equipment, which I understand from the reports came there from American Timken or British Timken, what is the fact as to whether or not [fol. 2249] they were the American practices in the operation of the machines?

A. That is right.

Mr. Ketterer: I think that is all.

Mr. Nitschke: No questions.

Thereupon, the Defendant, to maintain the issues on its part, called as a witness PAUL SHULER, who being first duly sworn, testified as follows:

Direct examination of Paul Shuler.

By Mr Ketterer:

Q. State your name, please.

A. Paul Shuler.

Q. Keep your voice up so we can all hear what you have to say, Mr. Shuler.

Where do you live?

A. Columbus, Ohio.

Q. By whom are you employed?

A. Timken Roller Bearing Company.

Q. In what capacity are you employed by that Company at the present time?

A. I am in the Labor Relations Department.

Q. How long have you worked for the Timken Roller Bearing Company?

[fol. 2250] A. About 36 years.

Q. Have you always been in the Labor Relations Department?

A. No, sir.

Q. Have you always worked in the Columbus plant?

A. No, sir.

Q. Where were you first employed by the Timken Roller Bearing Company?

A. At the Canton plant.

Q. And in what capacity did you first go to work for the Company?

A. As a roll grinding operator.

Q. What other jobs have you had with the Company since you first went with it?

A. I became a roll grinder lineman and then I became assistant foreman in the roll grinding department in Canton.

Q. And is that when you were transferred to the Columbus plant?

A. In 1935 I was transferred to the Columbus plant as foreman.

Q. In the roll grinding department?

A. That is right.

Q. You continued as foreman in that department until you went into the Labor Relations Department?

A. I worked out of the superintendent's office for about a year before going into Labor Relations.

Q. And you transferred from the Roll Grinding Department when you worked out of the superintendent's office?

[fol. 2251] A. Yes.

Q. Did you at any time make any trip to Europe for the purpose of visiting either the British Timken or French Timken plants?

A. Yes, I did.

Q. When was that?

A. That was in 1930.

Q. Do you remember what time of the year it was you left?

A. It was the latter part of August.

Q. And how long were you gone?

A. Until the latter part of October.

Q. Did you visit both the French Timken and British Timken plants or just one of them.

A. Both.

Q. And how long were you at the British Timken plant?

A. I imagine about five or six weeks.

Q. And how long were you at the French Timken plant?

A. Approximately two weeks.

Q. And what was the purpose of your going to the French Timken and British Timken plants in 1930?

A. To try to increase the efficiency of the roll grinding department.

Q. What type of roll grinding equipment was being used in those plants at that time?

[fol. 2252] A. The same type as in America, as in the American plants.

Q. And what was the name of the grinders they were using for roll grinding at British Timken and French Timken?

A. Well, they were called Churchill Grinders but they were exactly the same grinder as we used in this country.

Q. And what did we call them over here?

A. Cincinnati.

Q. Now, did you take any information along with you in respect of roll grinding when you went over there?

A. Yes, sir.

Q. I have here, Mr. Shuler, a group of papers that have been clipped together and marked for identification as Defendant's Exhibit No. 169. Can you tell me what they are, please?

A. They are copies of reports and copies of the information that I gave to the French and English plants.

Q. Now, what does that information generally cover?

A. Methods they used in the Roll Grinding Department.

Q. At American Timken?

A. At American Timken.

Q. And does it have anything to do with tolerances to be

followed in the grinding of rolls as exemplified in the American Timken practice?

A. Oh, yes, all American tolerances, our entire methods that we used in grinding.

[fol. 2253] Q. And you took that with you when you went over to England or France, or copies of those when you went over to England and France in 1930?

A. That is right.

Mr. Ketterer: I would like to offer, if the Court please, Defendant's Exhibit 169.

The Court: It may be received.

Q. Now, to what extent while you were there did you discuss the details of the practices as were outlined in these various reports as to American Timken practice with the representatives of British Timken and French Timken?

A. We went over them all completely.

Q. And what did you find the condition of their Roll Grinding Department to be when you arrived there in 1930?

The Court: What are you talking about, British or French?

Mr. Ketterer: British Timken first, if the Court please.

A. The machines were not set up to any standard. Each one was set up differently and the control wheel dressers were not on the machines, they just had one control wheel dresser for 12 machines which made it very—cut the efficiency way down on the operation of the machine. And the set-ups weren't standard. The work rests weren't ma- ined up right, and they were all 3/8 of an inch too low. [fol. 2254] And the machines were, some of them, as much as a half an inch off center in the grinding position.

Q. What if anything did you do at the British Timken plant in respect of the conditions that you found their roll grinding equipment in, if anything?

A. Well, I explained to them they had to get a feed wheel dresser on each machine and get it lined up and keep it right on that machine, and that the grinding rest was very important, and I had plates fastened to the bottom for all these work rests, and made them of a standard height, and explained to them the importance of keeping each machine set to a certain standard. What we call the drop-off on

the machines were off. There were no two alike. I tried to explain all of this to them and showed it to them.

Q. Was anything done while you were at the British Timken plant in respect of putting these machines in operating condition so that their practice and operation would conform with the American Timken practice and operation?

A. Yes, the necessary parts or equipment were ordered immediately as soon as they were shown.

Q. Did you assist them or direct the operation of revamping these machines while you were there?

A. I did.

[fol. 2255] Q. And how many of them were placed in operating condition while you were there, do you recall?

A. I don't just remember exactly how many, but at least half of the machines in the department were operating very efficiently when I left.

Q. And in the work of revamping the machines were you assisted by any of the British Timken personnel?

A. Very much so.

Q. And did you instruct them about the steps that were necessary to place the roll grinding equipment in the British Timken plant in proper operating condition?

A. I did.

Q. Now, you say you also went to the French plant in 1930. How long were you there?

A. Approximately two weeks.

Q. What was done while you were there,—first of all describing what the condition of the roll grinding equipment was in the French plant?

A. The machines were in just a little better shape in France than they were in England but they still had to have quite a bit of work done on them. The same condition existed with regard to the dressers for the feed wheel, and they also didn't have the proper prints to turn up their feed wheels, which I later secured for them.

[fol. 2256] Q. That is the prints for the feed wheels?

A. In France.

Q. Now, was any work done on the machines in France to put them in proper operating condition?

A. Yes, I worked on those quite a bit also. I did find that the spindles were in a little bit better shape on the French machines than on the English machines, but they

had them operating much slower than what they were supposed to run.

Q. What if anything did you do in respect of operating time?

A. Well, we increased the speed from about 50 to 70 a minute.

Q. Was that after the condition of the machines had been corrected and they had been revamped?

A. That is right.

Q. What if anything did you do about the instruction of operators to operate the machines?

A. Well, we had them instruct operators through an interpreter, and we also gave them written reports so that they could follow the written reports.

The Court: Who do you mean by "we"?

Q. Who do you mean by "we"?

A. Well, my interpreter.

Q. And you, jointly?

A. That is right.

Q. Who was your interpreter?

[fol. 2257] A. Mr. Fegan.

Q. And he was with you. Did he go from the British Timken plant to French Timken plant when you were there?

A. Yes.

[fol. 2258] Paul Shuler thereupon resumed the stand for further direct examination by Mr. Ketterer.

By Mr. Ketterer:

Q. Mr. Shuler, just before the adjournment yesterday I started to ask you about the subject of hoppers on the roll grinding equipment at the British Timken plant. I would like for you to describe for the Court now what the situation was at the British Timken plant in respect of the hoppers on the roll grinding equipment.

A. The machines were not equipped with hoppers.

The Court: What are hoppers?

Mr. Ketterer: I was just going to ask that.

Q. Will you explain to the Court what the hopper is on the roll grinding machine and what its function is?

A. It is a sort of bin affair that the rolls are placed in and fed into the machine automatically from the bin.

Q. Now, in the absence of the hoppers or bins on the roll grinding equipment at the British Timken plant how did they feed the rolls into the roll grinding machine?

A. There was one girl at each machine and she fed each roller in one at a time by hand.

Q. What effect did that have upon the rate of production at the British Timken plant?

[fol. 2259] A. It slowed the production down quite a bit because the girls didn't stay at the machine as steadily as they should have.

Q. What if anything did you do in respect of this hopper situation while you were at British Timken?

A. I had hoppers installed on all the machines.

Q. Now, there was some reference made to feed wheels in connection with the hoppers, I believe. What did they have to do with the hoppers?

A. Well, the feed wheel they were using was an obsolete type and in conjunction with the obsolete feed wheel they were using they were using an obsolete loading device that was also changed, and a new feed loading device and new feed wheels were installed on all the machines.

Q. What was the loading device, what function in the operation of the equipment did that serve?

A. Well, it carried the roll from the hopper across the face of the grinding wheel, then as it passed across the face of the grinding wheel it ground the surface of the roll.

Q. And you say that was replaced while you were at British Timken, too?

A. That is right.

Q. What is the fact as to whether or not in revamping the roll grinding equipment at British Timken when you were [fol. 2260] there in 1930 that you equipped their roll grinding machines so that they functioned on the same basis and with the same methods as had been employed and were employed in American Timken?

A. You say did I?

Q. Yes.

A. That is right, I did.

Q. What is sound testing in the manufacture of roller bearings?

A. Well, after a bearing is assembled it is placed in a

machine that is called a sound testing machine. It rotates the bearing at a very fast speed and if there is any defect in the grinding or any defect in the surface anywhere it will make a slight whistle or noise.

Q. That is done by air?

A. By air, and also there is a radio attachment to the machine.

Q. Now, prior to the time that you went to England had any sound testing equipment of the type that was used in the American Timken plant been sent to British Timken?

A. Yes, there was one machine, one American type machine sent to England.

Q. Was it in operation there when you arrived?

A. No, it was not in operation. They described it as a very [fol. 2261] crude affair and wouldn't use it.

Q. Well, did you have any discussion about the use of sound testing equipment?

A. I told them the importance of sound testing and also explained to them that the machine would work and had been working in America for years.

Q. Was any arrangement made with them at that time about getting more sound testing equipment and installing it?

A. They decided then they would contact the American plant and get another sound testing machine.

Q. Now, there has been some statement made in the course of your testimony and also in the course of Mr. Sloan's testimony about chatter in bearings and testing for chatter. What do you mean by chatter in respect of roller bearings?

A. Well, I guess you would call it an irregularity in the grinding surface, very minute hills and valleys. I don't know how else you would explain it.

Q. And that produces what effect?

A. It causes noise.

Q. And in the practice of American Timken were tests made of the bearings to determine whether there was any chatter in respect of the rolls as they were ground?

A. In the English plant they were being tried for chatter [fol. 2262] but not in the French plant.

Q. Now, at French Timken when you went over there in 1930, what was the situation in respect of hoppers on the roll grinding equipment?

A. The French had hoppers on about half of their machines.

Q. Will you state whether or not those hoppers were the same and operated the same as the ones that were used in American Timken?

A. They operated the same but we had quite a bit of trouble installing them and keeping them in operation because of the difference in the—well, the screws and things wouldn't fit, and their screws and things were made by the metric system, and any screw or anything had to be made up special.

Q. What if anything was done at the French plant while you were there in respect of this hopper situation?

A. Well, we went over all the prints and we sort of revamped the prints so that they could make parts and things that would fit these hoppers.

Q. By prints, you mean prints as to these feed rolls and screws?

A. That is right.

Q. For use in the operation of the roll grinding equipment?

A. That is right.

[fol. 2263] Q. And will you tell the Court whether or not they were prints that had come from American Timken?

A. They were.

Q. How long did you say you were in France in 1930?

A. Approximately two weeks.

Q. And was all the time that you spent there devoted to the matter of working on the roll grinding equipment at French Timken?

A. That is right.

Q. By the time you left France after having spent two weeks there, what was the condition of the roll grinding equipment as to its conforming with the practice of the American Timken Company?

A. Well, it wasn't completely the same as ours because it would take quite some time to get it all changed, but we had some of the equipment changed over to exactly the same type that we had in America.

Mr. Ketterer: That is all.

Mr. Nitschke: No questions.

[fol. 2264] Thereupon the Defendant, to maintain the issues on its part to be maintained, called as a witness

HOWARD I. NAUMAN, who, being first duly sworn, was examined and testified as follows:

Direct examination of Howard I. Nauman.

By Mr. Kettèrer:

Q. Will you state your name?
A. Howard I. Nauman.
Q. Where do you live?
A. Canton, Ohio.
Q. By whom are you employed?
A. Timken Roller Bearing Company.
Q. How long have you worked for the Timken Roller Bearing Company?
A. 30 years.
Q. In what capacities have you worked for the Timken Roller Bearing Company over the past 30 years?
A. I started in as an operator, and to lineman, and to general machinist and repair man, machine builder.
Q. And what is your position now?
A. Machine repair work.
Q. Did you at any time have occasion to make a trip to Europe to the plants of British Timken and French Timken?
[fol. 2265] A. Yes, sir.
Q. And when was it that you went over there?
A. Thanksgiving Day 1932.
Q. And you were there for what period of time?
A. Six months.
Q. Where did you go first on that trip?
A. Birmingham, England.
Q. And for what period of time out of the six months were you at Birmingham?
A. I spent approximately five months in Birmingham and one month in Paris.
Q. Will you tell the Court the purpose of your going over there in 1932?
A. I was sent over there to put in the same system we have in the Canton plant in regards to condition of machines and production.
Q. And were there any particular machines relating to any especial operations that you were concerned with?

A. I was concerned with the 4-spindle Acmes.

Q. And what operation in the manufacture of tapered roller bearings is performed on the 4-spindle Acme machines?

A. They make rolls, cones and cups.

Q. And what is done on the Acme in respect of rolls, cones and cups,—is it the grinding operation?

[fol. 2266] A. No grinding operation. Turned from the green to the green cups, from the green stock to the green cups.

Q. And is that true also of cones and rolls?

A. Yes.

Q. That is before the hardening operation?

A. Yes, sir.

Q. Now, going first to the British Timken plant what did you find as to the condition of the Acme 4-spindle machines when you arrived at the British Timken plant in 1932?

A. I found that they were completely worn out.

Q. In what respect?

A. Well, that would say that they needed a complete overhauling and there was nothing working right on the machines, they weren't in condition. The tooling was bad. They had practically the same tools and equipment we used in this country but it was misused.

Q. In what way was it being misused?

A. Well, in regard to the tools their men did not understand tool grinding. Instead of cutting steel they were pushing steel. They had no clearance in their tools. The spindle speeds and the r.p.m. surface travel and camming was all wrong.

Q. Will you tell the Court what you mean by surface travel and camming?

[fol. 2267] A. Well, surface travel, on what we used to call the MM steel should be about 85 feet per minute in order to get the right travel on your cross slides, and your end slides. In other words on cross slides we should get about .002 per inch, or the end slide .007 to .008. On these machines they had their spindle speed and surface travel very high and tools were not ground right and they were cutting about .010 per inch on the cross slides instead of .002. In other words they were burning their tools.

Q. What if anything did you do in respect to the camming?

A. In the first place we got the correct surface travel, r.p.m. and made the proper cams.

Q. You say you made them. Did you actually cut the cams yourself?

A. No, I went over there in a supervising capacity. We weren't allowed to machine anything ourselves. It was done by the English people.

Q. But it was done under your supervision?

A. Under my supervision.

Q. And the cams were actually cut under your supervision over there?

A. Yes.

Q. What else was done with the Acmes?

[fol. 2268] A. I overhauled three complete machines from the floor up and made them as new machines to our Yankee standards.

Q. When you say you overhauled them, does that mean you tore them down completely to the floor?

A. That is right.

Q. Was that work also done by employees of British Timken under your supervision?

A. Yes, sir, Mr. Calicote of the English plant was instructed by me.

Q. How many machines did you say you tore down and rebuilt?

A. Three completely.

Q. In connection with that job were any employees of British Timken instructed as to the construction and maintenance of these Acme 4-spindle machines?

A. Yes, sir.

Q. And was that work done by you, too?

A. Yes, sir.

Q. Now, after the tearing down of this equipment and after it had been rebuilt, what was done then in respect of its operation, if anything?

A. It was put on what we call Yankee production, the same as we had in America.

Q. And did you supervise work of the employees of the British Timken plant in respect to the operation of the [fol. 2269] machines that had been rebuilt?

A. Yes, sir.

Q. Over what period of time?

A. Well, I usually stayed with one machine as I rebuilt it about a week with the operator to make sure we were getting the right production, which we did.

Q. And after the machines had been rebuilt were they operating in accordance with American Timken practice then?

A. As long as I stayed in England they were.

Q. Now, you say you went to France after you had been in England approximately four months?

A. I went to France on the 29th day of January and returned the 2nd day of March.

Q. And what did you observe in the French plant as to the 4-spindle Acmes?

A. Well, they had sent three 4-spindle Acmes from Canton to France to be operated and someone had got hold of them and tore them all apart and they were throwed in the junk pile in one corner when I got there. Of course it was my job to rebuild those machines and get them into operation.

Q. Before we go to the French plant, there was one thing about the English situation I didn't ask you about. [fol. 2270] You said at the British Timken plant in England when you were there the tooling was not being properly used on the 4-spindle Acme.

A. That is right.

Q. Will you tell us a little more in detail about what was done with that?

A. As I said before, first we had to get the surface travel and r.p.m. correct and proper cams, and then grind the tools correctly.

Q. What did you have to do with grinding the tools correctly?

A. I had to instruct a man, an operator to do so.

Q. And did you do that?

A. I did.

Q. And by the time the machines had been rebuilt in the fashion you have described, had you instructed their operators about the method of grinding tools for use on the 4-spindle Acmes?

A. That is the first thing I done when I got into England.

Q. And the tool grinding practices you instructed them about how did they conform, if they did conform, to the American Timken practice?

A. I did them exactly the same as we did in America.

Q. All right, now, going back to the French Timken plant. You say there were three machines that had been disas-
[fol. 2271] sembled and were lying in the corner of the plant?

A. True.

Q. What was the first thing that was done in respect of that at the French Timken plant?

A. I started to rebuild those machines.

Q. Did you have any assistance from any of the employees of French Timken?

A. I had the foreman of the general tool room, a man by the name of Mr. Travis.

Q. How long did you say you worked at that?

A. Approximately a month.

Q. Did you get all three machines assembled in that period?

A. I did.

Q. What was their condition after you had completed their assembly?

A. I set up one job for them, that is all the time I had. Of course we used D.O.H. steel in France, solid bars. The D.O.H. steel is oil hardened steel, and the production is just half the MM steel. I set up the new 9074 and had most of the tools made. We didn't have floating reamers, and such things in France, which I made. The one machine I set up had run three weeks, hadn't been a tool out of it, had 100% production.

Q. Was the tooling put on the Acme machine at French
[fol. 2272] Timken the same as at the American plant?

A. With the exception of the floating reamers. The floating reamers we made in this plant were two pieces and adjustable. I was forced to make floating reamers out of solid stock which answered the purpose.

Q. Other than that the practice was the same?

A. Yes, sir.

Q. Did you do anything about instructing operators in the French Timken plant about the operation of the Acme 4-spindle machines?

A. To the best of my knowledge. I had no interpreter and it was rather hard to deal with those boys.

Q. You didn't speak French?

A. Not very much.

Q. Did you return to England before you came back to the United States?

A. Yes, sir, I returned to England the 2nd day of March.

Q. Did you spend any time at the British Timken plant?

A. I stayed until the 24th day of May.

Q. What was done in that period?

A. I was still working on rebuilding machines and we had three machines sent over from this country.

Q. Did they come while you were there?

A. They came while I was in France.

[fol. 2273] Q. They were there when you came back from France?

A. That is right.

Q. What was done with those three machines after you returned from France to the British Timken plant?

A. They were put on the Ford series, 14,000 cones, and the one machine was run at 78 pieces per hour and it run 100% as long as they had steel and oil.

The Court: What do you mean by "we"? I have heard the expression used "we". This is the third or fourth witness who referred to "we had something sent from the United States". What do you mean by "we"?

The Witness: The only way I can explain, we figure we are part of the Timken plant.

The Court: What do you mean by "we sent them over"? Do you know who sent them? Do you know how they were sent? Do you know who paid for them? Do you know who ordered them?

The Witness: Really, I don't know.

The Court: Do you know how they got there? Do you know who was responsible for the shipping of them? Do you know where they were purchased? Do you know anything about it?

The Witness: The machines were from Timken Roller [fol. 2274] Bearing Company because I rebuilt the machines before they were sent there.

The Court: They were machines that you had at the Timken plant in Canton?

The Witness: Yes, sir.

Q. So that they came from the American Timken plant?

A. Yes, sir.

Q. Now, as I understand it, these three machines that arrived in England while you were in France were machines you had rebuilt in Canton before you went to Europe?

A. Yes, sir.

Q. Did you have anything to do with their being set up?

A. Yes, sir.

Q. After you returned from France?

A. Yes, sir.

Q. What did you do about that?

A. Set the machines up, three machines, and got them on 100% production with an operator.

Q. And were the machines set up by you at the British Timken plant in conformity with the practice of American Timken in the operation of Acme 4-spindle machines?

A. Yes, sir.

Q. For how long had they been in operation before you left England, if you can recall?

[fol. 2275] A. The French machines?

Q. No, the British Timken machines, the three that came over there while you were in France?

A. They waited on me to get them in operation.

Q. After you got them set up how long did you stay in England?

A. Approximately two months.

Mr. Ketterer: I think that is all.

Cross examination of Howard I. Nauman.

By Mr. Nitschke:

Q. Mr. Nauman, you made a distinction between MM steel and some other type of steel.

A. D.O.H.

Q. Would you explain what those symbols mean?

A. Well, D.O.H. is a harder steel. It is a direct oil hardened steel. The MM steel is what we call as a "moly" steel, a softer steel.

Q. You say "moly" you mean it has molybdenum?

A. I am not a chemist, I couldn't explain that. It is a term we used in describing the steel.

Q. Which were they using in the French plant?

A. The D.O.H.

Q. And that is harder?

A. That is harder.

[fol. 2276] Q. And you have to use different speeds?

A. Different speeds.

Mr. Nitschke: That is all.

[fol. 2277] Thereupon the Defendant, further to maintain the issues on its part to be maintained called as a witness

HARRY H. TRAVIS who, being first duly sworn, testified as follows:

Direct examination of Harry H. Travis.

By Mr. Ketterer:

Q. Will you state your name, please?

A. Harry H. Travis.

Q. You live where, Mr. Travis?

A. Columbus, Ohio.

Q. By whom are you employed?

A. Timken Roller Bearing Company.

Q. How long have you worked for the Timken Roller Bearing Company?

A. Since August, 1919.

Q. And you are employed in what capacity?

A. At the present time I am a foreman.

Q. In what department?

A. Screw department, automatics.

Q. Did you at any time go to Europe to visit the plants of either British Timken or French Timken?

A. I did, yes.

Q. And when was it you went over there?

A. I left New York January 15, 1932, and arrived in [fol. 2278] England on January 21st.

Q. Of 1932?

A. 1932.

Q. How long were you there?

A. Well, between four and five months.

Q. Did you spend all of that time at the British Timken plant or did you go to France?

A. No, I spent three and a half months in British Timken and one week in French Timken.

Q. What was the purpose of your going over to Europe in 1932?

A. To supervise the repairing, re-tooling and job setting on 3¼ and 4¼ Gridley automatics as near to our methods here in the U.S.A.

Q. Had you had anything to do with the operation of automatics in the American Timken plant at Columbus?

A. I had, yes.

Q. And what had you to do with that prior to going to Europe in 1932?

A. Well, at that time I was what they call a head lineman.

Q. In the automatic department at the Columbus plant?

A. That is correct.

Q. And what does a lineman do? We have had that expression from time to time in the testimony here.

A. Well, do you mean the head lineman or just an ordi-
[fol. 2279] nary lineman?

Q. What does a head lineman do in the Timken plants?

A. Well, he is over all the other linemen, all of the operators and helpers, and so on. In other words, he is next to the foreman.

Q. What does the head lineman have to do with setting up machines or supervising the tooling that is to be done on machines?

A. Well, he has a lot to do with it.

Q. Well, I know he has a lot to do with it, but what? Describe in general what his duties are.

A. Well, the head lineman's duties are to see, if he is not setting the jobs up, that the other linemen set them up properly.

Q. By "setting up" you mean what in respect of installing tooling on the machine?

A. Put tools on the machine, recam them, getting it into operation on time, that is, the time you're supposed to run the part.

Q. Am I correct in saying that for every part made on the automatics the tooling has to be changed and the speed controlled by the cams on the machines?

A. That's correct.

Q. They have to be changed?

[fol. 2280] A. That is correct.

Q. And the job of the lineman is to supervise that job?

A. That is right.

Q. Now, when you got to England in 1932, what did you find as to the condition of the automatics in the British Timken plant?

A. Well, they needed quite a bit of repairing and they needed some retooling and resetting.

Q. What was the condition as to state of repair?

A. Well, the spindles were not properly adjusted and the turrets were bad.

Q. The turrets?

A. The turrets.

Q. Yes.

A. And the tool holder housings were not in line with the spindles.

Q. What did you do in respect of the repair of those machines?

A. I supervised the repairing of all the machines.

Q. By supervising, do you mean that the employees of the British Timken Company did the work under your direction?

A. That is right.

Q. And what period of time was required to place the machines in what you regarded as proper operating condition?

[fol. 2281] A. Well, I had personally four of them repaired, and I set the jobs up myself on four of them.

Q. By setting them up, you mean you installed the tooling and cams?

A. That is right.

Q. Now, about the tooling, what was the condition of that when you arrived in England in 1932?

A. Well, some of the tooling I found was being ground by hand where it should have been machine-ground.

Q. What if any change did you make in that practice while you were there?

A. That was all corrected properly, as we do back here in the States.

Q. I would like to ask you, Mr. Travis, whether or not the automatics that were being used in the British Timken plant were the same as the ones that were being used in the American Timken plant?

A. They were.

Q. So that the operation of them was the same and the method of using them was the same as you were accustomed to in the American Timken plant?

A. That is correct.

Q. Now, after the jobs had been set up, as you described it, on the automatics in the British Timken plant, what did [fol. 2282] you do then?

A. We instructed the men how to operate the machines and grind the tools properly.

Q. By "we" who do you mean?

A. We—well, I, then.

Q. Those were operators that were employed by the British Timken Company?

A. They were.

Q. And after you had finished the putting of the machines in operating condition and changing the toolings and setting up the jobs, in the fashion you have described, will you tell the Court whether or not they were in the same operating condition, to produce the same results, as similar equipment in the American Timken plant?

A. They were.

Q. What was the effect on production as a result of the work that you did there?

A. Well, the efficiency increased approximately 30 to 35 percent on these machines.

Q. What do you mean by efficiency?

A. Well, increase in production.

Q. Do you mean the number of pieces produced?

A. That is right.

Q. After you left England, did you go to France?

A. I did.

[fol. 2283] Q. And how long were you in France?

A. One week.

Q. What did you observe about the automatics in the French plant?

A. Practically the same condition existed there as in British Timken.

Q. And what did you do in respect of the automatics at the French Timken plant in 1932?

A. Well, meanwhile, I had some prints forwarded to me at the British Timken from America, some more prints were made at British Timken, and Mr. Fegan accompanied me to French Timken, as he had been there before.

Q. Who was Mr. Fegan?

A. Well, he was kind of a factory man or engineer, and he acted as my interpreter.

Q. Was he a part of the British Timken organization?

A. That's right.

Q. What did you do in respect of the automatics with the prints that you had forwarded from America and also the ones that were taken from England?

A. They were taken—we took those directly over to French Timken with us and there we gave them to the management of French Timken.

Q. And what was done in respect of the automatics, if anything?

[fol. 2284] A. Well, while I was there they had some radius trouble, some under-cut trouble in the green, and that was corrected.

Q. What do you mean by radius trouble and under-cut trouble?

A. Well, their tools weren't being properly ground, the same as existed in England. I was there only one week and I had the tools corrected and the under-cut fixture or attachment was not put on the machine properly, and I had that changed, and instructed them in the use of it.

Q. And when you left France at the end of that week what was the character of the operation of the automatics in the French Timken plant?

A. I don't just understand. Please state that again.

Q. What was the character of the operation of the automatics in the French Timken plant after you had gone over them during the week you were there?

A. Well, the under-cut and the radius were corrected, but the rest of the conditions still existed, and that's the reason we gave them the prints to correct them.

Q. But you didn't spend enough time there to supervise the actual correction?

A. Not enough time, that's correct.

Mr. Ketterer: That's all.

Mr. Nitschke: No questions.

[fol. 2285] Thereupon the Defendant, further to maintain the issues on its part to be maintained, called as a witness

Stephen P. Moreland who, being first duly sworn, was examined and testified as follows:

Direct examination of Stephen P. Moreland.

By Mr. Ketterer:

Q. Will you state your name, please?

A. Stephen P. Moreland.

Q. Will you keep your voice up, please, Mr. Moreland, so we can all hear what you have to say?

A. Yes, sir.

Q. Where do you live, Mr. Moreland?

A. I live in Indianapolis.

Q. By whom are you employed?

A. By the P. R. Mallory & Company.

Q. Where were you born, Mr. Moreland?

A. I was born in Russia.

Q. And you came to this country when?

A. In 1912.

Q. How old were you when you came over here?

A. About 14 years old.

Q. Now, were you ever employed by the Timken Roller Bearing Company?

[fol. 2286] A. Yes, I was.

Q. And for what period of time did you work for the Timken Roller Bearing Company?

A. Roughly, four years, from 1929—I left the company in September, 1933.

Q. And you had worked for the company for a period of about four years?

A. About four and a half years.

Q. What kind of work did you do for the Timken Roller Bearing Company when you were employed there?

A. I was doing the engineering work on heavy bearings and mostly applications of roller bearings to rolling mills and heavy machinery.

Q. Was the entire four years and a half you spent with the company spent in that kind of work?

A. Most of it, yes, but I was sent to Europe by them to help in the sales of Timken roller bearings in Europe.

Q. When did you go to England?

A. In December, 1931.

Q. And that was the first time you went?

A. That was the first time I went.

Q. And how long were you in England at that time?

A. Almost one year. I don't remember the exact date, about eleven months, roughly.

[fol. 2287] Q. Did you spend all of that eleven months period in England, or did you travel out of England?

A. I spent most of the time on the Continent, I would say probably 55 per cent of the time I spent in Germany, France, Switzerland, and in Russia.

Q. As to England, first, what did you do during the period of time you were in England?

A. I attempted to teach the English, the British Timken engineers, in American methods of incorporating Timken bearings in heavy machinery.

Q. In that connection, was anything done as to setting up any engineering department for that purpose in the British Timken plant?

A. Yes, we established a separate department for engineers who worked on nothing but on applications of Timken bearings to rolling mills, sugar mills, cement mills, rotary machines, and other heavy machinery. A great deal of it was done on the application of bearings to heavy drives on rolling mills and other heavy machinery.

Q. What if any data did you take with you when you went to England?

A. I took the Timken engineering journal and photostatic copies of calculation sheets and also a vast number of drawings showing the application of Timken bearings to various machines.

[fol. 2288] Q. What use did you make of this data that you took to England?

A. I had the English engineers study the drawings and calculation methods with me, and later on I did the same thing with Dr. Wrba in Germany. Dr. Wrba was the manager of the German Timken Company.

Q. Over what period of time did you review the drawings and the data that you took with you with the engineers at British Timken?

A. It was continuous. I mean all the time I was there I worked either with their engineers or their sales people, and

the engineers and sales people were coached in figuring loads and in incorporating Timken bearings in machinery.

Q. Had there been any experience in England up until the time—or in the British Timken plant, I should say, up until that time, in respect of the installation of Timken bearings in heavy equipment like rolling mills and rubber mills, things of that kind?

A. No, I don't believe there was any because most of the engineering work for them before that was done at the Canton office.

Q. Before you went to England in 1932, had you had anything to do with supplying data as to applications to British [fol. 2289] Timken in respect of these heavy applications?

A. Yes, I would say all of the work pertaining to the application of Timken bearings to heavy machinery passed over my desk.

Q. That was at Canton?

A. Yes, in Canton. I handled all of that.

Q. Now, you said something about sales contacts, that you also spent some time with the sales organization of British Timken. Will you tell the Court what that was, what the character of it was?

A. In England there were two sales people with whom I called on different machinery builders, like Frazer-Chalmers, and a company in Sheffield, Davey Brothers, I believe it is, or Davey Rolling Mill, associated with the United Machine in this country, and also a good many steel mills like the Baldwin Company in England, and other steel companies whose names I don't remember now.

Q. What was the purpose of the calls that you made on these various companies?

A. To sell the Timken bearings in England either for the English mills or for the mills that were built in England for export, for example, for export to Italy or to Spain or to Russia or to other countries in Europe, also to Australia. [fol. 2290] Q. Now, do you recall any specific mill jobs on which you worked that resulted in sales of bearings for use in rolling mills?

A. Oh, yes, the Baldwin Mills in England. The company was owned by Mr. Baldwin, who was in the British Cabinet, the Prime Minister, I believe—

The Court: Stanley Baldwin.

The Witness: Yes, Stanley Baldwin.

A. (Continued) Also several mills in the Scotch districts, the Fiat mill in Italy, and one mill in Spain, and numerous gear drives that they used in England and abroad.

Q. Now, the practice that you followed in engineering bearings into these various heavy mill applications that you refer to, was that the same practice that had been employed in American applications, to your knowledge?

A. Yes, it was exactly the same, because I followed the American method of calculating loads and selection of Timken bearings for these loads, for these machines.

Q. Was any effort made to check the design of bearings with American Timken while you were there?

A. Yes, those bearings that we had to design over there, because at that time we didn't have the full range of bearings available for every job, those bearings that were de-
[fol. 2291] signed in England had to be reviewed in Canton and they had to be okayed by Mr. Riblet, I believe—yes, Mr. Riblet.

Q. Mr. Riblet was who?

A. Mr. Riblet was the engineer in charge of designing Timken bearings.

Q. Now, you said a moment ago something about "we" not having a full line of bearings in England. By "we" you mean whom?

A. The British Timken.

Q. Was British Timken, at the time you were first over there in 1932, equipped to make the large size mill bearings?

A. No, they were not. It was after I had been there for probably six months that we started making Timken bearings in England, and we built a furnace there and bought machinery. The machines came to England from America through an English machinery dealer. I don't remember the name of the machinery dealer, but the machine supplier was an English company, but he sold American machines.

Q. And the bearings at that time that were used on the heavy applications were supplied by American Timken, is that correct?

[fol. 2292] A. Until that time, yes, and a good many bearings even after that because British Timken was not in a position to manufacture all the bearings that the sales demanded.

Q. Now, you said something a while ago about having

gone onto the Continent and spending considerable time there. Going first to Germany, whom did you contact there?

A. In Germany I contacted the steel mills, like Vereinigte Stahl Werke and a company in Magdaburg, I believe, that built heavy machinery, and a company in Dusseldorf, the Schloanan Company, in the Dusseldorf area, and in Saarbruken we called on a company whose name I don't remember, that built mills, rolling mills, and that company was interested in the use of Timken bearings, because until that time they were using the brass bearings and SKF bearings which were manufactured in Germany. But they told us that because our bearings are made in America and are not made by the German labor they couldn't buy our bearings unless the bearings were at least assembled in Germany.

Q. And that statement about the assembling of bearings in Germany, and the manufacture of bearings in Germany, were you given that response more than one place when you contacted these people?

A. In every case. In every case I had the same answer, [fol. 2293] and the only bearings we were able to sell in Germany were for the mills outside of the German Reich, where the customer specified the Timken bearings.

Q. And those mills were going where?

A. They were going into the Soviet Russia.

Q. Did these German representatives of the German companies say why it was necessary that the bearings be manufactured in Germany if they were to be sold there?

A. First was the necessity of employing German labor, second was the cost of Timken bearings, and the high duties, the high import duties was the last. They liked Timken bearings because they would carry the loads much better than others did, but I believe it was the German Government that did not want the American bearings used on German machinery, the same as they did not want the Timken bearings made in the United States used on the German railways.

The Court: What was the second point you mentioned? First was the necessity of employment of German labor.

The Witness: The second was the cost of the Timken bearings.

The Court: The cost?

The Witness: Yes.

[fol. 2294] Q. And the cost was based on what factors, did you say?

A. The cost of what?

Q. Of Timken bearings made in America.

A. Well, the American labor is so much higher that the SKF, for example, who had factories in Germany, could make bearings over there, and also their bearings were not a tapered type, they were the spherical type, and they were able to sell them where we could not sell any.

Q. Was Dr. Wrba, whose name you mentioned a while ago, was he with you when you made these contacts of the machine builders in Germany?

A. Yes, Dr. Wrba was with me all the time. In fact, he was the man who made the contacts, and my duty was to help him engineering-wise. He did all the sales work himself.

Q. Now, about the data in respect of prints, and that sort of thing, that you described that you took with you when you went to Europe, did you make any use of that in Germany in dealing with Dr. Wrba there?

A. Dr. Wrba and I spent every spare moment we had studying the Timken drawings, lay-outs. He studied the design of Timken roller bearings, and I left with him a complete set of drawings, and we also had to make a German engineering journal based on the Timken engineering journal, which we first worked out in English and then with Dr. [fol. 2295] Wrba in German.

Q. Do you speak German yourself, Mr. Moreland?

A. Not too well. I speak it, but not too well now. I haven't used it for fifteen years.

Q. At that time did you speak German?

A. I spoke some, yes. I spoke enough to understand it.

(Thereupon two engineering journals were marked by the Clerk, for identification, Defendant's Exhibit 170.)

Q. Do you have the other copy of your engineering journal?

A. Yes, I have it here. Would you like to have it?

Q. Yes, will you get it, please?

A. Here is the original too.

Q. Now, I hand you, Mr. Moreland, two documents, each of which has been identified with the same number, Defendant's Exhibit 170. I will ask you to tell me what they are, please.

A. This is the Timken engineering journal made in German, the one we had made up in Berlin, and this is the translation which you sent to me.

Q. Have you examined that translation?

A. Yes, I have.

Q. And is it correct?

A. I believe it is.

[fol. 2296] Q. You say "we prepared this engineering journal." By "we" you mean who?

A. By that I mean Dr. Wrba and I.

Mr. Ketterer: We offer Defendant's Exhibit 170.

The Court: It may be received.

A. If you need another German copy I have it at home.

Q. Well, we can get along, I think, with this one all right. Now, to what extent was the American engineering journal used in the preparation of this engineering journal that was prepared by you and Dr. Wrba in Germany?

A. Well, the illustrations were taken from the American engineering journal and from the album of photographs I had with me, and the list of Timken bearings was taken from the engineering journal. The only thing we did, we gave dimensions in millimeters beside the inches. If you notice in that book, the sizes of bearings are given in millimeters and inches; while in the American journal the dimensions are in inches only, and the description of different mills was taken from the album of photographs that I had at that time with me.

Q. Now, while you were in Germany, did you have anything to do with any negotiations with representatives of the Russian Government in respect of bearings?

[fol. 2297] A. Yes, we started working on that in the early part of 1932. Before I went to England there were Russian representatives in the United States. I got acquainted with them at Timken Roller Bearing's request, and after the Russians went home I wrote to them and told them that I would be in England and asked for permission to call on them. Dr. Wrba and I went to Moscow where we talked to the different people in the Commissariat on Heavy Industry—I believe that's the correct name of it, but it may not be the exact name, but something like that—and we also

visited the machinery building factory in Donbas in the southeastern part of Russia.

Q. Spell that.

A. D-o-n-b-a-s. We spent in that factory almost two weeks working with the Russian engineers on the application of Timken bearings to the heavy mills, which I believe later were built—some of those mills, were built in the United States, and they used Timken bearings in them, and others mills were built in Germany, but they were built to our designs.

Q. Now, were they the mills you referred to a while ago in your testimony, when you said that some of the mills that went to Soviet Russia had specified the use of Timken bearings on them?

A. That's correct.

[fol. 2298] Q. Now, did you continue your negotiations with the representatives of the Russian Government in respect of the construction of bearing factories in Russia?

A. Yes, sir, in Russia.

Q. And what was the character of the negotiations that you conducted there?

A. The draft of an agreement was made up and initialled by the Russian Government for the Timken Roller Bearing Company to build a factory in Russia, and the Timken Roller Bearing Company was to give the Russian Government technical assistance, for which the Russians would pay the Timken Roller Bearing Company a certain sum of money. I don't remember now what it was. The Russians also obligated themselves to buy Timken bearings for a fixed sum of money each year, and that pertained to bearings of 8 inches and larger in diameter, that is, outside diameter. The contract was—the draft of the contract was given to Mr. Dewar in London, and a copy of it was brought with me to Canton, and I gave it to Mr. Klinedinst. I thought I had a copy myself, but I couldn't find one.

Q. Now, during what part of 1932 was it you were in Moscow?

A. It was early in 1932, I would say around March, early March—probably part of April. I can't remember exactly now.

[fol. 2299] Q. Did you observe whether or not there were any other bearing factories in Russia at that time?

A. Yes, the SKF Company had a bearing factory where

they were building ball bearings and the straight roller bearings. They did not build the tapered roller bearings at that time. I understand they do now, but they did not at that time.

Q. When you were there the first time for those eleven months that ended in the latter part of 1932, was there any agreement finally reached with the Russian Government on that subject?

A. No, the agreement, the final agreement, was not reached until 1933, in the early part of 1933. It was around April or May.

Q. Did you visit any other countries while you were in Europe in 1932, other than the ones you have mentioned?

A. No, I visited France, Germany, Switzerland, and Russia, but we dealt with engineers from other countries too.

Q. You did what?

A. We had contact with engineers from other countries, for instance, we handled a job for Spain and we dealt with engineers from Spain and Italy.

Q. You didn't go to Spain or Italy?

A. No, I did not go there, but to Spain and Italy British [fol. 2300] Timken had sent a service man, Mr. Hill by name, who helped to assemble the Timken bearings in the mills there.

Q. Now, in Switzerland what if any contacts did you make? Was Dr. Wrba with you, first?

A. Dr. Wrba was with me. We called on three mills—I don't remember the names of the towns or the names of the companies, but those mills were used for rolling hot and cold nonferrous metals.

Q. By nonferrous metals you mean what?

A. Copper and brass and German silver.

Q. Were you able to make any sales of Timken bearings in any of those places?

A. No, we couldn't sell any Timken bearings there because the Timken bearings were not made in that country, Switzerland. That was the main reason. The only bearings that were sold, the only Timken bearings that were sold, in Switzerland were replacement bearings for automobiles, which I had nothing to do with, but my inquiries revealed that the only Timken bearings sold in Switzerland were those for American automobiles there.

Q. Now, did you go to France in 1932?

A. Yes, I did.

Q. And did you go to the French Timken plant in 1932?

A. Yes, I did.

Q. What was done there?

[fol. 2301] A. I had a short visit there, probably a week's time, and with one of their sales people I called on several machine builders, but French Timken, first of all, did not need any of my help because their man had been in the United States for almost a year and he had all the information with him that I could have given him.

Q. Who was that, what was his name?

A. Robert Beauvivier, and he had all the information, so I did not spend too much time with him. But I did call with the sales people on several mill builders, and I was not successful, for the main reason that the French at that time were not building any heavy machinery. They were getting that from Germany as reparations.

A. After the first World War the Germans had to give the French a certain number of heavy machines for nothing.

Q. Now, when was it you returned to the United States in 1932?

A. I believe it was in November, 1932, just what time I do not remember now.

Q. Then did you return to Europe at any time after that?

A. Yes, I did. After I reviewed the work that had been done in the United States during the time I was gone with [fol. 2302] the people here, I left for England, for Europe, in February of 1933.

Q. How long were you over in Europe on that occasion?

A. I stayed there until sometime in June, and in June I left England with the agreement from the Russian Government.

Q. Did you visit any countries on that trip other than England?

A. Oh, no, on that trip I was in Germany and in Russia.

Q. Again?

A. Yes, sir.

Q. And was that trip to Russia on that occasion in connection with this contract for the construction of a tapered roller bearing plant in Russia?

A. In part it was that, and in part to talk with the Russians again about the use of Timken bearings in four-high mills. The Russians had been considering buying them at

that time, I went there this last time, to Russia, at the request of the Russian representation in London, I believe it was—yes, in London.

Q. On the request of Russian representatives in London?

A. That's right.

Q. Did anybody accompany you to Russia?

A. Dr. Wrba did.

Q. From Germany?

[fols. 2303-2310] A. Yes.

Q. How long did you stay in Russia at that time?

A. It must have been more than three weeks. It was more than three weeks, but just how long exactly, I don't remember now.

Q. Now, did you discuss with the representatives of the Russian Government in Russia the purchase of bearings for four-high mills that were to be installed in Russia?

A. Yes, sir.

Q. Where were those mills going to be built?

A. They were going to be built in the United States. I reported when I came back, that United Engineering & Foundry Company would get the hot four-high mills and Mesta probably would get the cold four-high mills.

Q. Was this contract for the construction of a bearing plant in Russia, that was to be done by British Timken, was that ever executed?

A. I don't know that because I left Timken Roller Bearing Company in September, 1933. What happened then, I don't know.

[fol. 2311] Mr. Ketterer: That concludes the direct examination of Mr. Moreland, if the Court please.

Mr. Nitschke: No questions.

Mr. Day: Now, we want to offer the deposition of Howard Herbert Coombes, taken on behalf of defendant pursuant to stipulation of parties at 16 West 60th Street, New York City, before Clarence Bonynge, Notary Public, State of New York.

(Questions read by Mr. Day, answers by Mr. Ketterer.)

[fol. 2312] "Q. Will you state your name, please?

A. Howard Herbert Coombes.

Q. And where do you live, Mr. Coombes?

A. Sydney, Australia.

Q. And with what company are you connected?

A. Bearing Service Company.

Q. And how long have you been connected with Bearing Service Company?

A. Twenty years.

Q. And in what capacity are you connected with that company at the present time?

A. Automotive sales manager.

Q. How long have you been automotive sales manager?

A. I cannot tell you exactly; it is a number of years.

Q. Well, approximately?

A. Twelve years.

Q. And what was your previous connection with Bearing Service Company prior to being automotive sales manager?

A. Salesman.

Q. As automotive sales manager what are your duties generally in the operation of the company's business in Australia?

A. Well, primarily sales promotion.

Q. Over what area?

A. Particularly New South Wales and Victoria. The [fol. 2313] policies of course cover the whole of Australia, the influence of those policies would be felt in all other states in the Commonwealth.

Q. Were you connected with Bearing Service Company in 1940?

A. Yes, I was.

Q. And in what capacity at that time?

A. As sales manager.

Q. And are you acquainted with a man named Mr. Jack Harrison?

A. Yes, I am.

Q. How long have you known Mr. Harrison?

A. It is over 20 years.

Q. And is he connected with Bearing Service Company?

A. Yes, he is.

Q. And in what capacity?

A. Liaison officer.

Q. And his duties are what as liaison officer?

A. Primarily to keep all states and franchises posted with

current information on bearings from all agencies that we hold, for distribution of stock amongst the various states.

Q. By stock you mean stock of what?

A. Stock of bearings.

Q. You do not mean corporate stock?

[fol. 2314] A. Oh, no, no, bearing stocks.

Q. Were you acquainted with the fact that Mr. Harrison came to the United States of America in 1940?

A. I was.

Q. And before asking you about the purpose of his coming over here, is he an officer of Bearing Service Company, a corporate officer of that company?

A. Do you mean by that that he is an executive?

Q. Yes.

A. Yes, he is so.

Q. Did you participate in any discussions as to the purpose of Mr. Harrison coming to this country prior to his coming over?

A. I did, yes.

Q. Who gave Mr. Harrison his instructions as to the purpose of coming to this country?

[fol. 2315] A. Do you mean the individuals or the company as a whole?

Q. Either one.

A. The instructions given to Mr. Harrison were given to him by the directors.

Q. And the directors were whom?

A. Mr. Hodgkinson, Mr. Dickinson and Mr. Thomas.

Q. Now will you tell us what instructions he received from those men as to what he was to do when he came to this country in 1940?

A. The sole purpose of the visit was to see—

Mr. Nitschke: I want to object to that unless he says that he heard the instructions given to him.

Mr. Ketterer: He has already testified that he knew.

Mr. Nitschke: His answer was that the purpose was.

The Witness: Leading up to Mr. Harrison's visit there was discussed in detail for many months with all the organization and with all the executives, that it was fair and necessary, due to the critical position so far in England, to supplement that supply by obtaining American bearings. Mr. Harrison was therefore instructed to visit America

[fol. 2316] with the idea of interviewing all American companies from whom we could purchase bearings of all types. And to do that it was necessary for him to see Fafnir Bearing Company, Nice Bearing Company, R. B. C., M. R. C., Ahlberg, Timken, Schafer.

Q. Now his instructions as to interviewing various companies that you have named was to do what?

A. To supplement our supply of bearings that we were formerly getting from England, and which supply was drying up and looked like completely drying up.

Q. Had you previously gotten bearings from any source in America, that is prior to the war?

A. Yes, we had.

Q. And from what companies?

A. Practically all American ball roller bearing companies, I think I could safely say all American bearing companies at sometime or other we had bought bearings from.

Q. Did Bearing Service Company handle the bearings of any American companies prior to the war?

A. Oh, yes.

Q. And what companies?

A. The same as I have listed previously.

[fol. 2317] Q. In the field of anti-friction bearings in the Australian market in 1940 and prior to the war which type of bearings was more important, ball bearings or tapered roller bearings?

A. Ball bearings.

Q. And to what extent?

A. Roughly 80 per cent ball bearings and 20 per cent tapered roller bearings.

Q. The figures that you have given as the relative importance of ball bearings and tapered roller bearings on the Australian market, upon what experience is that based?

A. My knowledge of the bearing business.

Q. Over what period of time?

A. Twenty years.

Q. And does that reflect the experience of Bearing Service Company in the sale of bearings in the Australian market?

A. It does, yes.

Q. I will ask you, Mr. Coombes, whether or not Mr. Harrison had any instructions to request the Timken Roller

[fol. 2318] Bearing Company to terminate any agreement that it had with British Timken, Limited, in respect of supplying bearings to Bearing Service Company on the occasion of his visit here in 1940."

A. Mr. Harrison certainly did not have any such instructions from our company; in fact the only reason that the approach was made to American factories, which of course includes Timken, was wholly and solely for the purpose of supplementing the supply of ball and roller bearings for essential Australian industries.

Q. Mr. Coombes, is there any reason to your knowledge why it is desirable or necessary for you to have an English source of bearings?

A. Oh, yes, it is very necessary and essential.

Q. Will you explain why it is necessary?

A. Well, there are several reasons; the main one is the existing dollar position and the necessity for us in Australia to always make our purchases from a Sterling coun-[fol. 2319] try. That being the case, and having suppliers in England who can supply the bulk of the ball and roller bearings we require we buy from that source. Let me go one step further by pointing out that before being able to make any purchases whatsoever from a dollar source it is first of all necessary to obtain a license, an import license; and to obtain that license it is also necessary to prove to our government that the bearings we require are not obtainable from a Sterling country. Should we succeed with this proof and the bearings are urgently needed for industry, either for manufacturing or replacement purposes, we are granted a license to import from a non-Sterling country; and an allocation of dollars is made accordingly.

Q. How long has that import license arrangement been in effect?

A. I cannot answer that exactly, but I know it was in effect before the war, for some years before the war, but I do not know the period. I cannot answer that question, obviously, because it affects everything that is imported into the Commonwealth, there are various tariffs that give a protection to certain lines, and bearing were included in one of those categories when available from a Sterling country.

[fol. 2320] Mr. Ketterer: You may cross examine."

(Questions in cross examination read by Mr. Nitschke, answers by Mr. Derr, as follows:)

"Cross examination.

By Mr. Nitschke:

Q. What is the full name of your company, Mr. Coombes?

A. Bearing Service Company of Australia, Proprietary, Limited.

Q. Are there other companies in Australia known as Bearing Service companies?

A. There is a company I understand named Bearing Service Company, but they are not in the ball and roller bearing business, they handle journal bearings, white metal and brass bearings; they are not in any respect comparable with us.

Q. What is the Bearing Service Company of Sydney?

A. That is part of the Bearing Service Company of Australia.

Q. Is that a subsidiary?

A. No.

Q. Is it a branch office?

A. That is right.

Q. In other words you call your Sydney branch office sometimes Bearing Service Company of Sydney?

A. No, never—Bearing Service Company of Australia.

[fol. 2321] Q. And you have a branch office in Sydney?

A. Yes.

Q. Is that true of Bearing Service Company branch at Melbourne?

A. That is right.

Q. That is just a branch?

A. Yes.

Q. It may sometimes be designated as Bearing Service Company, Melbourne?

A. No, never. It is all Bearing Service Company in any part of Australia, it is Bearing Service Company of Australia, Melbourne, Sydney, Perth, Brisbane.

Q. Mr. Harrison was liaison officer for these various branches?

A. Correct.

Q. Was he also a liaison officer for Bearing Service Company and any other companies in Australia?

A. We have a company in Adelaide in which we have a controlling interest, called Duncan & Company, Adelaide. On the bearing and roller bearing side of that business they are jobbers.

Q. Are there not some companies like Duncan with which you are affiliated?

A. Connected with us?

[fol. 2322] Q. Yes.

A. No.

Q. Who are the directors again of Bearing Service Company?

A. Mr. Thomas, Mr. Dickinson, Mr. Hodgkinson and Mr. Foxhall.

Q. Do those men have operating positions in the company?

A. Yes.

Q. Do they have other titles?

A. Yes, Mr. Dickinson is managing director, and Mr. Thomas is director in Melbourne, manager, and Mr. Hodgkinson is managing director of the Sydney office. It is a bit complicated.

Q. Who is your immediate superior?

A. Mr. Hodgkinson.

Q. You said that you handled the bearings of these various companies that Mr. Harrison was instructed to visit, is that right?

A. We handled the bearings, that is correct.

Q. Did you include there the Timken Roller Bearing Company of Canton?

A. Yes, I did.

Q. When did you begin to handle their bearings?

A. The Timken Roller Bearing Company of Canton?

Q. Yes.

[fol. 2323] A. I could not tell you exactly, but it has been many years.

Q. Before the war?

A. Oh, yes.

Q. And when you wanted bearings from Timken at Canton how did you order them?

A. We ordered them from Birmingham, England, British Timken, Limited.

Q. Was that under instructions from British Timken?

A. That is correct, yes.

Q. Have you ever heard of a company called Kemsleys?

A. Yes.

Q. What relation does your company have to them?

A. To Kemsleys?

Q. Yes.

A. We do not have any relationship at all.

Q. Do you have any business relationship with them?

A. Yes, we do have from the fact that they are controllers of Timken in Australia.

Q. They are what?

A. Controllers of Timken.

Q. Do you mean they control the distribution?

A. They control who shall be the distributors of Timken in Australia.

[fol. 2324] Q. So you secure your rights to distribute Timken bearings through Kemsleys?

A. That is right.

Q. Have there been any changes in your relations with Kemsleys during the last four or five years?

A. Yes, there have been.

Q. What are they?

A. I cannot tell you exactly all, but I know that the automotive distribution of Timken was taken from Bearing Service Company and split up amongst other companies in Australia.

Q. You mean you had exclusive before that time?

A. Yes, exclusive.

Q. You do not mean that you no longer distribute their bearings for automotive purposes?

A. We do now.

Q. But you did not at one time?

A. We did not at one period. Just from memory it was about 1942 or 1943, I cannot quite recall the time.

Q. For practically those two years?

A. Do not tie me down to that, I am not sure of the years, but I am just taking it from memory, it was about that time.

Q. You now again are distributor of automotive bearings [fol. 2325] for Timken?

A. That is correct.

Q. But there was a time which you think to the best of your recollection was in 1942 or 1943 that you were not the distributor for automotive bearings?

A. I cannot swear to those years, I am merely stating that it could have been 1940, but it certainly was not much before the war and it was not much after the war started.

Q. You stated what instructions were given to Mr. Harrison. Were you present when instructions were given to him, the instructions that you have testified about?

A. I cannot answer that very well. I was present at some of them, and I know the whole of the instructions were worked up until such time as Mr. Harrison left. But the final interview that Mr. Harrison had with our directors I was away. That took place in Melbourne, and I was away from Sydney at the time in an army camp. But I knew what was going on. Really it was discussed that I do the trip that Mr. Harrison did, but I could not be spared at the last moment and Mr. Harrison came in my place.

Q. When did you leave the company to go to the army?

A. I was not in the army, I was just in the army camp [fol. 2326] helping them out on some bearing troubles.

Q. Do you know where you were in October of 1940?

A. That is just about the time that you were referring to, Mr. Harrison visited with us at Albury.

Q. So that at the last meeting that Mr. Harrison had with the directors you were not present?

A. That is so.

Q. And as far as you know were there other meetings had with the directors at which you were not present?

A. That is so.

Q. Did you know of the contract that British Timken had with American Timken respecting the selling of bearings in Australia?

A. The only thing I knew was that we had to place our orders through British Timken.

Q. Did you know that that was because of the contract which British Timken had with American Timken?

A. I never gave it a thought.

Q. From whom do you get these import licenses that you mentioned?

A. From a section of our government, the Customs Department.

Q. And how long is it that you had to get import licenses from the Customs Department in order to buy bearings from outside Australia?

[fol. 2327] A. It has been going on for many years, I cannot tell you exactly, but it was in operation long before the war.

Q. In 1940 did you have to get an import license?

A. Yes, we did.

Q. In order to buy?

A. Yes.

Q. I believe you stated that you had to assert that the bearings were not available from a Sterling country?

A. That is correct.

Q. Did you make those assertions in 1940 to your government?

A. We must have, otherwise we would not get a license.

Q. Well, it was not possible, was it, for you to get bearings from England in 1940?

A. No, it was not possible for us to get bearings from America in 1940 without an import license.

Q. But you said that you had to assert to your government in order to get the import license that bearings were not available from a Sterling country, is that correct?

A. That is correct.

Q. And was it true that in 1940 bearings were not available from Sterling countries?

A. Well, you cannot pin me down to one bearing or any [fol. 2328] number of bearings; it could be that one bearing was obtainable from an English source or from England and that another bearing was not available.

Q. Well, did your government require you to first inquire of a British company whether or not they could supply the bearings before they would give you a license to import from the United States?

A. In 1940?

Q. Yes, in 1940.

A. I could not answer that question; it is impossible to answer, 1940 was a war year in Australia—it was not here—and things happened pretty quickly in Australia in 1939 and 1940, and it became very apparent that we had to supplement our supplies for an essential industry from non-Sterling countries, and quite a lot of these regulations would have been waived, as they were subsequently when the Aus-

tralian Purchasing Commission was set up here and we were able to buy bearings without an import license.

Q. Was that true in 1940 and 1941 also?

A. I could not swear to that, 1940 and 1941.

Q. You just do not know?

A. I do not know the exact date, no.

[fol. 2329] Q. That was two years approximately before the Australian Purchasing Commission went into operation?

A. Yes, but in that period the government did relax certain controls, I could not name just exactly which ones, but they did relax certain controls to keep Australian industries supplied with ball and roller bearings. I could give you that information from my files, but I could not remember it; I had no reason to memorize it.

Q. You think it is possible then that in 1940 and 1941 you did not have to get import licenses—you do not remember the exact period of time—that there was a relaxation of the requirement that you have an import license in order to buy from the United States?

A. I think so, but I would not swear to it now, I could not remember it.

Q. You think there was a relaxation?

A. I think there was, yes.

Q. Do you know whether or not Mr. Harrison had any written instructions as to what he should do when he came to the United States?

A. He did.

Q. Who were those from? Whose instructions were they?

[fol. 2330] A. From the directors.

Q. From the three men you mentioned?

A. It could include other men as well, it might have been a direction of mine or other employees of the company. We were wholly and solely interested in getting bearings, and in many instances we knew more than perhaps the directors would know in respect of certain bearings.

Q. I just wanted to get straight whether or not he had been given written instructions from the directors.

A. That is right.

Q. He had been?

A. Yes.

Q. And did he carry those with him when he came to the United States?

A. He did.

Q. I believe you stated that it was your opinion that the bearing business in Australia was about 80 per cent ball bearings and about 20 per cent tapered roller bearings?

A. Yes.

Q. Do you have any idea what proportion of the tapered roller bearing business was replacement and what proportion was for original application?

[fol. 2331] A. I should say it would be 70 per cent replacement and 30 per cent original equipment.

Q. And by replacement you mean that the bearings were to be used in an installation where the original bearings had worn out or been broken?

A. That is right.

Q. Are there any manufacturers of bearings in Australia?

A. Yes.

Q. What are their names?

A. They are government organized factories. The bearings are made by the Australian government.

Q. How long have they been making bearings?

A. Approximately two and a half to three years.

Q. Are those bearings sold commercially?

A. Yes.

Q. They are not just used for government purposes?

A. No.

Q. What types of bearings do they make?

A. Up to the present moment they have made ball bearings only; although I am not suggesting that they have not at some time or other made a special bearing for a specific purpose. They may have done that, but I have not any knowledge and no way of knowing. It being a government enterprise I could not.

[fol. 2332] Q. Do you recall what time you began sending your orders directly to American Timken for bearings?

A. No.

Q. You did though for a certain period during the war?

A. I am not sure that we sent them direct or that we posted them. We might have posted the actual order for approval from our government or the Purchasing Commission.

Q. To American Timken?

A. Yes.

Q. You say you might have. You do not know whether you did or did not?

A. No, I am not sure of that.

Q. When you order bearings now from American Timken how do you do it, do you write to them direct or to British Timken?

A. We do not order any bearings from American Timken at all unless we are instructed to do so from British Timken.

Q. When you buy bearings from this list of companies which you mentioned before, Nice, M. R. C., etc., do you order those only on the instructions of British Timken?

A. No, they have nothing to do with British Timken at all.

Q. You send the orders direct to Marlin-Rockwell?

[fol. 2333] A. Most of these bearing people, manufacturers rather, have representatives here in New York, or in America somewhere, or in Australia, and the orders are placed through them.

Q. Through their representative dealer in New York or Australia?

A. Yes.

Q. But you do not have to clear those with British Timken?

A. No, they have nothing to do with it at all.

Q. Do you handle bearings for the Bower Roller Bearing Company?

A. We have handled them.

Q. During what period?

A. There have been many times that we have handled them, possibly half a dozen times, for some specific reason, such as Bower made tapered roller bearings that are not made by Timken either in England or America.

Q. You do not represent Bower in Australia?

A. No, but we can buy from Bower in Australia if we wish.

Q. Do you know if Bower has a representative in Australia?

A. A factory representative, yes.

Q. Do any bearing distributors in Australia handle Bower bearings?

[fol. 2334] A. Not that I know of.

Q. Do you know a company by the name of Machin & Company?

A. I do.

Q. Do they handle Bower Bearings?

A. Not that I know of.

Q. Are you in any way related with Machin & Company?

A. No.

Q. Are any of your directors directors of Machin & Company?

A. No.

Q. Do you know if any of the directors of Duncan & Company are directors of Machin & Company?

A. Not that I know of.

Q. Do you know who the directors are of Duncan & Company?

A. No, I do not—know any of them, did you say?

Q. Do you know who they are?

A. I do not know any of them—I know Harold Peake, who was the managing director.

Mr. Nitschke: That is all."

(Questions read by Mr. Day, answers read by Mr. Ketterer as follows:)

"Redirect examination.

By Mr. Ketterer:

Q. Mr. Coombes, have you purchased any bearings from Timken Roller Bearing Company since the conclusion of [fol. 2335] the war?

A. We have.

Q. Have you any idea as to what quantity you have purchased since the conclusion of the war?

A. Roughly $90,000 to $100,000 worth.

Q. Now, before you gave any order to American Timken for those bearings had you attempted to purchase them from a British or Sterling source?

A. We had.

Q. And what if any showing did you make to the Customs authorities of the Australian government in respect of their being available from a Sterling source?

A. We first of all asked British Timken to supply the order in question or orders in question, and they replied that they were unable to help us and would be unable to help us for some considerable time, and instructed us to

place our order with American Timken. With this evidence we approached their government, and they in turn issued us the necessary import license and dollar allocation.

Q. Now you were asked a while ago about whether there was any time when you did not represent British Timken both in the automotive and in the industrial field, and you said there was some period that you did represent them [fol. 2336] in both fields, is that correct?

A. That is correct.

Q. What happened that you lost the representation of one of those fields?

A. If I understand it it was due to some personal feeling between Kemsleys and our company.

Q. And in which of the two fields did you lose the representation?

A. The automotive field.

Q. And who was appointed representative of the British Timken in the automotive field during that period?

A. In Sydney, Bennett & Wood; in Melbourne, Motor Traders, Limited; and there were a couple of others, I forget who they were now because it was relatively unimportant to us.

Q. Now you said that you could not fix the time absolutely but it was sometime you thought in 1941 or 1942 when you lost that representation?

A. I think so; I am just not quite certain of the year.

Q. How was the relationship re-established so that you again represented British Timken in both fields?

A. One of our directors, Mr. Thomas, went to England, and we were re-appointed both automotive and industrial distributors.

[fol. 2337] Q. Do you recall about when it was that he made that trip to England?

A. The end of 1945 or the beginning of 1946.

Q. And you have continued since that time to represent British Timken both in the automotive and in the industrial fields?

A. That is correct.

Q. Now we asked you at the beginning of your examination about the instructions that Mr. Harrison had, and Mr. Nitschke asked whether those instructions were in writing. You said, I believe, that some of them or all of them were in writing?

A. I know he had a set of questions that he had to find the answers to.

Q. A set of questions?

A. Yes.

Q. I will ask you whether or not they were in the nature of memoranda to remind him of what he was to do when he was in this country.

A. That is correct.

Q. Now the instructions that he had, I understood you to say a while ago, were formulated over a considerable period of time, is that correct?

A. That is correct.

[fol. 2338] Q. And over what period of time prior to his leaving Australia would you say that the matter was discussed and the instructions developed?

A. I should say from the outbreak of the war.

Q. That is in 1939?

A. Yes, that is right.

Mr. Ketterer; I think that is all."

(Questions read by Mr. Nitschke; answers read by Mr. Derr as follows:)

"Recross examination.

By Mr. Nitschke:

Q. When you buy bearings from Nice or the other companies that you buy bearings from in the United States do you make inquiry of some British company first?

A. Where the bearings are made in England, yes.

Q. What company do you make inquiry of?

A. Hoffman Ball Bearing Company.

Q. Any other company?

A. It could be Salter, British Timken, Ransom & Marles.

Mr. Nitschke: That is all."

(Questions read by Mr. Day; answers read by Mr. Ketterer as follows:)

"Redirect examination.

By Mr. Ketterer:

"Q. One other question, Mr. Coombes. You said a while ago that perhaps 20 per cent of the bearing business in

[fol. 2339] Australia was for original equipment and 80 per cent replacement business. I want to ask you this, where the customer wants replacement bearings to replace bearings that have failed in a piece of equipment, what is the practice generally as to whether you try to replace them with a bearing of the same type and make as the one that was in the equipment originally, or do you undertake to get some other type of bearing?

A. We usually try to replace it with the bearing that was in the machine, not necessarily in make but in type.

Q. Now in connection with this business that you described a while ago of purchasing from a Sterling source, what is the fact as to whether that applies to other items than bearings when you import items into Australia?

A. Apart from bearings?

Q. Yes.

A. All imports from a non-Sterling country must have an export license.

Q. What is the fact then as to whether the equipment in Australia in which bearings were originally installed is British made in the main?

A. I would say yes.

Q. And are the bearings in that equipment in the main [fols. 2340-2343] British made also?

A. Yes.

Mr. Ketterer: That is all."

(Questions read by Mr. Nitschke; answers read by Mr. Derr as follows:)

"Recross examination.

By Mr. Nitschke:

Q. There are large quantities of American made equipment in Australia, are there not?

A. There are now, but there were not in pre-war times.

Q. In pre-war times weren't there large quantities of automotive equipment?

A. Yes, but more in the nature of automotive cars, trucks, tractors, and things of that nature, rather than machine tools.

Q. Automotive equipment was largely American made?

A. Yes."

[fol. 2344] Thereupon the Defendant, to maintain the issues on its part to be maintained, called as a witness

IMRIE DEVEGH, who, being first duly sworn, was examined and testified as follows:

Direct examination of Imrie DeVegh.

By Mr. Ketterer:

Q. Will you state your name?

A. My name is Imrie DeVegh.

Q. Where do you live?

A. In New York City.

Q. What is your business or profession?

A. I am a consulting economist. I do economic research work for corporations.

Q. And in what particular field do you do economic work?

A. A very substantial part of my practice is in the international field.

Q. Where were you born?

A. I was born in Budapest, Hungary.

Q. Will you tell the Court something of your early education?

[fol. 2345] A. I grew up mostly in Hungary and I went to the University of Budapest. I am a Doctor of Law of the University of Budapest. Then I went and studied economics at Trinity College, Cambridge, England. Then I came to the United States where I worked first for the National City Company. Then for ten years for a firm called Scudder, Stevens & Clark in New York City. I was head of the foreign department for eight years and head of all the economic research for two years. Then I worked for Charles E. Wilson, at the War Production Board, as assistant to the Production Vice-Chairman in 1942 and '43. For the last five years I have been practicing as an independent consultant in New York.

Q. What was the nature of your work with these various companies that you have described in respect of whether you specialized in the field of international economics or international trade?

A. Well, of a very great variety, I would say. I have gone to South America on questions of whether to establish branch plants; made market surveys in Canada. I have

been consulted on subsidiaries in Europe, various countries in Europe. I have done economic surveys in South American countries. In other words, I have had a great variety of jobs.

[fol. 2346] Q. Have you written any books in the field of economics?

A. Ten years ago I wrote a book on the pound sterling.

Q. And the title of that was what?

A. "The Pound Sterling, A Study of the Balance of Payments of the Sterling Area". Published in New York, I think late in 1938 or early in 1939.

Q. And what is the fact as to whether or not you have kept abreast of international trade developments?

A. Well, I have in the last twenty years.

Q. And you have made a study of that particular field?

A. Oh, yes, I have written many articles, papers in the American Economic Review, in the Review of Economic Statistics, Political Science Quarterly, those are the three in which most of my articles appeared.

Q. What was the nature of the work you did while you were at the War Production Board?

A. I was first Mr. Wilson's assistant on the Naval ship building program, and then I did other economic research jobs.

Q. At the War Production Board?

A. That is right.

Q. Now, in connection with your preparation to testify in this case have you made any particular study of the bearing industry, its situation in the field of international trade?

[fol. 2347] A. I have studied the statistics of international trade relating to anti-friction bearings in a large number of countries, in fact in all the major producing countries of anti-friction bearings, and I have looked at the production statistics that were familiar and available, such as the U. S. Census and British Census.

Q. Now, I would like to ask you, going back to the 1920's, whether or not you have been and are familiar with the international trade situation, especially in Europe, and as it involved the United Kingdom and the British Empire during that period?

A. Yes, sir.

Q. Will you describe generally and as briefly as possible what the economic situation was in Europe in the United

Kingdom and in the British Empire generally during the 1920's following the termination of the first World War?

A. The first thing I ought to say on that is the nature of the transformation caused by the first World War, which was that whereas until 1914 international trade was generally unrestricted except by tariffs, in other words, it was a trade in which price competition, within tariff limitations, was the virtually sole or at any rate the dominating form of competition, the first World War established in all the [fol. 2348] belligerent countries for the first time a system for trade control by administrative actions and trade prohibitions.

Q. Let me interrupt you at that point, Mr. DeVegh. What was the nature of the controls that first came into existence in the international field after the beginning of the first World War in 1914?

A. Well, a system of control developed gradually, whose salient characteristics were that all transactions across borders were very completely prohibited except under license, or permitted only subject to administrative approval. The belligerent countries were motivated by a number of well-known and easily conceived points of view, such as preserving the maximum resources within the country for warfare, preventing goods from seeping through neutrals into the hands of the enemy, and so forth. The control systems established in this second World War largely, at first, had their inception in the first World War precedent. The effect [fol. 2349] of the controls and of the prolongation of the first World War was that the neutrals increasingly applied the same kind of controls as a defense against the impact of the war upon them. There was a very spectacular and well-known and much quoted case when the Swedes, for example, refused to accept additional imports of gold in 1917 or '18 from Germany because Germany was dumping so much gold into Sweden in order to obtain war materials from Sweden that there was additional inflation caused in Sweden. This is a very famous case because it was, I believe, the first case where a country refused to accept gold and allowed its currency to go to a premium in terms of gold temporarily. This is a much quoted example. Much more serious controls were those imposed on all foreign exchange transactions in order to economize to the maxi-

mum the resources in each belligerent country for the purpose of warfare.

Q. Do I understand that the controls put into effect during the first World War related not only to the importation or exportation of goods but they also related to control in the field of currency?

A. Yes, sir.

Q. In other words both types of controls were put into effect during the first World War?

A. Yes, sir, both trade and exchange.

[fol. 2350] Q. Now, what was the situation at the end of the first World War, say in 1920 in Europe, in the British Empire and in the United Kingdom generally?

A. Well, in the British Empire and in the United Kingdom the situation was that a major effort was made to what was conceived of as getting back to normal. In 1920 or maybe it was until 1919, I don't remember the exact date of the termination of the agreement, but there was an inter-allied agreement by which American authorities supported the pound sterling at the old official rate of exchange of $4.86 per pound. This inter-allied agreement was abandoned and thereupon the pound sterling collapsed to about $3.20, from which it gradually recovered over a period of five years to its original par value. The British Empire was thus closest back to normal except for the violent fluctuation in the exchange rate and for the inception of the protective system with respect to industry. This protective system, the first step towards it was the imposition of the so-called McKenna's duties in 1915. The next one, the next legislative step was the Safeguarding of Industries Act in 1921. In addition, it is well known that during the war British industry was very completely integrated for the purposes of the war and there is the famous report of the Committee on Trusts, indicating the extent to which [fol. 2351] the industry was integrated, and this industrial integration for the purpose of the war effort continued, of course into the post-war. During the 1920's, while England had considerable difficulties that resulted from wartime disruptions, violent fluctuations in the exchange, internal inflation; and increase in industrial costs within England that resulted from the war, everybody in England was very much concerned about the bad defensive position into which England had been crowded, as opposed to the dominating

industrial position that England occupied throughout the 19th century.

Q. The dominating position that England occupied during the 19th century, how had that been changed or how had it changed by the 1920's?

A. From the final quarter of the 19th century on Great Britain was outstripped industrially by the United States and by Germany. And when I say "outstripped" I mean both in quantity of production and in quality of production, principally in the field of metallurgy. The United States became the leader of the world, and Germany a close second by the turn of the century, and since metallurgy was one of the basic British industries that was a very serious problem. The technilogical situation received a great deal of comment and also the quantity of output, [fol. 2352] the much larger and stronger American and German organizations were considered a considerable menace. Therefore, the British, during the 20's, started extensive movements to "Buy British", which is a very familiar slogan, to insist on British components in industrial production, to do everything within their power to still preserve the traditional industrial system, to maximize the cohesion to a British economy,—and by "British" I mean in this respect both England and the Dominions and Colonies,—against what they felt were the aggressive encroachments from the outside, in other words the competition for international trade by the newer and bigger industrial powers.

Q. Now state whether or not these defensive operations and the resort to the defensive measures you have described in England was the result of a realization in English business circles that the war and the developments prior to the first World War had placed England in a disadvantageous position in the field of international trade?

A. I believe that that was the case. I should mention in this connection that the impact of the first World War upon English metallurgy was accentuated by very high costs. In other words both the costs of the new industrial installations during the first World War and the costs of the operation at British wage levels which had something [fol. 2353] like trebled during the first World War, they had been very low prior to the first World War, resulted in cost distortions that were the major problems through-

out the 1920's and brought one great English metallurgical company after another into financial difficulty.

Q. Now, will you turn to France and tell the Court what the situation was during the war and immediately after the war in the 1920's in respect to the French economy?

A. The French economy was much more disrupted than the English because thirteen provinces of France were occupied by the Germans throughout the war and the war was fought in France, at least so far as the west was concerned.

Q. Coming to the matter of controls, what developed in France during and after the war in the 1920's?

A. During the war the French benefitted from the same inter-allied agreement to keep the franc at par, which was abandoned after the war, whereupon the French franc collapsed. Then in France the next five years were five years of continuous crisis in making an attempt to get back to normal. They emerged from the war with complete import restrictions which they tried to maintain. When they abandoned it and the new franc collapse began, they reinstated it in 1922, that is the system of import controls then, and that system continued until 1925, I believe, when [fol. 2354] they reconstituted the tariff on a high protective basis. In 1926, after the French franc had lost 80 per cent of its value, in other words after it had depreciated in France from 5 francs to the dollar to 25 francs to the dollar, they stabilized the currency. From then on for the next four years a considerable effort was made by France to try to return to normal, that effort being aimed at the institution of normal as it was in 1914 but not in 1926. Certain strategic factors weighed very heavily with the French government as you know, because France was very much weakened by the first World War, and was very much afraid of a rival in Germany, and as the French saw it, robbed of its guarantees by the weak British and American support at Versailles, at the Peace Conference and thereafter. So the French army was by far the biggest in Europe, and the French Government purchases played a very large part in French metallurgical production.

Q. What was the attitude of the French Government during the 20's in respect of developing industry in France that had any war implications or war uses?

A. Strongly nationalistic. Of course they were extremely anxious to have everything they felt necessary for defense within France. I believe this is a matter of completely common knowledge, after all France had been invaded four [fol. 2355] times, excuse me, only three times up to that time,—1815, 1870 and 1914, in each case with equally disastrous results, so that the whole French nation was always extremely conscious of the menace of German aggression, and of the need of having everything that could be had for defense within the country.

Q. State whether or not the resort in 1925 that you have described to the use of a high protective tariff in France was an expression of the view you have just discussed?

A. In part and in part it was also an attempt to get back to a price mechanism in international trade. In other words, to get away insofar as possible from this system of controls which they knew and many people in business in France felt was strangling production. The French Government made several efforts to get back to a freer and more rational basis of international trade at that time. The French Government originally proposed, for example, the International Economic Conference of the League of Nations in 1927, which was an attempt to get better international integration of industry, but it was not prepared to do anything on its own hook without wide-spread international agreements, to get rid of its nationalistic and essentially defensively-minded attitude towards industry.

[fol. 2356] Q. Now, what was the situation in Germany following the termination of the first World War and in the 1920's?

A. Germany emerged from the first World War in a chaotic condition. There was a very violent inflation which ended at the end of 1923 in the complete breakdown of the German currency system. After that time, through the large foreign loans, the German economy was rehabilitated during 1924 and 1930, so that Germany had, as it were, one more year of a return to normal period, longer by one year, in which conditions were going towards what was considered as prewar normal than did France, because German stabilization occurred about a year and a half before France's, or two years before France. But the German economy, of course, plunged into the depression about a year ahead of the French economy. Throughout this

time the Germans had developed a rather unsatisfactory psychology from the viewpoint of international cooperation and international trade, which was a residue of the defeat and of the very unhappy experiences from 1919 to 1924. Of course, German industry was always in cartels and cartelization was viewed as an instrument of national policy, as it were. The poverty of Germany, which was looked on as a great poverty that resulted from the first World War, the lack of foreign assets, the heavy foreign indebt- [fol. 2357] edness, the obligation to pay large reparations, were all economic factors very strongly pushing both administrative bodies and the cartels and the leaders of industry into a direction in which, although they were sympathetic to the idea of trading internationally, and so forth, one of the points of view was the national interest rather than a purely and completely unhampered price competition regardless of the nationality of the buyers and sellers.

Q. And as to the possibility of importing goods from outside of Germany on any substantial basis, how did this development of national interest and the lack of stabilization, things of that sort, affect the possibility of importing goods into Germany during the 1920's?

A. During the early 1920's, during the transition period, during the inflation period, just as in France during the inflation period, imports and foreign exchange transactions were subject to direct controls. During this brief period of the attempt to return to normal, broadly 1925 to 1930, during those four or five years there were no legal impediments to what I would describe as normal competition in international trade on a price basis, but there were these very great nationalist pressures. It was sort of immoral to buy foreign goods just as it was immoral in France to buy foreign goods that could be bought within France from [fol. 2358] French producers, just as in England it was very much a point of good behavior that you should buy British whenever you could.

Q. State whether or not in Germany there was any resort to the use of tariffs during the 1920's as a means of protecting German industry?

A. Oh, yes, Germany was always, since the 1870's, a high protectionist country, and the wartime controls were superimposed on a relatively high tariff structure which, of course, meant that tariffs, although irrelevant while the

direct controls were in effect and during the period after the stabilization of the currency, during this period of relative normalcy the Germans once more relied on a protective tariff structure.

Q. And that was from what date in the 1920's, if you know?

A. I don't exactly recall.

Q. How about other European countries, what was the situation in respect of them as to whether they resorted to controls of one kind and another as to imports into their countries during the 1920's?

A. Well, I think I can sum up the situation in one sentence, namely, that the further you got away from the West the worse control situations were. Then when we go east of Germany into the fragmentation area between Germany and [fol. 2359] Russia, where the small countries were struggling—

Q. Such as what?

A. Well, Poland, Czechoslovakia, Hungary, Roumania, Yugoslavia, Bulgaria, Greece, Turkey. I mean each one of those countries underwent violent inflation, each one of them had emerged from the first World War in 1919 in a situation very close to complete chaos, and international trade didn't start up immediately. I mean each country was so well withdrawn into its shell and trembling for its life. Actually, warfare didn't end in some of those countries until 1922, but very gradually they loosened up a bit. During this period of 1925 to 1930, there was a relief from restrictions which went to various lengths and in various directions, but there was an interval, half-hearted interval, in which each country was very much worried about the repetition of the horrible experiences that went before and in which, therefore, they had an essentially defensive point of view to international trade. Of course, since the depression broke out everybody interpreted the appearance of the depression as a justification for their worst misgivings, and from 1931 on import controls and exchange controls were universal in every one of those countries with trivial exceptions, which we can go into if you feel it necessary.

[fol. 2360] Q. I would like to ask you, Mr. DeVegh, this question. What is your opinion as to whether or not an American anti-friction bearing manufacturer would have

been able to have sold its products in the United Kingdom or in the British Empire generally, from the United States during the period of the 1920's that you have just described, in competition with an anti-friction bearing industry that was at that time operating in England?

A. With the greatest difficulty only, and to a very limited extent, if at all.

Q. And in your opinion would that have been practical from a commercial standpoint, on a commercial basis?

A. Well, I would be very much surprised if it had proved profitable, if that's what you mean.

Q. That is what I mean.

A. It would be surprising if it would have.

Q. I would like to ask you the same question in respect of France and Germany. Would, in your opinion, an American anti-friction bearing manufacturer have been able to have sold its product made in the United States in either France or Germany in competition with the anti-friction bearing industry that was at that time operating in both of those countries, on a profitable basis?

A. I would say that the case against the possibility was [fol. 2361] much stronger even than in the case of England and the British Empire, because France and Germany were that much further removed from the effort to return to normal than the British, and the considerations applying to war potentials weighed much more heavily even than with the British. Moreover, in the case of Germany you had to consider not only that domestic industry but the fact that Sweden was the next door neighbor and Sweden was a neutral in the first World War, and usually the Germans considered Sweden as a dependable second choice next to their own domestic supply, and they would have had no incentive to go further afield.

Q. In other words, the geographic closeness of Sweden to Germany—

A. And to England and to France, and the British industries within France.

Q. Would have some bearing upon the opinion that you have expressed?

A. Yes, sir.

Q. One further question in respect of the British Empire, economically what has been the historical basis on which the British Empire has operated as a source of raw mate-

rials and as a source of manufactured goods? Will you describe that briefly for the Court?

[fol. 2362] A. The British Empire throughout the 19th Century was the outlet for a large part of the manufactured goods, and especially capital goods, produced in the United Kingdom and, in turn, supplied the United Kingdom with food stuffs and raw materials. The large British investments abroad, which were such an important factor in both World Wars, were developed by the export of manufactured products and capital goods during the 19th century in very large quantities.

Q. And to what extent was the manufacturing economy in England dependent upon the rate of exchange of imports from the Colonies and Dominions and the rate of export of manufactured goods in the United Kingdom proper?

A. Very substantially. I believe I could say—I'm quoting from memory, but I believe in the 1920's something like 38 per cent of Great Britain's imports came from the Empire and 40 per cent of her exports went to the Empire and, of course, since the United Kingdom was the world's biggest foreign trader, this represents an extremely high percentage for the world, and for the other economic units very much smaller than the United Kingdom.

Q. And to what extent did the organization and operation and the development of the Empire along the lines that you have just described have a bearing upon the [fol. 2363] development of the attitude in England that you have described of buying British wherever possible?

A. Well, I believe that that was an Empire-wide movement, and I believe the Empire always has been and is now, and perhaps more than ever, saturated with British manufacturers and British made goods.

Q. Now, I would like to go from the 1920's to the 1930's. What if anything happened in the early part of the 1930's that had a bearing upon the international economic picture?

A. Well, the decisive factor on the international economic picture was the sequence of financial and foreign exchange crises that began in May, 1931, in Austria, spread from there in July, 1931, to Germany, and in September, 1931, to Great Britain.

Q. What happened in Austria, first?

A. The largest commercial bank collapsed because of excessive short-term borrowing, chiefly from the German banks. The German banking system was in the situation of having borrowed on short-term from England and the United States the funds that it lent to Austria, and thereupon a run developed on the German banks, and these two runs necessitated the imposition of foreign exchange controls, in other words, a prohibition of foreign exchange transactions except under license in both of those countries. [fol. 2364] Q. And that happened when?

A. In May and July, 1931, respectively. I think the actual dates were May 3rd and July 13th when these things went into effect.

Q. In 1931?

A. In 1931, yes, sir.

Q. And you say that resulted in the imposition of currency controls?

A. Of controls on all international payments, and from there on in an ever-widening sphere on all imports and generally all international economic transactions in Germany.

Q. And the imposition of currency controls following the collapse of the Austrian and German banking systems, would have and did have what effect upon the importation of goods into those areas, Austria and Germany?

A. Seriously restrictive, because from then on the question of whether to import and what to import was completely removed from all considerations of price competition and became a matter of government license, which was granted or not granted according to whether foreign exchange was available and whether the particular kind of foreign exchange that was required was available. Subsequently, of course, after the change of the German Government in January, 1933, namely the coming of the Nazis to [fol. 2365] power, to these considerations there was added the consideration of the foreign policy, war preparations, and prior to the war preparations also, of the economic penetration and economic aggression. In other words, from then on the international trade in Germany was very much directionally removed from international price competition in the point of view that dominated import trade. In exports, of course, from Germany, that's an entirely

separate chapter that we are not discussing. Of course, the Germans had to meet American and British competition there.

Q. That is, in respect of imports the factors--

The Court: Will you repeat what you said about exports?

The Witness: The exports—I was merely trying to emphasize that I was talking about imports into Germany, because it was in respect of imports that the German Government was able to impose its will 100 per cent.

The Court: In other words, Germany did control the imports?

The Witness: The German Government controlled imports.

The Court: But not as far as exports were concerned?

[fol. 2366] The Witness: As far as exports were concerned, Germany had to find a buyer and the buyer couldn't be so controlled. Therefore, Germany had to compete with exports from other countries.

The Court: In other words, the control was one-sided?

The Witness: Yes, sir.

The Court: Germany controlled the imports but did not control exports.

The Witness: That essentially would be so, yes, sir.

Q. Was the same thing true as to Austria at that time?

A. Until 1935 it was true of Austria. Then from the end of 1935 for about two years the Austrians made an attempt to go back to a freer system, but that lasted only two years and ended with the German occupation of Austria in March, 1938.

Q. What was Germany's position in the Central European picture as to being a manufacturing nation of considerable proportions?

A. Well, Germany was the world's second largest manufacturing country.

Q. And as to supplying the market in the Central Euro-[fol. 2367] pean area, what was its position?

A. Well, its position was very strong, and further strengthened by the use of international trade and exchange controls. They worked out a very elaborate system of so-called payments agreements and clearing agreements with their smaller, weaker, and equally insolvent neighbors. These agreements generally were rather comprehensive

regulations of trade and payments between the two contracting parties. The most typical agreement was an agreement by which each country agreed to have its own exporters to the other country collect from its own importers from the other country, so that no exchange, no money passed between the two countries, but there were two U-shaped transactions that approximately equalled each other. That is to say, if you want me to illustrate with an example, Germany would export machinery to Hungary and import bauxite from Hungary. Thereupon the German bauxite importer would not pay the Hungarian but would pay the Reichsbank of Berlin, and the Reichsbank would use those marks to pay the German machinery exporter, you see, so that no currency went out of the closed circuit. In Hungary, conversely, the Hungarian bank would collect in Hungarian currency from the importer of the machinery and pay it out to the exporter of the bauxite.

[fol. 2368] Q. And that made it unnecessary, then, to have international—

A. International exchange transactions, and enormously increased the volume of trade within the clearing to the exclusion of countries outside the clearing.

Q. And that was based upon a system of agreements between Germany and other countries?

A. Individual foreign countries, yes, a very comprehensive system of agreements.

Q. What if anything happened in England about that time?

A. In 1931, since the biggest short-term creditors of the German banks were English banks and American banks, but in terms of total resources of American banks the items were very small, a run developed on London and very heavy capital exports took place from England through the summer of 1931, so that by the time September 21st came the English had virtually no net gold reserves. The bank of England's statements still showed, I think 130,000,000 pounds, but foreign deposits, call deposits in London were still considerably in excess of that sum, so that for all practical purposes in terms of gold Great Britain was insolvent. So on September 21, 1931, they suspended gold payments and the pound sterling suffered a very severe collapse which, at its worst, somewhat over a year later, exceeded, I think by a small fraction, the depths of col-

[fol. 2369] lapse in 1920-21. Since at that point there was a world depression and the United Kingdom market was very important to British Empire countries, the Scandanavian countries and Baltic countries, all of these with the exception of Canada and Newfoundland followed the collapse of the pound sterling. In fact, in the case of Australia and New Zealand, the Australian pound and New Zealand pound were devalued more and were fixed at a discount of 25 per cent from the pound sterling. So that when the pound sterling would be $4, the Australian pound would be $3.20. This ratio has held ever since, that is the situation today. The ratio was never altered.

The Swedish crown, the Norwegian crown and the Danish crown followed the pound sterling in the same way.

Q. You mean they suspended gold payments?

A. They suspended gold payments and declared their currencies to be pegged to the pound sterling, so that the exchange rate between Swedish crowns and the pound sterling was stable, and both the pound sterling and the Swedish crown would jiggle in terms of dollars exactly parallel.

Q. In what countries was this pegging of currency to the pound sterling, in what countries did that take place?

A. All the Empire except Canada and Newfoundland, the Irish Free State, the three Scandanavian countries, and [fol. 2370] subsequently in a slightly modified form, the Baltic countries and Portugal joined what thereupon was described as the Sterling Area, and I believe also Iraq.

Q. You say that was then known as the Sterling Area?

A. It became known as the Sterling Area, and its principal criterion was that these countries maintained their central banking reserves in London. In other words, that London, essentially the Bank of England, acted as their central reserve, which meant that when Portugal or Australia would run up a big credit balance in dollars, they would transfer those dollars into sterling and not into gold. They wouldn't buy gold and put it into Lisbon, they would buy sterling and put it on deposit in London.

Q. What was the effect of that on the currencies of those various countries in respect of dollars?

A. The effect was essentially the same as that of the pound sterling. I mean, in other words, that they had

pounds sterling available in unlimited amounts at a fixed rate of exchange. An importer from England would know exactly how many Australian pounds or how many escudos or how many Swedish crowns or Norwegian crowns he would have to pay for his imports, how much he would realize on his exports. With respect to the dollar an uncertainty was introduced, because first the pound dropped from $4.86 to $3.15 or $3.14, then it ran up again to over $5 to the pound. Then from an average rate of $5 and [fol. 2371] odd cents from 1934 to 1937, it went down again to $4.68 at the time of Munich, and it was held with great difficulty at $4.68 until the outbreak of the second World War when it dropped again to $4.03. These violent fluctuations in the exchange rate, of course, are very disruptive for the trade of countries.

Q. What was the effect on international trade, as to the possibility of an American exporter having a favorable or unfavorable position, in the area or countries whose currencies were pegged to the pound?

A. It made the position of the American exporter very much more difficult, very much less favorable, and in discussing these Sterling Area countries it should be added that import controls were imposed in addition to the change of exchange rate, and in some cases even further exchange controls were imposed, in addition to the change in the exchange rate. By this I mean that, for instance, in Australia, where the crisis was especially severe, in 1931 the Commonwealth Government obtained powers to make merchandise trade and foreign exchange transactions subject to license, and this subjecting of trade and payments to license was in operation with varying degrees of severity, of course, according to conditions, ever since. I mean in 1936-1937 when Australia was getting good [fol. 2372] money for its wool and wheat export there was a relaxation of the control, and you could trade a little more freely, but, as soon as the exchange position becomes a little more difficult, they tighten. You see, they considered themselves very much dependent on the British market and, therefore, while you could transfer freely into and out of sterling, they did not welcome transfers into and out of dollars. The same thing was true as to Portugal and Denmark. Denmark and Sweden, where a very large proportion of their foreign trade is with England and

Germany, they had their exchange pegged to the pound, but they were very much affected by the impact of the German exchange control system. So for them there was an additional problem.

Q. That is, for Sweden?

A. And Denmark also. Of course, the Danes were financially weaker than the Swedes and had more difficulty. The Baltic countries kept a large part of their currency reserves in England. You see, all shipping and exporting countries are naturally highly dependent, were always historically highly dependent on England. This is just as true historically of Greece, which is a large shipping nation, as it is of Norway or the small Baltic countries, whose principal economic occupation was, except for the export of forestry products, to be an intermediary between the [fol. 2373] Russian Empire, and subsequently the Soviet, and the West. I mean, in referring to these Baltic states, that they were seafaring propositions concentrating on the export of raw materials from their own hinterland and importing the manufactured products, and that was true since the 16th century.

Q. What are some of the impediments in the way of exports into this geographic area of countries whose currencies were pegged to the pound that existed and served as a deterrent to those outside of the area?

A. During the 1930's?

Q. During the 1930's.

A. Well, the depreciation of exchange was equal to a 50 per cent tariff, or even 60 or 70 per cent tariff.

Q. Will you explain to the Court how that works out; the depreciation of currency operating as a 50 or 60 per cent tariff in those countries?

A. Well, let's assume that I am an American manufacturer selling into England an object that costs $5, or roughly speaking, 1 pound in 1930, the pound being $4.86. Well, then the pound drops to $3.20. That means—I hope my arithmetic will be correct—that the object will still cost $5 because, after all, it is produced in the United States, its price is fixed in dollars, but in pounds it isn't going [fol. 2374] to be a pound, it's going to be a pound and 8 shillings, or something like that.

Q. That is, to acquire the foreign exchange for the importation of the product?

A. I beg your pardon?

Q. That is, to acquire the foreign exchange for importing the product?

A. The cost is $5, and you will have to pay a pound and 10 shillings, or, roughly speaking, 1½ pounds. My arithmetic is not correct, but it's approximately on that order. Now, this was the, so to say, competitive advantage that the members of the sterling family acquired in both directions. Inward, the depreciation acted as a tariff making imports more expensive. Outward, the depreciation acted as an export subsidy making the domestic product cheaper because, since this was in depression time, the cost of production in England did not go up. So assuming that you have one producer who is producing in the United States for $5, and one producer who is producing in England for 1 pound, by the time the pound sterling had gotten down to $3.20 the Englishman was selling at 66 per cent of the price in dollars that he had been selling at before, whereas the American was selling into England at 150 per cent of the price at which he was selling before. [fol. 2375] Q. Was that true as to other countries in the area where the currencies were pegged to the pound, the illustration you have given?

A. The illustration would be exactly the same with respect to Sweden, Norway, or Denmark. It would be 25 per cent worse with respect to Australia. In other words you would have encountered that much more difficulty in selling goods in Australia because the Australian pound was cut practically in half, so that what used to cost 1 Australian pound, that is, a $5 object, would be practically a 2 Australian pound object because $5 became about 2 Australian pounds.

Q. That's in the import business?

A. That's in the import business and, of course, in the opposite direction, Australian exports were to that extent benefitted by a bonus, as it were. Now, this effect on the United States, as you know as a matter of common knowledge, was so severe that President Roosevelt in the spring of 1933 elected to depreciate the dollar, virtually in retaliation. I mean that was the famous debate about the currency warfare and economic warfare, but the currency depreciation, the depreciation of the dollar was essentially in retaliation for the depreciation of the pound

sterling, and the reestablishment of the competitive position for the United States that should not be as unfav- [fol. 2376] vorable as it was between 1931 and 1933. However, with regard to the countries that remained on the gold standard for another three years, namely, France, Holland, Belgium and Switzerland, and with respect to exchange control countries that pegged their exchange in the old parity like Germany, Italy, and various countries less important, this condition developed a distortion of the international price structure that persisted, so that from 1931 on international trade was a very sharply compartmentalized proposition, in which there was a maze of exchange regulatory and trade regulatory measures brought into being by the wide disparity that existed between exchange rates and internal price structures, by duties and exchange rates, and the agreements I referred to, so that some of the countries retired in a hard shell of license measures, exchange controls, trade controls, and sought to do business through peep holes rather than across their borders over the tariff wall, whether it was low or high.

Q. Was there anything else done in England in 1931, or immediately thereafter, to develop British trade and to restrict the manufacturing to England and depress imports to England from the outside?

A. Yes, sir. In the spring of 1932 Great Britain aban- [fol. 2377] doned what was left of its free trade and imposed a blanket tariff of 10 per cent on everything except a few food stuffs and raw materials and, in addition, imposed additional duties varying in rates, but most frequently 33-1/3 per cent over-all on a large variety of manufactured products. An Import Duties Advisory Committee was also established which had power to recommend upon the subject of duties, and the Board of Trade, which is the equivalent of the Department of Commerce, and the Treasury were given very wide powers further to modify rates.

Q. And was anything done on an import basis in respect of trade in the 1930's?

A. Yes. Just let me mention also that the power extended also to quantitative restriction of imports, and great variations of those quantitative restrictions existed. In 1935 a quota was imposed on steel imports into Great Britain, and that lasted for about two years, the quota being found

inadequate. About three months after the Tariff Act of 1932, the Ottawa conference took place where the principle of Imperial preference was established. In other words, where, in addition to the stable exchange rate advantages and the other natural trade advantages that they enjoyed, a differential tariff rate was established in both directions [fol. 2378] by which Empire products benefitted against non-Empire competition in the United Kingdom market, and United Kingdom products received additional protection against non-Kingdom products with reference to competition within the Empire.

Q. And that had what general effect throughout the Empire?

A. Of diverting trade from non-Empire countries to Empire countries.

Q. Now, did England resort to any other devices during that period of intensifying the manufacture of goods in the Empire or in the United Kingdom?

A. Well, several industries became more and more directly wards of the State. The economic penetration of the British Government into British industrial production, and the supervision and special legislation, and so on, was extended continuously.

Q. In respect of the type of bilateral trade agreement that you described that Germany resorted to in the early stages, in the 1930's did England follow that practice to any extent in the 1930's?

A. Yes, but not to the same extent as Germany. They had about nine payments and clearing agreements. They had, of course, such agreements with Germany and Italy, they had agreements with several Balkan countries, they [fol. 2379] had a very important agreement with Argentina, they had an agreement with Uruguay. As far as I remember, there were nine of these, and they were specifically payments and clearing agreements. Now, in addition to that they had the Imperial preference system which was a set of agreements, they also had the Anglo-American most favored nation treaty, and a very complex system of agreements with practically every one of the countries with which Great Britain was conducting trade.

Q. Was there any such agreement with Spain, for example?

A. As far as I remember, there was an agreement with

Spain but, of course, the agreements with Spain are a very complex subject because for three years Spain had two governments, the Republican Government and the Franco Government, and subsequently there was an agreement with the Franco Government, and throughout the war there was a system of agreements with the Franco Government and there is a payments agreement with Spain today.

Q. Will you turn to the situation in France during the 1930's, and following 1931, what was the situation in France in respect of the matter of controls?

A. The French held on to what was becoming more and more the old theory of free international payments with respect to the French franc, but by 1931 or 1932 some- [fol. 2380] thing like two-thirds of France's imports were subject to direct quantitative controls, in additon to tariff protection and, of course, as the war menace approached the French Government took a steadily increasing interest in the structure of industrial products within France. French currency during this period was very troubled. The French stuck to their original 1926 gold parity until 1936, when they hoped for an orderly devaluation, but a disorderly devaluation brought about a chaotic collapse in the French franc, which was from 1926 to 1936—excuse me, I would like to correct myself—which was from 1926 to 1933 4 cents, or fractionally less than 4 cents, 3.92 cents, which meant 25 francs and 50 centimes per dollar, and it went to close to 6-⅔ cents as a result of the depreciation of the dollar. In other words, 15 francs per one dollar. Then in 1936 it began to tumble and eventually wound up at approximately 2 cents or less than one-third of what it was worth in 1936, or an equivalent of about 45 francs per dollar. This was the rate at which the French exchange was fixed, I believe, when they went to war, and they emerged from the war at 50 francs to the dollar and at present they have two exchange rates, if not three, and the principal rate is 214, 214 francs per one dollar, or somewhat less than one-half of one cent per French franc.

[fol. 2381] Q. Has that devaluation of the French franc over a period of time had the same restrictive effect on imports from a dollar country as you described in respect of the devaluation of the pound sterling?

A. Well, it had extremely disruptive effects, of course. The French situation was further complicated by great

internal disorders in the years 1936, 1937 and 1938, and also by constant war preparations, all of which were reflected in the structure of foreign trade, in the kind of trade that was permitted, the kind of trade that was made difficult, and the kind of policy with respect to metallurgical purchases for national purposes that were undertaken. French metallurgy during the 1930's was almost completely dependent upon French government orders. You see, the 1930's were a period of very serious depression in France. I think that should be emphasized, as a matter of fact. The depression and recovery record in France during the 1930's is about the worst of any country, and France never recovered industrially the way other countries did in the mid 1930's, and in that situation, of course, in a situation of unemployment and depression, it is the metallurgical industries that normally suffer worst because people don't buy [fol. 2382] new capital goods when there is a slump, they don't need new capital goods. However, in France the metallurgical industries were actually kept going by what the Government wanted for the army, for the railway system, for war potential and military purposes. These played a very large part in the French economy, chiefly because the French economy was so depressed, not because French armaments were so enormously big, although they were substantial. As we know, France did not have a very great set of armaments when the Germans arrived.

Q. Now, going to the situation in Europe generally, what if any practices were followed throughout Europe, and the other European countries, as to the imposition of either currency controls or import controls, or both, following the collapse of the pound sterling in 1931 and the Austrian and German difficulties that you described a while ago?

A. Spain, Portugal and Italy had controls throughout the period. These controls were, of course, especially serious in Spain through the existence of the civil war, and in Italy throughout the regime, the control of industry existed in Italy throughout the period, and in Italy the exchange controls were hardly lifted at all during the 1920's. Import controls were, of course, operative both as import controls [fol. 2383] and as production controls through the system of national corporations, the famous corporate system of the fascist regime. In eastern Europe, with the exception

of Austria, as I have already mentioned, the German penetration was the most important economic factor in this period.

Q. How did that manifest itself?

A. By rigid exchange control, and import trade controls, payments agreements and clearing agreements with Germany and, of course, agreements also with other countries. I mentioned, I think, that Roumania, Yugoslavia and Turkey had payments agreements with England.

Q. Based upon what you have said, Mr. DeVegh, in respect of the situation in England from 1931 until 1939, what would you say as to whether or not an American manufacturer of anti-friction bearings would have found it possible to have sold his product manufactured in America in the United Kingdom, or in England, or in the British Empire, in competiton with the anti-friction bearing industry in England or the United Kingdom or the Empire, on a profitable basis?

A. I think that the situation was very much worse than during the 1920's, and all difficulties proportionately very much increased.

[fol. 2384] Q. And would you say it was possible to have traded in that area on a profitable basis from America under the conditions as they existed then?

A. I do not believe so.

Q. And directing your attention to France, and asking you the same question, what would you say as to whether or not an American anti-friction bearing manufacturer could have sold his product manufactured in America on a profitable basis in France in competition with the anti-friction bearing industry that was then operating in France during this period from 1931 until 1939?

A. I think that with respect to France, and even more strongly with respect to every other country with tighter controls and these exchange and trade regulations, the answer would be the same, only more so. In other words, that unless some far-fetched possibility existed of negotiating directly with the government, on a commercial basis I do not believe that any substantial trade could have taken place.

[fol. 2385] Q. Mr. DeVegh, before we adjourned you were talking about a type of restriction that was resorted to by various countries in Europe during the 1930's called

"clearing and payments agreements." I have here a sheet that has been marked for identification as Defendant's Exhibit 171. I will ask you if you can tell us what that is, please?

A. This is a summary table that appeared in a publication of the International Chamber of Commerce, called International Clearing and Payments Agreements. The International Chamber of Commerce maintained this as a serial publication in order to bring to its members' attention these agreements that affected international trade in great detail. This is a rather mammoth publication of which the present sheet of paper is the summary table.

Q. And state whether or not that indicates the various countries in tabular form that had various types of such agreements?

A. That is exactly what it does, as of March, 1939.

Mr. Ketterer: We offer Defendant's Exhibit 171.

The Court: It may be received.

[fol. 2386] Q. Now, I want to direct your attention to some of the countries that appear on this exhibit 171. As to Germany, for example, what does the table show as to the existence of such agreements between Germany and other countries?

A. It shows that Germany has had the most comprehensive system of such agreements.

Q. That is as of 1939 it had a comprehensive system of such agreements?

A. Yes, sir. Of the approximately thirty or forty countries that are included in this summary table, Germany had an agreement with every one except two, namely, Spain and, rather surprisingly, Japan.

[fol. 2387] Q. Now, with respect to England what does the table marked Defendant's Exhibit 171 show?

A. With respect to England it shows that England had such agreements in the number of nine.

Q. With nine different countries?

A. With nine different countries.

Q. Were there any such agreements between the French Government and any other European governments?

A. Twelve such agreements between France and other countries.

Q. And they operated currency-wise and exchange-wise

and import-wise in the fashion you have described a while ago before the recess?

A. Yes, sir.

Q. And what if any effect did such agreements have as to the possibility of a country that had no agreements of that character being able to trade with the two countries that were parties to such agreements?

A. It would increase the difficulty.

Q. I want to ask you whether or not on this able, Defendant's Exhibit 171, there appears anything to show that the United States Government had any such agreements in 1939?

A. The United States does not appear on the table and the United States Government did not have such agreements.

Q. I have here a group of photostatic sheets that have [fol. 2388] been clipped together and marked for identification as Defendant's Exhibit 172. I will ask you to tell us what they are?

A. These are photostated excerpts from a U. S. Department of Commerce publication entitled "The United States in the World Economy" which was published by the Department of Commerce in Washington in 1943.

Q. Now, I notice that attached to this Exhibit 172 are a series of, I believe of tables—

A. Charts.

Q. Or charts, I should say, beg pardon. Will you identify those, please?

A. These charts are photostatic copies of charts that appear in this book on Pages 6, 8, 56, 55, 57, 67, 68 and 69.

Q. Generally what do these charts show or the exhibits show?

A. These charts summarize in very convenient form the over-all impact of foreign restrictions on trade exports from the United States.

Q. To the different countries?

A. To the different countries and to the world as a whole.

Mr. Ketterer: We offer Defendant's Exhibit 172.

The Court: It may be received.

[fol. 2389] Q. Now, I want to call your attention to the first set of charts which are labelled here "Chart 2, Indexes of Economic Activity and International Trade." Will you

explain to the Court what they show on the subject you referred to a moment ago?

A. These charts show the relationship of national income and industrial production to imports in general, and for foreign countries also to imports from the United States. The small photostat preceding this chart shows the Department of Commerce figures derived from this same publication indicating how the supply of dollars to the rest of the world had diminished between 1929 and 1932.

Q. And what does it indicate as to the diminution of the supply of dollars for the rest of the world in that period?

A. That the supply of dollars was reduced, according to this table, from 7.4 billion dollars to 2.4 billion dollars or 68 per cent.

Q. And am I correct in understanding from that, then, that that means that the supply of dollars in the United States of either foreign governments or foreign nationals had decreased in the amount that you have indicated?

A. More specifically that the yearly supply had decreased. This is a table showing the yearly supply of dollars and not the reserve of dollars. The reserve that they [fol. 2390] may have had from previous times are a separate subject. The chart, however, that follows this table shows how this decrease in the yearly supply of dollars was reflected in a decline of imports from the United States into foreign countries. Imports from the United States into foreign countries are the same thing as the exports of the United States.

Q. And referring to that first table that you have there, the first chart, what does that show as to the relationship between any diminution of exports from the United States and the level of world trade generally?

A. The most significant of these four are the two charts on the right which show, for instance, that industrial production declined abroad approximately 25 per cent. The total imports of all foreign countries declined approximately in proportion between 1929 and 1932, but imports to foreign countries from the United States were approximately cut in half.

Q. During that period?

A. During that period. In other words, the decline was twice as bad.

Q. As to export trade from the United States?

A. As to export trade from the United States versus export trade from all countries together.

[fol. 2391] Q. Will you refer to some of the other succeeding charts that you have there and tell the Court what they show in that regard?

A. They show further details of the same information. Pages 56 and 57 show this information by broad geographic groups.

Q. Such as?

A. The first one, North America, South America, Asia, Oceania and Africa. And the second group shows for the United Kingdom, Canada, Australia, New Zealand, Denmark, Norway, Sweden, France, Netherlands, Germany and Japan.

Q. Now, you have shown what the general chart, the first one, showed as to the diminution of exports from the United States in relation to imports generally over the world. Is there any difference shown by the individual charts shown of individual countries in that regard as they show United States exports?

A. The general pattern is the same, although there are individual differences between individual countries.

Q. Directing your attention to the chart for the United Kingdom, what does that chart show as to the United States exports to the United Kingdom in relation to other items?

A. It shows that the United Kingdom suffered relatively little in its national income in the depression as expressed [fol. 2392] in pounds sterling, and that the national income of the United Kingdom rapidly reached new high levels after the depression. In spite of this the total imports never got significantly beyond eighty odd percent of the pre-depression imports. Imports from the United States dropped in 1933 as low as 40 per cent of what they were before, and didn't recover significantly until the 1936 boom, but continued high in '37 and '38 notoriously because of rearmament purchases. By 1938 Europe had a pronounced rearmament boom. As is reflected in production and income statistics that are readily available in the United States, the 1938 depression was a United States specialty because we weren't in the armament race, but the industrial production throughout Europe was maintained high principally

because of the increased rearmament expenditures. These increased rearmament expenditures are reflected in the relatively high level of the 1938 and '39 exports from the United States. Relative, that is, to immediate previous periods of exports from the United States.

Q. Preceding the initiation of this rearmament program in 1936, '37 and '38 in England and on the Continent of Europe generally, do these charts indicate or do they support the conclusion you expressed a while ago that the [fol. 2393] imposition of controls in Europe operated as a very definite deterrent of exports from the United States into those countries?

A. Both the imposition of controls in Europe and the depreciation of exchange, have been a major factor making the exports from the United States drop faster than exports from other countries and stay lower until the beginning of the major rearmament program.

Q. I have here Mr. DeVegh, some photostats that have been clipped together and marked for identification Defendant's Exhibit 173. I will ask you to identify those.

A. This is a report of the United States Tariff Commission issued in October, 1934, on the subject of anti-friction bearings.

Q. And I notice that there are some tables attached to that exhibit. What do they cover, generally?

A. These tables cover generally the production and trade in anti-friction bearings. Trade of the United States and also trade of foreign countries.

Mr. Ketterer: We offer Defendant's Exhibit 173.

Mr. Nitschke: Your Honor, I haven't had a chance to read this but it appears to me from just looking at it casually [fol. 2394] it contains more than just statistics; it contains comments about competitive conditions. I don't think it is being offered for that.

Mr. Ketterer: Well, it is being offered for whatever is contained in it, Mr. Nitschke. After all, that is an official Government report on the subject of anti-friction bearings.

Mr. Nitschke: That certainly doesn't affect its authenticity, I am not objecting to its authenticity, but that certainly doesn't prove the person relating it knew anything

about the competitive conditions. As a matter of fact he was just expressing general opinion.

[fol. 2395] Mr. Ketterer: Could we do this? Could I read the report and if there is any paragraph, as we go along, that appears objectionable or an opinion, the Court could rule on it?

[fol. 2396] The Court: Well, the only solution as I see it is to do as you suggest. Suppose you proceed to read from the report and if there is any place it may appear it expresses an opinion the Court will then rule.

Mr. Ketterer: Very well.

Mr. Nitschke: I think the last three sentences are the ones that caught my eye.

Mr. Ketterer: You mean on Page 28?

Mr. Nitschke: Page 26 of the photostat.

The Court: Page 26 beginning with: "Production costs in Europe are lower than in the United States, but under the present rate of duty, the price advantage is not sufficient to overcome the prestige of the domestic bearings."

Are those the only ones?

Mr. Nitschke: The only one I see right now. Let me [fol. 2397] look at them.

The Court: Those are clearly expressions of opinion.

Mr. Ketterer: I didn't so regard them, if the Court please. If the Court feels that way we won't read that.

The Court: If there is some method by which you can show they are the conclusions reached because of figures that appear in the report, then I should like to have you point that out to me. It does seem to me it is an expression of opinion rather than a conclusion based on figures.

Mr. Ketterer: As we examine the charts and tables that are attached to this exhibit we can show the basis of the statements made there. I will undertake to do that.

The Court: Of course if the witness on the stand wishes to testify as his opinion, that is one matter.

Mr. Ketterer: I understand.

The Court: If you are offering it as a report by some individual who reaches that conclusion who is not here to testify, that becomes again a different question.

[fol. 2398] Mr. Nitschke: Also Page 23 with respect to markets, there is the same type of opinion expressed by the writer as to the advantages of price, and so forth.

The Court: What page?

Mr. Nitschke: Page 23, really the fifth page of the batch of papers marked Defendant's Exhibit 173. Photostat bears the page number 23. It is the section entitled "Factors affecting exports". Two paragraphs. Those are just the writer's opinions of ability to compete.

The Court: Well, those two paragraphs in my judgment fall in the same category as the other two I pointed out. If there is some data in this report which is the basis on which these conclusions are predicated, and which can readily be discerned from the data, I see no objection to it, but if it is an expression of an opinion by someone which is not justified, I see that the objection is well taken.

Mr. Ketterer: Of course the parts which are referred to as to location of plants owned by foreign producers, has already been introduced in the evidence, there is not any difference of opinion as to location of plants. The last [fol. 2399] sentence in the first paragraph as to the advantage of foreign producers in price not only in their home markets but in all sections of the world is something that has already been put in the record in this case.

The Court: If Mr. DeVegh has testified and has come to the same conclusion, I see no objection to his testifying to it, but to offer a document in which someone who is not even identified expresses an opinion, it is certainly objectionable. Those matters, I say again, will not be received which express an opinion, even though it is contained in this document which is marked a "Summary of Tariff Information" prepared by some Government agency.

Mr. Ketterer: I should like to read the balance of this report. (Reading)

"Antifriction Bearings.

Tariff Act of 1930—Paragraph 321.

Antifriction balls and rollers, metal balls and rollers commonly used in ball or roller bearings, metal ball or roller bearings, and parts thereof, whether finished or unfinished, for whatever use intended, 10 cents per pound and 45 per centum ad valorem.

Comparison of Tariff Rates

[fol. 2400] 1930, par. 321—10 cents per pound and 45 percent

1922, par. 321—10 cents per pound and 45 percent
1913, par. 106—35 percent

Description and Uses

Antifriction balls, rollers, and bearings are used to reduce friction to a minimum between a revolving part and a fixed part in many mechanical devices. Complete bearings consist of metal balls or rollers which are fitted between two metal cases or race rings so that a shaft may be inserted into the inner ring, and the outer ring may be fitted into the machine frame. In some instances, the outer case for the balls or rollers is an inherent part of the machine or device, while the shaft forms the inner race, in which case only the balls or rollers are supplied by the bearing manufacturer.

Antifriction bearings are used in many types of machines, in airplanes, in railway cars, machine tools, electric motors, hardware articles, etc. The automobile industry is the greatest consumer in the United States and Europe of both ball and roller bearings, but the proportion used for this purpose is considerably larger in the domestic industry than in Europe.

[fol. 2401] One of the leading domestic automobile producers owns two large bearing plants, one manufacturing ball bearings and the other roller bearings. The bearings from these plants are sold also to the general trade.

Two of the principal domestic ball bearing companies are principally foreign owned—one Swedish and the other English, while one domestic manufacturer has affiliates in several European producing countries.

Foreign Production

The principal foreign producing countries are Sweden, Gemany, Italy, the United Kingdom, France, and Switzerland, probably ranking in the order named. Roller bearings are a rather recent development of the industry and are of less importance in relation to total production than in the United States.

The principal foreign company is Swedish controlled, and is known in the trade as S.K.F. It has 3 plants in Sweden, 2 in Germany, 2 in France, 1 in England, 1 in Czechosiovakia, and 2 in the United States, and has nearly 200 agencies and offices throughout the world. This com-

pany owns rich iron ore mines in Europe and is equipped [fol. 2402] to produce bearings from raw material to finished product. In its Swedish plant over 1,000 standard types of bearings are manufactured while its foreign factories concentrate on the production of types most in demand in their respective areas. Its normal capacity for ball bearings is 190,000 daily and it supplies approximately one-third of the world markets. S.K.F. bearings produced in Sweden represent about 95 percent of the total production of bearings in Sweden. Production in Sweden amounted to $9,370,000 in 1930, and to $6,410,000 in 1931. Approximately 99 percent of the total bearings exported from Sweden are S.K.F. bearings. Total Swedish exports amount to about 90 percent of production.

It is reported that approximately four-fifths of the German consumption, placed at $20,000,000 annually, is supplied by S.K.F. subsidiaries in Germany.

There is one large producer in Italy specializing in the production of automobile ball bearings. This company is a subsidiary of an Italian automobile company which also has a bearing plant in France.

There are about six producers in France, four of which are affiliated with companies in other countries, including [fol. 2403] a subsidiary of an American roller bearing company.

Production in the United Kingdom amounts to about $10,000,000 annually.

Production methods in Europe are similar to those in the United States, and in many instances the machines used are of the same type and are largely American made. Foreign producers are as favorably situated in relation to high grade iron ore as are the domestic manufacturers.

Ball bearings were first produced in Europe where the metric system is in general use. The metric system is also used in the United States in the manufacture of ball bearings, both European and American producers using standard S.A.E. metric specifications. Roller bearings were first made in the United States where inch-measurements were established, but in Europe they are made both to inch and to metric measurements. Ball bearings, and roller bearings made to inch-measurements are generally interchangeable.

No statistics are available on the number of bearings exported as parts of automobiles, machine tools, and indus-

trial machines, but they far exceed those of separate bear-
[fol. 2404] ings shown in table 12."

Skipping the discussion of the factors affecting exports, going to the heading (reading)

"Domestic exports to principal markets.

Domestic bearings are exported principally to Canada with lesser amounts going to European countries, Latin American countries, Japan, Australia, and the Philippine Islands with occasional large shipments to Soviet Russia. Export statistics, by principal markets, are given in the following table."

Those are the tables attached at the end, which we will refer to later.

(Reading) "Character of exports as to types and grades.

Exports from the United States are principally bearings used in the manufacture of automobiles in Canada in plants affiliated with American automobile producers. The balance of the exports are largely repair and replacement parts for American-made machines and devices, and types of bearings not produced in Europe.

Competitive Conditions.

The United States is the largest world market for bear-
[fol. 2405] ings, due principally to the extensive use of automobiles, electrical devices, and other machinery.

Domestic production is far in excess of any other country, amounting to $120,000,000 in 1929 and to $41,000,000 in 1933. Imports amount to less than one percent of production."

The Court: Is that correct, "the domestic production is far in excess of any other country, amounting to $120,000,000 in 1929 and to $41,000,000 in 1933"?

The Witness: That is correct.

Mr. Ketterer: Yes, that is correct.

(Continuing reading.)

"The domestic producers have established a high reputation through high quality products and service. Mass production methods are generally used in the American plants, and two of the largest bearing factories are owned by one of the principal domestic automobile producers.

Production in Europe is principally in Sweden, Italy, Germany, the United Kingdom, and France. The principal foreign company is Swedish controlled (S.K.F.) and has plants in each of the above countries, except Italy, and in [fol. 2406]the United States and Czechoslovakia and has agencies and offices throughout the world. This company is as favorably situated as the domestic producers in relation to raw material, equipment, and skilled workmen, and produces high quality bearings. Imports into the United States are principally from the S.K.F. plants and from Hoffman of England. These imports go largely to their American affiliates and are largely sizes and types which they do not advantageously produce here. In earlier years large quantities of bearings came from Italy. There is no foreign competition in domestic markets in cheap bearings which represent a very small part of the total domestic consumption."

Skipping the next paragraph.

(Continuing reading) "Lines of expansion of exports." Did Mr. Nitschke object to all of that or just the last sentence?

Mr. Nitschke: Just a minute. I object to all of that, the whole paragraph. The first sentence, where it expresses an opinion, it says, "there is little likelihood of any material expansion in export."

The Court: That is clearly an expression of opinion, that [fols. 2407-2408] last phrase. I don't see how the sentence would be complete or mean anything if you left out that phrase.

Mr. Ketterer: Very good.

The Court: Of course it is perfectly evident that the same testimony has been offered by other witnesses. I can readily appreciate the purpose of your objection. Technically it is objectionable, but as I say the same testimony has been offered by other witnesses and it is not of a great deal of significance whether it is offered by one or two witnesses, but as I said, on the basis of the rule no opinion evidence may be admitted through a document unless the person is here to be examined or cross-examined, I will sustain the objection.

[fol. 2409] Thereupon the Defendant, further to maintain the issues on its part to be maintained, called as a witness

William DeKrafft who, being first duly sworn, testified as follows:

Direct examination of William DeKrafft.

By Mr. Day:

Q. Will you state your name, please?
A. William DeKrafft.
Q. You live where, Mr. DeKrafft?
A. I live in Pine Valley, New Jersey, a suburb of Philadelphia, and I have an office in New York.
Q. What is your age?
A. My age is almost seventy.
Q. What is your present occupation?
A. I am a consultant to industry.
Q. With your offices in New York?
A. With my office in Wall Street.
Q. What do you do, generally acting as a consultant to industry?
A. Well, when managers of industry are in difficulty with problems I try to solve them for them. I have been rather [fol. 2410] successful.
Q. In that connection do you ever advise clients on business probems which have to do with trade abroad?
A. Yes, sir.
Q. Trade between the United States and Great Britain?
A. Yes, sir.

Mr. Day: If your Honor please, Mr. DeKrafft is going to confine his testimony very largely to Great Britain, and not generally.

The Court: I see.

Q. Can you tell us some of the companies for whom you have acted as a business advisor in recent years?
A. United States Rubber Company. I'm still advisor for, the Koppers Company, I'm still advisor for, the Bristol Company, I am advisor for Yale & Towne Manufacturing Company, and also the Pennsylvania Forge Company. I have advised the Worthington Pump & Machinery Company, the Brown Paper Company—

Q. That's enough of them. Some of them have been in connection with foreign problems?

A. Yes, sir.

Q. Where were you born, Mr. DeKrafft?

A. I was born in Philadephia.

Q. Will you give us some idea of your early career?

[fol. 2411] A. I graduated from the Germantown Academy which is a suburb of Philadelphia, and served an apprenticeship in the Baldwin Locomotive Works.

Q. When did you start with Baldwin Locomotive Works, how old were you?

A. I was 16 years old.

Q. How long did you serve the apprenticeship, as you described, with the Baldwin Locomotive Works?

A. Seven years.

Q. How long were you connected with the Baldwin Locomotive Works?

A. 35 years.

Q. Will you tell the Court briefly the different positions you held with the Baldwin Locomotive Works?

A. I was in the shops as an apprentice, in the mechanical end, studying the mechanical end of the business. I was in the purchasing department, in the treasury department, and finally I became in charge of all the commercial end of the Baldwin Locomotive Works, including the financial end. That was for a great many years.

Q. How many years did you hold that position?

A. From 1907 until December 31, 1929.

Q. In connection with your work with the Baldwin Locomotive Works, did you have occasion to observe anything [fol. 2412] as to trading between the United States and Great Britain, let us say?

A. Yes, indeed.

Q. How intimately did you become connected with that?

A. I opened an office in London for the Baldwin Locomotive Works many years ago. I think it was in 1910. That was a very important office for Baldwin. I traveled all over the world for Baldwin.

Q. Can you give us some idea of where you traveled? You say all over the world.

A. Well, I have been in Russia, Manchuria, Mongolia, Japan, Australia, all over Europe, almost everywhere ex-

cept India and South America and New Zealand, I think. I have been in the Balkan countries. I have never been in Austria.

Q. When you were in those countries did you have occasion to observe the manner of their transacting business?

A. That was the reason I went to those countries.

Q. With what other companies have you been connected besides Baldwin?

A. I left Baldwin at the end of 1929 and took over the rehabilitation of the United States Rubber Company, whose main office was in New York, but which had plants all over the United States except California.

[fol. 2413] Q. How long were you connected with the United States Rubber Company?

A. Seven and a half years.

Q. What was the character of your work with that company?

A. I was the chairman of the finance committee and, as such, I reorganized the company. It was in very bad financial straits in 1930.

Q. What if any occasion did you have, in a business way, to visit Great Britain in connection with your work with the United States Rubber Company?

A. The United States Rubber Company had large interests in Italy, France, and England, principally in England, also in Switzerland, and when I had a chance to take my nose from the grindstone I went to England and organized the rubber interests in England, that is, I made a study of them to see how best we could carry on and salvage the money we had invested there.

Q. In connection with your work with the United States Rubber Company, did you have occasion to study the matter of trade as between the United States and Great Britain, and Great Britain and the United States?

A. Yes, sir, we had a very important trade with Great Britain. A subsidiary of the United States Rubber Company sold the greatest volume of rubber goods in Great Britain.

[fol. 2414] Q. With what other companies have you been connected?

A. The Bristol Company of Waterbury, Connecticut.

Q. Are you connected now with that company?

A. Yes, I am advisor and director.

Q. What is the nature of the business of that company?

A. They manufacture precision instruments.

Q. And their principal plant is where?

A. In Waterbury, Connecticut.

Q. Do they have an establishment in England?

A. They have a subsidiary in England.

Q. In connection with the affairs and business of the Bristol Company, have you had occasion yourself to study the matter of business between the United States and Great Britain and between Great Britain and the United States?

A. Yes, sir, I did that last spring, at this time.

Q. And have you had occasion to study generally in connection with all of these companies, over the years, the matter of sending products from the United States, capital goods, into Great Britain, and the other way around, from Great Britain into the United States?

A. That has been continuous.

Q. For how many years have you given attention and study to that subject?

A. I think practically from 1907.

other companies—are you a director now of other com- [fol. 2415] Q. Will you give us some idea now of some panies?

A. I am a director of the Koppers Company of Pittsburgh, the so-called Meilon Company.

Q. What is the business of that company?

A. Their business was largely coal, and I have during the last ten years changed it into a chemical company, utilizing their production of coal as the basis of chemicals.

Q. When did you first begin to spend some time in Great Britain?

A. In 1934—oh, you mean to say before this?

Q. Yes.

A. In 1910.

Q. Then for how many years was it before you got a home in Great Britain?

A. Well, I bought my home in 1936.

Q. And from 1910 to 1936, that's a period of 26 years, how frequently did you visit Great Britain?

A. Well, up until 1914 I was there every year.

Q. Then the war came?

A. The war came on, I was in England when the war came on and I came home, and we were busy with the war,

and thereafter I went out to the Far East instead of to [fol. 2416] England because we had important contracts in the Far East, in Japan and in China.

Q. Which company do you mean now?

A. The Baldwin Locomotive Works at that time.

Q. Yes, and then after the first war you visited Great Britain how frequently?

A. Well, not until 1934. I was in touch, however, with our London office weekly.

Q. Do you have a home in England?

A. Well, some people call it a home. I have a very interesting house in England.

Q. Of course, you home is in the United States?

A. My home is in the United States.

Q. You are an American citizen and have been?

A. Yes.

Q. But you have a place over there?

A. I have. Would you like to know how I acquired it?

Q. This may not be directly in point, but will you describe briefly how you acquired the home, and the situation there. I am sure there will be no objection to it.

A. If you please, your Honor. I found that I was spending so much time in England that I thought that I would take some time and see what there was in England, and I found a magnificent ruin, and it had great historical inter- [fol. 2417] est, and I thought so long as I had a holiday I would try to restore that building, and I did. I always thought it was rather providential, because it became the headquarters of the British southeastern division during the war, we had the heads of the British Army and also General Smuts and Mr. Churchill visited us there, so I was pretty well repaid for it.

Q. That was during this last war?

A. That was during this last war.

Q. When did you go to England last?

A. Last April, last year.

Q. How long were you there?

A. I was there nearly two months.

Q. And prior to that time when were you there before that?

A. 1939, during the first two or three months of the war.

Q. I will ask you whether or not you were consulted by the British Government in connection with the last war as

to the matter of the British Government buying goods in the United States?

A. Yes, sir. I outlined the plan for British purchases in the United States for this last World War.

Q. Do you know whether or not that plan was in whole or in part adopted?

A. Yes, it was.

[fol. 2418] Q. I will ask you whether or not you were requested by the British Government to head up a plan for conducting the rubber business during the last war, or prior to the last war?

A. Yes, sir. In October, 1939, the head of the—the secretary of the Board of Trade asked me if I would give up my American citizenship and take over the head of the British rubber interests during the war.

Q. And you did not do that?

A. No, I did not.

Q. In connection with your experience generally in the prosecution of your various duties, you had occasion to keep abreast of and to study the question and method of trade between the United States and Great Britain?

A. Oh, yes, indeed, sir.

Q. And the exchange and sale of capital goods as between the two countries?

A. Yes, indeed.

Q. State whether or not you feel that you are able to express an opinion upon questions having to do with the sale of capital goods by an American manufacturer in Great Britain, or by a British manufacturer of capital goods in this country?

A. Well, I have given such opinions to industry, and they [fol. 2419] have carried them out. I am qualified, I think.

Q. When, if at all, did you first have any experience or learn of any restrictions imposed by the British Government with relation to goods sold, say from America into Great Britain, or from any country outside of Great Britain into Great Britain?

A. That was almost common knowledge, Mr. Day, from my earliest experiences in England.

Q. Dating back how long?

A. Oh, dating back from the very first time I established an office there, in 1910.

Q. Will you tell the Court briefly what you observed by way of any such restrictions way back as far as 1910?

A. In 1910 the Baldwin Locomotive Works did not establish an office in England to sell goods in England. We knew that it would be difficult, if not impossible, to sell locomotives in England. But we did expect to sell locomotives in the balance of the world and we wanted to keep our hand on the pulse in England.

Q. You say you knew it would be difficult to sell goods in England. What did you learn as to what created that difficulty, what was the reason for that difficulty?

A. British people and British managers in England did not want to buy American made goods. There was almost a [fol. 2420] cast iron rule not to buy American made goods.

Q. You say that dated back, to your knowledge, as long ago as 1910?

A. Yes, sir. I think we only sold one locomotive in England in my experience, and that was a sample locomotive to show the English how to build better locomotives.

Q. How long has that attitude been in effect, or how long has it been in operation, to your observation, since way back in 1910?

A. Well, in 1938 the pressure against the purchase of even Canadian made goods by our Canadian subsidiary became so great that I advised the United States Rubber Company to establish a rubber plant in England, which they did.

Q. A wholly owned plant?

A. A wholly owned plant.

Q. And do they have it there now?

A. Yes, sir, it's called the North British Rubber Company.

Q. Will you explain a little more now your own personal experience, what it was that prompted you to advise the U. S. Rubber Company to build its own plant in England?

A. It was what I would call a prejudice against the purchase of American made goods or any foreign goods not made in England.

Q. And had that been in existence from 1910 continu- [fol. 2421] ously up until that date?

A. Oh, indeed, yes, only it became worse.

Q. What do you say as to whether or not that prejudice, as you call it, has been in operation since 1938 up to the present time?

A. Well, I know that, because the Bristol Company cannot sell its instruments in England and had to establish a manufacturing plant in 1927 or 1928 for the manufacture of precision instruments in England.

Q. What is the Bristol Company now? I'm sure the Court understands what the U. S. Rubber Company makes, but what does the Bristol Company make?

The Court: He said precision instruments.

The Witness: It's a different kind, your Honor.

Mr. Day: I think it is.

A. For instance, I'll give you an illustration. In the old days the Dupont Company used to have a great big vat, probably as large as this room, and they would have men there that would mix the ingredients, set it in operation and they would have to keep thermometers in the vat to see that it didn't rise too high in temperature, because if it rose too high the steam would explode it, and now we have instruments that automatically control the heat and turn on [fol. 2422] cooling things, so that the temperatures in the vat are kept at a mien temperature. They are controlling instruments, measuring, controlling and recording instruments.

Q. What experience did you have with the Bristol Company?

A. In 1944 they came to me and asked me if I would come up and see if I could save the company. They were in bad financial way and I have been advisor for that company ever since.

Q. And you say they constructed a plant in Great Britain?

A. They constructed a plant in Great Britain, it's a small plant, but it is a plant. I visited it last summer, last spring.

Q. You have been talking about what you call a prejudice against American manufacturers shipping goods for sale in England without any plant there. Is that what was ordinarily known as "Buy British"?

A. That's exactly it, Mr. Day. It's the sentiment "Buy British", which has made it extremely difficult, if not impossible, for an American manufacturer to sell American

made goods in England, and that has been in existence since long before the war.

Q. Is that in existence today?

A. Oh, today it's impossible. I think, to sell goods in [fol. 2423] England because of financial restrictions.

Q. But state whether or not—and I'll come to that in a few moments—is this "Buy British" sentiment or prejudice still in existence today?

A. Oh, yes, indeed. Today, with the British economy such as it is, they will not permit the purchase of anything outside that is not of vital importance to the British economy.

Q. What effects have currency regulations had upon trade between the United States and Great Britain?

A. It has practically made trade from the United States to Britain impossible, practically cut it off.

Q. When did you first experience any trade regulations, currency regulations, when did you first observe they had any effect, going back how many years? When did they first go into operation?

A. They went right in at the end of the war.

Q. The first war?

A. In 1945.

Q. 1945?

A. That is, this present currency, stringent currency regulation, came in immediately after the war.

Q. Will you explain a little more just what that currency regulation is we are talking about?

A. Can I give you a personal example?

[fol. 2424] Q. Well, tell what it is, first, generally and then give the personal example if you will, please?

A. In the event a British manufacturer had to have something that was manufactured outside of Great Britain, he would have to go first to the Board of Trade to get permission to purchase, and then to the Bank of England to get permission to pay for it. The chances are neither one of those would be granted, unless the stringency was quite great.

Q. And why does Great Britain have that kind of regulation now, in your judgment and opinion?

A. Well, they are trying to save Great Britain financially and figuratively, Great Britain.

Q. What if any difficulties, in your opinion, confront an American manufacturer if he wants to sell goods over in

Great Britain, with regard to this currency regulation you are telling us about?

A. I doubt if an American manufacturer could sell his goods in Great Britain today.

Q. You said you knew of some personal illustrations in connection with that rule. Will you tell us what that personal experience was?

[fol. 2425] A. The currency restriction goes to this. I had quite a substantial sum of what is called American accounts in England. American accounts are different from British accounts because until the end of the American loan all British accounts could be converted into American dollars.

Q. You say you had. Do you mean—

A. I personally had.

Q. Go ahead, sir.

A. I applied to the Bank of England last spring, last May, to see if I could take some of these dollars home. They gave me permission to bring the dollars home which I had in my personal account, but the dollars which I had in a wholly owned British Company they refused, and I had to find investment for those sterling pounds in England. The restrictions go further than currency. I had some paintings which I thought I had better bring back to the United States, and I was very anxious to. I had to go to the Board of Trade and to the Bank of England to get permission to bring those paintings out of England, and had I not taken them into England in the first place they wouldn't have allowed me to take them out, because they were afraid I might sell them outside of the British sterling area and get dollars for myself. You saw those paintings in the office.

[fol. 2426] Q. How, in your opinion, would that kind of a restriction have an effect upon the effort by an American manufacturer to sell American made goods, capital goods, in Great Britain?

A. He wouldn't even try, except in one case. If the Treasury Department asks an American manufacturer under some agreement which the American Government had with the other country, then the American company would execute on the Treasury, United States Treasury, orders on that.

Q. Are you familiar with the practice of the British Gov-

ernment in requiring permission to a manufacturer outside of the United Kingdom when he wishes to enter or sell goods in Great Britain?

A. Well, there is no bar to the entering of the man to try. I would never advise anyone to try it.

Q. What permission do they have to get?

A. You have to get first permission from the United States Government to export anything to Great Britain today.

Q. You are referring to a recent regulation of what department of the United States Government?

A. The Department of Commerce, who just recently, within the last month, restricted the export of any manufactured goods outside of food and one or two other stuffs, without permission from the Secretary of Commerce of his department.

Q. From the Department of Commerce?

[fol. 2427] A. Yes.

Mr. Day: I want to say to your Honor, we have that regulation and I think we'll offer it in evidence later, so you can see just exactly what it is.

Q. It became effective the first of March, did it not, Mr. DeKrafft?

A. Yes, sir, I think it was issued then.

Q. Let us assume the American manufacturer gets past that permit so far as our Government is concerned. If he wishes to sell his goods in Great Britain, with what restrictions does he have to comply over there?

A. Well, he would probably find that the purchaser would have to pay a 100% purchase tax in addition to an import tax. The thing is practically prohibitive. I don't know of any commercial way you can do it.

Q. Are you familiar with the British restriction which requires a manufacturer coming in from the outside to apply to the British Commission and get a permit to manufacture goods, let us say, and sell goods in Great Britain?

A. Yes, all of that is closely controlled. You can't start a new manufacturing plant in Great Britain today without getting permission from the British authorities to do so. Is that your question?

Q. Yes, sir.

[fol. 2428] A. Oh, yes, and that has been going on ever since the war and, in fact, I think during the war.

Q. Have you any knowledge as to what kind or character of showing, let us say, an American manufacturer would have to make if he wanted to get that permission in Great Britain?

A. He would have to show necessity for producing something in Great Britain that was not produced there then, I think. I have never tried to get such permission.

Q. Are you acquainted, over the years, with the tariff regulations in Great Britain insofar as they apply to capital goods?

A. Oh, yes, generally. I couldn't give you dates and amounts. I know it's approximately one-third.

Q. And the answers you have given thus far as to the difficulties with relation to capital goods being sold by an American manufacturer in Great Britain, would those answers include as a part of capital goods anti-friction bearings?

A. Any part of machinery, Mr. Day, would come under that.

Q. Including anti-friction bearings?

A. Anti-friction bearings certainly would be included.

Q. How, over the years, has the tariff in Great Britain had an effect upon what I'm asking you about, that is, the [fol. 2429] ability of an American manufacturer to sell American goods in Great Britain?

A. Well, the cost of the tariff is roughly a third for American manufacurers, except Canadian manufacturers. They are less. But the cost of shipment is about the same, and insurance, so it doesn't pay an American manufacturer to sell in England, if he wants to make any money on the transaction.

Mr. Day: I think we'll offer evidence more exactly as to what the tariff is, if your Honor please. Mr. DeKrafft is just estimating that.

Q. What was the Webb-Pomerene Act?

A. The Webb-Pomerene Act was to try to help the American manufacturer sell abroad.

Q. And it provided generally what, as to American manufacturers selling abroad?

A. Why, I think it relieved the manufacturers of all liability under the Sherman Act, if I'm not mistaken.

Q. That is, it permitted American manufacturers to make

some kind of an arrangement to sell goods abroad, is that right?

A. They could sit down in the United States and discuss prices of goods to be sold in England, or elsewhere, if I'm not mistaken.

Q. What if any effect did that Act have upon trade, or the [fol. 2430] ability of American manufacturers to sell over in Great Britain in competition with goods made in Great Britain?

A. Well, it had the effect of scaring the English people, I know, because our agent came over and told us about that. All this is a long time ago, Mr. Day.

Q. That was passed years and years ago.

A. Yes, indeed. I had forgotten it, almost.

Q. Something has been said here about empire preference of imperial preference. What does that mean?

A. On this "Buy British" slogan which England had, the colonies and dominions were beginning to suffer, so they had a conference, I think in Ottawa, which they called the Ottawa Conference, and they gave the Canadians some relief from the tariff. In fact, the Canadians had to pay as much tariff into England as the United States manufacturers had to pay. So the Ottawa Conference reduced the tariff, if my recollection is right, to either ten or fifteen per cent, where we were paying 33%.

Q. That was back in 1932?

A. Way back there, yes, sir.

Q. How does the imperial preference operate?

A. It did operate for years by encouraging the outlying parts of Great Britain to ship their goods into Great Brit- [fol. 2431] ain. That was the idea of the Imperial Preference.

Q. And state whether or not that imperial preference doctrine operated more favorably to the outlying dominions of Great Britain than it did as to American or somebody outside the United Kingdom and its dependencies?

A. Mr. Day, it was because of that imperial preference that the United States Rubber Company shipped all of its goods, 100% shipped goods and sold in England, through its Canadian subsidiary. That's the way it operated so far as an American company was concerned. The Canadian subsidiary of the United States Rubber is called the Dominion Rubber Company, and it manufactured all of the footwear,

rubber footwear that was sold in England, and pretty close to 70% of the rubber footwear that was used in England, and they use an awful lot of it in England, was manufactured in Canada. But the "Buy British" slogan which you speak of started to operate even against Canada, and that was the reason I recommended that the United States Rubber Company establish a manufacturing plant for the manufacture of rubber footwear in England.

Q. Did the imperial perference doctrine make it easier for, let us say, any of the outlying dominions of the United Kingdom, to sell in England?

[fol. 2432] A. Oh, yes, there wasn't the same sales resistance against the imperial—under the Ottawa agreement it was part of the agreement that it was to encourage the sale of dominion made goods in England, England being a tremendous purchaser of goods of all kinds.

Q. Did it make it easier, therefore, for some outlying part of the whole United Kingdom to sell into England than it would be for United States to sell into England, or any other country?

A. Oh, yes. We could ship apples to England very much cheaper than South America or Australia or New Zealand could, but they bought New Zealand apples.

Q. How long ago was it they started this imperial preference back at the Ottawa Conference in 1932?

A. Well, you gave the date.

Q. Wasn't that the date given this morning? How long was that in effect?

A. I think it is still in effect. It sort of fell by the wayside during the war. Canada gave great credits to England.

Q. What experience have you had with the company you are connected with, this Bristol Company, as to the obtaining of licenses in Great Britain?

A. I have had experience, but it has been a very poor [fol. 2433] experience, in obtaining licenses in England to sell Bristol American made instruments there.

Q. You stated a while ago that licenses would have to be obtained to sell the goods in Great Britain, is that right, and also to get paid for them, is that right?

A. That's quite right, and during the later years of the war, for the British war effort, the United States Bristol Company shipped over a great number of parts to help the British Bristol Company manufacture finished instruments

for the various war industries of Great Britain, but they never were able to obtain licenses from the treasury to pay for those parts.

Q. What happened?

A. Well, last month this question came up. Bristol in the United States only owned 78% of the British company, 22% being owned by four people over there, and in a Board meeting I suggested that there was no reason why we should give the British a free ride, why couldn't we ask the British to subscribe for an additional new issue of stock, the American Bristol would put up its proportion, 78%, of 100,000 additional issue, that as the debt owed by the British to the American Company was $75,000—this is dollars instead of [fol. 2434-2435] pounds—the issue was approximately $100,000, the debt from the English Company to the United States company was $75,000. So the United States company subscribed to $78,000 worth of stock and sent that money over to England in a dicker with the Bank of England so that the British Company could pay its debt to the United States company, and that is what happened.

Q. And the American stockholders paid for the new stock in dollars?

A. In dollars.

Q. And the British stockholders paid for it in sterling?

A. In sterling, and the American company, however, got dollars for its $75,000 of debt.

[fol. 2436] Q. Something was testified to this morning by Mr. DeVegh about pegging the pound, and the pound value. What experience have you had with that, what can you tell about it generally, from your own knowledge and experience?

A. I have had a great deal of experience in respect to dealing with the pound sterling, because during the years I was with the U. S. Rubber Company, the U. S. Rubber owned the largest plantations in the world and we had to deal through the sterling area on that.

Q. I think, Mr. DeKrafft, instead of relating specific experiences of a specific company, the court has suggested you might tell generally what the practice has been. Now, if you want to use your own experience in connection with any company in answering the question, that's all right, but his Honor has suggested we ought not devote too much time to specific examples of specific named companies.

A. Do I know how the pegged sterling rate operates?

[fol. 2437] Q. Yes, sir. First, how does it operate?

A. Well—

Q. When did it come into effect, first? Mr. DeVegh told us about that, but will you tell about it briefly from the standpoint of a business man? By the way, you are testifying as a business man here, is that right?

A. That's all I am. Yes, sir.

Q. And I think I asked you before you went on the stand whether you had ever testified before.

A. This is the first time I have ever been asked to testify as an expert witness.

Q. And I think you said you testified once as a character witness years ago, is that right?

A. Yes, that must be 25 or 30 years ago.

Q. Can you tell us what *what* is meant by pegging the value of the pound?

A. Well, that's done by governments or by boards of trade.

Q. What was done in that regard by the British Government?

A. In the last few years the British Government pegged the official rate at $4.04 and a fraction. Well, that means that when you buy through some bank you buy sterling at $4.04, and that is the pegged value of the British pound. It isn't the real value of the British pound. Is that what you want?

[fol. 2438] Q. That's right, and over how much territory would that pegging of the pound spread, how much territory did it cover, how much domain?

A. That covered almost everything dealing with England or the sterling areas.

Q. What effect would that pegging of the pound rule or practice have upon an American company seeking to do business in Great Britain by and of itself?

A. Well, if an American company wanted to sell in Great Britain, it would be difficult because Great Britain wouldn't have to buy more dollars with its pound than it formerly did when it was selling at about $5.00.

Q. Would that become an obstacle, in your opinion, to an American company doing business, as such, in Great Britain?

A. Well, it would prevent the English company from

buying the American goods, if that's what you mean by an obstacle. It's difficult to get dollars to pay for the things in America. It's easy to get pounds in America to pay for things in England.

Q. What would you say, then, based upon your experience and your knowledge of the subject, and your study of it, as to whether or not at the present time it would be a practical, profitable commercial operation for an American Company to sell capital goods in Great Britain at the [fol. 2439] present time?

A. It would be neither profitable and, I think, it would not be possible.

Q. Will you tell the court quite briefly why you reach that conclusion?

A. I take it that all trade and commerce is based upon the profit motive, and American industry must sell at a profit in order to meet its depreciation and its cost of selling, and so forth. You can not obtain as much money in England for American made capital goods as would pay for profit and the cost in America. The British Government wouldn't give export licenses for dollars to pay for them.

Q. And these various matters that you have been detailing here on the witness stand as to "Buy British", the Imperial preference, and things of that kind, would they enter into your opinion that it would be not profitable or perhaps practically impossible for an American company to trade in Great Britain in that manner?

A. All of my experiences on various practices between trade and commerce in the United States and Great Britain have led me to that decision, that conclusion.

Q. In your opinion, was that the fact say in 1927, 1928? [fol. 2440] A. It has been the fact since since long before that, Mr. Day. They didn't have export licenses for money, but they had the British sentiment.

Q. And your opinion upon the subject of impossibility or practical impossibility of an American Company selling its capital goods by itself in Great Britain has been your opinion over how many years, running back from 1948, that has been your opinion how far back would you say?

A. It has been my opinion for the last twenty odd years.

Q. Back as far as 1927 and 1928?

A. Oh, yes.

Q. And before that?

A. Before that. Not only my opinion, it's almost general knowledge.

Q. What would you say, from a practical standpoint, a commercial standpoint, a reasonable, sensible business standpoint, whether or not it would be possible for a British manufacturer of capital goods to sell them in the United States now?

A. That hasn't been possible for a good many years.

Q. How many years back, as far as 1927?

A. Oh, beyond that. I think the last shipment of rails we [fol. 2441] had was at the turn of the century.

Q. Why would you say that it would be impossible to sell the other way, from Great Britain into the United States?

A. Today?

Q. Yes, let's have it today?

A. England has no steel, it has no raw materials, it's a converting nation. The only real deposit of natural wealth it has is coal, it hasn't the raw materials from which to convert. India has taken a great deal of its textile business away from it. We used to buy a good many of our clothes in Great Britain. That was very good for us, because we would go over there with dollars and buy at the depreciated rate of sterling. But now you have to have coupons. Is that answering you?

Q. Is there any tariff in the United States now that operates in that situation?

A. Yes, there is. We have a high protective tariff in the United States, we pay roughly one-third of the value of imported goods. It isn't practical for the British people to sell in the United States even if they had the raw mate- [fol. 2442] rials. We put the protective tariff up against Britain and against other countries to keep the goods out.

Q. You say that it wouldn't be a practical thing. That goes back how far would you say, Britain selling over here?

A. As far back—ever since I have been in business.

Q. That's way back for how long?

A. Well, from 1907, when I first started to observe the foreign trade.

Q. What would you say, then, as to whether or not, coming back to the American company selling capital goods, including anti-friction bearings, made in this country in competition with bearings made in Great Britain, would you say that was possible? I didn't ask the question that

way. From the practical standpoint would that be possible, I mean profitable competition, sensible competition, commercial competition?

A. I doubt if anti-friction bearings could be made in the United States now and sold at a profit in Great Britain.

Q. Has that been true for years gone by?

A. It's been true for a long while.

[fol. 2443] Q. Back as far as 1927?

A. Longer than that. Before that, Mr. Day.

[fol. 2444] Q. Mr. DeKrafft, I think you answered in your examination before the recess that it would be practically impossible from any reasonable commercial profit standpoint for an American manufacturer to sell capital goods in Great Britain. Now, what goods did you have in mind in that answer, goods that were made in Great Britain or in this country, or goods that were made only in this country and not in Great Britain?

A. I think I said, Mr. Day, in answer to your question, that if the goods were now made in England it would be impossible or practically impossible to start a new manufacturing business in competition with anything that is now manufactured in England.

Q. In other words, if the British manufacturing economy included the making of certain articles, you think it would be impossible or very difficult from any practical standpoint for an American manufacturer here in this country making the same articles to compete over in Great Britain with the British people?

A. I think the Board of Trade wouldn't allow the establishment of any such manufacturing company in England today to compete with its own established business.

Q. And would your answer be the same if it involved the question of being a British manufacturer selling over in [fol. 2445] this country something made in both countries?

A. Well, Mr. Day, today there are articles being manufactured in England and sold in the United States. You have probably seen the advertisement of the Austin cars: they are making, shall I say, a desperate effort to sell cars here to obtain dollars for them. Cars are selling at very high prices, and with the low horsepower people may want them. Also there are people who buy Rolls Royce cars in America, even though they cost 25 or 30 thousand dollars.

Q. That is, people who have a lot of money to invest in a particular kind of car, is that right?

A. They must have a lot of money.

Q. Well, are there some goods in your opinion, are there still some goods that are made in America that can be sold in Great Britain if they are required in Great Britain and not produced in sufficient quantities there?

A. Yes, sir, during the past few years we have shipped a very large quantity of coal machinery for use in the British coal mines to help them get their coal out. As I said, coal is practically the only natural resource England has.

Q. That is, if the British people feel that they require, to carry on their internal business or their domestic economy, goods from outside which they cannot get in sufficient quantities within their own borders, they will permit those [fol. 2446] goods to come in?

A. Oh, yes, they do it and they are doing it now. I didn't understand that was your question before.

Q. I wanted to clear it up because I might not have understood what you had in mind, or you might have something other than we are now talking about in mind.

A. Well, that is what I meant when I said that if the British economy required any manufactured goods, any machinery manufactured here, they would get it.

Q. From America?

A. Yes.

Q. That is, if they didn't have it over there or have it in sufficient quantity?

A. That is right. Those goods have been coming in through the United States over there.

Q. But your answer would be the same I take it, insofar as that would apply to the shipment of capital goods, including anti-friction bearings made in this country, and sought to be sold over there in competition with British made goods?

A. I can grant you exceptions to almost any rule, but it would not be a regular practice.

Q. Or profitable practice?

A. Oh, no, not at all.

Q. Not a profitable commercial practice.

[fol. 2447] A. You can find exceptions to all rules.

Q. Now, what would you say in your opinion would be the necessity of an American company seeking to sell

capital goods, such as anti-friction goods in Great Britain, having a company there where the goods are made?

A. If they want to maintain distribution of British made goods they would have to do it.

Q. They would have to have a factory in Great Britain?

A. That is what they should have. They should have established it long before this. They couldn't do it now.

Q. And manufacture in Great Britain?

A. They would manufacture with British workmen, British supervision, and everything. They don't need a British board of directors because in many cases the Americans maintain a majority of the board of directors without any detriment to the English business.

Q. What do you say about the kind of working men they should have?

A. Skilled British working men.

Q. What do you say as to the nationality of the men that go out to contact business, salesmen?

A. The salesmen would all be British salesmen, there should be British management.

Q. You say you would consider that a necessity for an [fol. 2448] American operation in Great Britain now?

A. Yes.

Q. Would that also be a necessity in 1927 or 1928 and over the years?

A. That is about the date when this started to become general practice, Mr. Day.

Mr. Day: I think that is all.

Cross examination of William DeKrafft.

By Mr. Nitschke:

Q. Mr. DeKrafft, I believe you said you were advisor to Baldwin Locomotive Company and the United States Rubber Company in connection with their foreign operations. When were you working with them?

A. I really work with them, you see.

Q. I believe you said since 1936 you have been acting as advisor in connection with foreign operations for several other American companies?

A. Well, in 1938 I came home from Europe impressed with the idea we were going to have a war, I was going to

try to get into production in the United States, and I established my office so that I could do that. Since 1938 I have been advisor with regard to their operations.

Q. And you have been giving advice including foreign operations?

A. Including any problems that arose there.

[fol. 2449] Q. Among those companies, I believe you said you represented, or have represented in that territory United States Rubber?

A. I have been advisor to United States Rubber since 1938, and still am.

Q. And Bristol Manufacturing Company?

A. And still am.

Q. And Koppers Company?

A. Koppers.

Q. And I believe you said you advised Worthington Pump & Machinery for several years?

A. Three or four years, yes.

Q. And several others you mentioned?

A. Yes.

The Court: I would like to ask just one question. Isn't there a considerable amount of exchange of goods between [fol. 2450] Great Britain and the United States today?

The Witness: Oh, there is.

The Court: Isn't there a tremendous amount of British china being imported, for example, at the present time?

The Witness: Well, your Honor, I doubt if it is British china, it may be, because you can't buy china in England.

The Court: I ask you those questions simply because of all those sweeping statements you made with reference to the exchange of goods. I think I marked down here in one place your comment to the effect that the sale of American capital goods was practically impossible to Great Britain on a profitable basis. Then you answered Mr. Day's question that the sale of British goods in the United States was practically impossible on a profitable basis long before the sale of American goods was impossible.

The Witness: Your Honor, I would say that for a great many years I have imported my suits of clothes from England, and a great many other people have used special goods like that. A lot of people prefer English toys for their children.

[fol. 2451] The Court: Aren't those still imported?

The Witness: Well, they are beginning to come in.

The Court: Does that trade barrier you have described apply to those items I have mentioned?

The Witness: I doubt if very many toys are coming in. I saw some at the port, but not any huge quantities.

The Court: Well, hasn't that sales resistance you have described, the policy of "Buy British" been in effect for the last five or six decades or more?

The Witness: Yes.

The Court: Hasn't there been a similar campaign in the United States to buy goods manufactured in the United States?

The Witness: Could I give you an example?

The Court: No. Isn't that true? Isn't it likewise true they even attempted to pass legislation to compel manufacturers to mark goods that were manufactured abroad to be sure that they were so marked?

The Witness: Oh, yes, everything that is manufactured here.

The Court: Then you didn't mean to have your statement as sweeping as you said?

[fol. 2452] The Witness: In connection with the volume of goods, I intended it to be as sweeping as I could state it.

The Court: That is, so far as volume is concerned?

The Witness: Yes.

Mr. Day: I tried to make it clear after the recess, maybe I didn't.

The Court: I think you did. I wanted to have in mind how far his comments went. Whether he meant it to be as sweeping as they appeared on his examination.

Mr. Day: If I understood it, and the witness will correct me if I am wrong, his testimony was to the effect that, because of the various barriers and obstacles and difficulties he has detailed, and which have been detailed by other witnesses, it would not be at the present time a sensible, commercial or practical thing for an American company making capital goods, including anti-friction bearings in this country, to sell them in Great Britain in competition with bearings made over there. That is, to sell them as American bearings through American agencies. Is that right?

[fol. 2453] The Witness: Oh, that is perfectly right.

Mr. Day: And upon the same basis, as applied to the same articles it would not be possible or practical, as I understand it, for a British company to sell anti-friction bearings or capital goods in this country. I think the witness did make it clear he didn't want that answer to apply to all goods made in this country and sold over there.

The Court: I am still anxious to find out the meaning of the words "practically impossible". That is a rather sweeping term.

Mr. Day: What we have in mind—

The Court: Does he mean it cannot be done at all on a profitable basis at any time? That is what those words imply to me. If that is what he means.

Mr. Day: Well, he said, and my question has been, that it would not be practical, or practically impossible from the commercial basis, in having a profit for that trade to be carried on. Is that the way you wish to have it understood?

The Witness: There are exceptions. For instance we are very short of coal tar in the United States, and within the last five months we have been receiving shipments of coal [fol. 2454] tar from England. Well, that is of large volume because we use that to go into anthracene and naphthylene, and other components for our manufacture here. But if the British manufacturer wanted to ship a line of, to use the term, roller bearings—I don't know very much about that—but he would find it would be practically impossible to sell those roller bearings here.

The Court: You say you don't know much about it.

The Witness: I know very little about them. I have experimented with them all my life.

The Court: Does the ERP contemplate such strong barriers as you have described?

The Witness: Well, your Honor, the reason—

The Court: I don't believe you understood my question. I asked you whether the ERP contemplates such strong barriers as you have described?

The Witness: The ERP contemplates setting up strong economies in the countries so they can do business.

The Court: But it does contemplate the exchange of goods rather than keeping the goods that are manufactured [fol. 2455] in this country here and the goods made in Great Britain there?

The Witness: Yes, the goods made here under the ERP will be shipped to England.

The Court: That is what I was inquiring about. I thought the very plan contemplated the shipment of American made goods. Those goods will have to be sold there, will they not? Will the same sales resistance be met in connection with this tremendous plan of rehabilitation of Europe?

The Witness: I told Mr. Day I think that orders received from the United States through that were completely excepted.

The Court: And you are excepting those?

The Witness: Yes. That would also be true of the three billion loan we made.

The Court: You included that.

The Witness: That is what I intended.

Redirect examination of William DeKrafft.

By Mr. Day:

Q. One more question so there will be no misunderstanding. When you have stated that the sale of capital goods, including anti-friction bearings, would be practically impossible, you didn't mean it to be physically impossible?

[fol. 2456] A. No, sir. Americans can do almost anything.

Q. What did you mean when you say "practically impossible?"

A. I think I prefaced my remarks by saying American industry must sell at a profit, and you can't sell goods against sales resistance, high tariff and high costs of transportation at a profit, and it is a great discouragement to American business to have some department losing money.

Q. Then, you mean, if I might suggest it, impossible from a profitable, practical, reasonable, sensible, commercial standpoint?

A. To keep an American industry solvent, yes, sir, that is what I meant.

Mr. Day: That is all.

Recross examination of William DeKrafft.

By Mr. Nitschke:

Q. Mr. DeKrafft, in your opinion is it necessary in order for an American company to do business abroad that they enter into cartel agreements to divide up world territory and fix prices?

Mr. Day: I object.

The Court: I think I will permit him to answer that. He has testified to the methods under which business could be transacted in Europe by an American business concern. [fol. 2457] I will permit that question to be put.

Q. Do you understand the question?

A. I understand the question. Might I say I have had experience only with one cartel arrangement. Would you be satisfied with an answer based on that experience?

Q. I would like to have your opinion.

A. That experience was in regard to rubber.

Q. I wonder if you could answer the question?

(Previous question read.)

A. I think the only way I can answer that, without being facetious, would be when in Rome, do as the Romans do. I have no intentions of being facetious.

Q. Is it your opinion that that is necessary?

A. I would say that since you are attempting to do business in any country you have got to conform to the rules, whether they are commercial or whether they are laws.

Q. I didn't ask you whether you had entered into specific written agreements. My question was whether you had to enter into agreements with foreign manufacturers dividing up world territories and fixing prices?

A. I would say that was necessary in some. Perhaps I should not say "necessary". I should say that it has been the practice in some industries.

Q. What industry is that?

[fol. 2458] A. That has been the—

Q. Besides anti-friction bearings.

A. I don't know anything about anti-friction bearings but I do know from reading in reports—

Mr. Day: I want to object to that question. I don't think that is quite the proper question "besides anti-friction bearings". That is his interpretation.

Mr. Nitschke: Well, I will withdraw the remark.

The Court: I believe his testimony was all-inclusive on a profitable method of doing business in Europe by American concerns, and justifies a question of the sort that was originally put, whether or not the only way by which they could engage in a profitable business in Europe is by dividing up the world into respective markets. I believe that is your question.

Mr. Nitschke: It is, yes.

A. (Continued) I think that is that question. I would say that it may be that the cartel is so strong in Europe that you would have to agree to the terms of the cartel agreement.

Q. Your answer is if there is a cartel in Europe it might be necessary. Would it be necessary for an American [fol. 2459] company to arrange a cartel agreement dividing the world territory in order to do business abroad?

A. I think that it would be a strange thing for an American company to make a proposal as such to an English company or a group of English companies.

Mr. Nitschke: That is all.

Mr. Day: That is all.

[fol. 2460] Thereupon Imrie De Vegh being recalled as a witness, further testified as follows:

Further direct examination of Imrie De Vegh.

By Mr. Ketterer:

Q. Mr. DeVegh, before the noon recess we had just completed reading a portion of Defendant's Exhibit 173. I should like now to direct your attention to the first table that is attached to this exhibit which bears the heading "Table 4, Ball and Roller Bearings and Parts: Exports of principal producing companies". That table shows what in respect of exports generally from countries and to countries?

A. The first line after the line showing the dates and the names of the countries indicates the total volume of exports from each one of the countries named in the ovr-all heading, and shows that, for instance, Italy, had exports of between 1 and 5 million dollars a year. The next section gives the same information on Germany, then the following on Swedan, and on the United Kingdom, France, Switzerland, and the United States, and finally a summary showing the total exports of the principal producing countries. Then these total exports of the exporting countries are subdivided by countries of destination to which these exports went from the seven large exporting countries.

[fol. 2481] Q. By that you mean that the names of the countries with the number in the vertical column—

A. On the left.

Q. —are the names of the importers who imported these respective anti-friction exports that were exported by the countries named in the horizontal heading?

A. Yes.

Q. Now, I want to direct your attention on this table to the line that shows the receipts or imports of ball and roller bearings and parts from various countries,—Italy, Germany, Sweden and the United Kingdom: Looking first at Italy, what is the amount of exports shown from Italy to the United States in the various years?

A. Exports from Italy to the United States were $152,306 worth in 1929, $4,233 worth in 1932, and negligible thereafter.

Q. And as to Germany, what does it show as to the exports from Germany into the United States in these same years?

A. Roughly $100,000 worth throughout. The range is between $131,662 and $94,759.

Q. And exports from Sweden to the United States?

A. I do not have the 1929 figure on this table because the original table of course does not contain it. For the two years that it is available it was $11,922 and $85,106.

Q. And what years were they, respectively?

[fol. 2462] A. 1932 and 1933.

Q. How about exports from the United Kingdom to the United States of all types of anti-friction bearings?

A. The highest in 1929 was about a quarter of a million dollars, and much smaller amounts during the depression.

Q. France?

A. Negligible—$7,000.

Q. Switzerland?

A. Even smaller.

And the total imports into the United States shown are, of course, a tiny percentage of total domestic consumption, as will appear from subsequent tables.

Q. Can you tell us where you have the totals of the imports into the United States?

A. Yes.

Q. Can you tell us if this shows the total exports of principal countries into the United States?

A. United States into all countries.

Q. It is not total imports to the United States?

A. One of the subdivisions, that is right.

Q. What does that amount to?

A. If I am not mistaken, in 1932 it was $156,000.

Q. That was total imports into the United States from all countries on the outside?

[fol. 2463] A. That is right.

The Court: What was the question?

Q. Total imports into the United States from all sources of anti-friction bearings in 1932 was the amount of how much?

A. $156,000.

Q. Now, from memory can you tell what the total consumption figure in 1932 was approximately in the United States?

A. 1932 was not a census year, therefore I don't know for certain, but it was on the order of 40 or 50 million dollars, judging by the censuses of 1931 and 1933, which straddle the year. Of course these are depression time figures, but it will appear from subsequent tables which are there presently how much both the trade and the United States production was.

Q. I would like to direct your attention to Page 13 of Defendant's Exhibit 173. I wish you would explain what that shows.

A. This shows imports for consumption into the United States, by years, derived from the same tariff commission publication. This page which is marked 13, and the next page which is number 14 are two related tables. If your Honor will look at it, the first segment is marked Table 5

"Anti-friction bearings: balls and rollers, ball and roller [fol. 2464] bearings and parts". That is the summary table. The next section, Table 6, and the two sections on the following page, marked Tables 7 and 8, are subdivisions of Table 5. Table 5 is the sum of the following three.

Q. Will you explain to the Court what the various headings and data developed in that table mean?

A. The summary table, the first one, the rate of duty is that applied by the various U. S. tariffs, starting with the Underwood tariff rate, in 1923 the Ford-McCumber tariff rate, which was continued in the Hawley-Smoot tariff bill in 1930 and wasn't modified until 1935, but this table having been published in 1934 obviously carries the story only to 1933.

Then the following column shows the quantity of imports in pounds, and the following column shows the value of the imports in dollars. The next column is the unit value, in other words the cents or dollars per pound. The following column shows the computed duty and the last two columns show the effective ad valorem percentage rate of protection that the rate of duty named in the second column from the left yielded. It showed during the 1920's and the 1930's the effective rate was between 54.4 and 61.9 per cent, roughly speaking between 55 and 60 per cent, as an effective rate of protection.

Q. Now, that was applied against value, is that correct? [fol. 2465] A. That is correct.

Q. So that if you had a bearing that represented a value, for examination purposes, of $5, the duty on it would range from 55 per cent to 65 per cent of the $5 value?

A. Yes, roughly speaking 55 to 60, but there are more detail breakdowns available. This is the over-all effective rate and the effective rate by sizes of course varies a little.

Q. You say Tables 6, 7 and 8 are subdivisions of Table 5, and by subdivisions you mean what?

A. I mean that Table 5 shows the sum total of all anti-friction bearings imported into the United States and parts thereof, in the years listed. Table 6 shows balls and rollers separately. Table 7 shows ball bearings and parts separately, and Table 8 shows roller bearings and parts separately.

Q. But other than that the content of those three tables is

the same as the contents of the summary table, which is the first one?

A. That is right.

Q. On Page 13. Now, directing your attention to the table that is marked Table 10 "Anti-friction Bearings", how does that differ from the material contained in the other tables in Defendant's Exhibit 173?

[fol. 2466] A. These are imports into the United States over a longer period of time than the first table included. The reason why we included both tables was because we didn't want to be partial. For instance, the first table was the table giving the exports of seven different countries, broken down by each importing country. It was therefore limited in its comprehensiveness, or limited in coverage from the viewpoint of the number of years covered. Whereas this table gives a fairly complete coverage, that is a biennial coverage with respect to the United States for each census year from 1923 to 1933, and it shows the sources of the imports of anti-friction bearings of countries, imports into the United States, that is.

Q. And that shows the imports from those countries into the United States in those years?

A. That is correct. And the total value fluctuated between just a little over a million dollars in 1923, and a peak value of 1.4 million dollars in 1929, with a low of $150,000 in 1932.

Q. Now, does Table 11 show anything different from the table marked 10 in Defendant's Exhibit 173?

A. This Table 11 gives similar information for the United States, broken down by the three subclassifications, namely, showing balls and rollers separately, ball bearings [fol. 2467] and parts separately and roller bearings and parts separately.

Q. You mean it shows the imports in those years into the United States from all sources of those different classifications of bearings?

A. For the years 1929, 1933, and preliminary figures for 1934.

Q. What does it show as to the total of imports of ball bearings and parts therefor in those years?

A. The value figures are $492,000 for 1929, $67,809 in 1933, and $161,102 in 1934.

Q. Now, there is one other table left attached to this ex-

hibit, Defendant's Exhibit 173. What does that show in respect to the other tables?

A. That shows exports from the United States by countries for the years 1923, 1925, 1927, 1929 and 1931.

Q. And does that cover all exports of anti-friction bearings in those years from the United States?

A. It does.

Q. To—

A. All countries.

Q. And the total exports in the years as shown by that table of all kinds of anti-friction bearings amounted to how much?

A. The highest value was in 1929, 3.2 million dollars, of which almost 2 million dollars worth went to Canada and [fol. 2468] just under three-fourths of a million dollars worth went to Soviet Russia, which, however, must have been a special order since, as you look at the Soviet Russia figures, you will see through the years 1929 and 1931 they are the only years in which even amounts exceeding half a million dollars appear for Soviet Russia. The Canadian figure is consistently the highest for the well-known reason that Canada is in its manufacturing geared to American industry, especially automobile production, and so forth, and is largely supplied by subsidiaries of American corporations located in Canada.

Q. Does Table 13 show a breakdown as to the different classifications of bearings or does it show just the total of all types of anti-friction bearings exported?

A. It is a sum of ball and roller bearings and parts, all classes in one.

Q. As to the United Kingdom, what does it show?

A. As to exports, out of the total shown at the bottom of the first portion of the table, exports from the United States to the United Kingdom have never exceeded $200,000 during the period reflected in this table, which contains the census years from 1923 to 1933, inclusive.

Q. Is there any significance to unit values and the rest of the data set forth in these tables?

[fol. 2469] A. Only for the purpose of tariff specifications; since there is both a specific duty and ad valorem duty on bearings coming into the United States, it is necessary to have a determination of the unit value and to have

a calculation of the ad valorem operation of the tariff for the purpose of being comprehensive.

Q. But that is the sole purpose?

A. It has no other significance than the tariff.

Q. And otherwise there would be nothing to apply that portion of the tariff against.

A. Yes. If it was purely a specific tariff that would be something else.

Q. Mr. DeVegh, before the noon recess you were talking about the inception of foreign exchange controls in various countries and I have here now an exhibit that has been marked for identification as Defendant's Exhibit 174, and I will ask you if you can tell us what that is.

A. May I make an off the record comment?

Q. Just tell us what that is.

A. This is a summary table derived from a document published by United States tariff commission entitled "Regulation of Imports by Executive Action in Countries with Independent Tariff Jurisdictions".

Q. Is that what that is?

[fols. 2470-2477] A. I suppose I can say into the record if you don't want me to say it off the record, that there is a difference between the exhibit which is this black and the white which has been made therefrom owing to the photostating technique.

Q. That is of the photostating office.

A. This contains irrelevant context material. I think you ought to submit as an exhibit a copy which does not contain the irrelevant text material.

Q. I will ask you what you mean?

A. I might add of course we can show this to Mr. Nitschke, the text.

Q. All we want is the title.

Mr. Nitschke: It is irrelevant. I am satisfied to let it go at that.

Mr. Ketterer: We will mark a white copy.

The Court: If there is an admission of irrelevance I don't think there will be an objection.

Mr. Nitschke: (After further examining exhibit) Maybe it is not irrelevant. It seems to qualify the table. I would like to look at it.

The Witness: We have the original documents here in

each case, so that we can in each case compare the original document and the explanatory matter.

[fol. 2478] Mr. Ketterer: If the Court please, at the conclusion of the testimony yesterday we were in the somewhat astounding position of having most everybody agree upon a matter of irrelevance. I have exhibited to Mr. Nitschke this morning the complete text of the article, pamphlet from which this table that was offered in evidence yesterday was taken, and he has suggested that it may be well to put approximately one paragraph of the text that is beneath the table in evidence, and rather than photostat it I think perhaps we could agree I will read that paragraph into the record and let the record show that that was the paragraph that immediately followed the table that was introduced and marked in evidence Defendant's Exhibit 174.

(Reading) "Foreign-exchange control.—The tabulation above shows the countries where foreign-exchange control is or has been officially in effect. Unofficial control exercised by the banks has existed in some other countries as, for example, in Norway (since September 1931), Switzerland (since May 1940), and Peru. In some countries [fol. 2479] foreign-exchange control is not employed to restrict bona fide commercial transactions. In others it consists merely in the obligation to sell to a governmental agency the foreign exchange derived from specified exports, and is not essentially a *restrction* on imports. In still other countries with both foreign-exchange control and import-permit requirements, foreign exchange is issued freely if import-permit requirements have been complied with; consequently, the mechanism of exchange control does not operate directly as a restriction on imports, although the issuance of import permits often depends on the availability of foreign exchange. For a number of countries, the fact that foreign-exchange control is not a direct restriction on imports is indicated by notes. In some other countries the control may be merely partial in that it applies only to transactions exceeding a specified amount, as for a time in Japan and Portugal or to transactions in specified currencies as in some British countries where transactions with sterling countries are not controlled.

"In a few countries control was exercised unofficially [fol. 2480] by the banks for some months prior to official introduction, as, for example, in Austria and Bolivia, and in

some other countries the control was not restrictive on imports until a month or so after the official introduction. A single date in the tabulation indicates that exchange control introduced officially at that time has since been continuously in effect."

[fol. 2481] Set of papers marked by the Clerk for identification Defendant's Exhibit 175.

Imrie DeVegh, thereupon resumed the stand for further direct examination.

Further direct examination of Imrie DeVegh

By Mr. Ketterer:

Q. Mr. DeVegh, I have here a set of papers that have been marked for identification Defendant's Exhibit 175. I will ask you to examine them and tell the Court what they are.

A. This is a compilation that was prepared by myself and my assistants under my supervision showing international trade in anti-friction bearings in the selected years 1934 and 1938. I have taken ten countries, including all major producing countries and major consuming countries, and the tabulation is the result. These figures were taken from the information in the New York Public Library from the original import and export statistics of each individual country.

The top table shows the end result converted into U. S. dollars. The other tables are supplementary tables showing the original breakdown for each country, showing, in other words, in the case of each country, where its exports of anti-friction bearings went and from which countries its imports of anti-friction bearings were obtained.

[fol. 2482] Mr. Ketterer: We offer Defendant's Exhibit 175.

The Court: It may be received.

Q. Now, Mr. DeVegh, in looking at Defendant's Exhibit 175, in the lefthand corner of the summary page, that was the first one, I would like to direct your attention to the list of countries there. On what basis did you select the countries delineated there, Sweden, Italy, Germany, United States, United Kingdom, Austria, Switzerland, Spain, Japan, Netherlands, Belgium and France?

A. On the basis that this list included, to my knowledge, all the important industrial countries that had a significant trade in anti-friction bearings. There were of course, other countries that did have trade in anti-friction bearings but the characteristics of that trade were not significantly different from these, and it didn't seem worthwhile to put down thirty or forty countries.

Q. Now, in the first column of this page is "Imports and Exports." What did the table underneath the heading of that show, on Defendant's Exhibit 175?

A. They indicate the amount in dollars in which these [fol. 2483] countries imported anti-friction bearings and exported anti-friction bearings, respectively, to all other countries.

The export figures are interesting. They include all important anti-friction bearing exporting countries, Sweden being the largest, Italy, Germany, the United States and the United Kingdom being the next largest, and these five countries altogether accounting for the bulk of the world's export trade in anti-friction bearings.

These five countries are the only ones whose total exports of anti-friction bearings amount to more than one million dollars each in the two years for which we have prepared this breakdown. Previous years can be found in that earlier exhibit giving the Tariff Commission's figures converted to U. S. Dollars for the previous years. These figures are intended to bring that information up to date beyond where the Tariff Commission's figures ended.

Q. I think it is correct the earlier exhibit stopped in the year 1933?

A. That is correct.

Q. This shows the figures for 1934 and 1938?

A. That is right.

Q. Now, the total figure as to imports of bearings for 1934, as shown on this table marked Defendant's Exhibit 175 into the United States from all sources is $697,547 in [fol. 2484] 1934. Do you mean by that that that represents the sum total of all imports regardless of the source that came into the United States in that year?

A. That is correct.

Q. And for the year 1938 the total shown under the heading "Imports" is $738,603. And does the same observation apply to that?

A. Total imports of anti-friction bearings into the United States.

Q. From all sources?

A. From all sources.

Q. Looking at the individual table, and the first one that is here "In and out of Belgium." Now, will you examine that and explain to the Court on what basis the figures are arranged on those individual pages, using Belgium as an example?

A. In each case we had to conform to the original sources, in other words we didn't try to re-write the export-import statistics of each country, so that the tables by countries would slightly differ in their set-up and size and detail of the breakdown. This was excerpted, as the source statement at the bottom of the page shows, from the Monthly Belgium Import-Export Statistics for the given year. On the left side are seen the major countries with which [fol. 2485] Belgium had anti-friction bearings trade. In all these tables I tried to omit the complete tabulation, in other words, where there was five or a thousand dollars' worth of trade I just dropped the figures because it would clutter up the record endlessly. But it will be seen from the values shown that these values were relatively low. The Belgium franc was about 5 cents in 1934 and about 3 cents in 1938. So the 26 million francs corresponds to $950,000 worth of imports, and the exports figure of 790,000 francs corresponds to $40,000.

Now the reason why Belgium was even as much of an importer of anti-friction bearings as this table shows is that Belgium was a major metallurgical manufacturing country, very large metallurgical industries, as compared to the total size and population of the country, and of course in 1938 Belgium was engaged in the European rearmament program which required a very substantial amount of anti-friction bearings.

Q. Now, as to imports from the United States, what does that table show in dollars as to Belgium? Can you convert that?

A. Well, imports from the United States—

Q. Into Belgium.

A. —into Belgium were about 6 percent of the total in 1934 and about the same percentage in 1938. In other

[fol. 2486] words, 1,600,000 francs, at about 3.3 cents would be—

A. It's approximately $50,000.

Q. $50,000?

A. Roughly speaking.

Q. That figure represented the exports from the United States?

A. To Belgium.

Q. In what year?

A. 1938.

Q. Now, were there any significant imports into the United States from Belgium?

A. None. I didn't even list these on this table because the figure obviously was less than a few thousand dollars.

Q. Now, I would like to turn—

A. Belgium was a net importer of bearings anyway.

Q. I would like to turn to the table that has to do with the United Kingdom.

[fol. 2487] A. That table is stated in pounds sterling. In 1934 the value of the pound sterling was about $5. In 1938 the value of the pound sterling was about $4¾.

Q. And the exports from the United States into the United Kingdom—before giving that figure, what is included in the general deseriptive language "United Kingdom"?

A. The United Kingdom of Great Britain and Northern Ireland.

Q. What does that set of tables show in respect of exports from the United States of all classes of bearings to the United Kingdom in 1934 and 1938?

A. According to the British statistics, the total imports of the United Kingdom from the United States in 1934 amounted to roughly 11,000 pounds or $55,000 in ball bearings and parts, and to 13,000 pounds or about $65,000 in roller bearings and parts.

Q. And the imports into the United States from the United Kingdom for that period, what does that table show as to that?

A. According to the British statistics exports to the United States of roller bearings and parts in the aggregate amounted to just under 20,000 pounds or just under $100,000.

Q. In what year was that?

A. That was in 1934.

Q. What about 1938?

[fol. 2488] A. In 1938—imports or exports, sir?

Q. Imports into the United States from the United Kingdom first.

A. That is, exports from the United Kingdom?

Q. That's right.

A. Exports from the United Kingdom to the United States, according to the British statistics, amounted to 8,500 pounds or rather less than $40,000.

Q. In 1938?

A. In 1938. That is roller bearings and parts.

Q. And what were the exports shown in that year, 1938, from the United States to the United Kingdom?

A. In other words, the imports into the United Kingdom from the United States, as shown in the English statistics, were for ball bearings 34,000 pounds or $170,000, rather less than $170,000, and for roller bearings it shows 59,000 pounds, in other words, rather less than $300,000.

Q. Those, again, are from all sources?

A. No, this is imports from the United States into the United Kingdom in 1938 according to the British Trade statistics.

Q. What I meant, Mr. DeVegh, when I said "all sources" I meant from all companies exporting bearings either from the United Kingdom to the United States or from the [fol. 2489] United States to the United Kingdom.

A. Indeed, sir. There is no way of distinguishing between companies.

(Thereupon table showing value of United States domestic exports of anti-friction bearings to the United Kingdom, Europe, and the world, was marked by the Clerk, for identification, Defendant's Exhibit 176.)

Q. I have here, Mr. DeVegh, a table that has been marked for identification as Defendant's Exhibit 176. I will ask you to look at that and tell us what that shows?

A. That shows the value of the United States domestic exports of anti-friction bearings to the United Kingdom, Europe, and the world for 21 years, from 1927 to 1947. In other words, this brings the story up to date and includes the war and post war record.

Q. What is shown on that table marked Defendant's

Exhibit 176 as to the allocation of imports between Europe, or the United Kingdom, Europe, and the balance of the world?

A. There is a percentage breakdown showing that the bulk of American anti-friction bearings that were exported went to non-European countries. All of Europe accounted for relatively small percentages in the back years. Of course, very much larger percentages during and after [fols. 2490-2491] the war. In the case of the United Kingdom the percentage was negligible until the war. During and after the war, of course, the percentage was higher.

Mr. Ketterer: We offer Defendant's Exhibit 176, if the Court please.

The Court: It may be received.

[fol. 2492] The Witness: Your Honor, may I be permitted to mention one more thing about the matter of using Europe as a category? Europe, outside of the United States, virtually the entire free world's metallurgical capacity is in Europe. There is a little bit of metallurgy here and there, in Latin America and elsewhere, and other tables show what the imports of Japan in anti-friction bearings have been, but the world's machinery is essentially and has been [fol. 2493] essentially built in the United States and in Europe, chiefly in the western European countries. The anti-friction bearings are components invariably of machinery. The demand outside the machinery producing countries is a derived demand, replacement parts, repair parts, and so on. The original equipment demand must be, your Honor, where metallurgical industries are.

(Thereupon table showing imports of anti-friction bearings into the United States for 1922 to 1943 and for 1947 was marked by the Clerk, for identification, Defendant's Exhibit 177.)

[fol. 2494] Q. Will you tell us what that is, please, Mr. DeVegh?

A. This table shows the value of imports of anti-friction ball and roller bearings and parts thereof, including balls and rollers, into the United States by countries of origin, 1922 to 1943 and 1947. In other words, this is the most detailed breakdown that we have presented so far of imports into the United States of anti-friction bearings by countries of origin over a comprehensive period of time.

Mr. Ketterer: We offer Defendant's Exhibit 177.

The Court: The source of this material is given at the bottom of the table, is it not?

The Witness: It should be the Foreign Trade and Navigation of the United States. Yes, the Foreign Commerce and Navigation of the United States, United States Department of Commerce, annual editions 1923-1943 and for 1947 the figures are from a special preliminary report of the Department of Commerce.

The Court: It may be received.

Q. Now, Mr. DeVegh, what countries, as shown by this table marked Defendant's Exhibit 177, had any significant imports into the United States?

[fol. 2495] A. The countries that are known as the European producers of anti-friction bearings, France, Germany, Italy, Sweden, Switzerland, and the United Kingdom. Among these, however, the only ones that were regularly even as high as $100,000 were Germany, Italy until 1929, Sweden, and the United Kingdom. After the depression, after 1929, the Italian company gave up its merchandising attempt in the United States.

Thereupon a table showing value of production of ball and roller bearings in the United States was marked by the Clerk, for identification, Defendant's Exhibit 178.

Q. Now, I have a sheet that has been marked for identification Defendant's Exhibit 178. I will ask you to examine it, Mr. DeVegh, and tell us what that is.

A. This shows census figures for the United States indicating the value of production of ball and roller bearings in the United States in the census years from 1925 to 1933 and in 1937 and in 1939.

Q. Now, in what are those totals shown?

A. They are shown on the table in thousands of dollars, indicating that in 1925 and in 1927 the total production was just about a hundred million dollars each, in 1929 it was $120,000,000 each, in 1931 and in 1933 this production [fol. 2496] dropped to 50 and 40 million dollars respectively, as I mentioned in my oral testimony yesterday, and by 1937 it was back up to $124,000,000, and in 1939 it was $104,000,000. 1939 is the most recent year for which a census of the United States is available, but it is common knowledge that today the figures on production of all those

products, including anti-friction bearings, runs three or four times the 1939 value.

Q. Now, I want to direct your attention to Defendant's Exhibit 175 again, from which it appears that the total imports into the United States in the year 1934 amounted to $697,545.

A. Yes, sir.

Q. Do you have a comparable figure for the domestic production in the United States on the table?

A. Unfortunately not, because 1934 was not a census year in the United States.

Q. What is the nearest year to that that you have?

A. The nearest year is 1933 when the production was $40,000,000, and in 1937 on this table it was $124,000,000.

Q. And in 1934 the exports are shown on a table marked Defendant's Exhibit 175 to all sources from the United States as $1,429,184. The nearest year you have there is what?

[fol. 2497] A. Still the same, one showing 40,000,000 and the other showing 124,000,000, recovery progressing from the low of 1933 until 1937.

Q. That represents roughly what percentage—the imports of 1934 represented roughly what percentage of the nearest figure you have there?

A. Well, certainly not more than 1 per cent—on this, about 1½ per cent, isn't it? But I should say that would be about the highest. Normally, the imports were constantly less than 1 per cent for census years, the comparisons which are available.

Mr. Ketterer: We offer Defendant's Exhibit 178.

The Court: It may be received.

Thereupon two sheets, the first showing production in the United Kingdom for 1924 and 1930, and the second sheet showing production in Sweden for 1930, 1931 and 1932, were marked by the Clerk, for identification, as Defendant's Exhibit 179.

Q. I hand you here two sheets, Mr. DeVegh, that have been marked for identification Defendant's Exhibit 179, and I will ask you to tell us what they are, please.

A. These are copies taken from the Department of Commerce Summary of Industrial Machinery Production, the [fol. 2498] first one quotes the United Kingdom census of production indicating ball bearings and roller bearings,

including steel balls and steel rollers for bearings, to have been produced in the United Kingdom in 1924 in the amount of 2¼ million pounds, or slightly over $10,000,000, and in 1930 approximately 2½ million pounds, or approximately 12½ million dollars at the then rates of exchange. The next table attached to it quotes from the same source Swedish production statistics, together with comment from the same source, referring to the table. It shows that Swedish production of ball bearings and roller bearings in the year 1930 amounted, in the aggregate, to about 42,000,000 Swedish crowns, which at that time were worth roughly a quarter. In other words, this again is the production in Sweden on the order of somewhere between 10 and 15 million dollars. The production, of course, declined in 1931 and 1932. The figure further down gives imports and exports of ball and roller bearings of Sweden in the amounts of imports of about a million crowns, exports of about 20 million crowns for the year 1933, in which year the Swedish crown was selling at a discount, in other words, about 20 or 21 cents.

The Court: To the dollar?

The Witness: To the dollar, yes.

[fol. 2499] Mr. Ketterer: We offer Defendant's Exhibit 179.

The Court: It may be received.

Thereupon Tariff Schedules from the Department of Commerce showing prevailing rates effective on varying dates in 1947 were marked by the Clerk, for identification, Defendant's Exhibit 180.

Q. I have, Mr. DeVegh, a series of photostats that have been marked for identification as Defendant's Exhibit 180. I will ask you if you can identify that, please?

A. The originals of these photostats were obtained from the Office of International Trade in the Department of Commerce, and they show as of the dates indicated at the heads on each page on the righthand side the tariff applying to anti-friction bearings in the foreign country named in the center heading on each page.

Q. By that you mean that those are the rates that would prevail against the importation of bearings—or that did prevail against the importation of bearings from the United States or any other country into the country whose name appears on the top of the sheet?

A. That is correct, Mr. Ketterer.

Mr. Ketterer: We offer Defendant's Exhibit 180.

[fol. 2500] The Court: It may be received.

Mr. Nitschke: Did the witness state that this is the tariff as of March 12, 1948?

The Witness: If that's the date on the top of the page, then that's what it is.

Mr. Nitschke: There are two dates on the pages I have, one is in the righthand corner and the other shows the date March 12, 1948.

The Witness: No, if you read the text it says immediately below "Statement of rates of import duty on ball and roller bearings, prevailing rates effective November 15, 1947." This is for Australia, which is the top page on my schedule, and on the following page, which is another Australian sheet—they apparently obtained two Australian sheets for two different dates. The next one is Austria and it shows a statement of rates for import duties on anti-friction bearings, and there the first date is August 6, 1947, which is when this original was typed, and it appears it was written on March 12, 1948, when it was obtained.

Mr. Nitschke: Then this does not include the changes made by the Geneva Trade Agreement?

[fol. 2501] The Witness: No, sir—excuse me, sir. The Geneva Agreement antedates March 12th. Somewhere, I think it shows that—it would depend upon the up-to-dateness of the Department of Commerce information.

The Court: Austria shows August 6, 1947.

The Witness: That would include it, yes. In the case of France, for example, we have both an old schedule and new schedule, and I know we have shown in the case of Belgium the original schedule corrected for the new schedule. In other words, wherever it was possible corrections were made.

Q. By that you mean wherever the data was available in the Office of the Department of Commerce it was corrected to show the effects of the Geneva Trade Agreement?

A. And we have also checked the corrections in my own office from my own copy of the Geneva Agreement, but schedules show anti-friction bearing rates in the official text for a few countries only.

The Court: The import duty is predicated on weight rather than on amount?

The Witness: On bearings, in many cases, your Honor. [fol. 2502] Mr. Ketterer: I think, if the Court please, you will recall that yesterday in respect of the United States tariff it was pointed out that they apply both as to weight and as to value, there being a specific duty and an ad valorem duty into the United States.

The Court: Yes, I recall that, and that's the reason I asked the question. I notice on the second sheet here, which I think deals with Belgium, it is given as to weight only and not as to value.

The Witness: Your Honor, most of these countries in Europe have the specific rates by quantities rather than rates ad valorem, but some idea of the quantity value relationship can be derived from the statistics relating to the United States imports, which have divided through the the quantity in pounds by the dollars in each year. Those tables are in the exhibits. They are the photostats from the United States Tariff Commission study of 1934 that contains some such information as to the relationship of weight to value by sizes in international trade. Unfortunately, for foreign countries we have no such evidence because the figures are not available in this country. But [fol. 2503] the weight value relationship must be about the same as in the United States. In other words, I believe the weight value relationship shows that a pound of anti-friction bearings stands on an average between 50 cents and a dollar in value in international commerce, as it appears for the United States.

Q. Now, Mr. DeVegh, yesterday you discussed in your testimony the situation, general economic situation in Europe in the 1930's up until 1939, which marked the beginning of the second World War. I would like to direct your attention to the situation that has existed in Europe since 1939. First of all, during the war period what was the general situation as to imports from Europe or exports to Europe to and from the United States?

A. Virtually the entire trade was strictly supervised and government controlled, and completely subordinated to war requirements in each country. A certain amount of trade took place for civilian commerce accounts, but even that was very rigidly supervised subject to export licenses at

both ends, and in the case of Europe usually also subject to import license. In the United States it wasn't, of course, necessary to have an import license.

Q. Now, directing your attention to England and the United Kingdom, what was the general situation in the [fol. 2504] United Kingdom on the termination of the second World War trade-wise?

A. The United Kingdom was in need of very large quantities of imports. During the war the United Kingdom obtained immense quantities of imports from the United States on Lend-Lease. I believe that the total amount of Lend-Lease given by the United States amounted to roughly 40 billion dollars to all countries, or even more than 40 billion dollars, and of this amount the United Kingdom got, as I recall it, 26 billion dollars. Lend-Lease consisted very largely of moveable goods. In other words, a very large part of Lend-Lease shows up in the trade statistics of the United Kingdom. Other parts of Lend-Lease do not show up in the trade statistics because they were military supplies directly given, occasionally to English forces in the field, so that the trade statistics are not an accurate measure of the total amount of Lend-Lease appropriations in any sense. But, as I say, during the war the United Kingdom converted to war more of its civilian economy than any western power, and the result was that the United Kingdom practically ceased to export for commercial purposes. The United Kingdom's exports of all products dwindled to small percentages of their prewar exports, and the entire [fol. 2505] British war effort and the feeding of the population and the maintenance of the British industrial equipment was largely financed by previously existing capital resources. In other words, by the sale of foreign assets, by borrowing wherever possible, and making foreign countries accept payment in pounds sterling left on deposit in London, since they could not be spent on anything because England did not have anything in export. This was the case very substantially with respect to countries like Argentina, Egypt, and the Near East, the Arab countries generally, and British India. Well, finally by very substantial amounts of Lend-Lease from the United States and so-called Mutual Aid from Canada. The result was that after the war the English had a very major economic problem in that, first of all, they had to acquire continuously

a large supply of food stuffs and raw materials to keep moving and to fill the pipelines of production and start producing its products again. The Island is essentially a fabricating economy, imports raw materials and semi-finished goods and exports finished and semi-finished products. In order to be able to start up operations, the workers have to be fed, in other words, the population's food supply had to be maintained by imports essentially. England is only about 25 per cent, or maybe now 30 per cent self-sufficient in food stuffs, in other words, between [fol. 2506] two-thirds and three-fourths of England's food has to be imported. In addition to that, they have to import the bulk of their raw material supplies except for coal and some iron ore, and then in the situation in which they emerged from the second World War they had tremendous and urgent requirements for reconstruction, not only of the bombed out buildings but for the replacement of worn out machinery. During the war all replacements that were postponeable had been postponed and British industrial equipment was in an extraordinarily run down condition when the war ended. Now, the situation has received so much publicity in the United States that I don't know that it serves any useful purpose for me to go into detail, but the first step in trying to provide for an economic and financial reconversion, in other words, a return to more normal conditions, was the Bretton Woods Agreements. No sooner were they enacted than it became obvious they were grossly inadequate. Under the Bretton Woods Agreements Great Britain was entitled to borrow, as I recall it, $425,000,000 per annum for four years, and that was inadequate. Then a British loan was negotiated. The Bretton Woods Agreements were finally approved by Congress, I think, in June, 1945—Lend-Lease ended in August, 1945, and the loan negotiations started almost [fol. 2507] immediately thereafter, in September of 1945. They were concluded in December, 1945, and Congress approved them in the spring of 1946, and the loan amounted to, as I recall it, 3¾ billion dollars in cash, plus about half a billion dollars in miscellaneous war assets. The loan was accompanied by a stipulation that the English should begin multilateral payments on July 15, 1947. Up to then the British, in their international economic relations with other countries, had built up an extremely complex system or network of special agreements. There were trade

agreements, which were frequently bilateral, and usually very specific as to quantities and stipulations under which the respective quantities moved; there were payments and clearing agreements. For instance, the Spanish agreement which was in effect before the war, in 1939, which appears in our first exhibit, was replaced in 1940 by a different agreement and that, in turn, was replaced by a different payments agreement in 1946. In 1945 and 1946, while the English had these difficulties, they built up a new system of agreements to replace the system of wartime agreements, since they could not trade and make payments without very specific agreements with other exchange control areas.

Q. Well now, Mr. DeVegh, before you go into that, I [fol. 2507-A] would like to ask you this question. You have described the general economic situation of England at the close of the war. Now, did the British Government take any steps in respect of controlling trade based upon the situation that you have described?

A. Oh, very extensive steps. The British economy was, as I said a moment ago, more completely converted to warfare than any other allied economy, except possibly that of Russia. This meant, concretely speaking, that all British industrial activity was under Government supervision, with the various Government authorities in control of production and trade having virtually unlimited powers of directing industrial production. While on a much more limited scale, something similar occurred in the United States as well, but of course here the Government controls on production were much more limited than in England. This entire system of production organization in England implied also an integration of the regulation of imports into this system and, of course, of all construction within the country, and so on, because England, after all, operated on importing raw materials even during the war, and the British Government, therefore, was the principal wartime importer, importing, for instance, all the food. To this day, the bulk of British food purchases occurs in the form known as bulk [fol. 2508] purchases. In other words, the British Government makes an agreement with Argentina's Government saying they are going to take so many million pounds of meat per month or per annum, and a very large part of British trade is to this day so conducted, and during the war virtually all of it was so conducted.

Q. Yesterday we talked about currency controls and we talked about export restrictions and export licenses. What if anything did the British Government do, or continue, after the termination of the second World War, in respect of export restrictions or import restrictions or currency controls?

A. Well, the entire wartime control system was maintained virtually intact, with few local alleviations, and I mean this very comprehensively, including internal production controls, although some relaxation occurred. The entire exchange control system was maintained under the original war powers acts until 1947. In 1947 a new foreign exchange control act was passed, which is a part now of the permanent British legislation, authorizing the treasury to be virtually perpetuated in the control of exchange.

Q. So that by the exchange control act of 1947, the effect was what?

A. Perpetuation of the war powers.

[fol. 2509] Q. In dealing in foreign currencies?

A. That is then subject to the authority and permission of the British Treasury and its appointed agent, which is the Bank of England, and provides for licensing to do certain types of transactions.

Q. Looking specifically at the matter of imports into England from any outside country, such as the United States, what did the exchange control procedure that was adopted and followed in England after the termination of the second World War mean in respect of imports into England?

A. Well, the exchange control act, as such, controlled merely the importation of cash, securities and other evidences of ownership and indebtedness. But since it comprehensively controls sterling out-payments, and the most important part of the out-payments of sterling being the payment for imports, it by implication makes imports subject to exchange control, and as a matter of practice foreign exchange is not made available for the purpose of importation to British subjects in the United Kingdom unless it can be shown that the purpose of the importation is approved by the Government authorities that otherwise supervise the particular activity. I mean, in other words, the approval of the Board of Trade or of the Regional Industries Committees and of other organs is a prerequisite for prov-

[fol. 2510] ing that the importation is meritorious and, therefore, deserves an exchange permit.

Q. What general test is applied in determining whether or not a given import will be permitted and foreign exchange made available to purchase it?

A. Well, the general tests are as many as there are cases. The basic principles are, first of all—well, if we generalize with respect to all imports, that's one case. With respect to all imports the governing considerations are the source, insofar as foreign exchange supplies are concerned. I referred previously to this very extensive network of international agreements. The entire world, through this network of agreements, was broken down into five broad groups of countries. Within each group the rules were different, and the availability of exchange was also different. The commitment of the British Government to provide or not to provide exchange is different. So, therefore, that is the first consideration from the viewpoint of the exchange control authorities. From the viewpoint, then, of the individual internal control authorities, from the viewpoint of whether they approve and support the application for exchange, the situation then breaks down according to the announced policies of the British Government with respect to various industries, various situations, [fol. 2511] and with respect to the established policy whether there is an announcement or not.

The Court: Is that policy determined by law, or is it a policy determined by the respective administrative groups?

The Witness: With respect to foreign exchange?

The Court: I understand the foreign exchange is a legal enactment.

The Witness: That is a legal enactment supported by international treaties.

The Court: Yes, but this matter that you have described where you assume that a British manufacturer or merchant wants to import goods from the United States or elsewhere and pay for it in pounds sterling, you described a policy. Is that policy a matter that is statutory, or is that a policy to be determined or to be applied by the particular group that acts on the application for import?

The Witness: The original statutory authority was the defense regulations of 1939. I do not know the full legal history of how the British Government's war powers were held, if they were continued or re-enacted or terminated

[fol. 2512] and replaced by new enactments, so I cannot state this in detail. But, for instance, last November Mr. Harold Wilson, who I believe was the Minister of Commerce at that time, made a statement with respect to the export policy, in which he publicly stated that the industries producing for export, or replacing export, or indirectly promoting export, will receive favored treatment with respect to all materials, as opposed to industries producing for domestic consumption, and they had their special designations of regional export committees and regional industrial committees to supervise that situation in their respective regions. Now, what the statutory authority of these regional committees is, other than what continued under the old defense regulations, I do not know. But from the statement of Mr. Harold Wilson, we do know they not only exist but are continuously being used by the respective Government agencies to execute their policies. You see, the big constitutional change which has occurred in the country is this, that whereas during the 1930's the official declared ideology of the British Government was non-interference in private business and, therefore, any interfering occurred first indirectly by moral suasion, then, [fol. 2513] if necessary, by legislative enactment, but just as little as possible, and trying to keep down control devices—it rather opposed, for instance, the German and Italian method of industry control—during the war there occurred what amounts substantially to a very extensive socialization of British industry, not from the viewpoint of ownership but from the viewpoint of integrating the operations.

The Court: In other words, the attitude of non-interference has given place to Government domination?

The Witness: During the war entirely so, and since the war the British Government has been a Labor Party Government which has believed in the giving of direction to the economy from above, insofar as a number of industries are concerned, and forcing the other industries to pursue the objectives of the State, as the Government sees it, and, therefore, they very deliberately go on using the wartime control measures and their successor measures as methods to enforce what they consider the most desirable policy or the necessary policy from the viewpoint of rebuilding England.

[fol. 2514] Q. Mr. DeVegh, going directly to the question of availability of a given product in the United Kingdom, what has been the practice of the British authorities, the Board of Trade, with respect to issuing import license for products for importation into Great Britain with respect to availability within the confines of the United Kingdom?

A. It is my understanding that the British Government will not permit the importation of goods that are produced in quantities they consider sufficient in the United Kingdom.

Q. Now, yesterday you were talking to some extent about the original formation of a sterling area or sterling block that commenced in the early 1930's and continued throughout the 1930's up until 1939, and you described in some detail how the thing operated within that area from 1930 after the collapse of the pound sterling in 1931 up until 1939. Now, has there been any development in respect of the sterling block or sterling area since the beginning of the war in 1939 and since the termination of the second World War in 1945?

A. Well, I touched upon this briefly before when I said a complex network of agreements was built up by the British Government classifying all the countries in the world in five small groups.

Q. Will you talk a little louder?

[fol. 2515] A. I am sorry. During the war the control system was of course very complete, but this development of the postwar currency agreements did not begin until 1945. In 1945 the British Government began to negotiate systematically with most countries in the world with respect to the mutual handling of their foreign exchange and trade relationships. A series of agreements was concluded during 1945 and 1946 which were set up along these fairly standardized patterns, although according to the individual requirements of each foreign country there were slight deviations. Moreover, with each country there exists now a minimum of three agreements on foreign exchange and in some cases many more; and the reason for this is as follows: that in 1945 and 1946 the first objective of the British Government was to continue the control system and to adapt it to postwar requirements by making it more flexible, as flexible as seemed indicated under the circumstances.

These agreements which I shall refer to as control system 1946 agreements, although some were negotiated before

and some a little later. These 1946 agreements distinguished rigidly between strictly speaking sterling area countries, which were the United Kingdom, the Dominions with the exception of Canada and Newfoundland, but of course [fol. 2516] including both India and Pakistan later on in that definition, all Colonies, Protectorates and Mandates, and in addition Iceland, the Farroe Islands, Iraq and Trans-Jordan. This group of countries were the sterling area countries, and among themselves sterling was interchangeable. Transfers out of the sterling area countries to the other four groups, however, were prohibited except under license.

Q. By that you mean that if anybody in the sterling area countries you have just delineated wanted to purchase outside of the area so described it was necessary to get a current import license?

A. Bank of England permission.

Q. All right, now, were there any other groups of countries involved in this network of agreements?

A. Yes, sir, the next group in importance from our point of view, was the so-called American area accounts. The American area accounts were sterling accounts derived from current transactions belonging to residents of the United States and its possessions, the Philippines Republic and sixteen out of the twenty Latin-American Republics. I can give the names of all the sixteen but I don't think it is necessary, the exceptions are, the four that are not in the American account system, it is perhaps easier to list, are Argentine, Brazil, Uraguay and Paraguay. Now, [fol. 2517] in American area accounts sterling was transferable into dollars, and dollars and other currency of the American area accounts were transferable into sterling, and into other countries' currencies—this is getting to be very confusing—into other currencies in the so-called transferable account area, which is the next group of countries. But those transfers did not work in the reverse direction.

Q. By that you mean what?

A. By that I mean that a Peruvian, for example, could pay New York in sterling and ask dollars for his sterling if obtained from current transactions, and he could also ask London to pay Buenos Aires with his sterling, but the Argentine would not be allowed to reverse the transaction and ask London to pay Peru. The logic of this complicated

arrangement was that the British had to have an increasing area of transferable accounts through the inclusion in a British sterling area, within which multi-lateral trade and payments would take place along organized patterns to the exclusion of the American area accounts from the benefits of the transferable account area.

The transferable accounts countries and the next group, namely, the bi-lateral account countries frequently changed place. For instance, Netherlands was a transferable ac- [fol. 2518] count country. Belgium was a bi-lateral account country. I do not know yet what the outcome of the Benelux negotiations were with respect to the new agreements. There is a new agreement but I don't have the text of it. France was a bi-lateral account country. Its presently negotiated customs union with Italy might protect that status. The devaluation of the franc presumably resulted in a supplement to the previous agreement, of which I don't have the text as yet.

The bi-lateral account countries were countries with which a strictly bi-lateral arrangement existed, so that transfers from that country to sterling and from sterling to that country were permitted either unconditionally or under very liberal licensing agreements, but no transfers into and out of other currencies, including the transferable accounts currencies, were permitted.

Q. By that, then, I take it you mean the bi-lateral countries. You said Belgium was a bi-lateral.

A. At one point Belgium, and for instance most of the iron curtain countries were bi-lateral countries. That meant England would have an agreement with Yugoslavia, by which the payments were handled by the Bank of England and through one bank in Yugoslavia, and the transactions would have to go into that one account, and no [fol. 2519] transfers into or out of that account were permissible without the Bank of England license.

Bi-lateral accounts were with former iron curtain countries, and Turkey, and in the course of various changes also Denmark, Belgium and France. The transferable account countries are countries like Spain, I believe also Portugal, Sweden, Norway, Egypt, Iran, Siam, those countries that were economically rather closely tied to the British Empire and where the Empire trade relations and payment relationships were traditionally in effect. I mentioned also the Netherlands in this connection.

Then there was a fifth group called the residual accounts, which included the Soviet Union, and then a few other territories, Albania, for example, was a residual account, and a few very minor other countries, the only one of any importance in the residual accounts was the Soviet.

Now, this system, as I said had been first negotiated through 1946, then in 1947, and when the multi-lateral convertibility clause of the British loan agreement—

Q. That is with America?

A. —of the American-British loan agreement was about to go into effect on July 15th, new supplementary agreements were negotiated with the transferable account coun- [fol. 2520] tries making their accounts multi-laterally convertible. In other words, the system then was that both transactions had to be licensed according to the internal requirements of Spain, for example, and England, respectively. The Spanish Government had to approve the importation, and the British Government had to approve the exportation. And exportations were subject to controls. However, once the transaction was approved the exchange was not permitted to be an obstacle. And in the case of the Spanish clearing, the Bank of England and the Instituto Nacional de Moneda Extranjera in Madrid agreed they will accept each other's overdraft to the amount of 2 million pounds sterling, one way and 88 million pesetas the other way, and beyond that, after July 15, 1947, it permits multilateral transfers from the Spanish monetary area into any other area of the world through London, and from the sterling area into any other part of the world through Madrid.

Now, this network of agreements was all predicated on the expectation that those other countries will not use the freedom so obtained for a run on the dollar balances of the Bank of England, similar to the run in 1931, but actually, this is exactly what happened. As soon as the multi-lateral provision went into effect on July 15, 1947, [fol. 2521] everybody began to draw out not only all current sterling but also some other sterling accounts which the Bank of England hoped they would not do and which under rigid administration of the agreement they weren't entitled to do. And the result was that the bulk of the British loan was wasted, a very high percentage, something like half of it or more disappeared in 35 days. And those

35 days from July 15, 1947, to August 20, 1947, were virtually the end of the British loan and the end of the liberalizing provisions in the agreement system.

On August 21st the British Government in exchange of letters with the U. S. Treasury announced it was not able any more to maintain multi-lateral transferability of sterling on current transactions. The Treasury agreed, and all these separate agreements were cancelled and renegotiated, and this process of renegotiation, which resulted in the third of the three economic agreements which I mentioned before, was in process throughout this fall and this winter, interspersed of course with the Geneva, the ITO and the Western Union negotiations which went on, and which of course have a bearing on the agreements that will result foreign-exchange-wise as well.

Q. Now, the operation of the sterling area in the four general classifications of accounts you have described, [fol. 2522] what effect if any does that have upon trade from a country like the United States that is listed as an American area account country for the purposes of trade in sterling exchange?

A. It tends to remove that trade from what might be described as normally competitive trade and makes it strictly administered trade. I mean, in other words, the British Government is going to administer that trade according to how much there is available in dollars, which depends on how much Lend-Lease they get, how much in loans they get, how much in European economic aid they get. They will spend those dollars and they will spend them in a manner that they consider appropriate to the public interest. And questions of comparative costs, regardless of exchange considerations, competitive price considerations, and so forth, do not enter into this form of trade, although the total of this trade has been very substantial, in fact higher than ever before in history in the aggregate.

Q. To what extent is that reflected by the fact the American Government has made dollars available to the American import-export bank in the Bretton Woods Agreement and the British loan now contemplated under the ERP?

A. Well, as I just said, it is these loans and gifts and subsidies and other forms of aid that have maintained [fol. 2523] United Kingdom imports from the United States at their highest level in history during the last seven years.

Q. I will ask you whether under the existing circumstances in respect of the British Empire or United Kingdom and the sterling area countries generally, the ones you listed in the first group, whether it would be possible for an American manufacturer of anti-friction bearings to sell any substantial quantity of bearings into that area on a competitive basis in competition with the anti-friction bearing industry in the Empire or in the United Kingdom as of the present time?

A. I do not believe that it would be possible on a competitive basis. I believe that it is not only possible but presumably taking place in a substantial scale on a non-competitive basis. In other words, after the British Government has decided that the entire bearing manufacturing capacity of England is wholly occupied as far as can be seen ahead and has sold its entire output forward as far as it can be seen ahead, if then it develops in connection with reconstruction or expansion of industry or for whatever other purpose the United Kingdom still needs bearings, then the British Government will consult the Board of Trade, the respective trade associations, and so forth, and see where else they could get bearings; and, presumably, [fol. 2524] first they will look within the sterling area, then within the transferable accounts area, because there there are no special problems, and if they find that there also the manufacturers are operating at capacity as far as can be seen ahead, as a source of last resort they will come to the United States, say, to use as an actual state, and say, "Well, how much can we get?"

This, in fact, is the significant change that has occurred in international trade as a result of the disruptions of two World Wars and the gradual drift towards increasing administration of trade production in each country but especially in the European countries. Namely, that whereas twenty years ago, or thirty years ago—well, thirty years ago was the first World War, let's say forty years ago—companies would compete internationally in international trade against each other across national borders regardless of whether the industry behind the tariff protection was a hundred per cent employed or not, today, with the full employment policy in each country, the insistence of each country in maintaining full employment, increasing foreign exchange restrictions regardless of whether that

means too much imports, too little exports, and so forth, the situation with respect to trade will be that the administered trade will flow through administratively [fol. 2525] approved channels. A system of ranks of imports is established in which domestic production has to be completely taken care of, has to have full employment, after that you look around and see whether the other countries with whom you have intimate, mutual agreements, clearing payment agreements, or that are members of the proposed Western Union System, whether they are also all fully employed or have extra capacity; and it is only after all those sources have been exhausted that the question arises whether additional imports should be taken in from the American area.

Now, it so happens that since the end of the war the need for products was so substantially beyond the ability to be satisfied from current capacities, that the United States that is the country accounting for two-thirds of the world's manufacturing capacity today, and at the same time being a country which was not devastated by war, was the source of last resort for a tremendous quantity of manufactured products. It made these products available and made these products available in virtually heroic amounts, and that is the reason trade out of the United States has been so substantial in recent years and is likely to continue very substantially, as long as this European recovery program, I think it is now called the Economic Cooperation Admin- [fol. 2526] istration, is in operation. During this time it is the deliberate policy of our government to help Europe to reconstruct itself, thereby to permit Europe to consume and absorb industrial products on a very large scale.

Q. Would it be correct, Mr. DeVegh, to say that volume of export trade from the United States would continue as long as the United States makes dollars available for the purchase of the products in America?

A. Only as long as dollars are available. It is, after all, very easy to foresee once Europe is reconstructed, once this capacity of production in Europe has been built up to the targeted levels, the present need of Europe for additional manufactured imports will very sharply decline, and at the same time with the end of the loans its ability to pay for them will decline very sharply, except insofar as by their

system of transferable accounts, widening their area of export trade, they manage to take export trade away from the United States, and from third countries, but the third countries have become very few in number.

Q. What do you say as to whether or not an American company could compete under existing conditions within a sterling area by any other method than by having a plant over there either wholly owned or partially owned?

[fol. 2527] A. That is the only way in which it can compete with an English producer, because that is the only framework within which it can place itself in a competitive position with the English producer.

Q. And why do you say that, Mr. DeVegh?

A. Well, I say it because of and with reference to this institutional transformation that has taken place. During the last thirty years under the Sherman Act the American companies are obliged to compete. Under European practices and methods, legislation and regulation, relating to the administration of foreign trade, that type of competition has become impossible for all practical commercial purposes across national borders. Therefore means have to be found, if production and trade is to be increased and enlarged, by which those American companies can still compete with the foreign companies within the territory of the foreign country. The only way that I can see that that can be done is by local manufacturing procedures in those cases in which there exists a substantial local industry. Of course that is not true of cases in which a local industry either does not exist or is obviously inadequate or is obviously not of strategic significance. A consideration of strategic significance enters in two ways into administered trade. One is that when the industry is strategically signifi-

[fol. 2528] cant each country tries to maximize its own output so as to be independent of imports. If it is strategically irrelevant then the countries don't want to waste any money in dealing with that under the foreign exchange system. So there are many distinctions, including the two named, in undertaking to compete with an important industry which exists in a given country which has an exchange control system. The only way you can compete with it from the outside is by going into the country and producing it.

Q. We haven't said anything about France and the

continent of Europe generally. What is the situation of France and the continent of Europe generally as to import controls or currency restrictions?

A. Well, the situation varies in its detail from country to country. The over-all generalization stands that every country in Europe applies exchange controls today. The only country in which these exchange controls do not operate significantly in the sense of trying to administer trade according to ultimate State policy is Switzerland. I mean that Switzerland has accumulated tremendous gold reserves during the war and the Swiss controls largely serve defensive purposes, like the prevention of inflation within Switzerland, and so forth. In the belligerent countries [fol. 2529] the primary consideration—I mean the former belligerent countries, of course including Italy—the primary considerations are reconstruction and the use of the dollars obtained on loans to the best possible advantage for the national economy as determined by the government and not by competitive conditions, of course.

Q. I have here, Mr. DeVegh, what has been marked Defendant's Exhibit 181. Will you identify that, please?

A. This is a reprint from the Foreign Commerce Weekly, which is a weekly publication put out by the United States Department of Commerce, and it has the title of "A Summary of Import License and Exchange Control Regulations in Principal Foreign Countries". It is merely a short reference table to give at a glance the requirements for traders, and if additional details are necessary they can be gotten by referring to the Department of Commerce, applying to the transaction in which they want to engage.

Mr. Ketterer: We offer Defendant's Exhibit 181.

The Court: It will be received.

[fol. 2530] Direct Examination of Imrie DeVegh (Continued.)

By Mr. Ketterer:

Q. Mr. DeVegh, before the adjournment you were asked this morning whether or not the matter of import restrictions as they were followed in England were based upon policy of administrative bodies in England, or whether they were based on statute. Have you made any check of that during the recess at noon?

A. I have, Mr. Ketterer.

Q. And what is the situation?

A. The situation is that under the Supplies & Services Act wartime controls in England were continued, and I believe that the Act, whose text I did not have with me, sets provisionally a time limit of five or six years to the continuation of the wartime powers, but it does continue all wartime powers.

Q. Now, I asked you this morning whether or not an American anti-friction bearing manufacturer could compete in England from the outside with the anti-friction bearing industry operating in England, and you gave your opinion about that. I want to ask you whether or not an American anti-friction bearing manufacturer at the present time could compete in France with bearings manufactured in the United States, with an anti-friction bearing industry op-
[fol. 2531] erating in France, on a profitable basis, by exporting bearings from the United States to France?

A. The answer is no, on a commercial basis. The possibility of selling to the French Government exists, under Lend-Lease—well, not Lend-Lease, but under the European Recovery Program and similar forms of aid.

The Court: Except selling to the French Government?

The Witness: Except selling to the French Government, yes, or to French Government approved purchasers.

Q. Does that also apply generally as to sales in the European market?

A. Generally, yes. Individual exceptions, I should imagine, could be found but they would be trivial in amount.

The Court: May I interrupt to ask a question?

Mr. Ketterer: Yes.

The Court: Was Citroen taken over by the French Government? I don't recall. It seems to me some time ago I had read accounts of Citroen being taken over by the French Government.

The Witness: That I don't know, your Honor. I believe that Renault was so taken over, but I'm not sure about
[fol. 2532] Citroen.

The Court: I think that's right. I do recall the fact that Renault was taken over by the French Government, but I did not recollect whether Citroen was.

The Witness: I'm sorry, your Honor, I don't know.

Schedule of import duties of the United States to

June, 1946, was thereupon marked by the Clerk, for identification, Defendant's Exhibit 182.

Q. Mr. DeVegh, I have three sheets here clipped together, marked for identification Defendant's Exhibit 182. I will ask you to examine those, please.

A. This is the United States import duties brought up to date, on June, 1946, prepared by the United States Tariff Commission, and two pages that have been photostated are the pages showing anti-friction bearings, that is to say, showing United States tariff rates and their changes on anti-friction bearings.

Q. That shows the tariff rates over what period?

A. It shows them under the Tariff Act of 1930 and amendments.

Q. And up to what time?

A: Up to June, 1946.

[fol. 2533] Q. That covers the imports, or the rates that apply to the imports of anti-friction bearings into the United States?

A. That is correct.

Mr. Ketterer: We offer Defendant's Exhibit 182.

The Court: This tabulation includes things other than anti-friction bearings.

The Witness: That is correct, your Honor, but you see we just had this part of it photostated.

The Court: Paragraphs 321 and 322 refer to bearings. Were there any other portions that are relevant to this matter?

The Witness: As I sit here, I do not believe so, but there might be something on the next page (examining exhibit). As far as I can see now the only page that matters is Page 174.

The Court: And only those two paragraphs?

The Witness: That is correct.

The Court: It may be received. I didn't know whether you wanted to offer the entire exhibit or just the one showing the import duties which obtained as to anti-friction bearings only.

Mr. Ketterer. That's the part, your Honor.

Thereupon a document was marked for identification, by the Clerk, Defendant's Exhibit 183.

[fol. 2534] Q. I have here four sheets that have been

clipped together, Mr. DeVegh, marked for identification Defendant's Exhibit 183. I will ask you what they are, please.

A. These are excerpts from the United States Tariff Commission study of anti-friction bearings, and the first sheet shows the 1929 invoice analysis of the weights of bearings and shows the ad valorem rate of duty on bearings of different sizes arranged in the order of size. It shows that there was only one item, the smallest size, on which the duty was less than 50 per cent, and on the biggest sizes the duty went over 100 per cent.

Q. And as to the succeeding pages?

A. On the succeeding pages there are three parallel tabulations containing the identical information with respect to the three tariff classifications of anti-friction bearings in the United States for the years 1926 to 1943. They show the rate of duty prevailing in each year, the amount of duty, the imports for consumption, both by weight and in dollars, then the equivalent ad valorem duty rate, and finally the average price per pound of the imports. Of course, the war years show trivial imports, but they are explained because of the complete interruption of international trade. The first of these tabulations refers to balls and rollers, the second one refers to ball bearings [fol. 2535] and parts, and the third one refers to roller bearings and parts.

Mr. Ketterer: We offer Defendant's Exhibit 183.

The Court: It may be received.

Q. Now, Mr. DeVegh, having in mind the equivalent ad valorem duty rate percentage-wise as is shown on the sheets that form a part of Defendant's Exhibit 183, I will ask you whether or not foreign anti-friction bearing manufacturers could sell in this country products manufactured in any European countries over a tariff barrier that size on a profitable basis, in your opinion?

A. Over a tariff barrier of that size, it would seem to me extremely unlikely. As a matter of fact, it would seem to me very unlikely even over a somewhat lower tariff.

Thereupon a document was marked by the Clerk, for identification, Defendant's Exhibit 184.

The Witness: As a matter of fact, your Honor, I don't know whether I may add to my previous answer, that the

matter is not even a question of likelihood or opinion, it's a matter of record, in that the tariff was in such amounts as shown on these tables, and the amount of imports accordingly was never more than 1 per cent of the domestic [fol. 2536] production, except I believe in one year in which it was 1½ per cent.

The Court: Why do you think it was necessary to impose that sort of rates? The likelihood of imports was almost impossible because of the testimony you have given previously.

The Witness: Your Honor, I believe—

The Court: Was it just simply a protection against a possibility?

The Witness: That would be my belief. The industry, the anti-friction bearing industry, I believe is older in Europe than in the United States—

Mr. Day: Would you talk a little louder?

The Witness: I'm sorry, sir. I believe that the anti-friction bearing industry is older in Europe than in the United States, and I believe that the tariff protection was high even in the 1913 Underwood tariff, and remained high in the 1923 tariff, and I believe also that once a high tariff rate gets established it comes down rather slowly. We have always been a high protectionist country, and manufactured imports into the United States of a kind in which American production was substantial was seldom encourage by tariff [fol. 2537] policy. Now, the reciprocal trade agreements act provides for two reductions in the anti-friction bearing rates, and I believe there is a somewhat further reduction under this general agreement that was negotiated a couple of months ago. But in the meantime the American industry has grown to be outstandingly the biggest in the world, and presumably for American production requirements of long runs a low cost producer, although I have no firsthand information on specificially ball and roller bearing costs, so I am merely generalizing from what I know to be the pattern in most of this kind of capital goods industries.

The Court: The question I had in my mind was whether or not, in view of your testimony of the inability of foreign manufacturers engaging in business in anti-friction bearings in the United States, this sort of tariff was a mere

reprisal for similar enactments or similar measures on the part of European countries.

The Witness. No, your Honor, it antedated them.

The Court: It antedated them?

The Witness: It antedated the European enactments.

[fol. 2538] The Court: Then the others were reprisals for this?

The Witness: Yes, in specific instances that may be.

The Court: But both barriers are still maintained, despite the economic impossibility of engaging in trade?

The Witness: Both tariff rate schedules are in existence. Tariff schedules have not been repealed. There exists instances where they have been superseded by direct controls. For instance, in the case of France, I believe that the French have actually suspended the application of their tariff system for the period of controlled importations, but the tariff act remains on the statute books.

The Court: Do you feel that such tariff rates are necessary, in view of your conclusions relative to the inability of foreign manufacturers engaging in business in the United States?

The Witness: As a permanent measure, I wouldn't think so. As an anti-dumping measure, we might arrange to have [fol. 2539] a high tariff, it might be indicated, but that would come under the Anti-dumping Act anyway, not under the regular tariff structure.

The Court: Then the regulations of the European nations, and those that you have made reference to, which control the market on imports and exports are not sufficient to control the situation thoroughly?

The Witness: Oh, they are sufficent. The European tariffs are at present the relatively least important impediment to trade, although they have been important in the past.

The Court: I wasn't referring to the tariffs, I was referring to the regulations to which you have made reference, such things as the exchange regulations, and the various other regulations, whether or not in view of all of those regulations there is any necessity whatsoever of maintaining a tariff wall such as is set up and sought to be introduced in this case?

The Witness: Well, quite frankly, your Honor, at present the Europeans don't have an excess of bearings for export and they wouldn't export, probably, even if we didn't have

any tariff at all. On the other hand, there existed situa-
[fol. 2540] tions in the 1930's when countries anxious to secure foreign exchange were dumping abroad below cost, and we had anti-dumping duties against them.

The Court: That was in the 1930's.

The Witness: In the 1930's.

The Court: The reason I asked the question was because it seemed to me your conclusions were quite definite on the inability of a European manufacturer being able to engage in business in the United States on bearings—

The Witness: Over the tariff barrier.

The Court: No, no, selling in the United States irrespective of the tariff barrier, such as is imposed by the United States tariff. That is, you described such situations as the licenses, that it was difficult to obtain export goods, you described the situation with respect to the sterling block, you described various other things which added to the inability of a manufacturer of anti-friction bearings and other goods of similar type selling any of their merchandise in the United States.

The Witness: Your Honor, the primary importance of European controls is with respect to goods going inward [fol. 2541] into those countries. With respect to goods going outward from those countries, there is an export licensing system in those countries, but it is generally the policy of those countries to try to stimulate exports to the dollar area. It is the in-flow of goods into the United Kingdom from the dollar area, that is restricted.

The Court: I know, that was your statement a moment or two ago with reference to the situation in reverse. That's the reason I asked the question, that's what prompted me to ask the question. I believe Mr. Ketterer asked the same question in respect to goods being brought into the United States.

Mr. Ketterer: I think, if your Honor please, the question I asked was tied to the tariff barrier that has been in evidence.

The Court: That's the reason I asked the question. I'm now saying exactly what the witness has tried to show, that the reverse of the situation, that is, the import into the United States by foreign manufacturers, became im-

possible, as you say, because of the high tariff wall set up by the United States.

The Witness: That is so.

[fol. 2542] The Court: And that is the reason you say that becomes impossible?

The Witness: That is so, your Honor, and because of the enormous industry that has grown up behind this tariff wall.

Q. Mr. DeVegh, I have some photostats marked together as Defendant's Exhibit 184. I will ask you to identify those, please.

A. This is the most recent report of the United States Tariff Commission on metals manufacturers in general, and the pages that have been photostated from this report are the pages relating to anti-friction bearings.

Mr. Ketterer: If the Court please, there is a part of this report that I think comes within the realm of opinion evidence, on the page that—it's on Page 361, under the heading "Post War Long Term Consumption, Products, and Imports." The balance of that page, I think, is pretty much a matter of opinion from the standpoint of the writer of the report. I would like to offer the report with the exception of that portion that appears on Page 361.

Mr. Nitschke: Your Honor, I think there is a further portion of this report that also comes within the definition of opinion. That's the portion beginning about the middle of [fol. 2543] Page 360, where the author of this report says, "If any bearing in the first class should come to be in substantial demand, its production would probably be undertaken in domestic plants" and so forth. He also talks about probabilities further on, what may be expected, what is likely if certain things happen. That comes down to that portion headed "Post War Long Term." It's a prediction on the part of whoever wrote this as to what would happen under certain conditions.

Mr. Ketterer: I think perhaps that one sentence you refer to, Mr. Nitschke, is in the nature of opinion. The balance of that paragraph, however, it seems to me would be factual.

The Court: You are now referring to the paragraph which says: "It is probable that the cost of producing those types of bearings which are made on a small scale is lower in Sweden" and so on? You think that is not opinion?

Mr. Ketterer: No, he is expressing a probability as to a fact, and in the part that Mr. Nitschke mentioned—

The Court: Do you think an expression as to probabilities as to facts is any different? One is opinion and the other [fol. 2544] is an expression of probability as to what might happen. It undoubtedly comes under the same objection, does it not? I take it that the other portions of the exhibit which are offered serve the purpose for which you are offering it and there is little need of entering into controversy about the balance of it, because it certainly does not tend to prove the proposition you are seeking to prove.

Mr. Ketterer: Oh, no. As a matter of fact, your Honor, I don't want to take the Court's time at this point to read this because it is in the nature of cumulative of material that has been offered both in written form, in tabular form, chart form, and by the testimony of witnesses, but I should like to offer the portions of it that are not within the opinion ban.

The Court: Either opinion or forecast of what might come.

Mr. Ketterer: That's correct.

The Court: Is there any objection to offering it under those conditions, Mr. Nitschke, if only those portions of it are offered which do not purport to give an opinion, or [fol. 2545] those portions which purport to forecast what may happen in the future?

Mr. Nitschke: Or which attempt to guess at what exists at the present time. Some of these are statements of probabilities.

The Court: That's your third point, and I don't imagine there is any objection to excluding those portions of it.

Mr. Ketterer: No.

The Court: Inasmuch as you do not propose to read it, if it is offered only in support of the contentions which are not predicated on opinion evidence, or the things that Mr. Nitschke has referred to, it may be received.

Mr. Ketterer: That's perfectly all right, your Honor.

Q. One further question, Mr. DeVegh. Have you an opinion as to whether or not the control system both as to

imports and currency in the United Kingdom and England will continue for the foreseeable future?

A. I see no evidence by which I could set any reasonable time of termination. It seems to me that the conditions which brought them into being are such as to be with us for a long, long time. I have previously indicated my [fol. 2546] serious doubts as to whether the end of the period of large foreign loans was going to be a period in which these countries will be particularly anxious to receive additional imports from the United States. It seems to me that the end of the European Recovery Program subsidies will be a period in which exports from the United States have to be very sharply curtailed, not only because the subsidies will end, but also because the domestic manufacturing capacity of those countries will have been very substantially increased. This is merely with respect to the economically obvious. In addition to that, we have no reason to assume that the extreme unbalance of international political power which now prevails on the Eurasian continent is going to change, and as long as western Europe feels as vulnerable, and menaced by Soviet power and by the existence of Soviet power, almost regardless of the expressions of that power in aggression, it is likely that the shell within which these nations are living will continue and get intermittently even harder, rather than softer, although undoubtedly from time to time there will be brief, or possibly even, let's hope, not so brief intervals in which there are or there will occur relaxations.

Mr. Ketterer: I think that's all.

[fol. 2547] Cross Examination of Imrie DeVegh.

By Mr. Nitschke:

Q. Mr. DeVegh, during your testimony, from time to time, you expressed the opinion that you did not think foreign companies could sell in the United States, or American companies could export, on a profitable bases, antifriction bearings. What do you mean by the words "profitable basis"?

A. I think that the expression that I tried to use was "on a commercial, or commercially competitive basis." I had in mind very much the characteristics of the capital goods industries and the part that components play in

capital goods production. I was referring especially, therefore, to these commercially competitive aspects rather than to the fact whether any single transaction was profitable or unprofitable.

Q. In other words, you are familiar, are you, with the practice of some American companies, I think particularly in the electrical equipment field, for example, of selling for export at much lower prices than they sell domestically, in order to increase production and, therefore, lower unit cost?

A. I'm not particularly familiar with that particular practice in the electrical equipment industry, but it's pos- [fol. 2548] sible that that practice exists.

Q. You are familiar with the fact that it does exist in some industries?

A. I don't like to say that. I have heard of it.

Q. A profitable selling price for export might be different than a profitable selling price for domestic consumption?

A. Well, I don't really know. I would have to know more about the specific case you have in mind in order to be able to say yes or no. I mean the idea of profitable exportation was not my idea. I know I was referring to commercially competitive exports over a long period of time, and how in any particular instance the cost accounting should be handled is a matter for the individual instance.

Q. In other words, then, you wouldn't want to express any opinion as to whether or not sales could be made on a profitable basis?

A. I was expressing an opinion on the point that in export trade, if over a period of time you want to engage in export trade, obviously you will expect profits on that operation, but whether the operation was profit-wise soundly planned or not is one question, whether it in [fol. 2549] effect constitutes a commercially practicable, competitive operation is something else again, I think, over a long time.

Q. You were referring to the latter?

A. I was referring to the latter, yes.

Q. Now, I believe you stated that you thought it would be impossible for any American firm to sell in England today on a competitive basis, I believe you used the expression "competitive basis" in that connection.

A. Yes, sir.

Q. Did you mean by that that the entire area of competition was closed?

A. The entire area of competition on a price basis within the United Kingdom today is substantially closed. That does not mean that sales are impossible. What I meant, and I think stated in some detail, was that in making sales in the United Kingdom in an industry that exists and has substantial capacity within the United Kingdom, the considerations that will determine whether a sale will be made or not will not be price considerations, such as would enter into competition with respect to imports into the United States. In other words, if, for instance, a Canadian were manufacturing something of which there existed United [fol. 2550] States consumers, that Canadian could sell into the United States over the tariff barrier, provided he got the export permit from Canada, and sell his product in the market on equal terms, from the viewpoint of the buyer, as anybody situated on the spot. The buyer of that product would not have to look at the fact that one potential seller comes from Detroit, Michigan, and the other potential seller comes from Windsor, Ontario, whereas the English buyer is, indeed, compelled by his government to see whether the seller is physically located within England or within a transferable account country, or within an American account country, and the buyer has no choice to buy the cheapest product. The buyer has to buy the product that his government tells him to buy, whether it's cheaper or more expensive, according to the location of the plant to which the government wishes the business to go.

Q. Well, now, does the British Government tell the purchaser in England which plant he shall buy from?

A. No, sir. I meant to say according to the location, the British Government will say, "These bearings are available within the United Kingdom. You wait until the British producer will deliver to you the bearings," and the British [fol. 2551] Government will say so regardless whether the British producer charges 20 cents more or 20 cents less.

Q. What if the bearings aren't available, and the man who wants to purchase, say it's a man who makes Rolls Royce automobiles—

A. Yes.

Q. —and he tells his government, "I can't get these bearings from anybody in England," and he gets a permit from

the British Government to buy them in the United States, that could be possible, couldn't it?

A. I suppose so, although he would probably have to have very specific reasons why he wants them. He can't just because he would like to have them, that's no reason, that's what I mean.

Q. If he has reason—

A. Let's say, if I may suggest this, let's say they want them for airplane engines, military necessity.

Q. All right, I was thinking of something different, of someone that might export Rolls Royce cars.

A. All right. The British want the exports, all right.

Q. Let's say the manufacturer of the product gets his permit from the British Government to buy outside the United Kingdom, and gets dollars to buy in the United States.

[fol. 2552] A. Yes.

Q. Does the British Government tell him who to buy from?

A. No, sir.

Q. It doesn't? He can buy from the manufacturer in the United States who can transport them to his plant in England the cheapest, is that right?

A. From within the United States, he can, as far as I know, from the viewpoint of the British Government he can pick out some manufacturer within the United States for this excess of demand that can not be satisfied within the sterling area.

Q. Under the British law, then, or under the administration of any of these import regulations, there is nothing to prevent him from buying from the cheapest producer in the United States, buying from any producer he wants to in the United States?

A. After he has had his license.

Q. After he gets his license.

A. After he gets his license he can use it in the United States. Presumably the license form specifies the contract, so that it goes on a previously established sales contract, but *csentially*, as far as I know, the British Government does not interfere in the choice of individual manufacturers [fol. 2553] outside of the United Kingdom.

Q. So that we can say there is some permissible area of

competition, as far as the sale of export bearings from the United States to Britain is concerned?

A. Well, there exists competition within the United States.

Q. For that purchase?

A. For the foreign business.

Q. As far as the law is concerned?

A. As far as the law is concerned—as far as the British law is concerned.

Q. As far as the British law is concerned, yes.

A. Yes.

Q. Throughout your testimony, Mr. DeVegh, you have told us about the many trade barriers that exist in the world today to the sales back and forth from one country to another country of goods. There have been efforts, have there not, made by men and nations in recent years to remove trade barriers of that sort?

A. Oh, yes, extensive efforts, and also, in the meantime, the United States Government, as I indicated, advanced very substantial sums of money to bridge over various countries and to stimulate the total volume of trade, yes, sir.

[fol. 2554] Q. And one of those was the Trade Agreements Act, which is known, I believe, as the Reciprocal Trade Agreement Act, commonly known?

A. Well, you are referring to the 1934 enactment?

Q. Yes.

A. In the United States?

Q. Yes.

A. Yes, sir.

Q. Which permitted reduction of American tariffs in order to promote trade between countries?

A. Yes, sir, and the Swedish agreement and the United Kingdom agreement that reduced the anti-friction bearings tariffs in the United States, were both agreements under that Reciprocal Trade Agreements Act.

Q. And that gave the President the power to reduce tariffs up to 50%?

A. That is correct.

[fol. 2555] Q. Mr. DeVegh, what are some of the other efforts that nations have made in recent years to remove trade barriers between countries?

A. Well, in the last lend-lease agreement there is a sec-

tion, Section 7, I believe, where rather extensive promises were made with respect to the future among the contracting parties to remove barriers if and when practicable. Then the Bretton Woods agreements stipulated that after the transition period which, I believe, was contemplated to be four or five years, exchange controls on current trans-
[fol. 2556] actions should be abandoned, as far as practicable, but, of course, there is an escape clause in the Bretton Woods agreement, as you know, which was put in at the insistence of the weak currency countries and is fairly comprehensive. Then there was this International Trade Organization negotiation in progress over a period of years, with several consecutive drafts of an international trade charter aimed also at the elimination or reduction in restrictions. The reason why those negotiations took such a long time, and why there have been such very great difficulties even recently in the Havana conference in ending the deliberations of the conference on no matter what terms, was that, whereas the United States has been promoting the policy of multilateral conduct,—it has been the avowed policy of the Government of the United States to restore the international end payments put in the constitutional framework that existed, shall we say prior to 1914,—in the rest of the world this attempt provoked the most violent resistance and in many cases violent resentment, even. And finally each nation insisted on the escape clauses that each country considered necessary in order to safeguard its own economy, according to its own institutional approach to economic questions.

[fol. 2557] Q. Well, now, the International Trade Organization has as its objective removing some of these governmental trade barriers, such as import restrictions and exchange restrictions, and also private trade barriers, has it not?

A. I believe so.

Q. And are there any other efforts on the part of nations to remove trade barriers?

A. Well, in a sense, indirectly, I should imagine, the European Reconstruction Program could be considered as an effort hoping to achieve some such result, but I believe that that is already stretching the point.

Q. How about the Geneva Trade Agreement?

A. The Geneva Trade Agreement, yes. I believe I referred to them, yes.

Q. A practical step in that direction?

A. Yes.

Q. Have you read the Economic Cooperation Act, Mr. DeVegh?

A. No. I said this morning it's very recent and I haven't had a chance to read it yet.

Q. Now, I believe you said, in connection with the I. T. O. and some of these other efforts to remove trade barriers that you're not very hopeful because the underlying [fol. 2558] economic conditions make it difficult for some of these countries.

A. Well, some of them in that in certain cases I do not believe that the institutions and the institutional framework permits any more the satisfaction of those ideals.

Q. That's in certain countries?

A. Yes.

Q. But there are some countries where that isn't true?

A. Yes, but those certain countries would certainly include the United Kingdom. What I mean by that is—I have tried to avoid the word "socialization" because it has an ideological connotation, and it's an awkward word to handle, but fundamentally the British Labor Party has been a socialistic body, shall we say, and it certainly does propose to administer the British economy and it is proceeding to do so. A number of industries have been nationalized, the commitments have been made to nationalize other industries, to have, in other words, a substantial socialized segment of British economy and to preserve full employment at all cost. Now, it is quite obvious that if the prime requisite of an economic policy is to maintain full employment regardless, then, from time to time the [fol. 2559] balance of international payments of that country will get hopelessly out of gear because the full employment production level determines about how much imports they will need, if they permit imports to come in on a competitive basis, but there is nothing in a full employment program that will tell you how much of your exports the foreigners might take, if the foreigners don't happen to have a full employment program, or if the foreigners' full employment program doesn't work. In other words, the reason why controlled economy has found such difficult

foreign exchange problems is not that they are mismanaged, or this or that or the other thing, although they might be mismanaged. The real reason is that in that kind of economy the equilibrium of international payments is a consideration wholly secondary to the prime considerations of domestic political objectives. By contrast, the prior to 1914 international system was predicated on the fact that international payments adjustments come first, and that the domestic economy will expand and contract, employment will rise and fall, according to whether there exists a foreign exchange basis, according to whether the international payments are in equilibrium. This is a completely [fol. 2560] fundamental institutional change that the policies of our administration in these international trade conferences have not sufficiently taken into account, in my opinion, and which, therefore, resulted in these hybrid agreements in which ideological commitments were accepted by the other nations with escape clauses that will nullify them whenever the requirements of the foreign country requires their nullification. Now, to come back to the classical instance where we have already seen the practices of this administration policy, let us turn to the British Loan Agreement. In the British Loan Agreement the multilateral clause was put in at the insistance of our government and—

Q. If I may interrupt you, this is all very interesting, but I'm afraid we're getting off the questions I'm asking.

A. All right, sir.

Q. I was asking with respect to the Economic Cooperation Act whether or not its objective wasn't to remove some of these problems which have caused the nations to set up restrictions and I believe your answer was yes, and you qualified it to some extent.

A. Well, I haven't seen the text, but by and large, it's a matter of common knowledge that it is a benevolent piece [fol. 2561] of legislation.

The Court: I don't understand that. What do you mean by that last expression, "benevolent"? Benevolent to whom? Is it benevolent only to one side, or does it contemplate a reciprocal proposition? Does it contemplate benevolence simply to those who are recipients of money, or does it contemplate a mutual exchange by which both sides are benefitted?

The Witness: It is my understanding that it's perhaps a fair generalization that the material benefits go *esentially* to one, in one direction, in other words, towards Europe, and that our compensation is partly ideological and partly the hope that in the future we will therefore be able to have both economic and better political relations with those countries.

The Court: That's the very proposition I wanted to have answered, if it was purely ideological. If I understand you correctly, the purpose of it is only one-sided insofar as economic gain is concerned and, again, one-sided insofar as ideological benefits are concerned?

[fol. 2562] The Witness: *Esentially* it's my opinion that these economic measures to help Europe have primarily benefitted, in the economic sense, the recipient. One can argue, of course, that a large part, for instance, of the British loan was spent in the United States and that therefore our exports from the United States were bigger than they would have been otherwise and that, therefore, certain American producers benefitted, but whether the benefit extends to the nation as a whole is questionable since those exporters in those years did not need additional exports to be fully occupied, and the very heavy exports of 1947 undoubtedly contributed to inflation within the United States. So that, therefore, the economic benefit to us from the British loan as an immediate proposition is questionable, although the political benefits and the moral benefits may have been very substantial and may have justified the expenditure of that money. To the British the economic benefits were, of course, immediate and substantial, and I believe with the European Recovery Program a very similar analysis could be made as a practical generalization. Our producers, our export men, and to that [fols. 2563-2566] extent the country, shall we say, benefit, but the primary purpose is to help Europe to recover, and by European recovery we get perhaps a valuable trading partner and a valuable political ally. Both of these counter-compensations are of a speculative nature. We don't know how real the political alliance will be after the recovery program moneys are spent, we don't know how real the economic benefits are going to be after the money is spent, and I submit that these are matters of rather remote speculation on which one can be pessimistic or optimistic according to how one is inclined.

[fol. 2567] Q. Mr. DeVegh, to the extent that the objectives of these various conferences and statutes that we have been talking about are successful, would you say those objectives would be frustrated by private cartel agreements between American and foreign industries prohibiting trade between the various countries of the world?

A. Well, if they are frustrated then they aren't successful. I thought you mentioned that cartel agreements were objectionable to the international trade organizations charter, and I don't remember now whether they are mentioned in the ECA preamble or not.

Q. Well, to the extent that these acts and international activities are successful in removing government trade barriers, which are the ones you testified about the last day or so, would those objectives be frustrated by private cartel agreements between American and foreign companies prohibiting trade between the countries?

A. Well, if such cartel agreements existed prohibiting trade between the United States and England by cartel members who would otherwise be competitors of each other, [fol. 2568] and if the parties live up to the territorial clauses of those agreements, I would say that what you have said would automatically follow.

Q. Then your answer would be yes?

A. Yes.

The Court: Mr. DeVegh, is it your opinion that the controlled economy of the international nations forecloses international trade or does it simply result in keeping international trade along the lines so controlled by the controlled economy of this country?

The Witness: My opinion is that the regulations alter the character of the trade. Sometimes, as under Lend-Lease, the trade is quantitatively bigger than it has ever been before, so that one cannot even say with certainty necessarily there will be an impediment in the sense of the reduction of the total. What we can say with certainty is that the consideration which will determine whether trade takes place or not will not be competitive considerations across the borders but will be administratively determined considerations which might be in practice anything like foreign [fol. 2569] exchange requirements, armament requirements, national security requirements or international treaties with other countries, or anything, but that have nothing to

do with normal commercial conditions as they exist within the borders of the United States.

The Court: Is it your opinion that the controlled economies of foreign nations forecloses competition in international trade or does it impede competition in international trade?

The Witness: It at present almost forecloses in large areas of control competitive international trade. The hope exists that there will occur alleviations from time to time but over the long run we have seen no evidence that the European nations want to abandon altogether their administrated controlled economy, their full employment programs. And we see even less evidence at this time that the international political situation will change so radically that the peaceful pursuits can be taken for granted. What I am referring to in this connection is a factor that has been very major in determining the protective patterns of various nations and the attempted capital movements, the [fol. 2570] actual flow of goods, namely the fear of a conflict between the United States and Soviet Russia at some time in the future, which time in the future may always remain some time in the future. I am not making predictions now, I am pointing out the obvious fact that with the existing size and armaments of Russia, all the western European countries are living in a state, relatively speaking, of long term terror, if I may use the expression.

The Court: Would the long term terror cause the isolated nations to live within their national borders in economic vacuum or will it tend to draw them as a magnet to the United States and draw them together in a union of western nations which will ease up that economic tension rather than to strengthen the tension?

The Witness: Well, your Honor, these are—

The Court: You expressed an opinion before, and that is what prompted me to ask you that.

The Witness: Well, I would say this, obviously the western European union is taking shape and to that extent the fears are removing barriers, among the sixteen western European nations.

The Court: That is my question exactly, whether or [fol. 2571] not that fear of that menace, as you have mentioned it, will tend to remove the isolation of the various nations and draw them together and set them up as against

the Soviet group, and economically as well as politically?

The Witness: Within that group; yes. Now, as to what the future economic and political relations of that group are going to be with the United States and in the long run both with the United States and Soviet Russia, is a matter completely hidden in a mist of the future. There is no certainty that if Russian armaments should become controlling at some future date the western European countries may not declare themselves neutral or try to withdraw from a conflict. I am not suggesting anybody has any such intention in any of those governments today, but these governments aren't permanent and we can't tell what the future will be in the long run. So the point of my reference to the troubled foreign political condition was that I don't know certainly that the hopes expressed in the recent legislative enactment are more certain of fulfillment in the future than the hopes expressed at the International Eco- [fol. 2572] nomic Conference in 1927 or the Lend-Lease Agreement or the British Loan, or other measures which were equally desirable, of which all of us equally approved in intent and execution, regardless of how much many of us felt grave apprehensions at the time as to whether they would achieve their avowed purposes or whether they would simply represent a temporary solution, after which new solutions will perhaps be sought once more.

The Court: Just one other question. You have expressed the opinion as to what the prospects would be in the future with reference to those matters bearing on international trade. What is your opinion as to what would happen should the Atlee government be replaced by a conservative government in England? Would your opinion be still the same as to what the prospects are of trade with the United Kingdom?

The Witness: Substantially, yes. The Conservative Party as of last year said that it did not propose to take back any of the nationalizing legislation of the Socialist government, and as to their nationalism as such, it is of a higher order than that of the Labor Party. The Labor Party is more internationally minded and idealistic than the Conservative [fol. 2573] Party, even though in their domestic policies they are more administrative minded than the Conservatives.

Mr. Ketterer: We have no questions on redirect examination.

[fol. 2574] Thereupon the Defendant, further to maintain the issues on its part to be maintained, called as a witness WHITLEY B. MOORE, who, being first duly sworn, testified as follows:

Direct examination of Whitley B. Moore.

By Mr. Ketterer:

Q. Will you state your name, please?
A. Whitley B. Moore.
Q. Where do you live?
A. In Canton, Ohio.
Q. By whom are you employed?
A. The Timken Roller Bearing Company.
Q. In what capacity?
A. Director of sales.
Q. How long have you been director of sales of the Timken Roller Bearing Company?
A. Since January, 1944.
Q. And prior to that did you have any connection with that company?
A. I did.
Q. And how long have you worked for the company?
A. Since February of 1919.
Q. And will you tell the Court generally what different positions you have had with the Timken Roller Bearing [fol. 2575] Company since you first started to work for it in 1919?
A. I was employed first as an engineer and was in the engineering department for two years. At the conclusion of that period I was assigned to the West Coast as district manager of sales. I was on the West Coast for a period of three years, then transferred to Canton as assistant manager of the industrial division, which position I occupied, I believe, until 1934 at which time I was made general manager of the industrial division. In 1940 I was given the assignment as general sales manager for the steel and tube division and occupied that position until 1944 when I took over the present assignment.
Q. Now, Mr. Moore, there has been testimony offered here that the market for anti-friction bearings generally fell into two classifications, the classification that relates to sales for original installation and sales for replacement

purposes. Do you recognize those as generally the two classes in which the market for anti-friction bearings fall?

A. I do. And I might add that the market for original applications is by far the most important, currently taking some 95 per cent of our production.

The Court: 95 per cent?

The Witness: 95 per cent of our production.

Q. And has that generally been the quantitative per- [fol. 2576] centage of the company's production in the field of its sales?

A. I would say so, plus or minus a very few percent.

Q. Now, as to original equipment sales, which you say occupies 95 per cent of the sales of the company, in what respect do you rate efficiency of the sales organization of the company in respect of sales?

A. Well, experience has shown that there are several factors which are important in measuring the efficiency and productivity of our sales force. We started in at first by setting a quota for a number of calls upon prospects. If those calls are productive, if our men present the Timken story effectively, we can assume that the prospects will call upon us to prepare engineering recommendations and lay-outs. By the same token, if those engineering lay-outs are executed well and interest the customer, we can assume that a certain percentage of our customers will say, "Well, that lay-out looks interesting to us but we would like to subject it to tests. We would like to build up a few units and actually try them out." If we follow those test applications carefully we can expect in turn a certain percentage will result in productive accounts, in other words, the design will be incorporated into production. By the same token, those production accounts, if they are followed by our sales [fol. 2577] department and our service department faithfully eventually result in a so-called after market or replacement market. And it is that replacement market that falls into the category of the final 5 per cent of our business.

Q. And if it were not, then, for the original replacement sales, is it correct to say that there would not be the replacement business representing 5 per cent of the company's business?

A. That is quite true.

The Court: I am afraid I didn't get the question.

Q. If it weren't for the original installation sales, there

would not be the after-market that represents 5 per cent of the company's business for replacement purposes?

A. That is quite true. I might qualify it to this extent that we might possibly be called upon to supply bearings to replace other makes of tapered roller bearings which are of similar size, but the extent of such business would be very very small indeed.

Q. Now, as to sources of replacement bearing sales, assuming that a bearing fails in the field, whether in the United States or any place else, on a piece of equipment, what is the source to which the customer may go or the user may go for the replacement of the bearing that has failed?

[fol. 2578] A. Well, to take a typical example, let's take an automotive vehicle, a car or bus or truck, ordinarily if a bearing fails in such vehicle the owner of that vehicle would go to his car or vehicle dealer. In the event that that vehicle dealer does not have that replacement bearing he would very likely go to what we term an authorized distributor, a concern which makes a business of stocking of sizes of adequate parts, standard parts. Such concerns might stock not only tapered roller bearings, and other parts of anti-friction bearings but also spark plugs, brake bands and other parts entering into the replacement of those particular vehicles. In the event that neither the vehicle dealer *or* the authorized distributor has replacement parts available it is quite likely that the owner would address an inquiry, if he located domestically, directly to the Timken Roller Bearing Company, or if it is an export or a foreign user, he probably would direct an inquiry to some import-export house in New York asking them to obtain parts and delivery on the replacement bearing.

Q. On occasion would such a potential customer look to a competitive source for replacement?

A. It is very unlikely unless a Timken bearing is not available. And I might say in that connection, your [fol. 2579] Honor, that to do a satisfactory job in the replacement or after-market availability of product, the first requisite, the first consideration that we give to the service of after-market, is to set up available stocks in those areas or communities where there are Timken equipped pieces of equipment.

Q. What system do you use in setting up that stock of

bearings for the replacement market, through what type of dealers and under what circumstances do they handle that business?

A. Well, we have a so-called discount schedule which takes care of the various classes of trade in the after-market. For example, we set up an authorized distributor. The authorized distributor might in turn have under his jurisdiction a stocking jobber, so-called, a much smaller concern, stocking a limited number of parts. We might have the classification of trade we call the fleet owners, and there are a number of others.

Q. Now, as to these distributors has the company any policy or requirement as to authorized distributors maintaining any stock of bearings on hand for use to take care of this replacement market?

A. Yes, sir, we go to considerable pains in setting up an authorized distributor, to make a survey of the Timken equipment in his particular area or community. In other [fol. 2580] words, we might discover there were so many Studebakers or Chryslers or *Cincinatti* Milling machines, or LaPlant road graders or what not, all incorporating Timken bearings, and we would counsel with the authorized distributor and see that he had a representative and adequate stock of Timken bearings for replacement purposes.

Q. Now, in respect to the foreign field, what steps if any, do you take to see that there is an adequate supply of replacement bearings available?

A. Generally we follow exactly the same practice in foreign markets. Going back a number of years, the number of vehicles and other pieces of equipment using Timken bearings was so small, so scattered, that we weren't justified in going to the costly market analyses that we might use domestically, but basically we use exactly the same procedure.

Q. Now, in respect of prices for the sale of bearings to authorized distributors, what practice has the company followed in determining the discount rate to be applied to the sale of bearings to the authorized distributor?

A. Well, we have had such discounts on prices that we place which we think would give the authorized distributor a fair return on his investment in Timken bearings, and we try to protect his investment by not underselling him [fol. 2581] through our own field offices.

Q. Now, why is it necessary that you follow that procedure in respect of the authorized distributors who are handling bearings in this replacement market?

A. Well, if we wouldn't give these authorized distributors price protection they would soon lose interest in the Timken account, we couldn't depend upon them to carry a comprehensive or adequate stock of Timken bearings, and consequently it becomes very important for us to honor the discount schedules that we have put into effect. By the same token, it is equally important that we do not appoint too many authorized distributors in a given area. In other words, if we appoint too many the line becomes unattractive, the authorized distributors do not have an attractive turnover, they lose interest and everybody loses as a result.

Q. Now, is that the practice in both the domestic field and the foreign field?

A. It is.

Q. To your knowledge does the British Timken organization maintain a system of distributors who take care of this replacement market throughout the territory in which they operate?

A. They do.

[fol. 2582] Q. And to your knowledge do they follow the same general practice as does American Timken in respect of protecting the authorized distributors in the markets in which they handle the replacement business of Timken bearings?

A. Yes, sir.

Q. Now, there has been something said in this case about a subject that has been referred to as a protective discount. Are you familiar with that phrase in the pricing structure of the Timken Roller Bearing Company?

A. Well, I have heard it used, particularly within the last four weeks. Just how the term originated as protective discount, I couldn't say. I would like to offer this as my opinion, that all discounts are basically protective. They protect not only your authorized distributors who maintain a stock of Timken replacement parts, they also protect motor car dealers who in turn may have a stock of Timken parts, or dealers in different equipment who may be using Timken bearings.

Q. In other words, it is your view, as I take it from what

you said, that as a matter of company policy the company feels that it must offer protection and not compete with the people who are acting in this replacement market, whether they are at home or whether they are abroad?

A. That is true. And that applies not only to foreign [fol. 2583] distribution but also to domestic distribution.

Q. Now, do you know what the discount was that was quoted on what has been referred to in the record as unsolicited foreign replacement business back in 1927 and 1928?

A. Yes, sir. 50 per cent from list.

Q. And did it make any difference where the bearings that were covered by such an inquiry were destined for?

A. By that you mean, Mr. Ketterer, whether the bearings were destined for foreign areas under our jurisdiction or under British Timken's jurisdiction?

Q. Yes, that is what I mean.

A. The 50 per cent discount from list applied equally to all foreign territory.

Q. It didn't make any difference where the bearings were going?

A. That is right.

Q. Now, have there been any changes from time to time from that discount rate you have described as having been in effect for all unsolicited replacement business, orders for replacement purposes?

A. There have been some changes. In 1932 the discount was changed from 50 per cent from list price to 50-5 per cent discount.

Q. On what type of sales?

A. On all types or classes of sales.

[fol. 2584] Q. To what territories?

A. All foreign territories.

Q. Then what happened after that?

A. Well, in 1934 that discount was increased to 60 per cent for all classes.

Q. Now, have there been any changes since then?

A. Yes, sir, that has since been changed to 70 per cent to authorized distributors; 65 per cent to car dealers or car importers; and 60 per cent to fleet owners and other classes of trade.

Q. Now, were those changes made in the discount rates after consultation with British Timken or were they made

without any consultation with British Timken, to your knowledge?

A. They were made without consultation, as far as I know.

Q. What was the purpose of making changes in those discount rates?

A. The purpose was to meet competition. And I might add that similar increases in discounts were being made domestically at generally the same time. There may have been a difference of a few months but changes were made both in our foreign discounts as well as in our domestic discounts in order to meet competition from other tapered roller bearing manufacturers. That competition might come either from domestic *manufactuers* or from foreign manufacturers.

[fol. 2585] Q. Now, are you familiar with any other change in the discount rate applicable to any other territory that has been put into effect since 1934?

A. Yes, sir. A change was made in our discount schedule in the territory of Hawaii, and that was made, I believe, on the first day of January, 1948. Those discounts were 70 per cent to authorized distributors, 58 per cent to stocking jobbers, who fall under the general jurisdiction of our authorized distributors, and a discount of 45 per cent to fleet owners and general replacement business of that character.

Q. Now, will you explain to the Court why the discount rate of 45 per cent was applied to the ones you have generally described as fleet owners or general industrial users?

A. You are talking about Hawaii now?

Q. Yes, that is correct.

A. Well, that was to meet American competition on other types of tapered roller bearings, and those discounts fall into agreement with the discounts which we are quoting in the various states within the United States.

Q. And what had that to do by way of protecting the authorized distributor of Timken bearings in Hawaii?

A. Well, it has everything to do with protecting the authorized distributors. If we were to have maintained our [fol. 2586] old discount schedule other distributors of competing companies would undoubtedly have put in stocks of bearings, either putting our own distributors out of business or seriously curtailing their activities.

Q. And is it correct to say that discount change was made for the purpose of protecting the authorized distributors of Timken bearings in Hawaii?

A. That is right.

Q. Now, I used the term a while ago in asking you a question in respect of this protective discount phrase as it having been something that applied to unsolicited service business for the export market. Will you explain to the Court what that means, what the phrase "unsolicited service business" for the export market means?

A. Yes. Let's take as an illustration a vehicle owner perhaps in South Africa, in some remote location in South Africa who is not familiar with any authorized distributor of British Timken in his area. He might therefore correspond with some exporter or concern that has a commission house in New York City to obtain price and delivery on a Timken bearing, and from such a commission house we might in turn receive an unsolicited inquiry.

Q. So by unsolicited inquiry you mean one that has originated with somebody who has had no connection with [fol. 2587] the sales organization of the Timken company or the Timken organization, whether American Timken, British Timken or French Timken?

A. That is right.

[fol. 2588] Further direct examination of Whitley B. Moore.

By Mr Ketterer:

Q. Mr. Moore, yesterday at the adjournment we were talking about the discount situation in respect of unsolicited foreign export business. I would like to ask you whether or not you can tell the Court what that amounts to in volume per year approximately?

A. That amounted to between $18,000 and $19,000 in 1947. I do not have the prior years in mind.

Q. From your experience would you say that that was a fair sample of the volume of that business?

A. I would. I would estimate that the amount of that business might run between $15 and $25,000 a year.

Q. And that covers unsolicited export business to any place in the world of the type that you have described?

A. That is right.

Q. Now, I asked you yesterday, too, about the various discount rates that have been in effect from time to time since 1927. I will ask you whether or not those rates as you gave them yesterday apply in all countries or whether there has been any difference in any countries in that regard?

A. They do not apply in all countries. Our discount in [fol. 2589] the territories coming under the jurisdiction of British Timken, we had a discount of 50 per cent whereas in South America and in other foreign territories under the jurisdiction of American Timken that discount is currently 70 per cent to authorized distributors, it is 65 per cent to car importers, and it is 60 per cent to fleet owners and people in that general category.

Q. And the Hawaiian discount that you gave yesterday of 45 per cent to general industrial users and fleet owners is applicable only to Hawaii?

A. That is right.

Q. That is, as far as export business is concerned?

A. That is right.

Q. Now, going to another subject, what if anything is done by American Timken in respect of sales of bearings to manufacturers of the equipment in this country when those manufacturers of equipment use bearings for replacement purposes at any place in the export field. Does American Timken control that or make any effort to control it price-wise, quantity-wise or anything of that sort?

A. There is no way in which we can control the distribution of bearings sold to American manufacturers. By that I mean if the Chrysler Corporation orders a quantity of bearings, we presume that a certain percentage of that [fol. 2590] quantity of bearings is used for service replacement in Chrysler products, and we have no control as to where they may ship those bearings.

Q. Whether they are used for replacement purpose domestically or whether they are used in the foreign markets?

A. That is right.

Q. Do you make any effort to control the price at which they are sold abroad or domestically?

A. No, sir.

Q. And have you at any time to your knowledge ever consulted with either British Timken or French Timken in that regard?

A. It has been generally understood between French Timken, British Timken and ourselves that manufacturers in America buying bearings would be exporting a percentage of their bearings into these foreign areas for service replacement business.

Q. Now, do you recall when the Russian Government first undertook to purchase any products in this country, and through what agency?

A. My memory takes me back to 1928 when I believe Amtorg was first set up in New York City to control the purchase of materials in this country for the Russian Government.

Q. And have you from time to time either had direct contact with representatives of the Amtorg Trading Corpora-
[fol. 2591] tion or had reports from other representatives of American Timken who have had contact with representatives of the Amtorg Trading Corporation in respect of sales of bearings over the years?

A. Yes, I have. I might say in that connection that it was the practice of the Russian Government through Amtorg to set up certain commissions for the express purpose, perhaps, of purchasing steel plant equipment, glass plant equipment, tire building equipment, and those commissions under Amtorg would deal directly with the matters pertaining to engineering of bearing applications as well as to the sale of our goods.

Q. What has been the practice of American Timken in connection with such sales to the Russian representatives of the Russian Government over the years?

A. Well, I am assuming that you mean by that, Mr. Ketterer, our practice with reference to British Timken and French Timken, and I would say that we operate entirely independently of British Timken and French Timken, although at the conclusion of those negotiations or sales, as the case may be, we make a specific effort to advise British Timken and French Timken as to what we did so that they have a record of our engineering recommendations and the prices quoted.

[fol. 2592] Q. Is there any prior understanding or has there ever been to your knowledge any prior understanding with either British Timken or French Timken with respect to the prices that were going to be quoted to representa-

tives of Amtorg or any other trading organization representing the Russian Government?

A. The understanding was that we would negotiate with Amtorg or with the Russian Government independently but would keep one another advised as to the progress of our negotiations.

Q. And in point of practice, how have these inquiries from Amtorg been handled and what has been their general character over the years?

Mr. Nitschke: What period of time is this?

Mr. Ketterer: From 1928 down to the present time.

Mr. Nitschke: Is it your claim this witness is familiar with that practice during that period?

Mr. Ketterer: He certainly is.

The Witness: Will you repeat the question?

(Question read.)

Q. You understand that is from 1928 down to the present time?

A. That is right. There has been no basic change in our method of handling inquiries and orders from Amtorg.

Q. And how have those orders been handled in respect of [fol. 2593] what kind of sales work was required from representatives of American Timken in respect of that business?

A. Well, the Amtorg engineers and our engineers worked very closely on the engineering features. For example, if a steel mill was being purchased it was necessary to satisfy the Amtorg engineers that the bearings that we would recommend were of adequate size, that they were properly mounted, would be properly lubricated. We reviewed with them matters pertaining to the service of the bearings after the mills were once installed in Russia and in operation.

Q. And what competition has American Timken had in respect of that business?

A. We have had plenty. We have had competition particularly from such domestic producers as Bantam, and Messenger, and Morgan Construction Company, and others.

Q. To your knowledge has there ever been a time when the Russian Government asked for quotations from British Timken and American Timken on the same item of business at the same time?

A. I don't recollect of any instance where the Russians made inquiries of British manufacturers and American manufacturers for the same general pieces of equipment. In other words, if they were going to put in a glass making [fol. 2594] plant in Russia they didn't ask producers of glass making machinery in England to compete with glass making equipment manufacturers in the United States.

Q. So you cannot recall of any instance when that question ever came up?

A. No, sir, I cannot.

Q. Do you recall that in a paragraph of the 1938 business agreement there is a proviso in the last portion of it that has to do with the Russian business on the subject of not under-cutting a quotation made by either party?

A. I do.

Q. And do you know what the purpose of that was?

A. While I was not in on the discussions at the time the contract was negotiated; it has been generally understood that we didn't want to be in a position where the right hand of Timken was doing something that the left hand knew nothing about.

Q. Now, I will ask you, Mr. Moore, whether or not you have had occasion at any time to go to Europe for any discussions with representatives of British Timken as to the handling of business?

A. I have. I made a trip last November and December to Great Britain and to France.

Q. And who accompanied you on that trip?

[fol. 2595] A. Mr. Howard Sauer, our foreign manager of sales.

Q. And where did you go on the trip?

A. Well, we visited first the British plant and offices in North Hampton, we went from there to our plant and offices in Birmingham, and again to our plant and offices in Wolver Hampton in England. We made other calls in London.

Q. Now, what was the general purpose of the trip to England and France at that time?

A. Well, Mr. Ketterer, I think that the trip was brought about primarily due to a very acute shortage of anti-friction bearings in Europe, and that shortage naturally reflected itself into an equally keen shortage of tapered roller bearings. So we went over to England, and again to Paris, to discuss with our associates over there what could be

done to expedite the flow of Timken tapered roller bearings into European and foreign markets.

Q. Now, were there any other purposes aside from that?

A. Well, we were quite anxious to see what could be done to expedite the processing of British import licenses on steel, which were required by British Timken for manufacture of the Timken bearings. Some of those import licenses were taking many weeks to process, and in the meantime our British plant was seriously in need of [fol. 2596] seamless tubing and of strip steel and of other unfinished components, and we were quite anxious to see what could be done to expedite the processing of those import licenses. As a matter of fact while we were in London we called upon the British Iron & Steel Corporation, which is the British Government agency for controlling the imports of steel products into Great Britain. Our conversation with British Iron & Steel, I really felt did some good, in that we arranged to have those import licenses expedited.

Q. Well, that was for steel for British Timken for use in the manufacture of tapered roller bearings?

A. That is right.

Q. Now, what was the general nature or the result of the discussions that you had with representatives of British Timken in respect of the matter of supplying tapered roller bearings in various markets of the world?

A. The sale of Timken bearings in original equipment is a matter that requires months and many times years to complete. We recognized that the present shortage of anti-friction bearings in Europe represented an opportunity for the Timken Roller Bearing Company and its associates to get original business that might otherwise require years of continuous effort to accomplish. So we were naturally very anxious to review with our British and [fol. 2597] French associates every possible means of getting prompt shipment of bearings into the European markets.

Q. And on what basis was it understood that that would be done?

A. Well, it was understood that on orders coming into the United States, into American Timken from European governmental agencies—I might illustrate the point by taking Belgium, which has sent an inquiry to us for a very

substantial quantity of bearings—it was understood that American Timken would quote and otherwise complete negotiations with the Belgium Government independently of British Timken. So it was agreed with our associates that in view of the current need for anti-friction bearings and the Timken bearings in particular, that we would operate quite independently but would keep each other advised. We specifically made the point to British Timken that we would refer inquiries to them from sources where engineering or service work might require attention, technically, that we could not give from Canton, Ohio.

Q. And in point of fact has business been handled on that basis?

A. It has.

Q. To your knowledge?

A. It has.

[fol. 2598] Q. And at what prices do you quote on this business that has come in in the fashion that you have described?

A. Well, we can safely assume that any inquiries that we receive in this country from European sources will also be sent to competitive manufacturers of tapered roller bearings, consequently our quotations on that type of business are made with American competition in mind and we quote prices that we think will be competitive.

Q. And are they prices that are agreed to with British Timken in any fashion?

A. No, sir.

Q. Now, what has been the principal export market of American Timken up to the war, commencement of the war in 1939?

A. Why, I would say that our principal export market was into Canada.

Q. And why was that?

A. Well, I think because of the close association between Canadian manufacturing activities and processes to American or United States practices.

Q. Percentage-wise what volume of export business that American Timken has done over the years, approximately what percentage of the export business, has been business to Canada?

A. Well, that of course varies from year to year but as a [fol. 2599] round percentage I would say 40 to 50 per cent.

Q. Of all export business done by American Timken?

A. Of our total export business.

Q. And what has been the next largest source of export business over the years, to your knowlege?

A. The next largest export business would be into European markets, normally those markets falling under the jurisdiction of British Timken.

Q. And that represents, percentage-wise, approximately how much of American Timken's export business as of prior to 1939?

A. In 1939 about 30 to 35 per cent.

Q. And is it a fact that those sales into the European market have been handled through either the British Company or the French Company, generally?

A. Would you repeat that question?

Q. I say, is it a fact that those sales into the European market have been handled through either British Timken or French Timken, that is, up to 1939, the time the war commenced?

A. Most of them.

Q. I have here two sheets that have been marked for identification as Defendant's Exhibit 185. I will ask you if you can identify those?

A. I can.

[fol. 2600] Q. And what are they?

A. This is a tabulation showing the number of bearing sizes made by the Timken Roller Bearing Company for each year, starting with the year 1903 and ending in the year 1948.

Q. And that was prepared under your direction by the engineering department?

A. That is right.

Mr. Ketterer: We offer Defendant's Exhibit 185.

The Court: It may be received.

Cross examination of Whitley B. Moore.

By Mr. Nitschke:

Q. Mr. Moore, yesterday you mentioned the fact that you considered all your discounts protective, is that right?

A. That's right.

[fol. 2601] Q. And I believe by that you indicated when you quote discounts to anyone, whether it is a distributor or

manufacturer or dealer, whatever it is, you feel obligated to honor that discount by not selling yourself at those prices, is that right?

A. That's right.

Q. What you mean, then I take it, is that with respect to your various classes of customers you will not sell at different discounts to customers within the same class?

A. We do not want to undersell our own channels of distribution, if I understand your question correctly.

Q. Would you undersell some other manufacturer's distributor if you could?

A. Well, I'm sure we have no control over that, Mr. Nitschke. We have no control over prices quoted by our competitors.

Q. I'm talking about yours. You say you won't sell—I believe this is your last statement that you would not sell at a lower price than one of your distributors?

A. Not knowingly.

Q. Knowingly?

A. Yes.

Q. Would you sell at a lower price than some other manufacturer's distributor was selling at if you could get the business away from them?

[fol. 2602] A. Well, by manufacturer do I understand you to mean, Mr. Nitschke, manufacturers of tapered roller bearings or manufacturers using tapered roller bearings in equipment?

Q. I'm talking about manufacturers of tapered roller bearings.

A. Well, I have no way of knowing what they would quote.

Q. Well, would you protect their distributors?

A. Why, we would have no way of controlling that, and certainly would make no effort to.

Q. You would not make any effort to protect their distributors?

A. That's right.

Q. The distributors you are talking about that you protect are your distributors?

A. That's right.

Q. The distributors of Timken bearings?

A. That's right.

Q. I take it, then, you have no agreement with other

bearing manufacturers as to the discounts you will quote on replacement sales?

A. We have no agreement.

Q. Now, is that true also in the export trade that you have no agreement with respect to what you quote on replacement sales?

[fol. 2603] A. That's right.

Q. I believe you testified yesterday that—

Mr. Nitschke: Reading from Page 2493 of the transcript, Mr. Ketterer.

Q. "Q. Now, were those changes made in the discount rates after consultation with British Timken, or were they made without any consultation with British Timken, to your knowledge?" And your answer was, "They were made without consultation, as far as I know."

A. That's right.

Q. I would like to call your attention to a document that has been put in evidence in this case, it's marked Government's Exhibit 108. It is a memorandum written by L. M. Klinedinst, and it is dated December 6, 1939. What was Mr. Klinedinst's position at that time, do you know?

A. Mr. Klinedinst was vice-president in charge of sales for our company.

Q. And what position did you have at that time?

A. In 1939 I was general manager of the industrial division.

Q. I will show you this memorandum. You notice at the top it is addressed to four people, one of them being W. B. Moore. Are you the W. B. Moore that that memorandum is addressed to?

A. I am.

[fol. 2604] Q. I would like to read you a part of this memorandum.

The Court: What is that exhibit, please?

Mr. Nitschke: Government's Exhibit 108, your Honor. It is dated December 6, 1939.

The Court: All right.

Q. The first paragraph says: "It is quite evident from past practice in handling export orders that there are some of our men not fully familiar with our contractual arrangements with British Timken regarding territories and the

shipment of bearings into each other's sales territory. So that our men may be fully familiar, we are quoting below from our business agreement with British Timken. The following paragraph covers British Timken's territory as well as our own." I believe you are familiar with those agreements, are you not, Mr. Moore?

A. That's right.

Q. I won't bother to read the next paragraph, then, but going down to the last paragraph of this memorandum, Mr. Klinedinst writes: "It is our interpretation of these arrangements that we are not permitted to sell or ship bearings into or known to be destined to British Timken's territory without paying them a 5% commission, and even under such circumstance our prices must be acceptable to them. We have a mutual understanding with British Timken that on unsolicited inquires for [fol. 2605] bearings going into each other's territory that we are at liberty at all times to quote prices representing a 50% discount from American list on standard bearings and pay a 5% commission on the net sale thereof. We insist that all of our men respect our agreement with British Timken and on any unusual cases to consult the Home Office for further instructions." Now, does that refresh your memory any on the question of whether or not your export discount was made after consultation with British Timken?

[fol. 2606] A. Well, Mr. Nitschke, our control provisions with Britain Timken have not at any time been followed specifically as called for in those contracts. For example, we have had, if you please, fielder's choice, or a license, in making quotations to concerns into British Timken territory, although on these small unsolicited orders which I have already pointed out this morning as representing only some $18,000 worth of business, we have adhered very religiously, I might say, to the 50 per cent discount.

Q. Is your answer that that does not refresh your memory as to whether you consulted with British Timken or that it does refresh your memory that you consulted with British Timken as to that 50 per cent discount?

A. Well, we have had numerous exchanges of correspondence and contacts with British Timken on this subject, but I understood your question was as to whether we had agreements with competitors.

Q. Well, that's not my question, Mr. Moore. I was referring to the statement you made on Mr. Ketterer's examination, where he asked you: "Now, were those changes made in the discount rates after consultation with British Timken or were they made without any consultation with British Timken, to your knowledge?" And you said, "They [fol. 2607] were made without consultation."

A. The changes in our discount schedules were made without consultation with British Timken. In other words, when we went from a 50 per cent discount to a 50 and 5 per cent discount in 1930, and again to 60 per cent discount in 1932, and again to a 70-65-60 series of discounts in 1934, those changes were made without consulting British Timken. But I do want to say that we undoubtedly advised British Timken that we were making those changes. Those changes were brought about by reason of competition from both American and foreign competition on tapered roller bearings.

Q. You did not make those changes, you did not change to 70 per cent, is that your testimony, with respect to sales of unsolicited business to the British Timken or French Timken territory?

A. We made no change in the 50 per cent discount into territories under the jurisdiction of British Timken.

Q. And that retention of the 50 per cent discount was made after consultation with British Timken, isn't that right?

A. Would you repeat that?

Q. Your retention of 50 per cent on sales to British Timken's territory or French Timken's territory was made after consultation with British Timken?

[fol. 2608] A. Why, I presume it was. I wasn't there, but—

Q. You don't disagree with Mr. Klinedinst's statement in this memorandum, do you?

A. No, I do not disagree with that at all.

Q. You also stated that you have no control over American manufacturers who might buy bearings from you for use to install in equipment they are making, to prevent them from taking some of those bearings and shipping them into British Timken or French Timken territory for replacement purposes. I believe you made that statement?

A. That's right.

Q. Or something approximating that?

A. That's right.

Q. But you have made efforts, have you not, to prevent American manufacturers from doing that?

A. We have no way of preventing them. We are very frequently asked by American manufacturers what prices we would quote on replacement bearings, and in more instances than not I believe that American manufacturers follow our price schedule because they recognize that the prices that we have established represent a fair markup which would encourage their own agents or distributors to maintain an adequate stock of bearings for replacement purposes.

[fol. 2609] Q. My question was: have you not attempted to encourage these manufacturers not to buy from you and ship into British Timken's territory for replacement purposes?

A. Oh, I would say that very definitely we encourage them to follow our general price schedule. In other words, we take this position, Mr. Nitschke, that it isn't desirable for the user to get half a dozen different prices on a Timken bearing. But we have no way of controlling that. We have our own schedule, we make that known to our customers. Frankly, we hope that they follow it, but we have no way of insisting that they follow it.

Q. Haven't you made efforts to get these people to have their dealers buy replacement bearings from British Timken and French Timken, and haven't you asked them not to take the bearings they buy from you and ship overseas to British Timken's territory for replacement purposes?

A. Well, I would say not. We may have suggested in certain instances that they follow our practices, or we may have suggested that we are already well covered with representation in these other foreign areas. But, again, I repeat we have no way of controlling the situation.

Q. Yes, I know you have said that time and time again. I'm not trying to dispute that fact with you. I'm asking you, even though you say you can't control them from ship-

[fol. 2610] ping into British Timken's territory, haven't you tried and asked them, attempted to get them not to do that but to buy from British Timken?

A. I presume that in certain cases that is true. I can't give you any specific instances right now.

Q. I would like to call your attention to another document which is in evidence in this case, Government's Exhibit 123. It's written by L. M. Klinedinst, dated February 24, 1941. What was Mr. Klinedinst's position at that time, Mr. Moore?

A. 1924?

Q. No, February 24, 1941.

A. In 1941 he was vice-president in charge of sales.

Q. I would like to read you a part of this letter. Mr. Klinedinst is writing to Mr. Dewar. Do you know who he is?

A. I know who Mr. Dewar is, yes.

Q. He says: "Dear Michael: I am attaching a copy of a letter just addressed to Mr. Pascoe again dealing with the subject of service requirements. We doubt if Mr. Pascoe fairly understands this whole picture." Now, this is the part I would like to call your attention to:

"It took many years, as you will recall, to get foreign [fol. 2611] dealers of American made cars to buy their service bearing requirements through British Timken. The habit has been formed, and up until recently the American car manufacturers supplied very few bearings to the foreign agencies for service. They depended upon British Timken to do that." Do you agree with Mr. Klinedinst's statement that it took many years to get foreign dealers of American made cars to buy their service bearings through British Timken?

A. Well, I have no way of knowing that that was actually the situation. It may have been Mr. Klinedinst's opinion at the time, no doubt was.

Q. Mr. Moore, throughout this period from 1927 and 1928 to date, have you known prices at which the British Timken distributors sell bearings?

A. In general, yes.

Q. What do you mean by "in general"?

A. Do you mean me personally or the company?

Q. I mean whether or not your company knew at what discounts British Timken distributors were selling?

A. Our company has been informed.

Q. Your company has been informed?

A. That's right.

Q. At all times?

[fol. 2612] A. Well, that I can't say. I don't know.

Q. Do you know this as a matter of your personal knowledge, or is this just something—

A. Well, I know that from time to time they have given us information as to the prices that they have been quoted. Whether they have given us all the information or not, I'm not able to say.

Mr. Nitschke: That's all.

Redirect examination of Whitley B. Moore.

By Mr. Ketterer:

Q. Mr. Moore, I would like to clear up this misunderstanding about the testimony that you gave yesterday. You recall that you testified yesterday concerning certain changes in discount rates on unsolicited export service business. Do you remember that?

A. That's right.

Q. Now, when you said yesterday, and I read from the answer that was given here and the question: "Q. Now, were those changes made in the discount rates after consultation with British Timken, or were they made without any consultation with British Timken, to your knowledge? A. They were made without consultation, as far as I know." In respect of that statement, I will ask you whether or not you were referring to these changes in discount rates that [fol. 2613] were made as you outlined them yesterday?

A. I was.

Q. And was there, in fact, to your knowledge, any consultation with British Timken in respect of those changes in the discount rates?

A. There was no consultation to my knowledge.

Mr. Ketterer: That's all.

Mr. Nitschke: That's all.

[fol. 2614] Thereupon the Defendant, further to maintain the issues on its part to be maintained, called as a witness

WILLIAM ROBERT TIMKEN who, being first duly sworn, testified as follows:

Direct examination of William Robert Timken.

By Mr. Ketterer:

Q. Will you state your name, please?

A. William Robert Timken.

Q. Where do you live, Mr. Timken?

A. Canton, Ohio.

Q. With what company are you connected?

A. The Timken Roller Bearing Company.

Q. How long have you been connected with the Timken Roller Bearing Company?

A. Since September 15, 1935.

Q. And your present connection with that company is what?

A. I am vice-president, a director, a member of the finance committee and the executive committee.

Q. How long have you been vice-president of the company?

A. I became a vice-president in the spring of 1941.

Q. And prior to that what was your position with the company?

A. When I first went there I was assistant to the secretary and treasurer, and a year later I was elected a director, a year after that, about October, 1937, I was placed in [fol. 2615] charge of the relations of the company with the British and French Timken.

Q. That was about 1937?

A. In the fall of 1937. In 1941 I was elected vice-president—well, in the spring of 1939 I became assistant to the president and continued as such until I was elected vice-president.

Q. Have you followed the connection between American Timken and British Timken and French Timken since 1937?

A. I have.

Q. And at the time you first started following that connection, I would like to ask you whether or not you made any effort to familiarize yourself with what had happened prior to the time you first had contact with it in 1937?

A. I did in a general way, I studied prior agreements.

Q. And you have followed the relationship, that has been part of your job since 1937?

A. Yes.

(Thereupon statement of investments of American Timken in British Timken, French Timken and German Timken was marked by the Clerk, for identification, Defendant's Exhibit 186.)

Q. I hand you three sheets, Mr. Timken, that have been marked collectively for identification as Defendant's Ex-
[fol. 2616] hibit 186. I will ask you if you can identify those?

A. Those are statements of investments in British Timken, French Timken and German Timken, compiled under my direction by J. A. Riley, assistant secretary—

A. Those are statements of investments in British Timken, French Timken and German Timken prepared by Mr. J. A. Riley, assistant secretary and treasurer of Timken Roller Bearing Company.

Q. Under your direction?

A. Under my difection.

Q. I notice that in this heading on the righthand side of each of these pages there is the statement "The Timken Roller Bearing Company, directly or indirectly," with the number of shares and the percent of the total. What does that "directly or indirectly" indicate?

A. During some period of the time portions of the stock was held by wholly owned subsidiaries of Timken Roller Bearing Company. There was Continental Bearings, and I.C.I., and several others, but the actual ownership was still with Timken Roller Bearing Company, although it was indirect.

[fol. 2617] Mr. Ketterer: We offer Defendant's Exhibit 186.

The Court: It may be received.

Q. Now, I notice on the first sheet of Defendant's Exhibit 186, the one that has to do with the investment in British Timken Limited, in the extreme righthand column of that sheet it shows down to and including 1934 that American Timken had 52½ per cent of the stock of British Timken, and that from 1934 down to the present date that percentage has remained at 30.26 per cent. Was that change made, or did that change occur at the time of the public sale of stock in 1935?

A. It did.

Q. I will ask you, Mr. Timken, whether or not, to your knowledge, the American Timken Company bought any additional shares on the public offering that was made in 1935?

A. At that time the Timken Roller Bearing Company purchased 10,000 shares.

Q. And why was that purchase made?

A. Well, we felt that we should maintain somewhat [fol. 2618] greater ownership than was represented in our joint holdings with Mr. Dewar.

Q. And the total of your joint holding with Mr. Dewar, aside from the 10,000 shares after the public sale in 1935, amounted to what percentage of the outstanding capital stock of British Timken?

A. Approximately 50 per cent.

Q. And with the additional 10,000 shares that was purchased, that gave approximately 5.26 per cent additional, so that the total of your shares—by yours I mean American Timken's—and Mr. Dewar's shares then totalled 55.26 per cent, approximately?

A. Yes.

Q. As to the French Timken Company, I notice on the second sheet of Defendant's Exhibit 186 that the percentage of ownership of capital stock of French Timken was initially 73.37 per cent. Who owned the balance of the stock of French Timken?

A. Mr. Dewar.

Q. And then in 1930 that dropped to 60.5 per cent, and after that drop occurred who owned the other approximately 40 per cent of 39.95 per cent?

A. Mr. Dewar, either directly or indirectly.

Q. By "indirectly" you mean through the medium of holding companies?

[fol. 2619] A. Wholly owned holding companies.

Q. But he was the beneficial owner of that difference in percentage at all times?

A. Yes.

Q. And as to the present time, or from 1934 down through and including 1947, it appears that American Timken has 50 per cent of the outstanding stock of French Timken. Who owns the other outstanding 50 per cent of the stock of French Timken?

A. Mr. Dewar.

Q. And that has been the situation continuously, as shown by this sheet, since 1934?

A. Yes.

Q. On the third sheet of Defendant's Exhibit 186 there appear the words, after the date 1941, "written off." What does that indicate?

A. At that time, I believe, it was written off for tax purposes, the remaining investment in German Timken.

Q. Whatever it amounted to?

A. The value of it.

Q. In the extreme righthand column on the third sheet of this exhibit, which has to do with the ownership of stock in German Timken, it appears that initially American Timken had 56.91 per cent of the stock. Were there other share-
[fol. 2620] holders in the German Timken Company?

A. Mr. Dewar held shares, and it is possible that Mr. Prausnitzer might have at that time.

Q. But they were the only other shareholders in German Timken, unless there were some qualifying shares outstanding?

A. As far as I know.

(Tabulation of dividends was thereupon morked by the Clerk, for identification, Defendant's Exhibit 187.)

Q. Mr. Timken, I hand you a sheet that has been marked for identification Defendant's Exhibit 187, and I will ask you if you can identify that?

A. That was prepared under my direction and indicates for the period from 1928 through 1947 the dividends received by the Timken Roller Bearing Company from British and French Timken, directly or indirectly, and the royalties received during that period from British Timken.

Q. There were no royalties received from French Timken?

A. No.

Mr. Ketterer: We offer Defendant's Exhibit 187.

The Court: It may be received.

[fol. 2621] Q. I want to direct your attention to some items on this exhibit, Defendant's Exhibit 187. There appear the words in the heading "Dividends less tax." What does that phrase "less tax" mean?

A. That means that the dividends were—a British tax was deducted from them before they were transmitted to us.

Q. And those figures, then, represent the net amount that American Timken received?

A. The net amount received.

Q. Also in the third column appear the words "Timken Holdings." What does that indicate?

A. Timken Holdings was a company controlled by Mr. Dewar and ourselves, and it was set up at the time of the public stock sale of British Timken shares as a method of maintaining the control arrangements with Mr. Dewar.

Q. Will you explain that a little further, as to maintaining the control arrangements, just what was the arrangement with Mr. Dewar as to this Timken Holdings Company?

A. The arrangement was that Mr. Dewar was to have control of the Timken Holdings Company so long as British Timken earned 15 per cent on its capital.

Q. Prior to the time that the public sale of stock was made [fol. 2622] in 1935, had there been such a control arrangement in effect with Mr. Dewar?

A. There had been.

Q. And state whether or not the organization of the Timken Holdings Company was to perpetuate that control arrangement between American Timken and Mr. Dewar in respect of the operation of the British Company?

A. That was its purpose.

Q. Now, how was that handled as to the shares of stock in Timken Holdings?

A. There were two classes of shares, there were A shares, of which Mr. Dewar held a majority and American Timken a minority; there were B shares, of which American Timken held a majority and Mr. Dewar a minority. As long as the profits of British Timken were maintained at the required figure, the A shares had 5 votes per share and the B shares had 1 vote per share, thus insuring Mr. Dewar's control of Timken Holdings under those conditions. If the picture changed and those profit figures were not maintained, the B shares had 5 votes and the A shares 1 vote, which would mean that control of the stock held by Timken Holdings would pass to us.

Q. And as long as that arrangement was in effect, was

there an obligation on the part of each party to vote the [fol. 2623] stock in accordance with the Agreement?

A. Yes.

Q. What was done with the American Timken stock as to Timken Holdings, did it hold the stock of American Timken?

A. Timken Holdings held the stock of both parties, partially as nominee and partially outright.

Q. So that the items that appear on here as dividends from Timken Holdings represent the return on the portion of American Timken stock that was held by Timken Holdings outright?

A. Outright, yes.

Q. The portion of American Timken stock that was held by Timken Holdings as nominee, those dividends came directly to American Timken less tax?

A. Yes.

Q. Was there a similar arrangement in respect of the holdings of the stock of the French Company?

A. Yes, the arrangement there was not as formal because there was no public ownership of the French Timken Company. But the essential control provision was that the company should pay $24,000 a year in dividends, and as long as it did that Mr. Dewar had control of the company. If it did not do that, the control was to pass to American Timken.

Q. And was Mr. Dewar obligated to vote his stock in support of American Timken management in the event that [fol. 2624] the earnings fell below the specified figure?

A. Yes.

Q. In other words, it was the same arrangement, essentially, as in respect of the operation of the British Company?

A. Yes, without intervention of a holding company, which was necessary because of the public ownership in British Timken.

Q. Has that arrangement in respect of the control of the British Company and French Company continued down to the present time?

A. It has, in essence.

Q. And what if any provisions in the control arrangement are there in respect of American Timken having any option on the Dewar stock?

A. We have an option on Mr. Dewar's stock in the event of his death or disability for a period of six months.

Q. And has that arrangement continued over the years since 1928 down to the present time?

A. That has been in existence throughout.

Q. Now, you recall that the last business agreement made between American Timken, British Timken and French Timken was dated in 1938?

A. Yes.

Q. And that there was a second agreement made at the [fol. 2625] same time bearing approximately the same date?

A. Yes.

Q. To which Mr. Dewar, American Timken and British Timken were parties?

A. Yes.

Q. Can you explain to the Court the reason for two agreements as of that time in 1938?

A. That second agreement was prepared by French lawyers, the French branch of Sullivan & Cromwell in Paris, and it is my understanding that the purpose of it was to insure that the individual stockholders of French Timken would guarantee, by signing it, French Timken's carrying out the first contract.

Q. That is, the main business agreement?

A. The main business agreement.

Q. And the parties to the second agreement, that is, the second 1938 contract, were the shareholders, all the shareholders in the French Company?

A. That is right.

Q. Now, there has been some testimony offered in this case that from time to time American Timken has purchased or supervised the purchase of machinery and equipment for both the British Timken Company and the French Company. Do you recall that?

[fol. 2626] A. We have.

Q. On what basis has that been done over the years, from a financial standpoint?

A. Generally, where we would buy machinery for them, order it for them from the outside, either new or used machinery, we charged them the actual cost of that machinery to us.

Q. Did that cost involve any administrative overhead, or any profit?

A. Not to us, no. No profit, no commission.

Q. Has that been the way that has been handled, to your personal knowledge, since 1935 or 1936?

A. Yes, on machinery bought on the outside, with one exception. Where we bought for them special machinery which required a good bit of testing, and being set up in our plant and actually run to make sure it was correct, we charged 10 per cent as a commission for our doing that job for them before shipping the machine.

Q. Was that 10 per cent figured on the cost of the equipment without administrative overhead or any item comparable to it?

A. It was. We also, where we sold used machinery from our plant to plants of French Timken, added 10 per cent in order to cover the cost of reconditioning and other incidentals, 10 per cent above the depreciated value on our [fol. 2627] books.

Q. Mr. Timken, I would like to ask you what has been the practice of American Timken in respect of advertising its products?

A. We have used three general mediums: one is national advertising, the other trade paper advertising, and then we have had booklets and pamphlets about the different products.

Q. What has been the practice of American Timken as to supplying British Timken and French Timken with copies of the advertising copy that is developed by American Timken for use in the three types of advertising that American Timken has resorted to?

A. We have supplied them with copies of everything.

Q. And that is done on what sort of a basis, monthly or weekly, or how?

A. As they are prepared.

(Three items clipped together marked by the Clerk, for identification, Defendant's Exhibit 188.)

Q. I will hand you here three items that have been [fol. 2628] clipped together and marked for identification as Defendant's Exhibit 188 and I will ask you to tell the Court what they are.

A. The first is an advertisement of national character concerned with the use of Timken roller bearings on freight cars; the second is a trade paper advertisement, advertising one of our specialty steels; and the third is a pamphlet

showing Timken products, which would be sent out to certain customers to familiarize them with our general line.

Q. Are these samples of advertising illustrative of the type of material that goes to British Timken and French Timken?

A. They are.

Mr. Ketterer: We offer Defendant's Exhibit 188.

The Court: It may be received.

Q. Has that practice of sending out advertising material developed by American Timken to British Timken and French Timken to your knowledge gone on constantly over the years excepting perhaps during the war years?

A. As far as I know it has.

Q. Now, there has been some testimony about the acquisition by British Timken of Fischer Bearings plant in England. To what extent did American Timken participate in that?

[fol.2629] A. When the matter came up we consulted and discussed it among ourselves and agreed with them that the purchase should be made.

Q. And "with them" you mean whom?

A. British Timken.

Q. And who, specifically?

A. Michael Dewar and Pascoe.

Q. And under what circumstances was the opportunity presented to acquire the Fischer plant in England?

A. In about 1936 the Fischer Company, which was one of the large German anti-friction bearing companies, set up a manufacturing subsidiary in England to manufacture ball and straight roller bearings. That was quite a sizable plant and it ran for two or three years until the war broke out, at which time it was seized by the British equivalent of the Alien Property Custodian. The British did not want to see the plant shut down because of their bearing shortages. They therefore looked about to have one of the British bearing companies to purchase it and to continue to manage and operate it. At that time Mr. Dewar and Mr. Pascoe, after consulting with us, made an offer for it, which was accepted.

Q. Do you know what the offer was?

A. I believe it was 200,000 pounds.

[fol. 2630] Q. And that was accepted by the representa-

tives of the British Government, or the equivalent of the Alien Property Custodian in England?

A. Yes.

Q. And what has happened with respect to the operation of the Fischer plant since that time?

A. It has been continuously operated by British Timken as a wholly owned subsidiary and has been expanded. When it was purchased British Timken moved all its own ball and straight roller bearings to the Fischer plant, and they sell those under the Fischer bearing trademark.

Q. Prior to the acquisition of the Fischer bearing plant in the fashion you have outlined was British Timken making ball bearings in addition to tapered roller bearings and straight roller bearings?

A. They were making both ball and straight roller bearings in addition to tapered.

Q. And that manufacture was being conducted at the Birmingham plant of British Timken?

A. Yes, it was a minor part of the production.

Q. You say after Fischer was acquired then all of the ball bearings and straight roller bearing manufacture, and the equipment for performing that work was transferred to the Fischer plant?

[fol. 2631] A. It was.

Q. And has Fischer continued as a wholly owned subsidiary of British Timken since that time?

A. It has.

Q. Now, there has been some reference in some of the written exhibits to a thing called the Westminster Account. Are you familiar with how that came into existence and what it was?

A. Yes.

Q. What was it?

A. The Westminster Account originated when in the middle 30's the French franc became very weak and at that time French Timken had considerable cash. They therefore transferred a goodly portion of this cash, although actually it was transferred I believe in the form of gold, to the Westminster Bank in London in order to conserve it in the event of a further weakening of the French franc.

Q. How was that done, by the prepayment of monies owed, or how?

A. The owners of French Timken, Mr. Dewar and our-

selves, in addition to the stock we owned, held promissory notes which had arisen out of our helping to refinance them after their early operating losses, and the gold was used to prepay a portion of those promissory notes.

[fol. 2632] Q. And that money that was deposited in the Westminster Bank in London amounted to approximately how much?

A. About $225,000.

Q. And that has been referred to between American Timken and Dewar and Pascoe and British Timken as the "Westminster Account"?

A. Yes.

Q. And has it remained on deposit since that time?

A. It has, although a portion of it has been paid out. There is now about $165,000 in that account.

Q. What was the purpose of its being paid out?

A. For several years we used it to pay the $24,000 annual dividend which French Timken was obligated to pay, until the war came long, when we agreed mutually with Mr. Dewar that that provision should be suspended because of the war.

Q. Now, were you in Canton in 1940 when a representative of Bearings Service of Australia, a Mr. Harrison, appeared in Canton?

A. I was.

Q. Did you talk with Mr. Harrison?

A. I did.

Q. What was the purport of the conversation you had with Mr. Harrison with respect to bearing supply of Australia?

[fol. 2633] A. Mr. Harrison felt that Australia was being neglected in the bearing supplies from England because of the war and because the British bearing industry was so fully operated for war materiel in England that they were not keeping adequate supplies going to Australia.

Q. And what did he propose in that regard?

A. Well, he had to find some way to repair the damage that was being done the Australian economy by lack of bearings.

Q. Will you state whether or not at any time he suggested the breaking of the contract between American Timken and British Timken, the 1938 agreement, in the conversations you had with him?

A. He did not.

Q. Now, what was in point of fact done in respect of supplying the Australian market by American Timken after 1940?

A. Well, we felt, too, that the Australian market was being neglected and we felt also that as a result of the German invasion in Norway, SKF in Sweden was cut off from its export markets, and that we could strengthen our Timken position in Australia. We therefore, I personally, went to Washington to see Michael Dewar, who was at that time with the British Government, there for the British Government, and persuaded him that we should temporarily supply Australia with bearings from American Timken in [fol. 2634] order to eliminate the dangers of shipping across the Atlantic, or the other way around, so that the Australian supplies would be brought up to what might be considered normal.

Q. And was that done?

A. That was done.

Q. And on what basis was it done?

A. Well, the British, British Timken maintained a service organization and engineering organization in Australia, and they proposed to continue to do so because they needed a market there. So we proposed to Mr. Dewar that the orders would be direct from Australia to us, with prices attached, that we would ship the bearings direct to their distributors, British Timken's distributors in Australia, and we would credit British Timken with the difference between the prices of those orders and the prices at which we would have sold the bearings to British Timken itself.

Q. Now, state whether or not in that connection you had any discussion with the representatives of British Timken in respect of the prices at which they sold the bearings in Australia?

A. We did not. The bearing orders came in with the prices attached.

Q. And then the sale was made and the shipment was made to the customer solicited by the representative of [fol. 2635] British Timken in Australia?

A. To the distributor in Australia.

Q. To the distributor. And will you state whether or not the transaction was handled the same as if it had been a sale of those bearings directly to British Timken?

A. That was exactly the way it was handled except the bearings themselves were shipped direct to Australia from America rather than to Britain and then to Australia. At first we figured that commission on each order separately, but later on that became such a great task that we figured the average commission over a period, found it to be about 21½ per cent, and made the agreement with British Timken that we would make it a flat 20 per cent in order to facilitate mathematical calculations.

Q. Was that for the purpose of reimbursing British Timken for the expense they had in maintaining the sales force and engineering force in Australia?

A. They were doing the selling and servicing job and we felt they had to be paid for it. Incidentally, they felt they weren't being paid enough to cover that.

Q. During that time did American Timken have any engineering force or sales force in Australia for the purpose of soliciting business?

A. None at all.

[fol. 2636] Q. Now, are you familiar with the fact that American Timken has recently set up a plant in Canada for the manufacture of tapered roller bearings?

A. I am.

Q. And when was that commenced?

A. Shortly after the war the Canadian Government decided that they were no longer going to be dependent for bearing supplies from outside Canada. They had been severely embarrassed at times during the war for lack of bearings and they felt they couldn't allow that condition to exist.

Q. And prior to the war were there any anti-friction bearings of any kind manufactured in Canada?

A. Not to my knowledge.

Q. Now, what was done by American Timken in respect of the matter?

A. Well, we set up a plant at St. Thomas, Ontario, Canada, and that plant I believe was started, started to build in '46, and is now built and operating. That is not a full fledged bearing plant, in that we commenced the manufacture, we originally set up a grinding department with the idea of getting into it gradually, and then later adding the necessary operating devices to make it a full fledged bearing plant.

[fol. 2637]. Q. Has any other anti-friction bearing manufacturer set up a plant in Canada?

A. I believe that General Motors has. They manufacture both the Hyatt and New Departure type of bearings.

Q. That is, both ball and straight roller bearings?

A. Yes.

Q. Now, as to the exporting of bearings from the United States, after the plant that you have established there gets into operation, what effect will that have upon the export of bearings from the United States manufactured by American Timken?

A. That Canadian plant is designed to make primarily the automotive types of bearings, and they will not produce the full range, so the future export of sizes they do not make will continue to come from Canton. But as to sizes they make they will be sold primarily by the Canadian plant, and if a temporary bulge would occur where they couldn't fill the orders, we would probably help them out.

Q. Now, there was some reference made in the early stages of the trial in this case that at the present time British Timken is in the process of raising additional capital. Are you familiar with that matter?

A. I am.

Q. And generally on what basis is the raising of that [fols. 2638-2644] capital to be undertaken?

A. It is proposed to issue preferred stock in the amount of 1,000,000 pounds.

Q. And for what purposes?

A. Well, it has several purposes. The division of that approximately $4,000,000 is about $1,000,000 for the purchase of the North Hampton plant of British Timken, which was built originally by the Government during the war; another million dollars will be devoted to the further expansion, primarily, of the North Hampton plant, but part of which will go into a new hardening department at Birmingham; about $600,000 of it will go into the payment for machinery already on order; and the balance will be used to pay off their overdrafts and to provide additional working capital for the expanded production volume which they will obtain on the completion of the program.

Q. Will you state why it was considered necessary to expand the British Timken plant at this time?

A. The British Government, the Ministry of Supply, came to them—

Q. By "them" you mean British Timken?
A. Yes. And said—

Mr. Derr: I object. He is not saying that he knows it of his own knowledge.

[fol. 2645] The Court: Well, I cannot possibly agree with the contention that any conversations that occurred between Mr. Dewar, Mr. Pascoe and the British Government con-
[fol. 2646] cerning the affairs of British Timken, even though British Timken was the instrumentality of Timken Roller Bearing Company, is admissible.

Mr. Day: Well, then, we will proceed to make the record under the rules, your Honor.

Mr. Ketterer: I would like to make an offer of proof for the record.

(Dictating to reporter.)

If permitted to answer the witness would say that representatives of British Timken were advised by representatives of the British Government—

Mr. Ketterer: I will start over again.

(Dictating to reporter.) That the witness would say that representatives of British Timken were advised by repre-
[fol. 2647] sentatives of the British Government that continued importations of tapered roller bearings into England could not be permitted, and that it would be necessary for British Timken to expand its facilities so that it could take care of the demand in England, and that if British Timken was not prepared to embark upon such expansion program that the Governme.. would try to find some other anti-friction bearing manufacturer who would undertake the necessary expansion program, and if no one else could be found who would undertake it that the Government would undertake to do so itself.

[fols. 2648-2649] Wednesday, April 21, 1948, 2:00 o'clock P.M.

Direct examination of William Robert Timken (Continued).

By Mr. Ketterer:

[fol. 2650] Q. Mr. Timken, there was introduced into evidence by the Government in this case a copy of a letter that has been marked for identification as Government's

Exhibit 98, which was a letter from you addressed to British Timken Limited, dated April 25, 1939. In the second paragraph of that letter the following language appears, and I'm quoting from it to you:

"We are conversant with your relations with SKF in England and understood how you are able to stabilize prices there. It is indeed unfortunate that this does not apply to the world generally."

What did you mean by that statement, Mr. Timken?

A. In that regard I would like to say that in my opinion, there are two different types of competition, one which I would call ethical competition and one unethical competition.

[fol. 2651] Q. Will you keep your voice up, please? We can't hear what you say.

A. We would want to engage in ethical competition, but when we get into places where the competition is unethical we would like to prevent it. By unethical I mean two things in this connection, one is where a subsidiary of a foreign manufacturer brings semi-finished bearings into this country under a misclassification of the Tariff Act, thereby bringing from Sweden bearings that were almost finished, giving them a finishing pass and selling them at very low cost. The SKF has done that; in fact, was convicted in Federal Court shortly after the first World War and paid a fine of several hundred thousands of dollars.

A. That's what I meant by the language in that letter, that we wanted to engage in honest and ethical competition where every manufacturer was trying to make a profit, a reasonable profit, and yet compete with the other, and was [fol. 2652] not doing the unethical things there. Another thing which we found SKF did was to try to freeze out their competitors by selling at what we knew must be far below their manufacturing costs which, again, I think is unethical competition.

Q. Now, there was another exhibit offered in this case, Government's Exhibit 130—

The Court: Was it this paragraph that you have read to Mr. Timken: "We are conversant with your relations with SKF in England and understood how you are able to stabilize prices there"?

Mr. Ketterer: Yes, that was what Mr. Timken meant by that.

The Court: Your reference, then, to the matter of stabilization of prices refers to some of the unfinished bearings under a lower tariff regulation or tariff rate?

The Witness: I meant it was our understanding that SKF was not using those practices in England that I classed as unethical.

Mr. Ketterer: That is, if the Court please, there were two things, one was the shipment of the bearings, the other was selling at prices that were below cost.

[fol. 2653] The Court: Well, candidly, the question is what he meant by stabilizing prices when he refers to a question that relates to fair or unfair competition. That's why I was asking whether that was in reply to the matter of stabilization of prices?

Mr. Ketterer: Well, he says that is what he meant when he wrote that letter.

The Court: That's what I wanted to know, if that was by way of explanation of that paragraph.

Mr. Ketterer: That's correct, that's the one.

Q. Now, there was offered in evidence by the Government a document that bears the heading "General Discussion With Dewar" and which is dated February 23, 1944, and identified as Government's Exhibit 130. That purports to be a memorandum which bears your signature concerning discussions between Messrs. Dewar, Umstattd, Henry Timken and Robert Timken, relative to postwar problems. In the second last paragraph of this exhibit the following language appears:

"We informed Dewar that present feeling in America against international cartels was growing as a natural extension of prohibition of such stultifying arrangements in the domestic economy. This feeling was shared by [fol. 2654] Timken Roller Bearing management who felt that it might become advisable to suspend the business agreements with British Timken although it was felt that primary importance should be given to aggressive competition on a world-wide scale."

Will you explain to the Court what you meant by that language?

A. I meant that whereas we, in the management of American Timken, knew that our agreements with British Timken and French Timken were for the purpose of com-

petition as partners against competitive bearing manufacturers, we felt that they might be misconstrued by someone who didn't know their aims and purposes.

Mr. Ketterer: Subject to recalling Mr. Timken, if we want to put this other agreement in when it gets here, that's all of the direct examination, if the Court please.

Cross examination of William Robert Timken.

By Mr. Derr:

Q. Mr. Timken, there has been some reference here in the course of this trial to the Timken Detroit Axle Company. I wish you would, for the purpose of the record in this case, tell us what the relationship is between Timken Detroit Axle Company and the Timken Roller Bearing Company.

[fol. 2655] A. There is no corporate relationship. My brother and I and my uncle are directors of Timken Detroit Axle Company.

Q. And how many members of the Timken family are directors of Timken Roller Bearing Company?

A. Just my brother and I.

Q. How many directors are there in the Timken Roller Bearing Company?

A. Seven.

Q. And how many are there in the Timken Detroit Axle Company?

A. Seven.

Q. Is it correct that the outstanding capital stock of the Timken Detroit Axle Company is represented by one class of shares, that is, a $5 par common, and that there are about 2,157,000 shares outstanding at the present time?

A. Yes.

Q. What percentage of the outstanding capital shares of Timken Detroit Axle Company does the Timken family own or control?

A. Well, what is your definition of "Timken family"?

Q. Well, for the purpose of that question the three members of the board of directors.

A. I would say directly and through trusts approximately 100,000 shares.

Mr. Day: Did I understand the witness to say that his [fol. 2656] brother and his uncle and he were directors.

The Witness: Yes.

Q. Do you know whether any of the officers of Timken Detroit Axle Company own stock in the Timken Roller Bearing Company?

A. They may. I don't know.

Mr. Derr: I would like to have marked for identification as Government's Exhibit 170 a certified copy of the corporate income tax return, form 1120, of the Timken Roller Bearing Company for the year 1946.

(Income tax return form referred to was thereupon marked by the Clerk, for identification, Government's Exhibit 170.)

Q. Mr. Timken, you have testified you are a director, I believe, and vice-president of Timken Roller Bearing Company?

A. Yes.

Q. And a member of the finance committee?

A. Yes.

Q. Are you familiar with the tax returns filed by the Timken Roller Bearing Company?

A. In general, yes.

[fol. 2657] Mr. Derr: I would like to have marked for identification as Government's Exhibit 171 a copy of the Annual Report on Form 10-K for the fiscal year ended December 31, 1946, filed with the Securities & Exchange [fol. 2658] Commission by the Timken Roller Bearing Company.

(Annual report above referred to was thereupon marked by the Clerk, for identification, Government's Exhibit 171.)

I would like to have marked for identification as Government's Exhibit 172 a copy of the instruction book for Form 10-K for corporations published by the Securities & Exchange Commission.

(Instruction book referred to was thereupon marked by the Clerk, for identification, Government's Exhibit 172.)

Q. Mr. Timken, I would like to call your attention to Page 2 of this report under the heading "Affiliations".

You will note at the bottom there is a paragraph marked "Note", which reads as follows:

"The registrant owns exactly 50% of the stock of a foreign company and the remaining 50% is owned by another single interest, but voting control of such foreign company [fol. 2659] during 1946 was held under an agreement by the other single interest. With respect to another foreign company, the registrant held slightly over 50% of its outstanding stock, but the registrant did not have voting control, either directly or indirectly, due to the fact that one class of shares, in which the registrant held only a minority interest, had greater relative voting power than the other securities outstanding. The registrant denies that either of these foreign companies is an affiliate of the registrant."

Are the companies referred to in that note British Timken and French Timken?

A. Yes, they are.

Q. They are the two companies?

A. Yes.

Q. I notice it says with reference to one company that they hold 50 per cent and with reference to the other they hold slightly over 50 per cent. During your direct examination, I believe, you testified, and I think the answer to the amended complaint in this case shows, that the Ameri- [fol. 2660] can Timken Company holds about 30.25 per cent of the British Timken Company. I wonder if you could explain the apparent discrepancy there?

A. Well, I think the second company here referred to is the Timken Holdings Company.

Q. And it's through Timken Holdings that the Timken Roller Bearing Company has a 30.25 per cent stock control?

A. That's held partially as nominee for American Timken and part of it is owned outright by Timken Holdings.

The Court: By whom?

The Witness: By Timken Holdings.

The Court: What are the respective holdings?

The Witness: I think about 80,000 shares is held by Timken Holdings as nominee and about 15,000 by Timken Holdings as outright owner for the benefit of American Timken.

The Court: That's a total of 95,000 shares?

The Witness: That's right.

The Court: Out of how many shares?

The Witness: Out of 400,000, the total of British Timken.

The Court: 95,000 shares held by Timken and the Holding Company?

The Witness: No, this 95,000 is all held by Timken Hold- [fols. 2661-2662] ings, but partly as nominee and partly direct. In addition the Timken Roller Bearing Company owns outright 16,000 shares of British Timken.

The Court: So that makes a total of how much?

The Witness: About 120,000 shares.

The Court: 120,000 out of 400,000 shares?

The Witness: Yes, or about 30 per cent.

[fol. 2663] Q. Mr. Timken, are you familiar with the report?

A. Not specifically with this. I know we do file such reports.

Q. Did you see that report before it was filed?

A. I don't recall that I did.

Q. Are you familiar with the facts set forth in the report?

A. In a general way, yes.

Q. Mr. Timken, who approves the Securities & Exchange Report filed by the Timken Roller Bearing Company?

A. Mr. Brower.

The Court: Mr. who?

The Witness: Mr. Brower, secretary and treasurer.

[fol. 2664] Q. Mr. Timken, you testified this morning with reference to the reasons why the 1938 agreements between British Timken and French Timken and American Timken and Mr. Dewar were in the form of two contracts or agreements, rather than one. I am not clear as to what you said this morning in that connection. I wonder if you would tell us again your answer to Mr. Ketterer's question in that connection?

A. I said that the second contract was drawn up by the Paris office of Sullivan & Cromwell, the law firm, and that it was my understanding that the reason for the second contract was that the individual shareholders of the French Timken were to sign that contract so that it would be guaranteed by them, in effect, that the first contract, or the business agreement, would be carried out by French Timken.

Q. Was that the only purpose that those two agreements were to effectuate?

A. That's the only purpose of which I'm aware.

Q. I would like to read an excerpt from a document which has been marked for identification Government's Exhibit 32, a letter of April 26, 1938, from yourself to Mr. L. C. Weiss of Ernst & Ernst, in which you say:

"As you know, the new contract between French and [fol. 2665] British Timken and ourselves is written so as to show the three companies are equal partners to the agreement in order to avoid a possibility of unfavorable French taxation."

Does that refresh your recollection that the agreements had other purposes?

A. Well, the purpose—one of the purposes of the first or business agreement was to raise French Timken to the status of a more or less equal partner with the other two companies. I am not familiar with French taxation, so I can't testify too much about any other purposes.

Q. But that was your understanding?

[fol. 2666] (Mr. Derr thereupon handed letter to witness.)

Q. Does that refresh your recollection that that was your understanding at the time?

[fol. 2667] A. Well, as I see it, that letter refers to the business agreement and not to the second agreement, because French Timken did not sign the second agreement.

Q. Wasn't one of the purposes of the 1938 agreements to avoid the possibility of French taxation?

[fols. 2668-2670] A. I would say it may have been. I don't specifically recollect that it was.

[fol. 2671] Q. Mr. Timken, wasn't another purpose of these 1938 agreements to satisfy Mr. Dewar in his desire not to have Timken competition in the areas affected by his companies?

A. No, I don't believe so.

Q. You are sure of that, are you? That's your best present recollection?

A. That's my best present recollection.

Mr. Derr: Your Honor, I request permission to use the Grand Jury transcript to refresh the witness' recollection.

The Court: Very well.

Mr. Day: I think, if your Honor please, we would like [fol. 2672] to have the record show that the Grand Jury testimony that is sought to be used by counsel for the plaintiff, as well as the Grand Jury testimony that was used some days ago when Mr. Klinedirst was on the stand, is testimony that was taken before a Grand Jury appointed by this Court, or charged by this Court, acting under the control of this Court, in investigating into an alleged violation of the Sherman Act some time ago, that several of the officers and employees of the defendant in this case were called before that Grand Jury and testified, that there was an indictment returned against certain defendants charging a violation of the Sherman Act and that the defendant was not included in that indictment.

The Court: What is the significance of that, Mr. Day?

Mr. Day: The only reason I make that statement is because your Honor takes judicial notice of what has happened, and your Honor heard the other case, but if this case should go to another court and this statement were not in the record, there might be some feeling that there was a Grand Jury indictment bearing upon the subject [fol. 2673] matter involved in this case. That's the only reason.

The Court: I assure you, Mr. Day, that my memorandum will make it perfectly clear that that was not the case.

Mr. Day: Well, thank you very much.

The Court: So that no reviewing court can ever be influenced by any such inference that may be drawn.

Mr. Day: I know so far as your Honor is concerned, that's true, but your Honor in his experience sees why I make the request.

The Court: Yes.

Q. Mr. Timken, I will now read from Page 708 and a portion of Page 709 of the Grand Jury transcript:

"Q. Mr. Timken are you familiar with the business agreements between Timken Roller Bearing Company and British Timken and French Timken?

A. Generally speaking, yes, sir.

Q. Do you know what the purpose of these agreements was or is?

A. Yes, in general, the agreements were originally formed because Mr. Dewar was putting a lot of money into

a bearing company and he wanted to know where he would stand in the future. Later on, when the British Timken [fol. 2674] stock was put on the open market, the brokers who sold it—at that time the agreement had 16 years to run, the brokers objected to the short time, because at the end of the agreement if no future agreement was made the Timken name was to revert to us, and the British company which was to make the purchase of the business, not be able to use it. The British brokers objected to that short term and insisted that unless it were lengthened, the price of the stock, at which the stock was to be sold, would be some 10 per cent less than it otherwise would be if the agreement were lengthened in term. At that time it was lengthened to 30 years instead of 16.

Q. Now, you said Mr. Dewar wanted to know where he stood.

A. Yes.

Q. In what respect? Would you be a little more explicit?

A. Well, he wanted to know where his—what he was putting his money into. He didn't want to get into a dog fight with us.

Q. About territories in which to sell bearings, you mean?

A. Yes, it would hardly be economical to support two sets of distributors in the same country, for instance. [fol. 2675] Therefore, he wanted a clear understanding of what territories his company would serve.

Q. I don't want to put the words in your mouth, but do you mean he wanted to be sure he wouldn't have competition in certain territories?

A. Well, it was partially that."

Now, Mr. Timken, does that refresh your recollection that one of the purposes of the agreements was to satisfy Mr. Dewar in his desire not to have Timken competition in the areas allocated to his companies?

A. I would say that it was only normal in this case that there should be some understanding as to having sales handled by one company or the other. For instance, in this country we have a lot of branches. We don't have a New York branch cover the San Francisco sales area. We don't have any written agreement on that either, but it's not normal that we would do it.

Q. I don't believe that's quite responsive to my question,

Mr. Timken. My question was: does that refresh your recollection as to one of the purposes of the agreements?

A. Well, I am saying that I think it would be normal in this case to have a more formal arrangement as to that than we would have with one of our branches.

Q. But that was one of the purposes of the agreement?

A. Yes.

[fol. 2676] Q. I believe you testified this morning as to the period in which you took over the markets in the Australian and East Indian territories that British Timken had theretofore been serving?

A. Yes.

Q. I believe you testified one of the purposes of your serving these markets was to protect British Timken, their interests in this area until they could resume taking care of their customers there?

A. No, I didn't say British Timken. I said to protect the Timken position in that area.

Q. To protect the Timken position in that area?

A. And I did not include the East Indies. It was Australia.

Q. Who do you mean by "Timken"?

A. The American Timken and our partners, British Timken and French Timken.

Q. Well, the Timken Roller Bearing Company had not been selling in that territory theretofore, had it?

A. Not in any substantial amount.

[fol. 2677] Q. And the interests you were protecting was a reversionary interest or future interest, is that right?

A. We were protecting the joint Timken interests with our partners.

Q. You were acting together to protect your mutual interests, is that right?

A. We were protecting them.

Q. That is your answer?

A. Yes.

Q. Mr. Timken, did you also begin to serve this market during the period when British Timken was unable to serve it because you wanted to eliminate SKF of Sweden from that market?

A. We wanted to strengthen our position in Australia.

Q. Didn't you also do it because you wanted to eliminate SKF of Sweden from that market?

A. Well, the natural way to strengthen your position is through competition with competitors, and by increasing your sales volume, naturally you decrease theirs, unless there is an over-all increase in the potential market.

Q. And the Timken Company would have done that by [fol. 2678] any means it could, wouldn't it?

A. No.

Q. Wouldn't it have done it by selling below cost?

A. Not to my knowledge. That's what I characterized as unethical competition.

Q. And that's your best recollection at the present time, that the Timken Company would not sell below cost in order to take business away from its competitors, is that correct?

A. I can't recall of any now in which we would have done it.

Mr. Derr: Your Honor, I request permission to use the Grand Jury transcript to refresh the recollection of the witness.

The Court: All right.

(Thereupon Mr. Derr handed the transcript referred to Mr. Dey.)

Q. Mr. Timken, I shall now read from Page 719 and 720 of the Grand Jury transcript:

"Q. Did you make an attempt to get British Timken to permit you to handle orders direct, rather than going through the process of asking their agent what price should be quoted?

A. I don't recall that. What we did at first, British Timken would get the orders themselves and send them out, find out which bearings we could probably make de- [fol. 2679] livery on, and send the letter on to us. But that was so slow, it was very unsatisfactory, and later we got permission, especially in the case of Australia, to have them come through the British Timken representative direct to us.

Q. What is the procedure that you follow now on orders from British Timken territory?

A. Well, I would say it varies, depending upon what territory it is and whether they can make delivery. Where they can make delivery they would naturally get the busi-

ness. You see, during the war we felt there was a very great opportunity to improve the Timken position in Australia and the East Indies, due to the fact that we thought at that time the SKF of Sweden was completely cut off from export, and we were willing to try to undermine their position by any means we could, including selling bearings at a loss if necessary."

Mr. Timken, does that refresh your recollection the Timken Roller Bearing Company was willing to sell at a loss, or any means necessary, to eliminate competition of its competitors?

Mr. Day: You mean SKF? Is that what you mean?

Q. SKF, yes.

[fol. 2680] A. I would say that in the case of SKF we felt that we had to use different means with them than we did with any of the more honorable competitors.

Q. Your statement, which you made to the Grand Jury, was true, was it not, Mr. Timken?

A. I'll agree we would do that against SKF.

Mr. Derr: That's all.

Mr. Ketterer: That's all, Mr. Timken.

Offers in evidence

Mr. Day: That about concludes, we think, our oral testimony. We have a great—I don't want to say a great many, but we have a considerable number of documents and we want to get them in evidence. I would like to offer some first and perhaps some of these can go in without any objection.

In order to preserve the continuity of the introduction of evidence, we want to offer as our exhibits, and have them numbered, Government's Exhibits 6, 7, 8, 9, 10, 11, 14, and 15.

The Court: You want those Government's exhibits marked as your own exhibits?

Mr. Day: I think the only way we could do it would be having the clerk put the next defendant's exhibit numbers [fol. 2681] upon those same exhibits.

The Court: All right, they may be received.

(Government's Exhibit 6 marked Defendant's Exhibit 189; Government's Exhibit 7 marked Defendant's Exhibit

190; Government's Exhibit 8 marked Defendants' Exhibit 191; Government's Exhibit 9 marked Defendant's Exhibit 192; Government's Exhibit 10 (heretofore marked Defendant's Exhibit 88) marked Defendant's Exhibit 193; Government's Exhibit 11 marked Defendant's Exhibit 194; Government's Exhibit 14 marked Defendant's Exhibit 195; Government's Exhibit 15 marked Defendant's Exhibit 196.)

Mr. Day: I next offer an agreement between Timken Roller Bearing Company, British Timken Ltd. and M. B. U. Dewar with respect to carrying into effect certain agreements and other matters. The date of that is March 13, 1928.

(Last document referred to was thereupon marked by the clerk, for identification, as Defendant's Exhibit 197.)

Mr. Nitschke: I have no objection to that at all, your Honor, other than my general objection as to relevancy of matters regarding financial relations.

The Court: It may be received.

[fol. 2682] Mr. Day: I offer as Defendant's Exhibit 198 a copy of resolution of British Timken Ltd. at and extraordinary general meeting of that company duly convened and held at 4 Central Buildings, Westminster, Southwest, on April 20, 1928, and the resolutions duly passed at that meeting.

Mr. Day: The relevancy is that it consists of resolutions of British Timken carrying into the corporate structure of British Timken certain provisions as to voting of stock and control and other matters theretofore agreed upon between the defendant and Dewar in the Heads of Agreement of May 16, 1927. It's a part of what happened between the parties.

The Court: This is corporate approval of the agreement which was offered in evidence?

[fol. 2683] Mr. Day: Yes, it's carrying into the corporate structure certain provisions theretofore agreed upon in the Heads of Agreement of May 16, 1927, between the defendant and Mr. Dewar.

The Court: It may be received.

Mr. Day: The next, as Defendant's Exhibit 199, Memorandum and Articles of Association of British Timken, Ltd.

Mr. Nitschke: Is this being offered for the same purpose, to show that the stock had certain voting rights?

[fols. 2684-2685] Mr. Day: I think so, and also for the purpose of showing the Articles of Association of the British Timken, Ltd. which was organized, we say, pursuant to the agreement between the defendant and Mr. Dewar. It's offered along the same line as the resolution.

The Court: What is the date of that?

Mr. Rudolph: If your Honor please, these are the entire Articles of British Timken, Ltd. It was organized in 1920, June 4th, and then amended Articles of Incorporation were adopted in 1928.

The Court: That's the original organization of British Timken and then whatever modification there may have been to the corporate setup in 1928?

Mr. Rudolph: Yes, that's correct, your Honor.

[fols. 2686-2688] The Court: It may be received.

Mr. Rudolph: Defendant's Exhibit 200 is an agreement made 20th April, 1928, between Timken Roller Bearing Company and Mr. Dewar.

[fol. 2689] Mr. Day: Thank you. We offer Defendant's Exhibit 200. That is the agreement described by Mr. Rudolph.

The Court: It may be received.

Mr. Day: Next, Defendant's Exhibit 201, an agreement dated April 20, 1928, between Timken Roller Bearing Company and British Limited and M. B. U. Dewar, with respect to subsidiary companies. We would like to offer that, your Honor.

The Court: It may be received.

Mr. Day: The next is a letter under date of May 1, 1928, [fol. 2690] from Michael Dewar to J. F. Strough, having to do with some matters relating to the organization of the French Timken company. We would like to offer that as Defendant's Exhibit 202.

The Court: All right, it will be received over the objection.

Mr. Day: Defendant's Exhibit 203 is a letter to Mr. Dewar from Mr. Strough approving Mr. Dewar's proposals as to French Timken, as contained in his letter of May 1st. This is dated May 16, 1928. We offer that, your Honor.

The Court: It may be received.

Mr. Day: The next exhibit, Defendant's Exhibit 204 is a letter from Stibbard Gibson & Co to Timken Roller Bearing

Company under date of June 4, 1928, headed and having to do with the French Company. We offer that.

[fol. 2691] The Court: It may be received.

[fol. 2692] Defendant's Exhibit 205 is a draft of a letter to Messrs. Marchal, Sanz and Ainsworth, dated June 1928, who were to act as the technical committee of French Timken.

We offer Exhibit 205.

The Court: It may be received.

Mr. Rudolph: Defendant's Exhibit 206 is a translation of Statutes, dated July 11, 1928, of French Timken. These constitute the Articles of Incorporation of French Timken.

We offer Defendant's Exhibit 206.

The Court: It may be received.

[fol. 2693] Mr. Rudolph: Defendant's Exhibit 207 is a cable from Porter to Timken, dated March 11, 1929.

We offer Defendant's Exhibit 207.

The Court: It may be received.

[fol. 2694] Mr. Rudolph: Defendant's Exhibit 208 is a cable dated March 12, 1929, from Strough to H. J. Porter.

The Court: Who is Porter? Has he been identified in this case?

Mr. Ketterer: Mr. Porter at that time was vice-president in charge of sales of the Timken Roller Bearing Company and he had gone to Europe to negotiate with Mr. Dewar with respect to the organization of the French Timken Company.

The Court: There is no dispute as to his identity and his capacity to act?

Mr. Nitschke: No. I have some recollection there is some testimony in the record on Mr. Porter.

The Court: All right; that may be received.

Mr. Rudolph: Defendant's Exhibit 209 is a cable from Strough to H. J. Porter, dated March 14, 1929.

[fol. 2695] We offer Defendant's Exhibit 209.

The Court: It may be received.

Mr. Rudolph: Defendant's Exhibit 210 is a cable dated March 18, 1929, from Porter to Timken.

The Court: It may be received.

Mr. Rudoph: Defendant's Exhibit 211 is a cable dated March 18, 1929, from Strough to H. J. Porter.

We offer Defendant's Exhibit 211.

The Court: It may be received.

Mr. Rudolph: Defendant's Exhibit 212 is a cable from Porter to Timken dated March 19, 1929. We offer Defendant's Exhibit 212.

The Court: 212 may be received.

Mr. Rudolph: Defendant's Exhibit 213 is a cable from Lothrop to H. J. Porter, dated March 24, 1929.

I believe Mr. Lothrop has been identified before. He was president of the company at that time.

[fol. 2696] Mr. Rudolph: We offer Defendant's Exhibit 213

The Court: 213 may be received.

Mr. Rudolph: Defendant's Exhibit 214 is a cable dated March 25, 1929, from Porter to Timken.

We offer Defendant's Exhibit 214.

The Court: It may be received.

Mr. Rudolph: Defendant's Exhibit 215 is a letter dated March 29, 1929, from the Timken Roller Bearing Company to the National City Bank, New York, New York, bearing the initials "JFS," which apparently stand for J. F. Strough.

We offer Defendant's Exhibit 215.

The Court: 215 may be received.

Mr. Rudolph: Defendant's Exhibit 216 is a cable dated April 23, 1929, from Strough to Dewar.

We offer Defendant's Exhibit 216.

The Court: 216 may be received.

Mr. Rudolph: Defendant's Exhibit 217 is a cable dated April 24, 1929, from Dewar to J. F. Strough.

We offer Defendant's Exhibit 217.

The Court: 217 may be received.

Mr. Rudolph: Defendant's Exhibit 218 is a cable dated [fol. 2697] April 27, 1929, from Strough to M. B. U. Dewar.

We offer Defendant's Exhibit 218.

The Court: 218 may be received.

Mr. Rudolph: Defendant's Exhibit 219 is a cable dated May 1, 1929, from Dewar to Strough.

We offer Defendant's Exhibit 219.

The Court: 219 may be received.

Mr. Rudolph: Defendant's Exhibit 220 is a cable dated May 3, 1929, from Strough to Dewar.

We offer Defendant's Exhibit 220.

The Court: 220 may be received.

Mr. Rudolph: Defendant's Exhibit 221 is a letter dated

May 28, 1929, from A. J. M. Duncan to the Timken Roller Bearing Company.

Mr. Nitschke: Your Honor, I wish to object to the portion of this letter headed "British Company" on page 2. It seems to me to be nothing but a lawyer's opinion about the prospects of the company.

The Court: I haven't seen it.

Mr. Nitschke: Beginning on the top of page 2, under the heading "British Company."

The Court: (After examining exhibit) It is quite evident that is all it is. The objection to that portion will be sus-
[fol. 2698] tained.

Mr. Rudolph: Then, I take it, your Honor, the rest of the letter is received in evidence.

The Court: The rest of the letter is received.

Mr. Rudolph: Defendant's Exhibit 222 is a letter agreement dated June 7, 1929, between M. B. U. Dewar and Timken Roller Bearing Company, which relates to a proposed readjustment of holdings in German Timken.

We offer Defendant's Exhibit 222.

The Court: 222 may be received.

Mr. Rudolph: Defendant's Exhibit 223 is a letter agreement dated June 7, 1929, between Mr. M. B. U. Dewar and the Timken Roller Bearing Company, relating to the proposed financing of French Timken.

The Court: 223 may be received.

Mr. Rudolph: Defendant's Exhibit 224 is an agreement dated November 8, 1929, between Mr. Dewar and the Timken Roller Bearing Company.

We offer Defendant's Exhibit 224.

The Court: 224 may be received.

Mr. Rudolph: Defendant's Exhibit 225 is an agreement dated November 8, 1929, between Timken Roller Bearing
[fol. 2699] Company and Mr. Dewar.

The Court: 225 may be received.

Mr. Nitschke: Is that the one that relates to Industrial and Commercial Investments?

Mr. Rudolph: Yes.

Defendant's Exhibit 226 is a letter agreement dated November 9, 1929, between Industrial & Commercial Investments, Inc., with Timken Roller Bearing Company and Mr. Dewar.

We offer Defendant's Exhibit 226.

The Court: It may be received.

[fol. 2700] Mr. Rudolph: Defendant's Exhibit 227 is a letter dated November 11, 1929, from the Timken Roller Bearing Company and Mr. Dewar to Bankers Trust Company, New York, N. Y.

We offer Defendant's Exhibit 227.

The Court: 227 may be received.

Mr. Rudolph: Your Honor, we have copies of agreements and correspondence relating to re-arrangements made between the parties in 1934 and 1935 at the time stock of British Timken was sold to the public. I discussed it with Mr. Nitschke, and I believe he objects only to two of these documents, aside from his general objection to their relevancy. Aand it occurred to us perhaps Mr. Nitschke will agree we can put in the rest of these as one bound exhibit.

Mr. Nitschke: Of course, if the two I object to are removed I have no objection to putting them in all at once as a collective exhibit.

The Court: The Court has no objection to it provided they will be fastened together so there will be no possibility of any misunderstandi g as to what is included in them.

[fol. 2701] The Court: Suppose you offer that collective document as Defendant's Exhibit 228, with the objectionable documents removed.

The Court: That is up to you, but 228 is the collection of documents which I assume will be indexed somewhere so the court will know what they are.

Mr. Rudolph: We will supply an index later your Honor if that is agreeable to the Court.

[fol. 2702] The Court: That is agreeable. I want to be sure that is done so I won't be left with a folder of papers without any knowledge as to what they contain.

Mr. Rudolph: Defendant's Exhibit 228 is a collective exhibit consisting of a folder of agreements entered into in connection with the issuance and sale of stock of British Timken to the public in 1934 and 1935 and certain correspondence which took place in connection with the issuance of the stock and those agreements.

We offer Defendant's Exhibit 228.

The Court: All right, they will be received. I understand, though, in your briefs you will point out those portions of [fol. 2703] these exhibits which you feel are necessary to be called to the attention of the Court.

Mr. Rudolph: Yes, we propose to do that, Your Honor.

Mr. Day: We have here to be marked our next exhibit, 229, net sales of the Timken Roller Bearing Company and subsidiaries for the calendar years shown below, these being net sales of bearings from 1922 to 1947, inclusive, and I understand from Mr. Ketterer that the subsidiaries referred to are—

Mr. Ketterer: They refer to the Timken Roller Bearing Company; the Timken Roller Bearing Sales & Service Company, when that company was operated, because it was during part of that period; it refers to the Timken Roller Bearing Company, Limited, of Canada, which is a selling company which was and still is being operated in Canada; and, for a part of the period, to the Timken Roller Bearing Company of South America, which is a selling company operating in South America.

Mr. Day: I would like to offer Defendant's Exhibit 229.

Mr. Nitschke: I have no objection to that.

The Court: It will be received.

[fols. 2704-2708] Mr. Day: I have here what I would like to have marked as our Exhibit 230—and I don't believe Mr. Nitschke has had a copy of this—what is headed "Foreign Royalties," and it is a list of the British and French royalties from 1910 through 1926, estimated in 1927 by quarters, and the net sales by pounds of British Timken purchases from us, that is Timken Roller Bearing Company; and net sales by francs of French Timken. This, I understand was found in our files. I would like to offer that in evidence.

Mr. Nitschke: I take it French was S.M.G.

Mr. Day: From 1910 to 1927, Mr. Ketterer, I think French would be S.M.G.

Mr. Ketterer Yes, that is correct.

Mr. Day: Yes, that is correct.

Mr. Nitschke: I have no objection.

The Court: It may be received.

Mr. Rudolph: Defendant's Exhibit 231 is a cable from Dewar to Henry Timken, Jr., dated June 26, 1936.

We offer Defendant's Exhibit 231.

[fols. 2709-2710] The Court: All right; it will be received.

Mr. Rudolph: Defendant's Exhibit 232 is a letter dated June 29, 1936, addressed to Mr. M. B. U. Dewar and bearing the notation in the lower left hand corner H. H. Timken,

Jr., which appears to have been sent from Mr. H. H. Timken, Jr., to Mr. Dewar.

We offer Defendant's Exhibit 232.

The Court: It may be received.

Mr. Rudolph: Defendant's Exhibit 233 is a letter dated June 30, 1936, from M. B. U. Dewar to Mr. Henry Timken, Jr., Timken Roller Bearing Company.

We offer Defendant's Exhibit 233.

The Court: 233 may be received.

Mr. Rudolph: Defendant's Exhibit 234 is a letter dated July 15, 1936, from M. B. U. Dewar to Mr. Henry Timken, Jr., Timken Roller Bearing Company.

We offer Defendant's Exhibit 234.

The Court: It may be received.

Mr. Rudolph: Defendant's Exhibit 235 is a letter dated July 31, 1936, from H. H. Timken, Jr., to Mr. M. B. U. Dewar.

We offer Defendant's Exhibit 235.

The Court: 235 may be received.

[fol. 2711] Mr. Rudolph: If the Court please, I have had an exhibit numbered 236, which is another collective exhibit which we prepared after discussion with Mr. Nitschke. It is an exhibit which relates to correspondence in the years 1920, '23, '24, '25 and '26 between American Timken, between officials of American Timken and British Timken, and Wolseley Motors, which at that time as your Honor will remember was a subsidiary of the Vickers Company in England, prior to the inception of our relation with Mr. Dewar in 1927.

I understand that Mr. Nitschke has two general objections to this exhibit, which, of course, he will discuss with your Honor. Generally speaking, we are doing this under the arrangement we made yesterday.

We would like to offer this and then point out to your Honor in the brief the pertinent parts of the exhibit.

[fols. 2712-2718] Mr. Rudolph: This is Exhibit No. 236. We offer the exhibit in evidence. We have a copy here for your Honor.

I might say the exhibit is not as yet indexed but we will of course prepare an index and furnish it to your Honor in the event it is admitted in evidence.

[fols. 2719-2722] The Court: All right, I will receive them then.

[fol. 2723] Mr. Day. We have here what has been marked Defendant's Exhibit 59, your Honor, and that's a circular published by the Timken Company some years ago. We only offer the picture of the old plant, not the writing, or the printing underneath it. So we may not be accused of offering only the old plant, on the other side we will offer the picture also of the other plants. But I do want to say to the Court that this includes the pictures of the plants in Canton, Columbus, Gambrinus, Mount Vernon and Wooster, [fol. 2724] and there are some other plants that are not in this picture, which I think came out in 1940. What we are not offering we will cover in some way, the printed part.

Mr. Day: We have here Defendant's Exhibit 241, which I should like to offer in evidence, which I understand is a picture of a bearing, a Timken bearing.

[fol. 2725] The Court: It may be received.

[fol. 2726] The Court: What about 237?

Mr. Day: I have 237, if the Court please. We might as well offer that.

[fol. 2727] The Court: It may be received.

Mr. Ketterer: I have had marked for identification Defendant's Exhibit 238, which shows in tabular form the average number of employees and production of bearings of the Timken Roller Bearing Company for the years 1922 through 1947, inclusive. I should like to offer that.

The Court: Employees and production?

Mr. Ketterer: Employees and production, from 1922 [fol. 2728] through 1947, inclusive.

The Court: It may be received.

Mr. Ketterer: Then, in respect of these contracts, copies of which we did not have available yesterday when Mr. Timken was on the witness stand, I have had marked for identification Defendant's Exhibit 239, which is a contract between The Timken Roller Bearing Company, M. B. U. Dewar, and Timken Holdings, Limited.

The Court: It may be received.

Mr. Ketterer: We have had marked for identification Defendant's Exhibit 240, which is a contract between the Timken Roller Bearing Company and M. B. U. Dewar, dated [fols. 2729-2730] March 22, 1948.

The Court: It may be received.

[fol. 2731] The Court: Let me rule on 236. Those letters,

to which objection was made because it was contended by the defendant that they contained certain information which is offered to prove facts, have been removed.

Mr. Nitschke: Yes, I think that's right, isn't it, Mr. Rudolph?

Mr. Rudolph: That is right, your Honor.

The Court: And the objection made to Defendant's Exhibit 236 is based entirely on the matter of whether or not it consitutes a defense to the charge made?

Mr. Nitschke: Yes, that is correct. As I understand it, the offer of those is not made to show the facts of what is stated in the documents, but only to show that Timken received such information.

The Court: To show that Timken received such information and relied on that information and was influenced in doing certain things because of the information received.

Mr. Nitschke: I suppose that is the inference.

The Court: That was the statement.

Mr. Day: That's right. Of course, by making that stipulation we don't imply—I don't think it's even necessary [fol. 2732] to state this—that there was anything in there that isn't a statement of fact. I mean we don't want to be in a situation of stipulating that anything in there isn't true.

The Court: That anything in there isn't true?

Mr. Day: Yes.

The Court: I appreciate that you are not admitting it isn't true, but yet the Government does not want to waive any objection to a contention that it is true.

Mr. Day: That's right, and we are not offering it for the purpose of showing that the things therein stated are true, but for the purpose stated.

The Court: It may be received.

Mr. Rudolph: If the Court please, Defendant's Exhibit 242 is a letter dated March 10, 1924, from Wolseley Motors, Limited, to Heman Ely of The Timken Roller Bearing Company. We offer Defendant's Exhibit 242.

Mr. Nitschke: I have no objection other than my general objection.

The Court: It may be received over the objection.

(Thereupon letter dated March 25, 1924, from Timken Roller Bearing Company to British Timken Limited was

marked by the Clerk, for identification, Defendant's Ex-
[fol. 2733] hibit 243.)

Mr. Rudolph: Defendant's Exhibit 243 is a letter dated March 25, 1924, from The Timken Roller Bearing Company to British Timken Limited, bearing in the lefthand lower corner the name Heman Ely, who was vice-president and treasurer of the Timken Roller Bearing Company at that time.

Mr. Nitschke: No objection to that except the general objection.

The Court: It may be received.

(Cable dated May 15, 1924, from Stibbard to Timken Roller Bearing Company was thereupon marked by the Clerk, for identification, Defendant's Exhibit 244.)

Mr. Rudolph: Defendant's Exhibit 244 is a cable dated May 15, 1924, from Stibbard to Timken Roller Bearing Company. We offer Defendant's Exhibit 244.

Mr. Nitschke: No objection.

The Court: It may be received.

(Cable dated May 16, 1924, from Timken to Stibbard, was thereupon marked by the Clerk, for identification, Defendant's Exhibit 245.)

Mr. Rudolph: Defendant's Exhibit 245 is a cable dated May 16, 1924, from Timken to Stibbard. We offer
[fol. 2734] Defendant's Exhibit 245.

Mr. Nitschke: What was the date of that?

Mr. Rudolph: May 16, 1924.

Mr. Nitschke: No objection.

The Court: It may be received.

(Cable dated June 2, 1924, from Stibbard to Timken Roller Bearing Company was thereupon marked by the Clerk, for identification, Defendant's Exhibit 246.)

Mr. Rudolph: Defendant's Exhibit 246 is a cable dated June 2, 1924, from Stibbard to Timken Roller Bearing Company. We offer Defendant's Exhibit 246.

Mr. Nitschke: Is that June 2nd?

Mr. Rudolph: Yes, June 2, 1924.

Mr. Nitschke: No objection.

The Court: It may be received.

Thereupon letter dated June 19, 1924, from Stibbard,

Gibson & Company to Timken Roller Bearing Company was marked by the Clerk, for identification, Defendant's Exhibit 247.

Mr. Rudolph: Defendant's Exhibit 247 is a letter dated June 19, 1924, from Stibbard, Gibson & Company to The Timken Roller Bearing Company. We offer Defendant's Exhibit 247.

Mr. Nitschke: No objection.

[fol. 2735] The Court: It may be received.

Mr. Rudolph: We will supply copies of those exhibits to your Honor.

The Court: All right.

Mr. Day: If your Honor please, we have been trying to locate an official document of the Department of Commerce, Office of International Trade, that has to do with a license regulation effective March 1, 1948, which we are advised by a current Export Bulletin that we have here published by the Department of Commerce, Office of International Trade, will require that licenses be required for the exportation of all commodities to territories in Europe and certain contiguous areas. We haven't yet been able to locate the specific document. We would like, if possible, to reserve an exhibit number for it in our case, and just as soon as we get it we will give a copy to Mr. Nitschke.

The Court: I see no objection to that. Do you have a copy of it now?

Mr. Day: No, we don't have what seems to be the official copy of the document. We will try to get it.

The Court: What is that, a Commerce Department regu-

[fol. 2736] lation?

Mr. Day: It seems to be a regulation of the Department of Commerce, Office of International Trade, and I have here this current Export Bulletin and it says what I have just read, and we want to get the document and put it in, and reserve a number for it.

The Court: Well, it's understood that when the official document is located that there is no objection to its being offered.

Mr. Day: I'll show it to Mr. Nitschke as soon as we get it.

Mr. Nitschke: I certainly won't make any objection, your Honor.

The Court: That will be Defendant's Exhibit 248, is that right, Mr. Wilson?

The Clerk: Yes, that's right, your Honor.

The Court: All right.

Mr. Day: The Defendant rests. I would like to say in that connection that we are quite certain there aren't any more exhibits that we wish to put in, and if in the next three or four days, before the argument starts, we find anything we'll call Mr. Nitschke's attention to it. But we do rest.

Mr. Nitschke: Your Honor, before proceeding with rebuttal, I would like to make a few statements for the record. First, I would like to withdraw the Government's [fols. 2737-2742] objections to Defendant's Exhibits 131 and 135. The reason I say that is because we have had a standing objection to the relevancy of the entire defense. In connection with those exhibits, 131 and 135, I just want the record to show that we did not make that objection.

Mr. Day: What are they?

Mr. Nitschke: They are your exhibits. I think they relate—

The Clerk: Defendant's Exhibit 131 is a report by Mr. Hess dated May 31, 1935.

The Court: Those were Exhibits 131 and 135?

Mr. Nitschke: 131 through 135.

The Clerk: Defendant's Exhibit 132 is a cable dated May 31, 1935 from Duncan to Hess.

Mr. Nitschke: Is that all right?

Mr. Day: Yes, if you want to withdraw your objection, it's certainly all right.

Mr. Nitschke: I thought you wanted to hear further what they were?

Mr. Day: No, I think no matter what they are if you want to withdraw your objection we can't stop you.

[fol. 2743] Mr. Nitschke: Your Honor, before putting in evidence these documents I have a stipulation which Mr. Ketterer has agreed to, as follows:

The mark "Timken" is the only mark the Timken Roller Bearing Company has registered with the United States Customs Office;

Secondly, the Timken Roller Bearing Company did not use the mark "Timken" on bearings until 1912, but it did use the mark before that on boxes.

Mr. Ketterer: That is correct.

Mr. Nitschke: I have had marked for identification as Government's Exhibit 173 a portion of a letter dated

February 23, 1924, from Carr & Carr to the Timken Roller [fols. 2744-2749] Bearing Company, and as Government's Exhibit 174 a letter dated November 9, 1927, from Stibbard, Gibson & Company to The Timken Roller Bearing Company which I wish to offer in evidence.

The Court: They may be received.

[fol. 2750] We have Government's Exhibit marked for identification 175, a portion of a letter written by Mr. Hess to Mr. Dewar dated October 22, 1934, and Government's Exhibit 176, reply to that letter dated November 5, 1934, from Dewar to Hess. I wish to offer Government's Exhibits 175 and 176 in evidence.

[fols. 2751-2752] The Court. They may be received.

[fol. 2753] Now your Honor, I now wish to read a very brief portion from the deposition taken in London, in order to identify the author of the next document which I hope to put in evidence. Reading from Page 110 of the transcript, my examination of Mr. Dewar.

(Questions read by Mr. Nitschke and answers by Mr. Derr as follows:)

"Who is E. H. Doughty?

[fol. 2754] A. Doughty is the head of our drawing office. 'Engineering drawing office' is the American expression for it.

Q. What are his duties?

A. He is concerned with the applications of bearings to all classes of vehicles, rolling mills, machine tools. He also deals with patents.

Q. You say he is concerned with applications. Do you mean he is the engineer who determines what applications shall be suggested to the customers?

A. That is so, yes.

Q. Does he have a responsible position in the Company?

A. Yes.

Q. Who is his immediate superior?

A. Mr. Pascoe.

Q. How long has Mr. Doughty held this position, generally?

A. Some years.

Q. Do you know what he did before he became in charge of the technical department?

A. I think he was a member of it, under a man called Wood.

Q. Has he been with British Timken a long time?

A. Yes, a long time.

[fol. 2755] Q. As long as you have?

A. I think longer, to tell you the truth.

Q. Did Mr. Doughty handle trade mark matters also?

A. Yes."

I also wish to read from Page 112 of the deposition, also examination of Mr. Dewar:

"Q. I have here 'Government's Exhibit D. 35', which is marked 'COPY' entitled 'From Technical Department to Mr. W. Dallow. OUR REF, END/E/NC, Date 12th Dec, 1935.' Would you look at that and tell me what it is, if you recall.

A. This is a summary of the position of the trademark 'Timken' as far as it concerned British Timken and British Timken territory.

Q. That was prepared by Mr. Doughty.

A. It is mostly prepared by a man called Skerrett, the Patent Agent for ourselves.

Q. I wonder if you would look at the last page.

A. It is signed by Doughty.

Q. But it contains material written by Skerrett?

A. Yes.

Q. That document was found in the files of the American Company. Do you know how it got there?

A. I would say we sent it to them."

I wish to have marked for identification as Government's [fols. 2756-2770] Exhibit 177 this document which was identified in the deposition as Government's Exhibit D. 35, and which is the report of Mr. Doughty of the technical department to Mr. Dallow.

Mr. Ketterer: We object to that, if the Court please.

[fols. 2771-2776] Mr. Nitschke: Your Honor, I have had marked for identification as Government's Exhibit 178 excerpts from the SEC report and the definition of terms which were marked for identification yesterday as Government's Exhibits 171 and 172. This exhibit contains that portion of the SEC report made by the defendant defining its relationship with the foreign companies as not affiliates.

Mr. Day: We wa to object to that.

[fol. 2777] The Court: Well, aside from all of the discussion, I don't believe it is proper rebuttal.

[fol. 2778] * * * and I will have to sustain the objection.

Mr. Nitschke: I would like to have marked for identification as Government's Exhibit 179 a copy of a letter from Duncan to Timken dated January 11, 1939, entitled "British Timken Trademark."

Letter last above referred to was thereupon marked by the Clerk, for identification, Government's Exhibit 179.

Mr. Nitschke: This letter recites that it sends copies of certain documents to Timken, and I have excerpted from one of the enclosures, namely, the opinion of Mr. F. E. Bray, K.C. an expert on trademark law, one paragraph of that opinion which is the only part I wish to offer. I would also like to have marked for identification as Government's Exhibit 180 a copy of the British Trademark Journal for March 1, 1939. I think I better qualify that, it's not a copy of the journal, it's a copy of three pages from the journal.

Document last above referred to was thereupon marked by the Clerk, for identification, Government's Exhibit 180.

Mr. Nitschke: As Government's Exhibit 181, a letter from W. Robert Timken to Joseph Gravely dated March 28, 1939.

[fol. 2779] Letter above referred to was thereupon marked by the Clerk, for identification, Government's Exhibit 181.

Mr. Nitschke: And as Government's Exhibit 182 a typewritten copy of a portion of a letter from W. Robert Timken to Duncan dated April 8, 1939.

Letter above referred to was thereupon marked by the Clerk, for identification, Government's Exhibit 182.

Mr Nitschke: And as Government's Exhibit 183 a letter dated November 2, 1939, from Duncan to Timken.

Letter above referred to was thereupon marked by the Clerk, for identification, Government's Exhibit 183.

Mr. Nitschke: This also contains a copy of a telegram, and I offer the telegram not attached to the letter but independently, as Government's Exhibit 184. The telegram is from Stibbard to Timken and is dated November 2nd.

Mr. Day: That's a cablegram, isn't it?

Mr. Nitschke: Yes, I believe it is, Mr. Day. It's dated November 2, 1939.

Cablegram above referred to was thereupon marked by the Clerk, for identification, Government's Exhibit 184.

[fol. 2780] Mr. Nitschke: As Government's Exhibit 185

a letter from Gravely to The Timken Roller Bearing Company dated November 4, 1939.

Letter above referred to was thereupon marked by the Clerk, for identification, Government's Exhibit 185.

Mr. Nitschke: As Government's Exhibit 186 a letter from W. Robert Timken to Walter Rockwell, Timken Detroit Axle Company, dated November 4, 1939.

Letter above referred to was thereupon marked by the Clerk, for identification, Government's Exhibit 186.

Mr. Nitschke: As Government's Exhibit 187 a letter from Robert Timken to A. I. Hawkins, Timken Detroit Axle Company, dated November 10, 1939.

Letter above referred to was thereupon marked by the Clerk, for identification, Government's Exhibit 187.

Mr. Nitschke: As Government's Exhibit 188 a letter from Hawkins to W. Robert Timken dated November 22, 1939. This is on the letterhead of the Timken Detroit Axle Company.

Letter above referred to was thereupon marked by the Clerk, for identification, Government's Exhibit 188.

Mr. Nitschke: As Government's Exhibit 189 a cable [fol. 2781] dated December 1, 1939, from W. Robert Timken to Hawkins, Timken Detroit Axle Company.

Cable above referred to was thereupon marked by the Clerk for identification, Government's Exhibit 189.

Mr. Nitschke: And as Government's Exhibit 190 a letter from Duncan to Timken dated February 16, 1940.

Letter above referred to was thereupon marked by the Clerk, for identification, Government's Exhibit 190.

[fol. 2782] Mr. Ketterer: If the Court please, we object to the exhibits that are offered, first, on the ground that none of them constitutes anything in the nature of rebuttal. If we apply the test that the Court outlined, which I think is a sound test, as to what is or is not rebuttal, there isn't a single one of these documents that has been offered here that rebuts any proof that has been offered in the defense. If you look at each of them individually, there isn't anything [fols. 2783-2785] here that has been offered that rebuts anything that anybody has said, or anything that is in writing that was offered by way of exhibits in this case.

[fol. 2786] The Court: I think it went further than that, Mr. Ketterer. I think if you look back in the record you will find that the question you put to Mr. Hess was so general

and so all-inclusive that it went fu.ther than that. At least, that is my recollection of it. That is why I am hesitant in immediately ruling on this matter because it is my recollection that you went a little further than simply asking whether or not Timken had such control over Timken Detroit Axle as to enable Timken to influence Timken Detroit Axle with references to prices. I think it included not only prices but everything. You may be right, that it didn't. If I find it didn't, this testimony may go out. I can't very well do anything but this, gentlemen, and [fols. 2787-2788] this group of exhibits, I'll say to you, I will receive with the proviso that if I find it is not in rebuttal of anything that appears in the testimony on the defense, then I will disregard it.

[fol. 2789] Mr. Nitschke: I have one other exhibit, your Honor, which I would like to have marked for identification as Government's Exhibit 191. Government's Exhibit 191 is a publication of the Anti-friction Bearing Manufacturers Association entitled "Export Offices and Foreign Representatives of Anti-friction Ball and Roller Bearings and Steel Balls Manufactured in the United States."

Document last above referred to was marked by the Clerk, for identification, Government's Exhibit 191.

Mr. Nitschke: I would like to offer that in evidence as part of the Government's rebuttal.

Mr. Ketterer: We object to that, if your Honor please.

[fol. 2790] The Court: Well, you needn't go any further. If it does no more than simply rebut the all-inclusive statement that was given by Mr. DeKrafft and Mr. DeVegh—

Mr. Nitschke: That's what it does.

[fol. 2791] The Court: —to the effect that it was impossible profit-wise to engage in foreign trade in roller bearings by Timken, then it is clearly admissible to show whether or not the mere fact that these people were engaged in it does have some bearing or may have some bearing on that all-inclusive statement. Whether it does refute it or not I am not prepared to say, and I am not saying. But you recall that there was a very definite statement—I think Mr. Day towards the end tried to modify that somewhat, as he understood it, and did modify it somewhat—but I think Mr. DeKrafft's statement was a sweeping declaration of a nature that would permit the refutation of it.

Mr. Nitschke: That is all the rebuttal the Government has, your Honor.

[fol. 2792] The Court: Any surrebuttal?

Mr. Ketterer: In the exhibits that were offered by counsel for the Government this morning, there were some excerpts of letters that were read, and in that connection we should like to offer the letters in their entirety so that there will be no question as to the meaning of the writers in these letters.

Mr. Nitschke: I have no objection to doing that, your Honor, and if it would be more convenient I will offer the entire letter as my exhibit.

Mr. Ketterer: That's all right with us.

The Court: I understood Mr. Nitschke made those excerpts for the purpose of cutting down the volume of the exhibits. But are you willing to offer them?

Mr. Nitschke: Certainly.

The Court: I don't believe there is any need for any further offer, then.

Mr. Ketterer: That's perfectly all right. I'll just refer to them as Government's Exhibits 173, 175 and 176.

The Court: Is there anything further, gentlemen, outside of the closing arguments?

Mr. Nitschke: I don't think so, your Honor.

[fol. 2793] Mr. Day: I would like to renew the motion we made at the end of plaintiff's case for dismissal and a judgment for the defendant upon the ground, as I remember the rule, that the plaintiff has not made a showing on the law and the facts which entitles the plaintiff to relief, the same one we made at the end of the Government's case.

The Court: That will be taken under advisement.

[fol. 2794] Mr. Day: If the Court please, your Honor will recall that at the adjournment of court last Friday we talked about our wish to offer in evidence a provision of the Department of Commerce, Office of International Trade having to do with export licenses. We now have a document which I think covers the proposition.

Thereupon current export bulletin, Department of Commerce, Office of International Trade marked by the Clerk, for identification, Defendant's Exhibit 248.

Mr. Day: I would like to have that offered as our next Exhibit 248.

The Court: It may be received.

Mr. Day: We also have one more exhibit, which is the investment of American Timken and Dewar in French Timken. It is a tabulation starting in 1928 and running through 1940. I would like to have that marked our next exhibit.

Tabulation above referred to thereupon marked by the Clerk, for identification, Defendant's Exhibit 249.

[fols. 2795-2922] Mr. Day: Mr. Rudolph talked with Mr. Nitschke about it over the week-end and I understand he has no objection to it.

That is compiled from the books of the defendant, I am advised.

The Court: It is a tabulation?

Mr. Day: It says "Investment of American Timken and Dewar in French Timken."

The Court: I see. It may be received.

[fol. 2923] Mr. Day: If the Court please, as we told your Honor just a few moments ago in chambers, we have talked to Mr. Nitschke about introducing into evidence two additional exhibits. One is Defendant's Exhibit 250, cable sent in my name to Andre Augis of Paris under date of April 24, 1948. And the other is a cable to me signed Murray, M-u-r-r-a-y in answer to it.

The Court: Can you identify Mr. Murray?

Mr. Day: Mr. Murray is connected with French Timken.

The Court: In what capacity?

Mr. Ketterer: Mr. Murray is a tax consultant, adviser, to French Timken and has been for a great many years. He is connected with a French firm whose name I cannot recall at the moment, although he happens to be an Englishman.

The Court: There is no dispute of Murray's position being such that he can state the facts as they are stated in that cable?

Mr. Nitschke: No, there is no objection, your Honor.

[fols. 2924-2986] The Court: They may be received.

Defendant's Exhibit 250, cable dated April 24, 1948 from Mr. Day to Andre Augis; and Defendant's Exhibit 251, cable in reply from Murray to Mr. Day, both received in evidence.

[fol. 2987] Case Submitted

[fol. 2988] Reporter's Certificate

We hereby certify that the above and foregoing is a true and accurate transcript, embodying the changes and corrections pursuant to stipulation of counsel filed herein.

In United States District Court

[Title omitted]

Stipulation re Attachment to Defendant's Exhibit No. 248—Filed May 25, 1948

We, the attorneys for the respective parties, do hereby stipulate that Current Export Bulletin No. 434, dated January 28, 1948, Department of Commerce, Office of International Trade, which is attached hereto, may be attached to, and become part of, Defendant's Exhibit No. 248, and that the Court may enter an order accordingly, notice by the Clerk being hereby waived.

(s.) Robert A. Nitschke, Attorney for plaintiff.
(s.) Luther Day, Attorney for defendant.

It is so ordered.

(s.) Freed, U. S. District Judge.

[fol. 2990] [File endorsement omitted]

IN THE DISTRICT COURT OF THE UNITED STATES FOR THE NORTHERN DISTRICT OF OHIO, EASTERN DIVISION

Civil Action No. 24214

UNTED STATES OF AMERICA, Plaintiff,

vs.

THE TIMKEN ROLLER BEARING COMPANY, Defendant

MEMORANDUM OPINION—Filed March 3, 1949

FREED, J:

1. The instant action was brought by the United States under favor of Section 4 of the Sherman Antitrust Act to prevent and restrain the continuing violations of Sections 1 and 3 of the Act. Permanent injunction with adequate protection to prohibit the violations is sought.

2. The complaint charges, that the defendant and the co-conspirators entered into contracts, agreements and understandings to eliminate competition between themselves and with others, in the manufacture and sale of anti-friction bearings in all the markets of the world, including the United States. It recites that they allocated the respective territories in the world in which each party might manufacture and sell anti-friction bearings and that they prevented one party from selling or shipping anti-friction bearings into the territory allocated to any other party, except in completed articles of manufacture and for replacement bearings in those articles. It further charges that they fixed and agreed upon prices of bearings shipped into the territory allocated to any other party and that they fixed and agreed upon prices of anti-friction bearings sold and shipped to Russia. They allocated the use of the trade mark "Timken" to each of the parties in their respective designated territories and required that the co-conspirators not manufacture and sell bearings, except under the mark "Timken". The agreements required the co-conspirators to surrender to defendant the rights in the name "Timken" upon the termination of the contracts between them. It is

claimed, in certain of the designated territories they entered into agreements with other manufacturers to regulate and allocate the sale of anti-friction bearings and they aided and assisted each other in restricting and eliminating in their respective territories competition from others in the manufacture and sale of anti-friction bearings.

3. It is alleged in the complaint that the combination and conspiracy resulted in unreasonable restraint of imports into and exports from the United States. It is further alleged that the current world shortage of anti-friction bearings and decreased European production caused by the war, has created large potential export markets for anti-friction bearings of American manufacture. Notwithstanding this, the continuation of the conspiracy and combination will restrain and prevent defendant from seeking and ac- [fol. 2991] quiring many world markets with the eventual consequence of reducing its production of bearings and employment of labor.

4. The factual and legal questions to be determined in respect of the charges of the complaint are posed by the Government as follows:

5. Within the purview of the Sherman Act is it illegal for the "defendant and two foreign corporations, which between them manufacture and sell a substantial portion of the world's production of anti-friction bearings, to regulate interstate and foreign commerce by private arrangements embodying the following restrictive practices"?

> "(a) Allocation, by agreement, of trade territories throughout the entire world, each agreeing with limited exceptions, not to manufacture and sell in the other's territory;
>
> "(b) Imposition by agreement, of price restrictions upon products sold by any party in the territory of another;
>
> "(c) Agreement to exclusively exchange present and future know-how and inventions, patented or unpatented;
>
> "(d) Use by agreement, of a common trade mark "Timken" in their respective territories compulsory use of that mark by the foreign conspirators, prohibition against their dealing in products under any other

name and requiring that they cease using the name upon termination of the agreement;

"(e) Mutual co-operation and assistance to protect each others' markets and to eliminate the competition of outsiders;

"(f) Participation in foreign cartels which restrict exports by United States producers."

6. The defendant, The Timken Roller Bearing Co., is an Ohio corporation with its principal offices located at Canton, Ohio. It employes upwards of 16500 employees at its various plants located in Ohio and in Colorado, in the United States and St. Thomas, Ontario in Canada. Its foreign sales are handled by two wholly owned corporations: Timken Roller Bearing and Service Limited and The Timken Roller Bearing Co. of South America, Canadian and Ohio corporations respectively. Defendant manufactures tapered roller bearings, alloy steel, seamless tubing and removable rock bits.

7. British Timken Limited, named a co-conspirator, (hereinafter referred to as British Timken) is a British Joint Stock Company which maintains its plant and principal offices at Birmingham, England. It employes approximately 2400 workmen and manufactures tapered roller bearings and axle boxes for railroad cars. Its wholly owned subsidiary, Fischer Bearings Co., Ltd., manufactures straight roller bearings and ball bearings.

8. Societe Anonyme Francaise Timken, also named a co-conspirator (hereinafter referred to as French Timken), is a French corporation with its plant and offices at Asnieres, France. It employes approximately 510 people and manufactures tapered roller bearings.

9. The assertion of the Government that defendant, British Timken and French Timken dominate the tapered roller bearing market of the world and a substantial portion of the total anti-friction bearing market is challenged by defendant.

[fol. 2992] 10. The evidence discloses that defendant is "many times over" the largest manufacturer of tapered roller bearings in the world. Its gross sales in 1947 were $77,097,756.00.

11. According to the figures compiled by the Anti-Friction Bearing Manufacturers Association, defendant's

percentage of the tapered roller bearing industry in the United States was as follows:

Year	
1941	71.9%
1942	77.9%
1943	82.2%
1944	80.3%
(7 months) 1945	78.9%

12. Presently defendant's output of tapered anti-friction bearings constitutes 25% of the total production of anti-friction bearings in the United States.

13. British Timken, during the period from 1927 to date, produced a large volume of all the tapered bearings in England. It manufactured more than 90% in 1927, the percentage decreased to 70%, and later returned to more than 90%. It produces approximately 20% of all the British anti-friction bearings. British Timken's sales including those made by its subsidiary, Fischer Bearings Co., Ltd., totaled $14,700,000 in 1947.

14. French Timken manufactures about 80% of the tapered bearings in France, which constitutes 10% of all the anti-friction bearings. Its sales in 1947 totaled $2,274,723.

15. Command of such volume of business spells out the dominant position of defendant, British Timken and French Timken both in the tapered and anti-friction bearing industry. Oxford Varnish Corporation et al. v. Ault & Wiborg Corporation, 83 Fed. (2d) 764, U. S. v. Columbia Steel Co., 334 U. S. 495, 527.

16. It was aptly stated during the trial that practically every shaft that turns and every vehicle that rolls is dependent on anti-friction bearings. Their crucial importance to our present industrial economy requires no demonstration. Modern machinery, such as trucks, automobiles, farm machinery, locomotives, aeroplanes, in fact every product which has rotating parts, relies on anti-friction bearings for continued operation.

17. Friction bearings and anti-friction bearings have distinctive characteristics. Friction bearings slide over the shaft and depend solely on oil or other similar substance to reduce friction. Anti-friction bearings, on the other hand, consist of a circular group of steel rollers or balls revolv-

ing between two circular raceways which reduce friction between moving mechanical parts.

18. There are two general types of anti-friction bearings: roller bearings and ball bearings. Tapered roller bearings are a style of roller bearings.

19. While tapered bearings compete with other types of anti-friction bearings and to a much lesser extent with friction bearings, tapered bearings because of their design and applicability for particular use, enjoy freedom from competition, just as for certain definite uses, ball bearings are free from competition.

20. They constitute a distinctive type of anti-friction bearing which fulfills a requirement not supplied or satis- [fol. 2993] fied by others. Whatever competition exists between the different types of anti-friction bearings, is present only up to the point of the adoption, in the design of a specific type of bearing, in the proposed equipment or machinery. Once that particular type of bearing is incorporated, other types cannot be substituted for replacement. The replacement bearings must be of the same size and character.

21. The original installations constitute approximately 95% of the output of roller bearings and the replacement sales the balance of 5%.

22. In our highly mechanized industries, roller bearings serve as vital links in the chain of their assured existence and sustained progress. Defendant, British Timken and French Timken exercise a potent force in the making and marketing of these products, essential to the maintenance of the economic welfare of the United States and of the entire world.

23. In order to view the conduct of defendant in the proper perspective during the period of time when it is accused of violating the antitrust laws, it is essential to examine its prior activities which the Government claims culminated in the agreements, contracts and understandings to eliminate competition, assailed in this action.

24. On June 16, 1909, the first of a series of written agreements, licensing the production and distribution of tapered roller bearing was concluded between defendant and Electric & Ordnance Accessories Company Limited, (a predecessor of British Timken and a subsidiary of Vickers Ltd., a British trust comprised of many companies and described as manufacturing everything from battleships to baby

carriages). Under its provisions defendant granted to E. & O. A. the exclusive license to "make, use, exercise and vend" in the United Kingdom and the Isle of Man roller bearings of all kinds made pursuant to the specifications of British patents which defendant then owned or under patents later to be granted to or acquired by defendant. It contained definite territorial restrictions. Defendant was prohibited from making or selling to others, or from licensing others to do it, or from selling its own manufactured bearings for shipment into the territory of E. & O. A. It was, however, permitted to make and sell or license others to make and sell bearings for vehicles manufactured outside and shipped into the territory of E. & O. A.

25. E. & O. A. was prohibited from selling bearings outside of its territory and from selling bearings in its territory, knowing them to be for shipment outside. E. & O. A. was allowed to sell bearings in its own territory for vehicles manufactured there for export elsewhere. The license was so conditioned that E. & O. A. was prevented from manufacturing or selling any anti-friction bearings, except those made under the licensed patents and except those assembled in other articles produced or sold by E. & O. A. E. & O. A. was obliged to use the designation "Timken" exclusively on all the bearings made or sold by it. It was incumbent on E. & O. A. to use all the instructions for manufacture given to it by defendant which defendant agreed to supply. Defendant in turn was privileged to utilize any improvements made by E. & O. A. in its manufacturing process. E. & O. A. had the right to determine the sale price for its bearings, provided that the deficiency between its lowest price and the lowest sale price of defendant would not be in excess of the United States tariff chargeable on the bearings from any part of E. & O. A.'s territory.

26. In another agreement executed on the same day defendant granted to E. & O. A. the full and exclusive right to "license and authority to make use exercise and vend" roller bearings of all kinds under certain French and Russian patents and under a German patent application as [fol. 2994] soon as the patent or other equivalent grant shall have been obtained in the territories covered by the patents. It provided that so long as the agreement is in force, E. & O. A. shall have "full and exclusive right license and authority until all the said Patents shall have been

granted or after all or any of the said Patents shall have ceased to exist (but only so fa as the Licensor can then lawfully do so) to make use exercise and vend articles embodying the subject matter of such Patents or Patent and Roller Bearings of every kind whatsoever in that part of the said territory where the Patents or Patent shall not have been granted or shall have ceased to exist."

27. Defendant also granted to E. & O. A. an exclusive license to manufacture and sell articles, embodying the subject matter of the British patents referred to in the first agreement and roller bearings of every kind whatsoever (whether covered by patents or not) throughout Europe (except the United Kingdom, France and Russia and except Germany after the patent or grant shall be issued or made there) and throughout the whole of the British Colonies, Protectorates and Dependencies except Canada. It contained the identical restrictions set forth in the first agreement in respect of sales in the other party's territory. The provisions of the first agreement pertaining to price regulations, to the compulsory use of the mark "Timken" by E. & O. A., to the requirement that E. & O. A. use instructions as to method of manufacture, to the furnishing of data by defendant, to the privilege of defendant to utilize improvements made by E. & O. A. were embodied in the second agreement in identical language.

28. The agreements of June 16, 1909 were modified on April 6, 1920, by two separate instruments between defendandt and Wolseley Motors of England (another Vickers' subsidiary). The rights of E. & O. A. were assigned to Wolseley. The territorial divisions remained as they had been designated. The respective areas were redefined as licensor's area (defendant) and licensee's area (Wolseley). Defendant was permitted, however, to sell to manufacturers in defendant's territory who in turn, were allowed to export bearings to Wolseley's territory for use in their products. Wolseley was granted the same privilege in its territory.

29. The price for replacement sets for use in Ford cars in Wolseley's territory was fixed. Defendant and Wolseley placed on record their desire and intention, that bearings made in their respective territories "shall not be sold at prices which shall be unreasonable and unfair to the party in whose territory the Roller Bearings are sold" without accepting any legal obligation for it.

30. The modifying agreements further provided, that if

the principal agreement (June 16, 1909) should be rescinded, Wolseley should abandon the use of the name "Timken" as part of its name (if so used) and in all other respects, and secure to defendant the exclusive use of the name "Timken".

31. In 1924 and 1925 after all the basic patents pertaining to the tapered roller bearing had expired, two agreements were executed between defendant and British Timken. They merely modified the prior agreements and continued them for a term of five years to January 1, 1929. In the meantime British Timken succeeded to the rights of Wolseley Motors (its parent company). Royalties payable by British Timken were reduced from fifteen per cent to five per cent. They recited that the name "Timken" should belong exclusively to defendant and that during the continuance of the principal agreements as modified from time to time British Timken should be deemed to be using it as a part of its exclusive license and upon the expiration of the agreements British Timken should change its name and do everything necessary to secure for defendant the exclusive right to the name "Timken".

[fol. 2995] 32. These various agreements constituted the basis of relations between defendant and British Timken, including its predecessors E. & O. A. and Wolseley Motors, subsidiaries of Vickers. Against the backdrop of these prior relations we must view the conduct of defendant to resolve the questions raised by the charges of antitrust violations beginning in 1928.

33. As to the existence of these license contracts, which contained restrictions of territories, fixing of prices, covenants of defendant and British Timken not to compete with each other there is no dispute. The only comment of defendant in that regard is that, "Vickers in its zeal to protect itself may have exacted too broad a license."

34. The Government points out that in 1927, prior to the time defendant and British Timken associated in their challenged conduct in the bearing industry they were prosperous and growing concerns. This is amply supported by the evidence.

35. Since it was founded, defendant has held a commanding position in its field of manufacture. By 1928 it became the Titan of the roller bearing industry. It had purchased the assets of its principal competitors in the United States. Conflicting claims were made, during the trial, as to the

exact percentage of the total tapered roller bearing market controlled by defendant. It is of no moment what the precise figures were. Defendant's assertions that it was "many times over the largest manufacturer of tapered roller bearings in the world" and that "Timken Tapered Roller Bearings are standard equipment in a majority of all makes of automobiles, trucks and busses. Railroad cars and locomotives, steel mill roll necks, machine tool spindles, oil field machinery, compressor crankshafts, paper making machines—these are but a few of Industry's tough jobs in which Timken Bearings have become dominant" are sufficient indication of the position of defendant in the industry.

36. Although defendant in its advertising characterized itself and its product in this fashion in 1941, its relative position was the same in 1928. British Timken's potent leadership in the industry compared favorably with that of defendant. It showed a substantial growth from the time the principal contracts were made and increased its productive capacity, experience in manufacture and sales output to an extent, that it became a potential formidable competitor in the field of roller bearings. It experienced a relatively greater growth in the business than did defendant. It had but one competitor in Great Britain and sold approximately 90% of all the tapered roller bearings there. So the accused agreements between 1928 and 1938 were made between two manufacturers, who on the basis of the evidence, were properly characterized as the largest manufacturer in the world and the largest manufacturer in Great Britain respectively.

37. Around 1926, Michael B. U. Dewar, an English businessman, became vice chairman of Wolseley Motors. British Timken was then a subsidiary of Wolseley Motors. As a member of a British commission, while on a visit to the United States to make an economic study, he spent some time at defendant's plant. In 1927, shortly after his return to England, he became interested in personally acquiring British Timken. As an officer of Wolseley Motors, he knew of the existing agreements between defendant and British Timken, of their provisions pertaining to territory, royalty and trade mark. He also knew that the contracts were to expire on January 1, 1929.

38. On March 10, 1927, Dewar wrote to defendant's president, advising that he had become chairman of British Tim-

ken and raising the question of the continuation of the existing agreements between British Timken and defendant. In this letter mention was made that he contemplated making an offer to Vickers for the purchase of British [fol. 2996] Timken and expressed the thought that it would require about £300,000. He commented, "I do not know whether your Company would care to be interested if I were to make such an offer either permanently or on the basis of the money loaned being repaid out of profits."

39. On March 28, Dewar cabled defendant, inquiring whether it would be prepared to extend its agreements with British Timken for ten years, if he were to take it over and stating that he had to make up his mind within the next ten days and should like to do it, but did "not think it wise without a ten year's agreement with" defendant.

40. Defendant cabled Dewar in reply, that it was willing to consider an additional ten year license and reduction of royalty, that with its cooperation costs could be reduced 25 per cent or more and further saying that it would be more interested in joining with him in purchasing the British company from Vickers.

41. Additional cables and personal negotiations between an executive of defendant and Dewar followed, which eventuated in a written instrument named, "Heads of Agreement" dated May 16, 1927 signed by defendant and Dewar. It was in effect a memorandum of the concurrence of the parties on the basic subject matters of the negotiations to be later "embodied in more formal documents as soon as practicable".

42. Inter alia, it provided that defendant would contribute £52,500 and Dewar £47,500, for the purchase of the stock of British Timken; that upon the issuance of two classes of shares Dewar would hold the majority of the class which controlled the company; that such control would cease in the event a stipulated minimum net profit was not earned and a specified dividend was not paid periodically; that Dewar was to be the managing director while the shares he owned controlled the company.

43. The contract likewise provided that a new agreement would be entered into between defendant and British Timken "extending for ten years the terms of the existing Agreements between them subject to modifications and generally upon such terms and conditions to be mutually

agreed' including among others "Any practicable steps to be taken for the protection of the name Timken and securing the exclusive reversion of the name in all countries to the American Company at the termination of the Agreement."

44. The control of British Timken accordingly passed from Vickers to defendant and Dewar. Each owned about 50 per cent of the stock, but Dewar was the managing director and conducted its affairs.

45. Under these recited circumstances and following these preceding events, British Timken, defendant and French Timken made a series of agreements and engaged in a course of conduct which are labeled by the Government, "a broad combination and conspiracy to suppress all competition between the parties * * *".

46. What were these agreements and what did these companies do to warrant the charge leveled against them?

47. On January 1, 1928 a "business agreement" consisting of three written instruments of the same date was made between defendant and British Timken, to be in effect for a period of ten years. Simultaneously all existing contracts between them were cancelled.

48. The agreement of 1928 followed generally the pattern of those which preceded it. The world was divided into respective territories for the manufacture and sale of bearings in this language: "For the purpose of this Agree- [fol. 2997] ment the United Kingdom of Great Britain and Northern Ireland and all other countries of Europe and all colonies or dependencies of said United Kingdom and European countries except in or adjacent to North or South America shall be deemed to be the territory of the British Company and the rest of the world shall be deeemd to be the territory of the American Company."

49. Exclusive license was granted to British Timken under existing or future patents and defendant for the duration of the agreement. In turn British Timken was to assign absolutely and for all time its existing and future patent rights in defendant's territory.

50. They agreed to inform each other in respect of all inventions and improvements regardless whether they were patented or not patented. Advice as to methods and manufacture was to be furnished by defendant, and British Timken was obliged to follow it.

51. Each party agreed not to sell bearings directly or to others for shipment into the other party's territory, except as assembled component parts of completed articles manufactured in its own territory and for bearing replacement purposes in such completed articles. In the event such sales in or into the other party's territory were made, they were obliged to advise each other of the details of the sales and pay an amount of ten per cent of the net sales price.

52. They agreed to endeavor to maintain the distinctive character of the trade mark "Timken". British Timken agreed not to manufacture or sell bearings except under the trade mark and only in accordance with the provisions of the agreement, and to eliminate the name "Timken" from its corporate name and to refrain from its use as a trade mark upon the termination of the contract.

53. Prior to 1924, British Timken or its predecessor exclusively licensed a French company, La Societe de Mecanique de Genevilliers," (hereinafter referred to as S.M.G.), to manufacture Timken roller bearings in France and its colonies. S.M.G. registered the trade mark "Timken" in France and her colonies, where it was the only manufacturer of tapered roller bearings until 1928, when its license agreement was terminated.

54. Early that year steps were taken by Dewar, with the consent and cooperation of defendant, to organize Societe Francaise Timken (French Timken) which accordingly came into existence in July of 1928. The ownership of its stock was divided between defendant and British Timken. Dewar, however, during the entire time under consideration, controlled its operations and supervised its business activities. French Timken purchased from S.M.G. the trade mark rights in the name "Timken" for 12,000 francs.

55. A "business agreement" was entered into between British Timken and French Timken, on the model of the one between defendant and British Timken, allocating to French Timken France and her colonies, dependencies and mandates (except those in North and South America) as its exclusive territory for the manufacture and sale of anti-friction bearings.

56. French Timken rented a plant, purchased machinery

from defendant and British Timken and commenced operations by first importing semi-finished products from defendant and British Timken. By 1933 it was engaged in the manufacture of all the component parts of roller bearings.

57. In Germany, one Prausnitzer, the owner of a company called Deutsche Timken Gesselschaft, had registered the trade mark "Timken". Defendant and British Timken [fol. 2998] organized a new German company with the same name, gave Prausnitzer a 20-25 per cent interest in it and named him manager in order to acquire the trade mark and Prausnitzer's assignment of his company. An agreement similar to the one made with French Timken was consummated between British Timken and Deutsche Timken Gesselschaft, which allocated Germany as the German company's exclusive territory for the distribution of anti-friction bearings. In 1934 the German company's business was discontinued and British Timken again took over the territory.

58. Before the expiration of the 1928 contract, another agreement between defendant and British Timken became effective (on January 1, 1935), for sixteen years, which was substantially the same as the 1928 contract.

59. In it were found, however, the following provisions: "The American Company (Timken) in its territory may accept and execute orders for bearings for ultimate destination in the British Company's (British Timken's) territory for use for bearing replacement purposes in such completed articles of manufacture but such right shall not authorize sales to or known to be destined for manufacturers in the British Company's territory or sales at prices in conflict with the wishes of the British Company and the American Company from time to time will notify the British Company of the details of the sales authorized under this paragraph and will pay to the British Company an amount equal to five per cent (5%) of the net sale price thereof."

60. Conversely the same provision is made as to prices and payments to defendant for sales of replacement bearings by British Timken in defendant's territory.

61. Russia became the joint territory of defendant and British Timken. Business transacted there was conditioned as follows:

62. "The prices and terms at or upon which offers are

made and orders are accepted shall so far as practicable be mutually agreed from time to time but nevertheless either of the parties hereto shall be at liberty to quote and accept orders at low prices and extended times for payment without the consent of the other party after having first submitted the prices and other terms to the other party for its consideration and remarks provided that any such quotation or acceptance shall not involve under cutting some quotation already made by the other party."

63. The agreement of June, 1928 between French and British Timken was modified in a new contract on July 15, 1935. It too, provided that bearing replacement sales might be made by defendant, French Timken and British Timken in and into their respective territories. The prices had to be satisfactory to the company into whose territory bearings were sold. French Timken was obliged to sell no bearings other than under the trade mark "Timken."

64. The present operations of defendant, British and French Timken in the world market of anti-friction bearings are carried on under the provisions of and subject to the restrictions of two contracts both dated November 28, 1938. They are, the "Tripartite Contract" between defendant, British and French Timken and the agreement between defendant, British Timken and Dewar, which is supplemental to the Tripartite Agreement. These are the final understandings which superseded all the numerous others and are to govern the conduct of the parties until the end of 1965.

65. The lengthy recital of the contents of the prior agreements was felt desirable for the purpose of showing the evolution of exclusive licenses under patents, into agreements which are not based on the prerogatives enjoyed by [fol. 2999] the limited patent monopoly.

66. Defendant and Dewar have to date maintained controlling stock interest in British Timken. In 1935 stock was sold to the general public, which resulted in defendant owning 30.25 per cent and Dewar 25 per cent of the shares Defendant and British Timken own all the stock of French Timken.

67. Considerable testimony was offered to explain the reasons for the making of the large number of contracts, why they were modified and extended from time to time

and various covenants were inserted in them and why the present contracts have such long duration. In the basic questions involved, the reasons advanced are of no significance. The controlling facts are that they were made and that they contained certain provisions which may bring them under the condemnation of the Sherman Act.

68. The 1938 contracts are each entitled "Business Agreements" and contain substantially the same provisions present in the 1935 agreements.

69. To summarize their salient features, the contracts provided for exclusive marketing areas which prevented the parties from selling in each other's territories, fixed prices on all replacement bearings sold in each other's territories, fixed prices on bearings sold in Russia and compelled British Timken and French Timken to manufacture and sell bearings only under the terms of the agreements and under the trade mark "Timken."

70. The evidence is overwhelming and uncontradicted that defendant, British Timken and French Timken religiously adhered to their contractual obligations to make the territorial divisions inviolate. Indeed, in some instances, they refused to disturb the allocated territories even where exceptions were made in the agreements. For example, although the contracts permitted sales of replacement bearings outside of the allocated territory D. P. Hess (assistant to the president of the defendant company), confirmed the arrangements he made with British Timken in a memorandum on February 16, 1932 as follows:

> "*Prices on Service Bearings Into Our Territory*
>
> Arrangements completed to effect that British Timken will not quote on any inquiry coming in and state product should be obtained from us. There are two exceptions to this:
>
> (1) When customer demands British product.
>
> (2) When S. K. F. or F. S. are in competition.
>
> Both the latter are quoting 70 off on the Continent and we are having our trouble.
>
> Hong Kong will be American territory starting at once."

71. Each of the parties refused orders for shipment outside of its territory, referring them to the company in whose territory they were to be used. During the period from July 1, 1945 to February 20, 1947, alone, defendant transmitted 402 inquiries or orders to British Timken and French Timken. In each instance the customer who placed the order was advised that either British or French Timken had the exclusive right to supply the bearings.

72. The study and persistent effort to assure the exclusive right of each party to manufacture and sell in its own domain is emphatically illustrated in the various letters and memoranda of the officers of the contracting parties and particularly of the officers of defendant. They bear out the Government's contention that the respective trade [fol. 3000] provisions were to be preserved regardless of the unsatisfied demand for bearings in the various parts of the world. Over the entire span of years during which the restrictions existed, the parties did not deviate from their course of conduct. Even when the world gradually became engulfed in armed conflict, provisions were made to supply customers by specific arrangements so as to retain the trade division.

73. In 1929, the Ford Motor Company, attempted to purchase a quantity of tractor bearings from defendant for use in its Cork, Ireland plant, which was in British Timken territory. Defendant, instead of filling the order, made the bearings, and shipped them to British Timken for resale to Ford. In that connection Hess wrote:

> "This is causing us, frankly, a great deal of changing in our plan of operations, as it meant putting all of this type of machinery to making these large bearings, on double shift and operating them seven days per week; but we feel that you need this help very badly at the present time, and our joint efforts must be made to keep competition out of this Ford situation.
>
> "You may be interested to know that the Ford Motor Company, Detroit, upon receiving advices that your deliveries were not satisfactory, from their English and Cork representatives, immediately placed an order with us for approximately 5,000 sets of bearings, and of course they would have to pay our prices for them. We felt this would be a very serious handicap to your

future sales, as they would constantly hold up the fact to you and possibly to us, that you could not handle their production after we had used efforts, as you know sucessfully to have them turn over this entire production to you.

• • • • • • • •

"We are shipping these bearings to Ford, Cork, Ireland, freight prepaid, and are going to bill you your selling prices to Ford. • • •

"As you understand, these prices for the differential bearings in particular, are very materially below the prices that we sell Ford, and these quotations to you must be held in strictest confidence, as we certainly would be asked to explain the difference in prices we bill to Ford and the prices to you; and our explanation of this would be that we are billing you such prices on account of the close relationship between the two corporations, and that the British Timken Company is standing whatever losses may be incurred."

74. On December 5th, 1939 L. M. Klinedinst (vice president of defendant) wrote to all interested employees of defendant as follows:

"Since the turmoil in Europe certain situations are arising that make it necessary for each and every one of our key men to thoroughly understand the setup between British Timken Limited, Birmingham, England, and The Timken Roller Bearing Company, Canton, Ohio.

• • • • • • • •

"The contract provides that we shall not ship or knowingly permit our customers to ship bearings into their territory for use in the manufacture of any equipment whatsoever. Where customers wish us to make [fol. 3001] shipments into their territory for manufacturing purposes, we are to advise them of our arrangement with British Timken Limited and you are to immediately advise us of such conversations, negotiations, etc., so that we can in turn contact the British Timken Company.

"Undoubtedly many of our manufacturing customers buy bearings from us for service purposes and occasionally for manufacturing purposes and in turn re-ship them into British Timken's territory. That, of course, we have no knowldge of and we cannot stop.

* * * * * * *

"There are a number of American manufacturers using Timken bearings who operate plants in British Timken's territory. Some of these plants have used both SKF tapered roller bearings and Timken bearings. Inasmuch as it is becoming more and more difficult to secure anti-friction bearings from the Swedish companies, these American manufacturers who own these foreign plants will probably call on us to make deliveries of bearings from here. Please note that such deliveries are in direct violation of the British Timken contract, and where such requests are made refer them to us as we may want to effect some arrangement with British Timken to fill such requirements rather than have the American company buy one of the competing makes of tapered roller bearings and have them shipped into British Timken's territory. In such an event, both companies would lose."

75. Again on December 6, 1939 in another communication he wrote:

"It is our interpretation of these arrangements that we are not permitted to sell or ship bearings into or known to be destined to British Timken's territory without paying them a 5% commission, and even under such circumstances our prices must be acceptable to them. We have a mutual understanding with British Timken that on unsolicited inquiries for bearings going into each other's territory that we are at liberty at all times to quote prices representing a 50% discount from American list on standard bearings and pay a 5% commission on the net sale thereof. We insist that all of our men respect our agreement with British Timken and on any unusual cases to consult with the Home Office for further instructions."

76. On January 29, 1940 in "Inter-Organization Correspondence", W. R. Timken, (vice president of defendant) referring to Klinedinst's letters, reiterated their contents in this manner:

"In view of the confused conditions of international trade and the increased demands of the British and French governments for bearings for war purposes, it is probable that we will receive more and larger inquires for bearings destined for the territories of our British and French associates. We have also had reports that companies using SKF bearings are having difficulties in getting deliveries, and this, too, may be a factor in our receiving inquiries for delivery in the territories of our associates.

"Our agreement provides that we are not to sell bearings into Europe or possessions of European [fol. 3002] countries, excluding Russia and North and South America, except for service, and, in the case of service, only under certain price conditions. Our agreement does *not* permit us to sell original equipment bearings directly or to domestic manufacturers knowing them to be destined for shipment into British or French Timken territories. However, this does not include bearings assembled into complete articles of manufacture or component parts of completed articles of manufacture subsequently shipped into their territory.

"When inquiries are made for bearings which may be shipped into our associates' territories, please report the matter immediately to Canton giving full information as to number, size, quantity, specification, and the exact use of the bearings. In addition, you should use your best efforts to persuade the customer that our British and French associates are both able and eager to supply their foreign requirements and that they manufacture a product comparable in every way to our own.

"When emergency shipment of small orders is demanded, we have the permission of our associates to fill such orders. We do not, however, wish to take advantage of this permission except where it is unavoidable. These cases must be taken up with Canton

as outlined above for it is necessary that complete information be given to the associate involved. Should the Canton office see fit to fill any such orders that does not mean we will continue to accept them, and the customer should be urged to place all future orders with British or French Timken as the case may be."

77. A report from R. E. Forsythe, (assistant to the president of defendant) to Klinedinst on December 3, 1940 entitled "Sales Into British Timken's Territory" described the temporary arrangement precipitated by the war. He said:

"* * * It had not been our practice in the past when we shipped bearings for British Timken directly to their export customers to give them a discount from our standard established prices such as we gave them when the bearings went to Birmingham, but they asked that we now do so due to prevailing circumstances. In other words, when we made shipments to their customers direct, they would advise us the prices at which the material should be charged and then we were to credit British Timken's account with the difference between the amount received from the customer and the price we would ordinarily have charged British Timken had the bearings gone to Birmingham.

"We agreed to do the above on a temporary basis, reserving the right to rescind the price concession at our discretion, and in this connection British Timken was to guarantee the credit of their agents so long as we followed their instructions regarding terms of shipment.

"Since the time that hostilities broke out in earnest in Europe we have continuously received inquires emanating from British Timken's sales territory requesting catalogs and prices on our bearings. In many cases we were advised that they had formerly been supplied their Timken bearings from Birmingham, but they now desired to establish an American source of supply in case they could no longer secure bearings from Eng- [fol. 3003] land, and in some cases these inquires came from British Timken distributors and French Timken

agents. We have either referred the inquiries to Birmingham, or if it were a specific inquiry covering a definite lot of bearings we quoted our protective discount of 50% off American list. We have received definite orders from their sales territories which upon being referred to British Timken were turned down at their instructions.

* * * * * * *

"Mr. Winspur (of the British Purchasing Commission) advised me more or less confidentially that he had learned that all orders from Bearing Service Company in Australia had to be placed through Birmingham due to contractual relations and stated that he felt it would be necessary for the Australian Government to probably take over these orders and place them through the British Purchasing Commission. In discussing this with Mr. Harrison a few days before he left Canton, he asked if we would cover them in the amount of 5% on such sales inasmuch as they had the defense contract, but we made him absolutely no promises of any kind.

* * * * * * *

"We have picked up from several sources in the United States the story that The Bower Roller Bearing Company is making every effort to take advantage of present conditions in order to establish themselves in world markets, and such conditions as described above only serve to give them an entree into these fields. We have also heard that SKF is buying Bower bearings and are either re-packaging them or having their name stamped on the bearings and selling them to their regular customers in export markets. Naturally, we feel that present conditions do not add to the prestige of the Timken name and also that Bower who is a dangerous competitor is now being given an opportunity to secure a foothold from which it may be very hard to dislodge them after the war is over."

78. The strict adherence to the territorial restrictions applicable to Australia became a matter of grave concern

to British Timken's distributors and eventually to the British Purchasing Commission. There was a serious interference in Australian war production due to British Timken's inability to supply bearings. The threat of sales by competitors to supplant the meager amount of available bearings and the clamor of Australian distributors, eventuated in the relaxation of the theretofore inflexible provisions of the contracts. For the period of the war emergency, defendant was permitted at first to fill only Australian orders and later orders emanating from any place in British Timken's territory, but only through British Timken's distributors and only at prices designated by it.

79. The voluminous correspondence on the subject matter bears out the critical situation which existed and which required the reluctant alteration of established policy.

80. For example, on September 20, 1940, C. S. Gibson (technical representative of British Timken at Melbourne), in a letter advised Forsythe of the proposed visit of an official of Roller Bearing Service Company of Australia to Canton and further said:

"• • • It seems impossible to rely on Birmingham to efficiently handle orders, and of course, neither [fol. 3004] I nor our Distributors are officially allowed to correspond with you direct. Mr. Harrison will, I expect, give you details of lots of other matters which have been held up unduly, but I pointed out to him that possibly you may not be able to help him much, as this territory is controlled by British Timken Ltd.

• • • • • • •

"• • • On the other hand, you will appreciate the rather absurd position existing at the present moment, inasmuch that we are getting practically all our supplies from you, and yet it is almost impossible to get any information from Birmingham. Why not take over Australia and New Zealand for the duration of the war? I hope that you have been asked by Birmingham to quote for the complete equipment of 20 alternatively 35 locomotives and tenders for the New Zealand Railways. This is a case where the customer is extremely anxious to place the order with us, but for some extraordinary reason, we do not seem to be able to produce a price."

81. R. R. Thomas of Bearing Service in writing to Forsythe commented:

"Our cable to Mr. Harrison may have been a little difficult for you to understand but we are engaged at the moment in replying to a cable from Mr. Pascoe and we are very concerned to make sure that Mr. Harrison does not ask you specially to request that our orders go direct to Canton and then for us, in our enclosed letter, to ask Timken to do the opposite. In other words, we do not want you to think for one moment that we would ever let you down in the slightest particular.

• • • • • • •

"I am asking Mr. Harrison to try and meet Mr. Dewar and casually give him a copy as per our enclosure stating to him that he might wish to make some enquiries while he is in America."

82. The cable to which he made reference was sent by Pascoe (chief executive director of British Timken and director of French Timken) to Bearing Service reading:

'Canton report confusion caused by receiving requests for deliveries and prices direct from Australia presumably Bearing Service Company Stop This is directly opposite to our instructions Stop How does it occur? Stop Please take immediate steps to rectify.'

83. Subsequently Thomas wrote to Gibson:

"Not only was that opportunity missed but after more than twelve months of war, after large quantities of ball bearings have become available in this country, we still await our first considerable shipment from Canton and we still, in some unfortunate cases convert Timken users back to ball bearings.

• • • • • • •

[fol. 3005] "In some urgent cases we have been reminded by the Ministry of Munitions that we were retarding the Defence program by not supplying information promptly and we were asked whether we were prepared to do something about it or whether they

would communicate direct with the British Purchasing Commission.

* * * * * * *

"With all respect, we request Mr. Pascoe to accept this following recommendation which we make in the light of many years experience of this market.

(a) That all our orders be forwarded to British Timken, Ltd.

(b) That in all other matters connected with shipments of goods, we be encouraged to communicate freely with Canton, at the same time sending a copy to Birmingham."

84. On December 4, 1940 Klinedinst wrote Dewar, who was then in the United States:

"We were advised by the British Purchasing Commission that they will very likely take over all of the purchases of anti-friction bearings for Australia. This will present a problem, the solving of which we must ask your help.

"Undoubtedly as these inquiries come to the British Purchasing Commission they will ask all tapered roller bearing manufacturers in this country to quote prices, and following the same assumption further, they will give the business to the lowest bidder. That is one phase of it. On the other hand, should your Australian distributors specify on their orders that they must definitely be supplied Timken bearings, then, we presume, they would come to only Timken for quotations, or would they take it upon themselves to buy from the cheapest source?

"Regardless of how this works out, we have the problem of what prices to quote and how to distinguish between bearings that are to be used essentially for service and those to be used in production. There is another angle that may enter into this—the Purchasing Commission may go, for instance, to the General Motors Export Corporation for prices on bearings for General Motors equipment and, naturally, there should be uniformity in prices. Surely we feel it is necessary to have two distinct prices if this is possible—one

covering bearings for service and the other for production.

"We have in mind a number of American manufacturers who have assembly plants in Australia, and if the British Purchasing Commission takes over that phase of the business those bearing purchases would come through them rather than through the International Harvester Company, or General Motors, or whoever may have plants in Australia.

"We have in mind a situation that developed several months ago. When we quoted the British Purchasing Commission on a large quantity of bearings at the established government buying agency price—#30—[fol. 3006] our competitor, The Bower Roller Bearing Company quoted on this same inquiry at about a #17 price and The Bower Company got the business.

"We do not want to see The Bower Company or any other American manufacturer of tapered roller bearings find a foothold in Australia or in any other territories covered by you, but we feel this will happen on a straight competitive bidding proposition because it is not possible to definitely control the price at which other tapered roller bearing people will sell their products for foreign consumption.

"The simplest way out of this, as we see it, is for British Timken to instruct all of their foreign service connections to very definitely and positively specify Timken tapered roller bearings. That will give the British Purchasing Commission no leeway. If that can be done, the problem is virtually solved.

* * * * * * *

"We feel, Mr. Dewar, that the awkward situation now presenting itself might have been avoided had British Timken permitted us to handle their outside orders direct.

"Mr. Harrison of The Bearing Service Company of Melbourne spent quite some time with us recently and was very bitter in his criticism of our deliveries. We found in many cases we had never received an order from British Timken for the sizes so badly needed.

"The policy followed by your Australian people was to send the order to British Timken, they would fill

such parts of it as they could and the balance of it was transferred to us. That meant a very great delay and that was why we suggested sometime ago that you have such parts ordered and shipped direct from Canton."

85. On December 18, 1940, Gibson addressed a personal note to Forsythe, saying among other things:

"On the 11th December, the following cablegram was received by Bearing Service Co. of Aust. Pty. Ltd. Melbourne from Mr. Harrison. This was sent from Los Angeles on the 10th December:

'Canton advise Dewar agreed yesterday their handling Australia direct he cabled Pascoe this effect now awaiting confirmation Birmingham'

"As you can imagine this is some of the best news I have had in years. So far I have not received any advice from Birmingham about it. I feel that Birmingham will do their best to avoid this arrangement, although if Mr. Dewar has agreed to it, half the battle is won. I can think of quite a number of reasons as to why Mr. Dewar would agree, and no doubt I will hear this story from you in due course.

. . . . . .

"I do not know if you will be taking over this part of the business, and am of the opinion that it is quite [fol. 3007] possible that Birmingham will want to retain it. Should you be taking it over, it will of course be necessary for you to compete with prices ex Ford factories in Canada, and you will know what the position is with them. You may prefer to retain the business in this way but as you can imagine, I am naturally anxious to have it direct."

86. The Australian government representatives called on defendant in February 1941 to build a plant in Australia. Wm. E. Umstattd (president of defendant) reported to his associates in a memorandum:

"Mr. Gutteridge, an engineer who has been sent to this country by the Australian Government to negotiate for the establishment of manufacturing plants in

Australia, visited us at 3 P.M. with Mr. Chamberlain who is at present Technical Engineer with the British Minister of Munitions in Washington.

"Gutteridge and Chamberlain called on us to see if we would be interested in establishing a bearing plant in Australia to manufacture all types of anti-friction bearings. They said that the anti-friction bearings business in Australia has amounted to about $1,000,000 per year for the past several years, but within the past twelve months this figure has increased approximately 100%. Mr. Gutteridge said that the Australian Government was insisting that a plant be built in Australia and that adequate tariff protection would be given to such an industry.

"I explained to Gutteridge and Chamberlain that Australia was controlled by British Timken and that under no circumstances would we consider building a plant in Australia. I pointed out to them that it would be almost impossible to get delivery on any machine tools suitable for the manufacture of anti-friction bearings and that no bearing manufacturer in this country had excess machinery which could be shipped to Australia. Mr. Gutteridge wanted to know if we would be interested in establishing a plant in Australia if he could secure priorities for the necessary equipment. I told him that I did not think he could secure such priorities, but if he did we would not be interested as I had previously pointed out that British Timken controlled the sale of Timken bearings in Australia."

87. The inquiry of the British Purchasing Commission was answered in the same vein by Umstattd:

"Your letter of February 26th has been received.

"When Messrs. Chamberlain and Gutteridge visited us about ten days ago we told them that under no circumstances would The Timken Roller Bearing Company establish a plant for the manufacture of bearings in Australia. We have a contract with British Timken Limited which precludes our establishment of a manufacturing plant in Australia. Such a plant would have to be built by British Timken Limited."

88. These communications demonstrate that the parties not only sought the preservation of their respective sales fields, but that they supported the agreements by the maintenance of prices fixing arrangements. The protective discount policy insured the parties against competition from each other in replacement bearings. Defend- [fol. 3008] ant sold at a 70% discount for export in its own territory, but quoted prices representing a 50% discount from the American list on standard bearings in response to unsolicited inquiries from British Timken's territory.

89. Other steps were taken to prevent outsiders from disturbing the agreements as the particular situation required.

90. In January of 1928 D. E. Hobley (sales manager of British Timken), wrote to Hess:

> "In Budapest, Hungary, Timken bearings are serviced by Mr. Michael Pal, and he has been doing remarkably good business for us during the last year. In the same city where is a house called Messrs. Denes & Friedmann, who are the representatives of the Timken-Detroit Axle Company through their British connection. As you know, we have established service prices for bearings identical with your own and operate with the same discounts, but we are much alarmed to find that Messrs. Denes & Friedmann can sell Timken Axle sizes considerably cheaper than our own distributor. . . .
>
> "It seems to us that the Timken Detroit Axle Co. are taking advantage of their position inasmuch as they buy from you at low prices and ship them over to our territory on a small margin of profit and this does interfere with our service prices."

91. In February 1928 Hess replied to Hobley:

> "We have finally concluded arrangements with Timken Detroit Axle Company with reference to the sale of our bearings through their distributors in Europe, and particularly in Budapest, Hungary.
>
> "Mr. Emmett, of the Automotive Products Company, London is in touch with this situation, and I believe it would be wise for you to call upon him. He will receive instructions from Timken Detroit to the

effect that he should not undersell us or you on service bearings."

92. They deviated from adherence to protective prices only in cases where competition of outsiders required that it be done.

93. In June, 1944 E. H. Austin (defendant's manager of Service Sales), wrote:

"Joe Cornell handed me your letter of June 2 which resulted in my discussing this with Mr. Klinedinst. I think before we definitely commit ourselves to quoting 70% on general sizes and 60% on Ford on the orders to which you refer, we better find out just exactly what is involved—bearing sizes, quantities, etc. Perhaps you could tell us a little bit more about Cymot, Ltd. for it is well that we are given what information is available on any of these companies that we give consideration to quoting our export prices in British Timken markets.

"You brought up an age old subject, namely, the policy that we should employ in quoting on inquiries emanating from British Timken territory. I pointed out to Mr. Klinedinst the weakness in our pricing policy in the British Timken market, emphasizing the fact that buyers for the B T market are becoming familiar [fol. 3009] with the fact that we are protecting British Timken and by so doing do not have a price that is anywhere near competitive to Bower. As a result, it now develops that we don't even get inquiries for a lot of requirements. They are automatically referred to our competitors. Naturally it cannot be expected that Bower will establish an export policy comparable to ours in territories that we cover and another pricing policy to be in line with us in British Timken territories."

94. In the joint territory of Russia, the pricing provisions spelled out in written contracts were carried out to the letter.

95. The contractual obligations for the interchange of information relating to the manufacture of bearings and of all inventions and discoveries, whether they were patented or not were construed by defendant, British and French

Timken to be for their mutual benefit only, to the exclusion of all others. Accordingly any information pertaining to their manufacture was denied to outsiders unless consent was obtained from the party affected. In December, 1932 Hess wrote Dewar:

> "Upon my return to this famous country I find a cable from Birmingham with reference to a statement made by Ford Dagenham that we have granted Ford America a license to manufacture Timken bearings according to our patents, and it puzzled me just a little bit because this is the situation I described to you when I explained that we had dropped the Bower suit and had given Ford such a license as they describe. We, however, explained to them that we could give them no such license for England or any European plant as British Timken was our exclusive licensee and that anything in this regard which they desired would have to be discussed with you."

96. The inhibition imposed by the contracts on British and French Timken, not to manufacture or sell tapered roller bearings, except under the name "Timken" was observed and both companies throughout the years before and after 1928, to date, have become identified as producers of "Timken" bearings. The goodwill they built up and the competitive position they acquired in the allocated territories was under the name "Timken". The retention of the goodwill and place of dominance in their business field depended on the continued right to use the name. The severance of contractual relations meant the termination of their ability to profit by the many years of experience in manufacture and successful business dealings with their customers. In turn no competitor of British or French Timken was permitted to use the trade mark "Timken".

97. In addition to dividing the world into restricted manufacturing and marketing areas, maintaining price fixing arrangements, and interchange of discoveries, know how and inventions to the exclusion of others, defendant, British Timken and French Timken co-operated to shut out the competition of other dealers in tapered roller bearings.

98. The rigid territorial divisions were followed at all times except when adherence to such restrictions would result in the possibility of loss of business. They were made

for the dual purpose of protection against each other and to eliminate the competition of other tapered bearing producers.

99. Dewar's testimony in this regard was:

> "We had a common enemy in the Swedish S. K. F. who had begun the manufacture of tapered roller bear- [fol. 3010] ings, and our general policy was that if a tapered roller bearing was sold it had got to be a Timken and not a S. K. F. To us it was really immaterial whether it was made in the United States or whether it was made in Great Britain or France, provided it carried the name 'Timken'. We used to sell at the request of the American Company in the Argentine and the American Company has sold at our request in our territories."

100. Hobley (in charge of British Timken's sales), commented:

> "The whole object of that arrangement was that if clients in our territory insisted on buying bearings from Timken we would let them do so. If there were clients in the Timken Company's territory who wished to buy from Great Britain we would supply them. A commission would be granted in either case. That was in order to combat competition; that was the whole basis of it."

101. Klinedinst wrote to Dewar on December 4, 1940:

> "We are primarily interested, of course, in keeping Timken bearings to the front during this trying period and the further desire to help you in every way possible since we know how difficult it is to eradicate a competitor in foreign fields after he once gets a start."

102. W. R. Timken, during the trial, in answer to the question: "What is the procedure that you follow now on orders from British Timken territory?", replied:

> "Well, I would say it varies, depending upon what territory it is and whether they can make delivery. Where they can make delivery they would naturally get the business. You see, during the war we felt there was a very great opportunity to improve the Timken

position in Australia and the East Indies, due to the fact that we thought at that time the SKF of Sweden was completely cut off from export, and we were willing to try to under mine their position by any means we could, including selling bearings at a loss if necessary."

103. The sales of bearings by defendant, British Timken and French Timken, to each other were on a most favorable basis to supplement the plan of strict compliance with the allocated areas and to protect themselves from competition by outsiders. In December, 1929, Hess, in a letter told Dewar:

"With this situation confronting us we are going to be bothered by rather serious competition from S. K. F., and the thought has occurred to us that it may be possible for you to supply bearings for our industrial requirements in Canada. According to our records there is a 15% duty on English products as compared with our 30% and, if you can sell bearings at low enough base prices, there is no question but that we can hold—or I should rather say get—a big bulk of this industrial bearing business in Canada."

[fol. 3011] Dewar replied:

"I should love to help you compete with S. K. F. in Canada. I heard quite casually the other day from a representative of the American motor industry, (who was in London and whom I met but whose firm I do not know) that for their assembly factory in Canada they have placed an order with S. K. F. for bearings which will be manufactured in Luton, as they were able to buy these *taper roller* bearings made by S. K. F. Luton more cheaply in Canada than they can buy yours.

"I do want to take every possible step we can to keep S. K. F. out of the taper roller bearing business anywhere."

In August, 1939 the matter of SKF (a Swedish bearing manufacturer) competition continued to concern defendant and British Timken. Klinedinst wrote Dewar:

"We are having our troubles with the SKF Company not only in this country but in Canada as well

and in many foreign countries such as Japan, South America, and elsewhere due to their making price reductions very far below those that we have ever extended to anyone in their respective field.

* * * * * * *

"However, the thought that we have in mind is that we should make a study of the Canadian situation with the thought in mind that perhaps some arrangement might be set up whereby we could be appointed exclusive Canadian distributors for British Timken handling tapered rollers, balls, and straight rollers, not only for service requirements but for new installations as well in all of the various industries. There would be some advantages in this and perhaps many disadvantages. We can see, however, that industrial and service bearings shipped by SKF from Sweden into Canada take a duty of 17½% while they are free from England. This would give us that advantage.

"While this arrangement might not be feasible, it is certainly worth while thinking about, and it appears to us a good club to put over the SKF Company's head."

104. Defendant and British Timken made certain that the alloy steel made by defendant, especially adapted for the manufacture of bearings, was not made available for use by their competitors.

105. In a letter in September, 1934, Dewar told Hess:

"The position is one of considerable difficulty because I do not feel inclined to agree to give you carte blanche to sell tubing in our territory; it might conceivable react to our disadvantage if your tubing were sold to our competitors."

Hess in reply, stated defendant's policy:

"* * * please understand that under no circumstances would we sell our tubing to any one in the world who might as a result harm British Timken, French Timken or American Timken. We have not yet reached this necessity in merchandising our Steel and Tube product."

[fol. 3012] 106. The collaboration of Defendant, British Timken and French Timken to eliminate competition with each other and to eliminate the competition of other bearing producers was augmented by agreements of British Timken and French Timken with their competitors abroad, to share customers and sales in certain markets and to stabilize prices. Hess referred to the association resulting from the agreement as a cartel in reporting on its success to H. H. Timken (the founder and at the time president of defendant company).

107. Aside from the cartel arrangement, discussions were had concerning prices between defendant, British Timken and their foreign competitors.

108. In December, 1932, Dewar wrote J. D. Spray (director and vice president of defendant company):

> "I take it that you are trying to improve the price level in the Canadian market. Is it your suggestion that you and ourselves should try to arrive at a general arrangement with SKF regarding quotations to Ford in Canada and at Dagenham, or for other manufacturers in Canada as well as Ford? As I believe you are aware, we have not as yet had to reduce our f.o.r. prices for Canada as low as we have had our prices driven down for Ford Dagenham.
>
> "During Mr. Hess's visit, he told us of certain events on your side of the water. The result of this information has been that we are engaged at present in negotiating an arrangement with SKF to cover orders placed by Ford Dagenham. As the SKF position is at present, their English Company is only interested in Dagenham. Their Swedish Company is interested in the Canadian market and in all the other places where they assemble cars.
>
> "As you probably know, we have at present practically the whole of the Ford European business with the exception of a percentage in England and with the exception entirely of their German orders. Our proposed agreement for Dagenham will be on the basis of us having 70% and SKF having 30% of the work.
>
> "I would add, in addition, that we hope to come to an arrangement on Service work for all Bearings in England as part of the same arrangement."

109. Dewar also reported to Hess about a meeting in Paris at which British Timken R.I.V. (a large Italian bearing manufacturer), and S.K.F. were represented. He said among other things:

> "After that I re-iterated that in my opinion—and it was an opinion only as I had no right in any sense whatever to speak for the T.R.B., Canton, and I had no knowledge of what was in their thoughts—I felt that the key to such very close cooperation, as joint manufacturing, lay between SKF, Gothenburg, and the T.R.B. in Canton.
>
> "Mr. Batt then informed us that he had had some discussions of an informal nature with T.R.B. regarding the possibility of stabilizing prices in the Canadian market."

110. Although the cartels were formed without defendant's execution of the actual agreements, they were the result of the understandings and cooperation of defendant with British and French Timken to bring them about. Defendant's territory was affected. It was the beneficiary of [fol. 3013] their operations. Its officials were in consultation with the officers of British and French Timken concerning them, they prompted and approved the agreements.

111. In November of 1932 Hess wrote H. H. Timken:

> "One thing is very encouraging about the operation of the cartel. Between SKF and ourselves we have raised prices about 5% and come to a definite agreement as to service prices in France.
>
> . . . . . .
>
> "Dewar and I have been discussing what to do in case they try to reduce our volume to the quota figure and after considering various plans, we have come to the conclusion to try and hold our present volume (about $400,000.00 sales annually) and in exchange for this higher quota, offer SKF one half of our steel tonnage in France. This seems like a good move and will possibly be quite acceptable to SKF as their steel production in Sweden must be very low at this time."

112. The report of Hess in September, 1933, on his European trip, sheds considerable light on defendant's part in the cartel operation:

> "During the current year, real progress has been made in cooperation with SKF to not only stabilize sales prices but to raise them generally, and contracts for the last half, do in many cases, call for a 5% increase in prices. The need for this is vital when we consider the fact that automotive and commercial vehicle sales prices have declined about 30% since 1929. This is due almost entirely to SKF competition but our present relations with them in England are quite cordial and we feel that for the next year we face no further price cuts. This relationship with SKF started with our offering to split the Ford business on a 70-30 basis during my visit last fall, but it is interesting to know that we continue to receive 90% of Ford business, due in all probability to the fact that we are considered 100% British, and of even more importance, we give Ford excellent service and have assigned one man to spend practically all of his time at Dagenham.
>
> • • • • • • •
>
> "Both Mr. Dewar and Mr. Pascoe are watching the R.I.V. (Italian) situation very carefully and Mr. Dewar is keeping in constant friendly contact with Angellis, head of R.I.V. Our latest information is that the R.I.V. plant is very slack due to the let-down in Russian orders, and our British associates feel that they will use every means to sell this output at low prices, all over the world. This, of course, might affect us materially in South America and Canada where we have maintained good service prices, but it is the writer's opinion we shall have no great difficulty in the U.S.A. as long as the present tariff is maintained and with the depreciated dollar.
>
> "As is generally known, we are members of the French anti-friction bearing cartel. This cartel was started in July 1932 and expires at the end of this year."

113. The cartel agreement between SKF and French Timken provided for a division of all of the French bearing

business on a percentage basis, French Timken only participating in the tapered roller bearing market; SKF, in both [fol. 3014] ball and tapered markets.

114. As stated in the agreement, "In order to arrive at the allocation of the market as provided in as precise a manner as possible, an intimate commercial collaboration will be established between the two contracting parties, which will have to determine by agreement the tariff prices and discounts for the retail market, the prices and delivery dates quoted for all large orders or important customers." The parties agree to contact each other "at least every month" and to push the standardization of bearing sizes.

115. The cartel agreement between SKF and British Timke was not only an arrangement on prices of bearings and the percentage of the total bearings each was permitted to sell, but the parties agreed not to sell replacements of the other's bearings. The division of business as to specific customers was set up on a quota basis. When one of the parties exceeded its quota on a certain customer that party was required to raise its prices until there was compliance with the agreement.

116. The lengthy recital of letters, reports and memoranda paints such a clear picture of the conduct of the accused companies over the period of years that the Court feels it serves the necessary purpose of pointing out the patent reasons for resolving the factual issues which are involved. It leaves no room for dispute or contradiction on the salient facts.

117. The evidence conclusively establishes to the satisfaction of the Court the assertions of the Government: that defendant, British Timken and French Timken have manufactured and sold during the period from 1928 to date a substantial portion of the world's production of antifriction bearings and that they have imposed restraints on foreign commerce; by (1) allocating trade territories throughout the entire world each agreeing with limited exceptions not to manufacture or sell in the other's territory; by (2) fixing of prices on products sold by any party in the territory of the other party; by (3) mutual cooperation and assistance to protect each other's markets and to eliminate the competition of outsiders and by (4) participation in foreign cartels which restrict exports by United States producers.

118. The contentions that defendant stifled or eliminated

competition and restrained trade, by exclusively exchanging present and future know-how and inventions, patented or unpatented, and by compulsory use of the trade mark "Timken" by British and French Timken, by prohibition against their dealing in products under any other name, and by requiring that they cease using that name upon the termination of the agreements, will be discussed later in this opinion.

119. The analysis of the evidence is susceptible of but one conclusion. It discloses an extensive and far reaching combination to smother all competition between defendant, British and French Timken and to stifle or suppress competition of other manufacturers by joint effort against them or by agreement with them.

120. It is readily seen that the present relationship of the parties is not only the culmination of the successive agreements beginning in 1928. The combination is, as well, the outgrowth of the principal agreements in 1909, when world markets were divided and competition was eliminated. Those contracts were not merely patent licenses for the manufacture of tapered roller bearings in limited areas, but they encompassed fields beyond the ambit of the existing patent rights. U. S. v. U. S. Gypsum Co., 333 U. S. 364, U. S. v. National Lead Co., 63 Fed. Sup. 513, 523, aff'd 332 U. S. 319, Morton Salt Co. v. G. S. Suppiger Co., 314 [fol. 3015] U. S. 488, Ethyl Gasoline Corp. v. U. S., 309 U. S. 456. The territorial restrictions applied to markets where defendant had no patent rights. Interstate Circuit, Inc. v. U. S., 306 U. S. 208, 228. They included future development and inventions in the industry. U. S. v. National Lead Co., supra, Ethyl Gasoline Corp. v. U. S., supra, Pope Manufacturing Co. v. Gormully, 144 U. S. 224.

121. After the expiration of the principal patents, the restrictions imposed continued. Without the benefit of the limited monopoly power of the patents the agreements followed the same pattern. They no longer revolved around the patents, but were without pretense contracts for the avowed purpose of suppressing competition. Duncan (Timken's London counsel) pointedly said in November 1927:

> "As we understand the position, the main advantage derived by the English Company under the Agreement will be the advice and information to be received from

you, the right to use the name 'Timken' and the absence of your competition. Do you not think that it would be better to accentuate these advantages in the Agreement, rather than leave them merely as incidents in a patent license?"

122. When in 1928 the American, British and French companies agreed to continue their activities, British Timken had grown from infancy in the bearing industry to a position of dominance and was a potential competitor with whom defendant had to reckon.

123. The relationship effected and maintained was not that which prevails between a manufacturer and its exclusive foreign agents for the distribution of its product. Each company was a manufacturer and distributor, independent of the others, but joined for the sole and only purpose of mutual benefits. It is not even contended that defendant, British Timken and French Timken ever competed.

124. The inflexible territorial limitations imposed by the parties on each other, which they violated only to prevent others from encroaching on the protected markets, were designed for the purpose of preventing competition and were reinforced by price agreements. The word "Timken" had become synonymous with tapered roller bearings. To lend support to the desire to eliminate the competition of other producers, defendant supplied British and French Timken, and them alone, with know-how in the production of bearings. It insisted that bearings produced and sold by them be identified by the name "Timken".

125. The cartel agreements in France, England and Italy were made by British Timken and French Timken with the knowledge, approval and co-operation of defendant to effectuate the plan of excluding competition of others in the territories of defendant, British and French Timken.

126. The extent to which they were successful in impeding competition is of no moment. It is sufficient that that was the end sought to be accomplished. Associated Press v. U. S., 326 U. S. 1, 12, U. S. v. Socony-Vacuum Oil Co., Inc., 310 U. S. 150. The French Anti-Friction cartel, the English SKF-British Timken cartel and the agreements with Bock and R. I. V. fortified defendant in the overall plan of suppressing competition in the sale of tapered bearings.

127. It is an imperative of the Sherman Act that all

combinations in restraint of international trade and all agreements to restrict competition be condemned. U. S. v. National Lead Co., supra; U. S. v. Addyston Pipe & Steel Co., 85 Fed. 271, 291; U. S. v. Aluminum Co. of America, 148 Fed. (2d) 416.

[fol. 3016] The very aim of all the antitrust laws is to ban conduct and practices which destroy free and unhampered competition. That postulate has been repeatedly announced by the courts even before the legislative enactment. Within the last decades the decisions reiterating it have covered thousands of printed pages. They have been regarded as inimical to economic freedom. The Government refers to the instant combination as an international cartel, which appellation is assailed by defendant. That name applied to the combination has no significance, other than to label it as a pool of "separate firms to maintain prices above a competitive figure". (Webster's New International Dictionary). It is merely descriptive of the combined relationship between defendant, British Timken and French Timken. If the term connotes vice or illegality it is clearly applicable.

128. The strict allocation of markets to the members of a combination of competitors in the various parts of the world and the eradication of competition among them violates the Sherman Act. U. S. v. American Tobacco Co., 221 U. S. 106, U. S. v. National Lead Co., supra.

129. The contracts by which it was agreed that in a particular area anti-friction bearings might be sold by only one of the members of the combination, necessarily were intended to and had the effect of eliminating competition. The Supreme Court repeatedly recognized the inherent danger of such agreements to our system of free enterprise, and held that agreements or arrangements for dividing markets were illegal under the Sherman Act. U. S. v. American Tobacco Co., supra., U. S. v. Addyston Pipe & Steel Co., supra, U. S. v. National Lead Co., supra.

130. The fact that defendant, British and French Timken were manufacturing and selling only tapered bearings does not immunize the combination against the operation of the antitrust laws. It is true that there is competition between tapered and other types of anti-friction bearings to the limited extent pointed out earlier. The prohibitions of the Sherman Act, however, are equally applicable to

combinations in restraint of trade when only part of the commerce is stifled. As was said in Eastman Kodak v. Federal Trade Commission, 158 Fed. (2d) 592, 594, cert. denied 330 U. S. 828:

> "Hence it will not do to say that all film is in the same class. If a purchaser wants a color film he must be able to buy it from more than one manufacturer if there is to be 'free and open competition with commodities of the same general class'; that he can buy a black and white film will not serve to destroy the monopoly of the sole producer of color film."

and in U. S. v. Yellow Cab Co., 332 U. S. 218, 225:

> "Hence it is enough if some appreciable part of interstate commerce is the subject of a monopoly, a restraint or a conspiracy."

and again in U. S. v. Socony-Vacuum Oil Co., 310 U. S. 150, 225 (footnote 59): "And the amount of interstate or foreign trade involved is not material (Montague & Co. v. Lowry, 193 U. S. 38) since § 1 of the Act brands as illegal the character of the restraint not the amount of commerce affected."

131. The benefits of a competitive price system under the Sherman Act would be lost to the vast number of manufacturers whose machinery and equipment are geared to use only tapered bearings, if the operation of the Act were to be construed otherwise.

[fol. 3017] 132. The practice of selling only at prices agreeable to the party into whose territory the sales were made and the provisions of the contracts for agreed prices on replacement parts and the other price fixing arrangements of defendant, British and French Timken must be condemned as violations of the Sherman Act. U. S. v. Masonite Corp., 316 U. S. 265.

In U. S. v. Socony-Vacuum, supra, the Supreme Court said:

> "Thus for over forty years this Court has consistently and without deviation adhered to the principle that price-fixing agreements are unlawful per se under the Sherman Act and that no showing of so-called competitive abuses or evils which those agreements

were designed to eliminate or alleviate may be interposed as a defense.

* * * * * * *

"Whatever economic justification particular price-fixing agreements may be thought to have, the law does not permit an inquiry into their reasonableness. They are all banned because of their actual or potential threat to the central nervous system of the economy." (Footnote 59).

In U. S. v. Line Material Co., 333 U.S. 287, it was said:

"Price fixing in any form is perhaps the most powerful of all inducements for abandonment of competition. It offers security and stability; it eliminates much of the uncertainty of competitive practices; it promises high profits."

and again in U. S. v. Paramount Pictures, Inc., 334 U. S. 131, 143:

"We start, of course, from the premise that so far as the Sherman Act is concerned, a price-fixing combination is illegal per se. United States v. Socony-Vacuum Oil Co., 310 U.S. 150; United States v. Masonite Corporation, supra. We recently held in United States v. Gypsum Co., 333 U.S. 364, 400, that even patentees could not regiment an entire industry by licenses containing price-fixing agreements."

134. No less harmful and injurious to the unrestricted flow of commerce in tapered bearings was and continues to be the association of defendant, British and French Timken for the purpose of protecting each other's markets and the exclusion of outsiders from the tapered bearing market. Such conduct is denounced by the antitrust laws. Associated Press v. U. S., supra, Montague & Co. v. Lowry, supra, Standard Sanitary Mfg. Co. v. U. S., 226 U. S. 20, U. S. v. Trenton Potteries Co., 273 U. S. 392.

135. The participation in the foreign cartels by defendant completed the circle within which the combination operated to forestall competition. The circumstances outlined above under which defendant took part in the operation of the cartels leave no room for escape for defendant

from the prohibitions of the Sherman Act. The ban on restraints of imports and exports has been consistently enforced by the courts. United States v. General Dyestuff Corp., 57 Fed. Sup. 642, United States v. Nord Deutscher Lloyd, 223 U. S. 512. What was so well said in United States v. National Lead Co., supra, 524, is equally pertinent when applied to the facts in this case:

> [fol. 3018] "The several agreements relating to manufacture and trade within the European markets are but some of the links in the chain which was designed to enthral the entire commerce * * *".

136. Nor does the fact that the cartel agreements were made on foreign soil relieve defendant from responsibility. U. S. v. Nord Deutscher Lloyd, supra. They had a direct and influencing effect on trade in tapered bearings between the United States and foreign countries.

137. There is no charge made in the complaint that the parties engaged in the practice of exclusively exchanging present and future know-how and inventions, patented or unpatented. Evidence seeking to establish such claim was offered at the trial. Although it does not convincingly appear that either the exclusive exchange of know-how or the enforcement of the trade mark restrictions alone served as direct instruments to eliminate competition, they have been most helpful in buttressing other illegal conduct to achieve the desired result. They were integral parts of the general scheme to suppress trade.

138. Are the contentions urged by the defendant sufficient to overcome such manifest violations of the Sherman Act?

139. The first contention of defendant is that even if the agreements between the three Timken companies for division of territory, and any incidental arrangements as to price contained therein were made, any restraint resulting therefrom to constitute a violation of the Act, must be found to be unreasonable. Defendant's position is that it undertook to extend its activities by the purchase of British Timken and the formation of French Timken with Dewar. It protests that it was not done for the purpose of eliminating competition and that if did not have that effect, that there has been no intent to unduly restrain trade but that it was done for good business reasons. Defendant says

the division of markets between the companies was reasonably ancillary to the acquisition of British Timken and the formation of French Timken.

140. In advancing the argument that only such contracts or combinations are within the condemnation of the Act as prejudice the public interest by unduly restricting competition or obstructing trade, defendant concedes that:

141. "It would appear, superficially, that contractual provisions like those involved in the case at bar that American Timken will not sell bearings in the territories of British and French Timken, respectively, and vice versa, tend to prevent competition between the parties."
